Next rock your spine back and forth, slightly nodding your head. Picture yourself as a hollow piece of bamboo. (When you nod your head your head has a connection with the lumbar area).

After you finish the rocking, smile down from the top of the spine all the way down to the bottom and then from the bottom all the way up again.

Rocking the spine and smiling into the spine is a very important practice because it relaxes the spine and the nervous system. People who want lo calm down, must first relax the spine. When the spine is tense and stiff, there is no way to calm down.

1. The well-known “Three Lines Inner Smile”, which you will find in the books *Taoist Way to Transform Stress into Vitality* and *in Awaken Universal Light.*

2. The “Energizing Inner Smile”.

3. The Inner Smile that emphasizes relaxation, balancing the emotions and transform them into compassion energy.

The second and third versions of the Inner Smile both use the creation cycle of the five energy phases, corresponding with the five vital organs.

Three Lines Inner Smile

A. Smiling Down to the Organs: the Front Line

1. **Mideyebrow point and eyes**: Relax your forehead, and be aware of smiling energy gathering before your eyes as golden light. Imagine the feelings you would have upon entering a beautiful garden. As you hold that feeling, project an image of your own smiling face in front of you. Feel that smiling energy shining like the sun. Spiral this radiant energy at the point between your eyebrows, drawing it in through that point and through your closed eyes to stimulate the pituitary gland.

Fig. 6 *Smiling Down the Front Line.*

2. **Face**: Continue to draw smiling energy into the mideyebrow point; feel the mideye expanding. Let the Chi flow into your nose and cheeks. Feel it relaxes your skin and muscles and warms your entire face. Let the smile flow into your mouth, gently lifting its outer corners. Feel the smiling energy flow into the tongue, and move the tongue around to activate the flow of saliva. When you feel the saliva is abundant, swallow it. Touch the tongue to the roof of the mouth, and leave it there for the rest of the practice (this action connects the Governor and Functional channels, which are the two major energy pathways of the body). Swallow the saliva down toward the thymus and the heart, drawing the energy further downwards. Feel the smiling energy flow into the jaws, releasing any tension there. Slightly open your mouth to separate the teeth while pressing the tongue against the palate.

3. **Neck and throat**: Smile down into your neck and throat, allowing your neck to sink down slightly to rest from holding your head. Smile into the thyroid and parathyroid glands, located in the front part of the neck. Feel the throat open like a flower blossoming as the energy releases any tension.

4. **Throat and sternum**: When a lot of saliva is produced, swallow it down toward the organs you are smiling at. Let the smiling energy flow into your thymus gland, located between the throat and sternum. Feel it expand as it radiates the warm, fragrant, smiling energy down into the heart

5. **Heart**: The heart is approximately the size of a fist and is located behind the sternum, slightly left of the center. Smile to your heart and thank it for circulating blood throughout your body. Feel it relax as its workload becomes lighter. Let the smiling energy fill your heart with love as impatience and hastiness are transformed into joy and respect. Love, joy, respect, and ultimately compassion all arise from the heart. Feel these virtues radiate to the organs, glands, and the entire body.

6. **Lungs**: Smile into every cell of your lungs as you thank them for supplying oxygen to the body and releasing carbon dioxide. Feel them soften and become more spongy and moist as they expand

with smiling energy. Feel the virtues of the heart (love and joy) enhance the smiling energy in the lungs as it transforms any sadness and depression into righteousness and courage.

7. **Liver**: Smile into your liver, which is located on the bottom right side of the rib cage. Thank the liver for its role in digesting, processing, storing, and releasing nutrients, and in removing any toxic substances. Feel it soften and increase its moisture. Let the smiling energy, enhanced by the virtues of the heart and lungs (love, joy, righteousness, courage) transform any anger held by the liver into kindness.

8. **Pancreas and spleen**: Smile into your pancreas at the bottom left side of the rib cage. Thank it for producing insulin to regulate your blood sugar level and enzymes for digestion. Smile into your spleen, located behind the pancreas at the same level on the left side. Thank it for producing antibodies to fight diseases. As you smile into your spleen and pancreas, feel any worries they hold become transformed into fairness by the smiling energy enhanced by the virtues of the heart, lungs, and liver.

9. **Kidneys**: Bring the smiling energy into your kidneys, located at the lower back on both sides of the spine, inside the lower part of your rib cage. Thank them for filtering the blood, eliminating waste products, and maintaining the water balance in the body. Feel them grow cooler, fresher, and cleaner. Smile into your adrenal glands, on top of your kidneys; these produce adrenaline and several other hormones. Feel any fears become transformed into the virtue of gentleness by the smiling energy and all of the other virtues collected thus far.

10. **Genitals**: Bring the smiling energy down to the genital area in the lower abdomen. Women: The female genitals are known as the “Ovarian Palace,” and it is located about three inches below the navel, midway between the ovaries. Smile and spiral the accumulated energies into the ovaries, the uterus, and the vagina. Thank the ovaries for making hormones and giving you sexual energy. Bring the combined sexual, smiling, and virtue energies up to the navel, and spiral at that point.

Men: The male genital area is known as the “Sperm Palace.” and it is located one and a half inches above the base of the penis in the area of the prostate gland and seminal vesicles. Smile and spiral the accumulated energies down to the prostate gland and the testicles.

Thank them for making hormones and giving you sexual energy. Bring the combined sexual, smiling, and virtue energies up to the navel, and spiral at that point.

Note: When returning energies to the navel for storage, mentally create a spiraling motion to centralize and keep them there. The vortex created draws in energy like a vacuum.

11. **Eyes**: Return your attention to your eyes. Quickly smile down into the organs in the front line, checking each for any remaining tension. Smile into any tension until it is released.

B. Smiling Down the Digestive Tract: the Middle Line

1. **Stomach**: Once again become aware of the smiling energy in your eyes and the mideyebrow, and allow this energy to flow down into your mouth. Become aware of your tongue, and swish it around to produce saliva. Place your tongue against the roof of your mouth, tighten the neck muscles, and swallow the saliva hard and fast, making a gulping sound. With your Inner Smile, follow the saliva down the esophagus to the stomach, located below the left side of the rib cage.Thank the stomach for digesting your food, and feel it relax as the energy flows into it.

2. **Small intestine**: Smile into the small intestine in the middle of the upper abdomen. Thank it for absorbing nutrients.

3. **Large intestine**: Smile into the large intestine, which encircles the small intestine from above and on both sides, and the rectum. Thank the large intestine for eliminating wastes.

4. **Bladder and urethra**: Bring the smiling energy back up into the bladder, just behind the pubic bone, and into the urethra. Thank these organs for holding and releasing urine.

5. **Eyes**: Return your attention to your eyes. Quickly smile down the middle, checking each area for any remaining tension. Smile into the tension until it melts away.

Fig. 7 *Smile Down Middle Line, the Digestive Tract.*

C. Smiling Down the Spine: the Back Line

1. **Eyes**: Bring your attention back to your eyes again and draw more energy into them and the mideyebrow.

2. **Glands in the brain**: Activate the saliva, and swallow as you push the tongue upwards, directing the energy flow into the brain. Draw smiling energy in through the eyes and mideyebrow.

Smile into the pituitary gland, three or four inches behind the mideyebrow. Feel it blossom. Smile into the thalamus gland, which is located directly above the spinal cord, slightly behind and above the pituitary gland and the hypothalamus, which is located in the bottom of the third ventricle room. Smile into the pineal gland under the crown point. Feel these glands swell and grow. Smile into the left and the right hemispheres of the brain to balance and nourish them.

3. **Spinal Column**: Smile into the midbrain and cerebellum and the first cervical vertebra at the base of the skull. Bring the loving energy down through all of the vertebrae to the base of the spine. (Vertebrae: seven cervical, twelve thoracic, five lumbar; base of the spine: sacrum, and coccyx).The disks beneath each vertebra soften as the spine expands and elongates. Your back should feel loose and comfortable.

4. **Back Line**: Return your attention to your eyes, and quickly smile down the entire back line. This exercise greatly increases the flow of spinal fluid and calms the nervous system. Your whole body should feel relaxed.

Fig. 8 *Smile Down the Back Line.*

Fig. 9 *Smile into Brain.*

D. Smiling Down the Length of the Entire Body

Entire body: Start at the eyes again, and direct the Inner Smile quickly down the front, middle, and back lines. If you are experienced with this practice, smile down all three lines simultaneously while remaining aware of the organs and spine. Feel the energy descend the entire length of your body like a waterfall of love and peace. Feel the muscles, skin and bones relax as your whole body unwinds.

E. Collecting and Storing Energy at the Navel

To end the practice, it is very important to store the accumulated energies at the navel. Too much Chi remaining in the head or heart causes most of the ill effects of meditation. Drawing this energy into the navel for safe storage can prevent such problems. To collect the energy concentrate on your navel area about one and a half inches inside your body. Then mentally spiral the energy, moving further outwards with each spiral until you complete 36 cycles. Do not go above the diaphragm or below the pubic bone as you expand outward (At first, you may guide the spirals with your forefinger). Finally, spiral back into the navel for 24 cycles.

Men: Cover the navel with both palms left over right. Start spiraling down toward the right side (clockwise) 36 times.

Women: Cover the navel with both palms, right over left. Start spiraling down toward the left side (counterclockwise) 36 times.

Men and Women: Next, reverse directions, and spiral back into the navel 24 times (Men spiral counterclockwise; women spiral clockwise). Move closer to the navel with each cycle. You have now completed the Inner Smile and should feel an increase in your Chi flow.

Energizing Inner Smile

We start to smile into the bladder, the uterus, the ovaries, the testicles and the prostate gland, because it creates a lot of energy.

Slightly rock yourself.

Smile into the bladder, the uterus and the ovaries, the prostate gland and the testicles. Picture these organs and connect with them. Feel they are connected with the brain and that their energy rises up through the spine to nourish the brain. Picture a big blue ocean and a fire under this ocean. See a beautiful blue light evaporate from the ocean.

Smile to the kidneys. Smile this blue light in the bladder, uterus/ovaries, or prostate and testicles, and the kidneys, bringing stillness into the kidneys. Feel these organs expanding with blue light. Let this blue light, with its gentleness and calmness, extend into the whole body, especially into the liver. Feel it energize the liver.

Smile into the liver. Picture your liver and connect with it. See the sun shine in the forest. See the green light. Smile this green Universal light and kindness into the liver. Feel the liver expanding with the green light. Let it radiate out to all the organs, especially to the heart. Feel the green light energizing the heart.

Smile into the heart. Picture the heart and connect with it. Be aware of the red light, a sunset on the ocean producing a red light. Smile this red light into the heart with love, patience, and inner joy. Feel the heart expanding with red light and love. Let it radiate out from the heart into the whole body, especially into the stomach,spleen. and pancreas. Feel the red light energizing these organs.

Smile into the stomach, spleen, and pancreas. Picture and connect with them. See the beautiful filtered rays of sunshine of Indian Summer full of balance and harmony, a golden light. Smile this golden light into the stomach, spleen, and pancreas. Feel calm, serene, and centered. Let this golden light radiate out into the whole body, especially into the lungs. Feel the golden yellow light energizing the lungs.

Fig. 10 *Collect the Energy by Spiraling.*

Fig. 11 *Creation Cycle*

Smile into the lungs. Picture and connect with them. See and smell the fresh, pure white light of the high mountains. Smile this light into the lungs, the nose, the skin, and the large intestines. Let it radiate out into the whole body, especially into the kidneys.

Do two more rounds of this cycle of the Inner Smile. Then gather the smiling energy in the bladder, the uterus or the prostate gland and let this energy rise through the spine to the brain. Hold the energy there. Feel how this smiling energy energizes the brain, the spine, the nerves, and all the organs and glands and that the muscles are connected with these nerves. Rest. Concentrate on the energy in the brain and the spine. Feel the energy in the brain and the awareness expanding.

Inner Smile that Relaxes and Balances the Emotions

We generally start with the heart, because the heart creates a lot of strong emotions, especially love and hate. When you start to smile to the heart, sometimes hate or impatience will come up. If you can continue to smile to the heart you will feel that the inner joy, love and happiness will start to grow in your heart very easily. If people cannot feel love, inner joy, and happiness, nothing will be able to make them feel happy.

There is nothing wrong with negative emotions, as long as you recognize them and know how to transform them. This will prevent the energy sticking in the organs. You have to find a balance.

Emotions like hate, anger, impatience, fear will always come up. You have to watch, be aware of them and work with them constantly so that they will not grow too much and start to block the energy in the organs and other parts of the body.

When you continue with the Inner Smile, the Six Healing Sounds and the growth of the virtue energy/pure light in the organs, eventually no more space will be left for these negative energies (emotions) to grow in the organs.

Rock yourself gently, especially your spine.

Practice

Smile into your heart. Feel the love, inner joy, and happiness in your heart and expand this love and happiness into the universe and let it multiply. Continue expanding unconditional love, inner joy, and happiness from the heart into the universe and feel that it is coming back multiplied, into the heart with the red light. Let the light from the heart shine into every single organ of the body like sunshine. If any hate comes up keep on smiling and sending love and happiness to this feeling of hate and eventually it will change into loving, happy energy as well.

Smile down to the stomach, the spleen, and pancreas. See any worry inside them. Inhale the yellow golden light, the feeling of openness, fairness of the earth power, harmony, and centeredness. Accept your worries, balancing them with the virtues of openness, fairness, and centeredness.

Smile to the lungs. See any sadness inside them. Inhale the pure, white light, the courage of the metal power. Accept the sadness, and balance it with courage.

Smile down to the kidneys and the bladder. See any fear inside them. Let the sun shine on the ocean, a blue light. Inhale this blue light and the gentleness and stillness of the water power. Accept the fear. and balance it with this gentleness and stillness.

Smile into the liver. See any anger, resentment, and frustration in the liver. Let the sun shine on the forest producing a green light. Inhale this green light and the kindness and generosity of the wood power. Accept the anger, and balance it with kindness and generosity.

Do two more rounds of this Inner Smile, relaxing and balancing the emotions and eventually transforming the “negative emotions” into virtue energy.

Inner Smile Applications

Here are some examples of how the Inner Smile supports other practices in the Universal Tao System's series of self-healing techniques.

Tao Yin

The Lotus Meditation is wonderfully calming but is complete only with the interior 'posture' or interior attitude cultivated by daily use of the Cosmic Inner Smile.

Fig. 12 *The Inner Smile helps the Dragon Stretch his Tail and Claws in Tao Yin.*

The Lotus Meditation is especially applicable to the Tao Yin movements. Because of the emphasis on working with the whole spine and the powerful psoas muscles the practitioner sends grateful attention from the heart down the spine to the kidneys.

The Lotus meditation can be used during Tao Yin practice, and is especially useful during the rest periods between the movements. You can use the Lotus Meditation in any rest period. Choose the places that best suit you.

This meditation helps to achieve the balance of kidney and heart energy which is a vital part of self-healing. The balanced flow of water and fire energy will greatly help to transform the accumulated stress in the mind and body into a sense of well-being.

Here's the Lotus Meditation for your deep enjoyment.

Lotus Meditation

Imagine the heart as a red lotus flower and the pericardium (the heat-regulating membrane which encloses the heart) as the lotus pads. Visualize the kidneys as being bulbs, similar to the clusters or plexuses where the stems of the pads and the lotus flower join together. In a pond or pool there are usually several lotus plants that join together in a cluster, anchoring in the mud. From the kidneys (kidney bulbs/clusters), visualize roots extending down through the legs into the watery mud of the earth basin.

Through this merging of the body and the lotus in nature, sense these qualities of energy in your body. Feel the supporting connection with the same qualities of red and golden energy coming to us from the sun and the universe above, as well as that of the blue water energy coming from the earth and nature. Feel the warm red energy of the heart and the red and yellow/gold from above. Likewise, sense the cool, blue water energy of the kidneys and the refreshing blue water energy from the earth. Smile even more and relax the mideyebrow.

Fig. 13 *The Inner Smile is like the Sun, Rain and Earth for the Lotus Flower.*

Lotus Energy Meditation

1. **Breathe to the Tan Tien, and consider the lovely blooming lotus:** You can see the open flower, seeing it as red with yellow/gold petals in the center. Smile with appreciation.

2. **Look at the pads, stem and roots:** The leaves float on the water's surface. See the stem as it descends from the bloom to the roots mired in the mud. Feel the roots sinking into the bed of the pond. The roots receive just the correct amount of nutrition from the wet earth.

3. **Sense the harmony of fire and water:** The pads and flower open to the sun and universe to soak up the life-sustaining rays. The sun is the source of fire energy. The earth holds the necessary water. Smile and appreciate this life-giving harmony of the forces of fire and water, yang and yin, male and female.

4. **Connect images with your heart and kidneys:** As you continue with the Tan Tien breath, expanding and contracting, look inside to your heart and kidneys. The kidneys are the roots accessing water. The heart is the open lotus taking in the sun's fiery gift. The spine is the healthy and supple stem connecting the two energies.

5. **Inhale to the heart and exhale to the kidneys:** Coordinate the Tan Tien breathing: Inhale into the heart, drawing the warmth from the sun, feeling it come down through the crown of the head and blend it with the love, joy and happiness in the red heart/lotus. Draw this loving, hot heart energy back to the point opposite the heart center on the spine (the wing point between the scapulas, between T5 & T6) as you slowly inhale. Then exhale the hot energy down the lotus stem/spine to the cool kidneys, warming them with the loving heat from the heart. You may enhance the

emotional balancing effect by subvocally exhaling with the heart sound, Haaaaaw, as you mentally direct the heart energy down the spine.

6. **Alternating, inhale into the kidneys and exhale up to the heart:** See the kidneys as the nourishing bulbs of the lotus with roots that extend down through the legs and soles of the feet into the mud, accessing the soothing blue water energy held by the earth. As you inhale to the kidneys, feel that the roots are drawing the cool, soothing, nourishing blue water energy up through the soles of the feet, up through the legs to the kidneys. In the kidneys, feel the gentle calm, peaceful feeling blending with the cool, soothing blue water energy that has percolated up through the legs. As you exhale, you may subvocally express the kidney sound, Chooooo, and send this soothing boost of gentle, cooling wet blue kidney energy up through the supple stem/spine via the wing point to the grateful, happy heart.

7. **Continue alternating the breath this way for a few times:** Red light from the crown into the heart and down to the kidneys; blue light from the bubbling springs into the kidneys and up to the heart.

8. **Then, just relax and don't bother about the breath:** Simply move the smiling mind back and forth between the heart and kidneys along the connecting spinal stem. The balancing will automatically occur. Smile to the lotus perfection and beauty. Smile with gratitude to your kidneys, spine and heart. The lotus meditation is very calming, and naturally, the more it is used, the easier it is to realize this inner calm.

Chi Nei Tsang

The “secret technique” of Chi Nei Tsang = healing from the heart. The heart guides the Chi Nei Tsang practitioner and student in the CNT healing session. The heart’s respectful and loving power is activated by the Inner Smile and this environment allows healing to flourish.

Fig. 14 *Healing with Love from the Heart.*

Inner Alchemy

The Fusions lead to Kan and Li.

Fig. 15 *Inner Alchemy begins and ends with the Inner Smile.*

Iron Shirt Chi Kung

Fig. 16 *The vital Iron Shirt Chi Kung postures and Tan Tien Breath would be empty without the Cosmic Inner Smile.*

Tai Chi Chi Kung

Everyone admires the grace and power of a round of Tai Chi. Integrating the Inner Smile into Tai Chi complements the the inner grace of breath and movement. By smiling into the Tan Tien Chi, the Ying and Yang wholeness of Tai Chi is even more “round”.

Fig. 17 *The Inner Smile moves the Chi Harmoniously.*

Elixir Chi Kung
Creating the Golden Earth Pill

Fig. 18 *The Alchemy of Creating the Elixir is Enriched with the Cosmic Inner Smile.*

Healing Love

Many practitioners are attracted to the Universal Tao's Healing Love single and dual cultivation. We are sexual beings and must manage sperm and egg energy in a healthy and respectful manner for the growth of our body, mind and spirit.

Fig. 19 *The Center of the Brain connects to the Sexual Organs.*

The pituitary, recognized as the “master gland” and the pineal, known as the “spiritual gland” are profoundly and positively influenced by the Inner Smile. They function in concert with the sexual glands during loving sexual arousal. This glandular cooperation blends what are perhaps the strongest human energies: love and orgasm. The Cosmic Inner Smile fortifies this mixture. When the couple makes love they smile at their own organs and at their partner’s organs with sincere gratitude. The sexual energy multiplies this loving appreciation and in this loving cooperation Healing Love is present.

Fig. 20 *Why are this woman and this man “inner smiling”? Because of their loving energy and their orgasmic energy.*

Daily Practice

Practice the Inner Smile when you wake up. It will improve your whole day. If you love your body, you will be more loving to others and more effective in your work. After you have learned the practice, it takes five to ten minutes to smile down your entire body. Try to maintain the sensation of the Inner Smile throughout the day. Keep reminding yourself of the feeling because it is one of the best stress reducers in the world.

Smiling Aura Field: Form of Protection

There are subtle energies or "psychic forces" around us that affect our lives. Although unseen by the majority of people, these forces extend a primary influence on our health and well-being.

Negative psychic energies from others can create stress and cause illness. When a person has strong emotions toward you, the psychological energy associated with those thoughts and feelings can disturb your energies, jeopardizing your health. The "Smiling Aura" is a beautiful emanation of our highest energetic frequencies that protects us from the negative vibrations of others. The Inner Smile Practice enhances this Smiling Aura. By remaining conscious of the smiling energy, especially in the mideyebrow, face, and navel areas, you can intensify the Smiling Aura Field around your body. This will help you to keep out negative vibrations which other people create unknowingly. The Smiling Aura Field can also help you transform your own negative energies into positive life force. For instance, if you feel anger, the smiling energy you maintain gives you the ability to smile into that emotion until it dissipates and transforms into kindness. With practice, you can use this force to transform hatred into love; sadness into courage; and fear into gentleness. After a while, the process becomes automatic.

Fig. 21 *Smiling to the Aura Field.*

Cosmic Inner Smile

Smiling Heals the Body

Mantak Chia

Illustrations by Udon Jandee

Cosmic Inner Smile

The Inner Smile is a powerful internal healing and relaxation meditation. Deep relaxation dissolves physical and mental tensions that can cause energy blockages and unhealthy Chi. The Inner Smile enhances the energy of the organs and glands, our life force in general, and stills and focuses the heart and mind (hsien). It makes us more aware of our body and inner being, because we learn to communicate with our organs, glands, spine and other specific parts of our body, as well as our soul. Taoists discovered that consciousness is rooted not only in the brain, but also in the vital organs and in a more subtle sense, in each of the cells.

Smiling to the organs and thanking them for the work they do will reawaken the intelligence of the body. We are often so out of touch with the body and emotions that we do not notice inner disharmony developing until it finally manifests itself as a serious illness.

Practicing the Inner Smile daily lets us look inside to keep in touch with the state of our inner organs, our Chi, our breath and emotions. We can spot problems at their inception, making it easier to balance the emotions and virtues.

The meditations, practices and techniques described herein are ***not*** intended to be used as an alternative or substitute for professional medical treatment and care. If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training. This booklet does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Healing Hand

Humans can build all kinds of sophisticated instruments because of the magnificence of the hands and the fingers. Another higher function of the hands is the power of healing. Knowing the major points of the hands and fingers will enable you to stimulate and maintain the organs in good function.

Palms

The palms are where all major energies of Chi join. The palm can be the place from which the life-force is sent out to heal others or yourself. The palm also is the place where energy can be received and enter into the bone structure and into the major organs.

Pericardium

The pericardium (P-8) is the main place of energy concentration. You can collect the energy in this point and transmit stronger energy from this point.

Large Intestine

The large intestine (LI-4) is the major point which controls all the pain in the body, especially in the sense organs (eyes, ears, nose) and headaches.

Fig. 1 *Pericardium*

Fig. 2 *Large Intestine*

Major Palm Lines

The three major palm lines are the Life Line, the Line of Intellect and the Line of Emotion.

Fingers have Corresponding Bodily Functions

The fingers are connected to the organs' meridians. The joints of the finger bones are also related to parts of the organs and their corresponding senses and emotions.

Fig. 3 *Three Major Palm Lines*

Fig. 4 *Fingers and Their Corresponding Bodily Functions Through the Organs' Meridians*

Massage the Hands

Always start by rubbing your hands until they are warm.

1. Massage the pericardium (P-8). Use the thumb to press the middle of the palm with a circular motion.

Fig. 5 *Massaging the Pericardium with fingers cupped in the palm in a half-fist, the pericardium is the point at the tip of the middle finger.*

2. Massage the hegu (LI-14). Press the thumb around the point in a circular motion, and press more at the index finger bone. Find the pain point and massage it away.

Fig.6 *Massaging LI-14*

3. Massage the major palm lines. Use the thumb to massage along the palm lines. Massage more towards the thumb bone and along that bone. When a lot of emotion is held inside, find the sore point and massage it.

4. Massage the back of the hand. Use the thumb to press along the bones on the back of the hand. When you find a tender spot, take more time to work on it.

5. Massage the fingers. Always rub your hands until warm. Use the right hand's fingers to wrap around the left thumb, and then, one by one, squeeze, hold and release each finger on the left hand three to six times. Start with the left hand and continue to the right hand's fingers, according to the elements of the finger. This will greatly help to control emotions.

Fig. 7 *Massaging the Palm Lines*

Fingers Correspond to Emotions, Elements and Organs

A. Thumb corresponds to the element earth and is associated with the stomach. The corresponding emotion is worry.

B. Index finger corresponds to the element of metal and is associated with the lungs and large intestine. It links with the emotions of sadness, grief and depression.

C. Middle finger corresponds with the element of fire and is associated with the heart, small intestine, circulatory system and the respiratory system. It links with the emotions of impatience and hastiness.

D. Ring finger corresponds to the wood element and is associated with the liver, gall bladder and the nervous system; it corresponds to the emotion of anger.

E. Pinky finger corresponds to the water element; it is associated with the kidneys, and corresponds with the emotion of fear.

Head

A. Crown Point

This is located in the center of the crown; in the fontanelle area of an infant's skull there may still be a slight depression. The crown point is the junction of one hundred channels through which the energy of the body passes. Massage this area with both your middle fingers. This will relieve dizziness and headaches, which result from too much energy in the head. It also relieves high blood pressure and stimulates the nervous system.

Fig. 9 *Crown Point is the junction point of one hundred energy channels.*

B. Bring Chi Energy to the Hands and Face

Inhale, contract the sexual organ, buttocks and middle of the anus. Rub the hands, clench the teeth, and put the tongue to the roof of the mouth. When the face, head, and hands are hot, breathe normally and begin to massage.

C. Knock the Head

Hit the head with the knuckles of the hand, knocking all around the head. Knocking the head lightly can help to clear your head, eliminate stubbornness and make your thinking sharper. Many of our students use this knocking of the head to release the pressures that they have from today's life of fast, advanced technology and the feeling of always having to keep up. This is especially true of those graduate students who feel a great deal of pressure and stress in keeping up with their studies. Each year students commit suicide because the pressures and stress accumulate too much in their heads, making them unable to think clearly: they start to feel everything in their society as too much pressure, which leads to worry, fear, sadness, and many, mixed emotions. The simple knocking of the head can release pressure and stress that accumulate there.

Fig. 10 *Knocking the Head*

D. Hold your Breath to Increase Chi Flow

Holding your breath will increase the Chi flow to the face. The head has many channels that join in the skull, especially in the crown point.

E. Scalp

Prepare your hands, head and scalp by warming up. Using both hands like a comb, press hard and move slowly, massage the scalp, going straight back from the hairline to the base of the skull. As you do this, mentally direct your energy from the back of the skull to your feet. Repeat 6-9 times. Massage more in any places in which you feel pain, until the pain goes away.

Fig. 11 *Massaging the Scalp*

F. Crest

Using your thumbs, massage the crest (the edge) at the base of the skull until you feel no pain there. This will help you reduce headaches and eye aches and will increase vision. This place in Tao tradition is called the Pool of Wind which tends to collect the “evil wind”, the major cause of all the pain in the senses.

Fengchi Point (GB-20)

Fig. 12 *Crest - Edge of the Skull*

Fig. 13 *Go straight back from the hairline to the base of the skull.*

Face

Natural Beauty

Massaging your face with Chi is a far more effective beauty treatment than the most expensive cream or cosmetic, Your skin will glow brightly and eventually become less wrinkled. There are many meridians passing through or ending at the face. When blocked, they result in reduced flow of Chi energy and circulation. The face is the first impression imprinted in other people's minds. Chi circulation provides it with attractive personal energy.

Fig. 14 *Head and Face*

Fig. 15 *Massage the Whole Face*

Fig. 16 *Massage the Mid Forehead*

Temples

Use your index fingers to massage the temples in a circular motion, first clockwise, then counterclockwise. Massage the forehead and the temples; use the knuckle rub from the middle of the forehead all the way to the temples ten to twenty times. These exercises will reduce headaches in the front and in the temples. Find the painful point and massage it until the pain is gone.

Fig. 17 *Massage the Temples*

Mouth

Depression makes the corners of the mouth drop. Looking cheerful, delightful, more attractive and happy are dependent so much on the eyes and the corners of the mouth. When the muscles of the mouth are loose because of stress, depression, or sadness, the corners of the mouth drop and the energy system is depressed and in low key. No one likes to look at a sad face or a depressed face; it makes other people feel sad and depressed, too.

The flow of energy in the body and the expression of the face are the main attractive powers of a person. Massaging the mouth muscles up will help to lift the corners of the mouth. The Inner Smile and lifting up the corners of the mouth are very important to building up attractive energy.

Beautify the Mouth Massage

Using the thumb and the index finger of the right hand, touch both corners of the mouth and feel the Chi from the thumb and index finger pass to the corners of the mouth. Slowly press and push up about one inch, release and start again at the corners, pressing up ten to twenty times each day.

Cheerful Delight

Mouth Corners Drop

Fig. 18 *Beautifying the Mouth Massage*

Eyes

The eyes are the windows of the spirit. In Taoism we regard the eyes as Yang energy which will guide all Chi flow in the body. The eyes can greatly affect your personality Some people are born with a lot of white in their eyes--three portions of white to one portion of iris—sometimes called “thief eyes” or “danger attack eyes.” Such eyes can result in a suspicious look, portending unpleasant things. Through the exercises, you can gradually correct the white portion of the eyes.

Since the eyes are connected to the entire nervous system, they have a special importance. The eyes reveal the health of your entire body. Through the eyes we can tell which organs are weak and/or toxic. Massaging the eyes will remove stress from the vital organs. Nowadays people use their eyes much more than in the past to read, watch television, and work with computers, electronics and microscopes. This strains them a great deal and makes the openings of the organs loose, so that much of the organ energy is drained out. In Taoism, we regard the eyes as the doorways to the soul as well as the opening of the liver.

A. Bring Chi Energy to the Hands and Eyes

Repeat the procedure for bringing energy to the hands by inhaling; holding the breath; and contracting the sexual organ, buttocks and middle of the anus and both the left and right sides of the anus. Direct the Chi to both eyes. Rub the hands, clench the teeth, place the tongue on the roof of your mouth. Direct the energy to the face and then the hands. When your hands are hot, focus on your eyes until you feel them filled with energy.

Fig. 19 *Eyes are the Windows of the Spirit*

Fig. 20 *Eyes are the Doorways to the Soul*

Fig. 21 *Use the Fingertips to Gently Massage the Eyeballs*

B. For the Eyeballs and Surrounding Area

Close your eyes. Use your fingertips to gently massage your eyeballs through your closed eyelids, six to nine times clockwise, then six to nine times counterclockwise. Then gently massage the area around the lids the same number of times. Be aware of painful spots and massage those places until the pain goes away. Pay special attention to the inner and outer corners of the eyes. These are points of the gall bladder meridian and will relieve eye ailments if massaged.

C. Pull up the Eyelids

Pulling up the eyelids will increase the fluid. Use the thumb and index finger to pinch, pull up and release the eyelids six to nine times.

Fig. 22 *Pull Up the Eyelids*

D. For the Eye Sockets

Bend your index fingers and use the lower section (second phalanx) of each thumb to rub the upper and lower bones of the eye sockets six to nine times.

Fig. 23 *Massage the Eye Sockets*

E. For getting a Tear out

Hold an index finger up about eight inches from the eyes, or put a dot on the wall five or six feet away from you. Stare at it intently without blinking your eyes until you feel like a fire is burning in them. The Taoists believe that the toxins will burn out of the body through the eyes. They will begin to tear. Do this to strengthen your eyes. Then, rub your hands until warm; close your eyes and cover your eye sockets with your palms. Feel the Chi from the hands absorbed into the eyes. Rotate your eyes six to nine times, first in a clockwise direction, then counterclockwise.

Fig. 24 *Getting a Tear Out*

Fig. 25 *Absorbing the Chi into the Eyes*

Fig. 26 *Parts of the Eyes Connect with Senses and Brain*

F. Pull in the Eyeballs

The eyes are divided into five parts. Each part is closely connected with the organs and nerves. Become aware of the eyes.

Pulling and pressing the eyeballs will exercise the organs, sense, glands and the brain. This is also the best exercise for the eye muscles. The eyes have many muscles which we do not exercise very much and, thus, they become weak, contributing to poor eyesight.

1. With the eyes still closed and cupped by the palms, inhale, contract the anus and sexual organ, and pull the eyeballs back into the sockets.
2. Contract the middle of the anus and the middles of the eyeballs.
3. Contract the front of the anus and the tops of the eyeballs.
4. Contract the back of the anus and the bottoms of the eyeballs.
5. Contract the right side of the anus and the right sides of the eyeballs.
6. Contract the left side of the anus and the left sides of the eyeballs. This exercise not only strengthens the eyes but also the pituitary and pineal glands and the inner ear including the ear drum and canals. When you pull the eyeballs in and upward and look toward the crown, you are exercising the upper muscles and stimulating the pituitary gland and pineal gland.

When you contract and pull in the middle of your eyeballs, you are exercising the back of the eye muscles and the inner ear.

When pulling in the outer corners of the eyes, you are strengthening the side eye muscles as well as the ear canals end the ear drums.

When pulling in the inner corners of the eyes, you are strengthening the inner side muscles, the tear ducts and the nose.

When pulling in the lower parts of the eyes, you are pressing the lower part of the ear canals and the nervous system.

Pressing into the Inner Ear

Left Eye Pressing into the Ear Canal. Right Eye Pressing into the Eustachian Tube

Pressing into the Pituitary Gland

Right Eye Pressing into the Ear Canal. Left Eye Pressing into the Eustachian Tube

Pressing into the Eustachian Tube

Fig. 27 *Moving the Eyes*

G. Learn to Maintain Eye Contact

Some people in eye to eye contact with other people feel nervous and frightened, and their voices become very low and hard to hear because of weak organs. Some people will look around and not look into your eyes when you talk to them. This can be caused by weakness of the gall bladder and kidneys. To improve this, you can use the Inner Smile, Six Healing Sounds and Tao Rejuvenation, plus the practice of staring.

Look at your face in a mirror for two to five minutes each day for the first week. After ten days you can begin to stare at your eyes and increase your confidence by looking at your irises. Gradually you will lose the fear of looking into other people's eyes.

Nose

The nose has several important functions. When we breathe properly through the nose and not through the mouth, the nose filters out dirt, preventing it from reaching the lungs. It also regulates the temperature of the air: when the air is too cold, the nose will warm it up first. Without this regulating action, extreme temperatures could injure the lungs, make us susceptible to upper respiratory illnesses and subject to getting colds easily. One great advantage about people who practice the Tao System is that they seldom get colds.

The nose has three meridians running through it: the large intestine, the stomach, and the Governor or back Channel. Rubbing the nose strengthens the temperature regulator stimulates the above organs, and increases hormone secretion. In China just a few needles inserted in the nose serve as a general anesthetic for any part of the body to be operated on.

An unhealthy nose affects the personality. A thin, flat and unhealthy looking nose, or a badly shaped nose, can make you less attractive to other people. A strong nose can help you to have good Chi. The nose is the first place into which the breath of life enters.

A weak nose usually will be infected, and a lot of mucous can leak into the sinuses. A weak nose also can affect the voice. A good singer always has a good nose. Rubbing and massaging the nose will increase the Chi and will improve circulation around the nose.

Ears

In China we believe that a person with thick, long ears will have a long, healthy life and that the personality will be more attractive.

The following exercises can prevent hearing loss which occurs gradually as we age. The ears are acupuncture maps of the whole body, containing 120 points. Many acupuncturists now use only the ear points to cure many ailments as well as for weight control.

A. Outer Ear

Repeat the method for bringing energy to the hands, contracting the left and right sides of the anus.

1. Front and back: Make a space between your index and ring fingers and simultaneously rub in front and in back of the ears.

2. Ear shells: Rub the ear shells with all your fingers. This will stimulate the autonomic nervous system and warm up your whole body, especially in the cold weather.

3. Ear lobes: Using your thumb and index finger, pull down on the ear lobes.

Rub in Front and Back of Ears

Rub the Ear Shells

Pull Down on the Ear Lobes

Fig. 28 *Rubbing the Ear*

4. Ear drum exercises: For the outer ear drum, repeat the method for bringing energy to the hands, contracting the left and right sides of the anus. Inhale and then exhale completely. Put your index fingers in your ears; it should feel as if there is a vacuum in the ears. If it does not, then exhale more. Move your index fingers back and forth six to nine times at your own pace until you can feel that the insides of the ears are moving, and pull out the fingers with a quick movement. You should hear a “pop” sound, and you will feel that you can hear better and that your mind is clearer.

Fig. 29 *Outer Ear Drum Exercise*

B. Inner Ear

Repeat the method for bringing energy to the hands, contracting the left and right sides of the anus.

The inside of the inner ear, being inaccessible, is usually not exercised and grows weaker with age. These two exercises use air pressure and vibrations to strengthen the inner ear. The ear canals, the nose canal, and the mouth are connected together, so in this exercise we are using the pressure that builds in the lungs and bringing it back up to the mouth, thus adding pressure to the inner ear drums. This is how to exercise the inner ear drums.

Fig. 30 *Diagram of Inner Ear Drum*

Fig. 31 *Inner Ear Drum Exercise*

Gums, Tongue, Teeth

Healthy teeth require healthy gums as their foundation. These exercises will strengthen both the gums and teeth. Teeth are the excess energy of the bones, and when the teeth get stronger, so do the bones. When the teeth and tongue are strong, your breath improves as well, eliminating bad breath.

We regard saliva as an essential form of energy which can lubricate the organs and digestive system. The tongue is the opening of the heart, and both are made of similar tissue. A healthy and clean tongue will strengthen the organs, especially the heart. You should clean your tongue twice a day with a brush or scrape it with a tongue scraper, and massage your tongue with a tongue depressor or a clean finger. Find the painful spots and massage there until the pain goes away.

A. Bring Chi Energy to the Hands

Repeat the procedure for bringing energy to the hands, contracting the middle of the anus.

B. Gums

Open your mouth and stretch your lips tautly over your teeth. Use three fingertips (index, middle, and ring fingers) to tap the skin around the upper and lower gums. Hit around until you feel warmth in the area.

C. Gums and Tongue

Massage your upper and lower gums with your tongue. Then suck in some saliva, press your tongue tightly against the roof of your mouth, and try to exercise the tongue. When you strengthen your tongue, you are strengthening your heart. Press around. Press the tongue to the roof of your mouth, tighten your neck muscles and swallow the saliva. This lubricates the digestive glands and organs.

Fig. 32 *Hitting the Gums Exercise.Using the Tongue, Massage the Upper and Lower Gums.*

D. Tongue

In a sitting position place the hands on the knees, palms down. Exhale and straighten the arms, spreading the fingers apart and keeping the hands on the knees. Open the mouth as wide as possible and thrust the tongue out and down, focused on the throat. With the tongue out as far possible, gaze at the tip of the nose. The whole body should be tense. Hold the breath for as long as you feel comfortable. Relax with inhalation and regulate the breath. This will help to strengthen the throat, the tongue and the power of speech. These exercises will help to improve foul breath and to clarify speech.

Fig. 33 *Diagram of Tongue Parts and Corresponding Organs*

Fig. 34 *Tongue*

Fig. 35 *Press Tongue to the Roof of the Mouth*

Inhale, then exhale as you press your tongue out and down as far as you can. Follow by pulling the tongue in and curling it. Press your tongue to the roof of your mouth as hard as you can, contracting the middle of the anus and the esophagus to help the tongue. With more practice you will know how to use the inside force, the force from the organs, to press your tongue up. Even though the tongue has no bones to exert force, you will still be able to exercise the tongue well.

E. Teeth Clenching

Relax your lips. Click the teeth together lightly and then clench them hard, as you inhale and pull up the middle of the anus. Do this six to nine times. Move your tongue and mouth to create a lot of saliva. The technique of swallowing the saliva is to put the tongue up to the palate and swallow quickly with a hard gulp, sending the saliva down the esophagus to your stomach.

F. Energy to Teeth

Close your mouth and let your teeth touch lightly. Direct the energy to your teeth. Gradually feel the electrical flow of energy there.

Fig. 36 *Click the Teeth Together Lightly*

Fig. 37 *Clench the Teeth Together Hard*

Fig. 38 *Throat Glands*

Neck

A. Thyroid and Parathyroid: Site of Courage, the Power of Speech

The neck carries the busiest traffic in the body and is the seat of the thyroid and parathyroid glands. When you massage here, you increase the body's metabolism. Neck tension can also be caused by emotional imbalance. When we are tense and nervous, we are responding to negative emotions, such as anger, fear and sadness. The neck is similar to a traffic bottleneck. All of the signals, as well as the emotions, have to pass through it. When under stress and under emotional strain, the neck starts to accumulate and jam the tension. Unconsciously, the neck muscles tighten, attempting to block out pain. Keeping the neck soft will help Chi flow to the higher center that is located in the brain, keeping the mind and body in harmony together.

Tension in the neck can make you less courageous. When the neck is tense, it will block self expression in the throat. With proper flow of Chi energy, we can express ourselves appropriately at the proper time, place, and in a proper way.

The neck is the passageway of many meridians and is the channel of the Chi energy of the organs. In the middle is the Governor meridian. On the sides are the bladder meridian, the triple warmer meridian and the large intestine meridian. The emotions passing through the meridians of the neck may tense and jam up there.

Emotion:	Organ/Associate Organ:
Anger	Liver/Gall Bladder
Fear	Bladder/Kidneys
Grief	Large Intestine/Lungs
Hastiness	Heart/Small Intestine/Triple Warmer
Worry	Spleen/Stomach/Pancreas

B. Bring Chi Energy to the Hands

Do the procedure for bringing energy to the hands and contract the front of the anus.

C. Whole Neck

Spread your thumbs apart from your other fingers. Alternating hands, rapidly wipe the neck from the chin to the base nine to thirty-six times.

D. Middle Neck

Alternating hands, use the middle three fingers to rapidly wipe down the middle of the neck from the chin to the base nine to thirty-six times. The thyroid and parathyroid glands are in the front section of the neck. Use your thumb and the three other fingers to massage these glands. Find the painful points and massage them until you feel them open. Massaging this area will help to increase metabolism and the power of speaking.

Fig. 39 *Wipe the Neck from the Chin to the Base*

E. Turtle Neck

Sink your chin down, then out and up. Feel your spine press down and then expand. This will help loosen the vertebrae and discs of your neck.

F. Crane Neck

Move your chin forward, circling out, then down, then up, and out again. Feel your spine expand and then contract.

G. Massage the Neck

Massage the points along the back of the neck and on the back along the cervical vertebrae. Start from the shoulders and go up to the base of the skull. Use your fist to hit along the neck. Find any painful spots and any tense spots and massage until they are released. This will greatly help to release the tension of the neck and help to detoxify the toxic accumulations in the neck area, the causes of many headaches.

Fig. 40 *Turtle Neck*

Fig. 41 *Crane Neck*

Fig. 42 *Massage the Points Along the Neck*

Shoulders

Many people feel tense and worried, and their shoulders are tight and held up. The way to release the tension is by pulling up your shoulders to press against the neck, tightening the muscles of the neck and shoulders. Hold for a while, exhale deeply, and let them drop down, pulled by gravity like a sack of potatoes. Feel the burden, worry, and stress drop down to the feet and out to the ground. Feel yourself grounded. Do this three to nine times, and the tension and worry will go away.

Relax your shoulders and chest, exhale and release more, until you feel the tenseness gone.

Fig. 43 *Dropping the Shoulders will Help to Release Tension and Worry.*

Detoxifying Organs and Glands

Lightly slapping and tapping over the organs and glands help to shock the toxic sediment and increase the circulation and Chi flow to these areas. Our practitioners claim they are able to heal themselves from many chronic illnesses which are very hard to heal by conventional medicine.

I. Thymus Gland

The thymus gland controls the immune system and is related to longevity. Normally the thymus gland atrophies after childhood. In the higher levels of Taoist practice, the thymus gland can be regrown. This helps maintain health and vitality and supports greater spirituality. Thumbing the thymus gland can help increase the activity and release more hormones.

A. Bring energy to your hands by the usual procedure, contracting the front of the anus and bring the Chi toward the thymus.

B. Make a fist, inhale and thump down the middle of the upper chest from the collar bone to the nipples six to nine times. Do not talk while you are doing this or you might harm yourself.

Fig. 44 *Hitting the Thymus Gland*

II. Heart

Lightly slapping an organ stimulates the release of toxins, which allows the organ to rebuild and repair itself. In doing these exercises, be aware that the slapping or tapping should be adjusted by you so as not to use excessive force which may be harmful.

A. Do the energy to hands procedure, contracting the left side of the anus and bringing Chi toward the heart.

B. Slap your heart lightly with your palm six to nine times. Don't speak.

III. Lungs

A. Bring energy to your hands, contracting the right side of the anus and bringing Chi to the lungs.

B. Using your palm, slap up and down your right lung, hitting only as hard as is comfortable. Do not talk. Contract the left side of your anus and slap your left lung. This can help to clean out the mucous and to clean out the lungs.

Fig. 45 *Slap at Heart, Lungs and Liver Areas*

IV. Liver

A. Bring energy to the hands, contracting the right side of the anus and bringing Chi to the liver.

B. Using your palm, slap below the rib cage on the right side. Don't speak. This can help to detoxify the liver.

V. Stomach, Spleen, Pancreas

A. Bring energy to your hands, contracting the middle of the anus.

B. Contract the anus at the left side, and slap at the spleen, pancreas and stomach. Place one palm on top of the other and rub below the rib cage, from center to left, then left to center.

Fig. 46 *Rub the Stomach, Spleen and Pancreas*

Fig. 47 *Rub Back and Forth over the Liver, Stomach and Spleen*

VI. Large and Small Intestines

A.Bring energy to the hands, contracting the entire anus.

B. Small intestine: With palms together, rub a small circle around your navel, first clockwise, then counterclockwise.

The small intestine is one of the longest tubes in the digestive system. A careless diet, too much hot food or dairy products, or too little fibrous food will create mucous that will stick to the walls of the intestine, block the absorption of nutrients and slow down digestion. Once mucous accumulates, it is like a snow ball that will get bigger and bigger, eventually becoming a lump which slows down the traffic of the digestive system.

C. Large intestine: Place one palm on top of the other and rub your abdomen in a large circle. Start on the lower right side and rub up and around in a clockwise direction. This will move the energy in the intestine and relieve constipation. For diarrhea, rub counterclockwise. If you have normal elimination, rub in both directions. These exercises increase the absorption and dissolve the accumulations that stick to the large intestine's wall.

Fig. 48 *Hitting the Sacrum Can Help in Strengthening the Sciatic Nerves*

VII. Kidneys

The kidneys act as helping to filter out waste material from the blood. If there is too much waste in the system, the kidneys cannot filter it all. The waste will tend to collect in the ducts and tubules of the kidneys, impairing their health. By hitting the kidneys' area, we shake out the harmful sediment and help prevent kidney malfunction.

A. Bring energy to the hands, contracting the left and right sides of the anus.

B. Locate the kidneys just above the lowest, or floating, rib in the back on either side of the spine. Make a fist and hit the kidneys with the back of the fist between the wrist and knuckles. Alternate hands and hit only as hard as is comfortable. This will help to shake loose the sediment, crystals, and uric acid that get caught in the kidneys. This will also strengthen the kidneys and relieve back pain.

C. Rub your hands together to warm them. Then rub your palms up and down over the kidneys until they feel warm.

VIII. Sacrum

In the Taoist system the sacrum is regarded as extremely important. It is a pump which helps to bring spinal fluid and energy (Chi) to the brain. It is also the junction where the sexual organs, rectum, and legs meet. Sciatic pain, which shoots down the legs, originates in the sacrum; therefore, strengthening it will release this intense pain.

A. Bring energy to the hands, contracting the back of the anus to the sacrum.

B. Make a fist and use your knuckles alternately to hit both sides of the sacrum. First hit in the area of the eight sacral holes, and then the hiatus, the depression at the bottom of the sacrum.

Fig. 49 *Hitting the Kidneys will help to Shake Out Sediment*

Knees and Feet

I. Knees are Toxin Collectors

Toxins tend to collect in the lower limbs because of the slowdown of the circulation due to gravity. The most common places are the back parts of the knees. Slapping at these places will break down the toxins. The body will then eliminate the toxins out of the body by urine, bowel movements and sweat.

A. Bring Chi Energy to the Hands

Bring energy to the hands; do no contractions.

B. Behind the Knees

Prop your leg up on a chair or low table so the knee is straight. Then slap smartly behind the knee nine to eighteen times. Although it hurts, it is extremely beneficial in releasing toxins which accumulate there. This release may be indicated by the appearance of a purple dot. Use discretion as to how hard you slap, since it can be overdone. Repeat this exercise on the other knee.

Fig.50 *Slapping Smartly behind the Knee Helps to Release Toxins*

Fig. 51 *Massaging the Knee Cap*

C. Knee Cap Massage

Massage the knee cap until it is warm, There is very little blood flowing to it and it tends to be quite vulnerable. This practice strengthens it. Massage the other knee cap.

D. Move the Knee Caps

Relax the knee caps, then move them up and down to the left and right and around both clockwise and counterclockwise.

E. Massage the Knees

Falling down is often caused by weak knees. Massaging the knees will improve your stability and flexibility.

II. Feet: Roots of the Body

Strong feet and tendons increase your stability by connecting you to the healing energy of the earth. Feet are the reflexes of the whole body's organs, glands and limbs. (They are like remote controls. Massaging will help to stimulate the organs and glands and increase the circulation.

A. Bring Chi Energy to the Hands

Bring energy to the hands; do no contractions.

B. Massage the Feet

Take off your shoes and stockings and massage the tops and bottoms of each foot with your thumbs and fingers. Be sure to massage the kidney point, the sore spot in the center between the ball of each foot and the adjoining pad. If you are in a hurry, massage the whole of each foot once by rubbing the sole of the foot vigorously and carefully across the top of the other foot, going from the heel to the arch to the toes. The soles of the feet have energy meridians to the entire body. Massage the feet, and when you find painful points massage them until the pain goes away. This will help to clear any blockage of Chi channel flow.

Fig. 52 *Feet are the Reflexes of the Whole Body's Organs, Glands and Limbs*

C. Spread Out the Toes

Spread out and separate all the toes, especially the little toes, and then release. Repeat six to nine times. This is especially good for the tendons of the feet.

Fig. 53 *Separate all the Toes by Spreading them out.*

D. Big and Second Toes

Rub the big toes and second toes together rapidly. This a good exercise to do at odd moments during the day.

E. Rub Feet Together

Keep the feet warm by rubbing them together. This will help to stimulate all the body's organs.

Cosmic Self-Massage

Taoist Way of Rejuvenation

Mantak Chia

Illustrations by Udon Jandee

Cosmic Self-Massage

In this booklet Virtually all Western massage is massage primarily of the muscles. Whatever its virtues, Western massage is altogether different from Chi Massage. Tao Rejuvenation employs one's own internal energy, Chi energy, to strengthen and rejuvenate the sense organs—eyes, ears, nose, tongue, teeth and skin—and the inner organs.

The techniques used by Taoists are some five thousand years old and, until very recently, were closely guarded secrets passed on from a Master to a small group of students. Often, too, each Master knew only a small part. Now Master Chia has pieced together the entire system of Chi Massage in a logical sequence in such a way that once you have it shown to you, you need only five or ten minutes of practice daily.

In short order you will note improvement in complexion, taste, vision, hearing, sinuses, gums, teeth, tongue, the internal organs and general stamina.

Cosmic Six Healing Sounds

Theory

Having accessed the knowledge of the universe through internal practices, the Taoist masters discovered that each healthy organ is associated with a particular sound, color, and quality of energy. Emotional problems, pollution, poor food, injuries, and overly strenuous exercise can overheat the internal organs. causing them to weaken. This changes the state of each organ's sound frequency, color, and energetic quality. The Six Healing Sounds practice help to restore, balance, and cleanse the vital organs by correcting these factors. They also stimulate the Chi flow throughout the body to enhance one's overall health and vitality.

The Cosmic Six Healing Sounds help to release any excess heat that may be trapped in the cooling sacs which surround each organ. As you assume the postures and produce the sounds sub-vocally, their vibrations redistribute any excess heat into cooler regions of the body where this can safely be stored or used. Once the organ energies are balanced, you have a good foundation for establishing and nurturing the virtue energies. This will help to maintain the Chi balance throughout the system.

What causes an organ to malfunction? There are many causes. Urban society creates a life full of physical and emotional stresses such as overcrowding, pollution, radiation, junk food, chemical additives, anxiety, loneliness, bad posture, and sudden or overly vigorous exercise. Separately and together, these stresses produce tension and start to block the free passage of enegy flow in the body, thus the organs overheat. In addition, the concrete jungle that we live in lacks the safety valves provided by nature: trees, open spaces, and running water, which give forth a cooling, purifying energy. Continued overheating causes an organ to contract and harden. This impairs its ability to function and results in illness. One of the surgeons working with the Universal Tao Center in New York reports that the hearts of patients who have died of heart attacks look as if they've been cooked! And the ancient Taoists have a saying: "Stress cooks your brain".

Chinese medicine teaches that each organ is surrounded by a sac or membrane, called fascia, which regulates its temperature. Ideally, the membrane releases excess heat out through the skin, where it is exchanged for cool life force enegy from nature. An overload of physical or emotional tension causes the membrane, or fascia, to stick to the organ so that it cannot properly release heat to the skin nor absorb cool energy from the skin.

The skin becomes clogged with toxins and the organ overheats. The Sounds speed up the heat exchange through the digestive system and the mouth. The digestive system is more than 20 feet long and runs from the mouth to the anus as one pipe in the middle of the body in between all the organs. It helps release excess heat from the fascia, cooling and cleansing the organs and skin. When all the sounds and postures and done in the proper order, body heat is evenly distributed by the intestinal tract throughout the whole body, and each of the organs is at its correct temperature.

Daily practice of the Six Healing Sounds wil restore and maintain calmness and good health. Greater sexual pleasure and improved digestion will occur. Minor ailments, such as cold, flu, and sore throats, can be prevented or thrown off easily. Many students of The Universal Tao have overcome their long-standing dependence on sleeping pills, tranquilizers, aspirin, and antacids. Heart attack victims have prevented further attacks. Several psychologists have taught some of their patients to use the Six Healing Sounds to relieve depression, anxiety or anger; and body work oriented healers have used the Six Healing Sounds to help speed up healing, and the healer spends less of his own life force energy.

Each of the six organs in the practice has an associate organ which responds together with it and in the same manner. When an organ is weak or overheated, its paired organ is similarly affected. Likewise, practicing the appropriate healing sound and posture improves the organ and its associate.

***Note**:* Typical side effects of these practices are yawning. burping, or passing wind, all of which are beneficial as indicators of moving energy.

Practice

First Cosmic Healing Sound: Lung Sound

The Lung Sound is a metal sound. It sounds like the vibration of a bell and activates the lung Chi.

Associated Organ: Large Intestine
Element: Metal
Season: Autumn
Color: White
Emotions: Grief and Sadness
Virtues: Courage and Righteousness
Related Senses: Smell (Nose) and Touch (Skin)
Taste: Pungent
Related Parts of the Body: Chest, Inner Arms, Thumbs
Sound: ***Sssssssss*** (Tongue behind Teeth)

Exercise:

1. Sit with your back straight, your hands resting on your lungs, and your eyes closed. Smile down to your lungs. Be aware of the quality of the energy in the lungs. Picture a white light, fresh and pure like the energy of the mountains and hear the metal sound.

2. Take a deep breath, open the eyes and raise your arms out in front of you with the palms facing the lungs. When the hands are at eye level, begin to rotate the palms, bringing them above your head until they face up and are pushing outwards. Point the fingers toward those of the opposite hand. Keep the elbows rounded out to the sides, and do not straighten your arms.

Close the jaws so that the teeth gently meet and part the lips slightly as you slowly exhale through your teeth the sound "***Sssssssss***". In the beginning, you can produce the Lung Sound out loud, but eventually you should practice it sub-vocally.

Fig. 1 *Become aware of the Lungs.*

Feel that the sound starts to move the Chi in the lungs, and that any excess heat and toxins are expelled from the lungs as the sacs surrounding the lungs are compressed.

Fig. 2 *Gather the energy into the Lungs.*

Note: “Sub-vocally” means that you are vocalizing so softly that only you can hear the sound and feel the vibration inside the lungs. You must exhale slowly and fully. Also, the word “sacs” refers to the layers of tissue called fasciae, that surround every organ.

Fig. 3 *Do the Lung Sound.*

3. When you have exhaled completely, rotate the palms and scoop up the white light. Pour this light from the crown down into the lungs. Lower the arms and hold your hands before the lungs and radiate the bright white light, and courage into the lungs.

Fig. 4 *Bring the energy down to the Lungs.*

4. Rest, close your eyes and be aware of your lungs. Smile into them, and imagine that you are still making the Lung Sound. Feel the vibration of the sound moving and cleaning the energy in the lungs. Breathe normally, and see your lungs glowing with a bright white light. This will strengthen your lungs and activate courage in the lungs. With each breath, try to feel that fresh white metal energy is replacing the excess hot, toxic, and depressed energy.

Fig.5 *Cover the Lungs.*

5. Nurture good emotions. This is the most important part of this practice. Take as much time as you need to get in touch with the organs. When you get rid of the excess heat and let the white metal energy expand in the lungs, good emotional qualities will have room to grow. Concentrate on the feelings of righteousness and courage as you transform any sadness or grief. Sit up straight and tall so you can feel courage, and try to maintain the feeling of the Lung Sound for increasingly longer periods after each practice, and in your daily life.

6. Repeat the Lung Sound three to six times. For sadness, depression, colds, flu, toothaches, asthma, emphysema, or depression, you may repeat this exercise 6, 9, 12, or 24 times.

Fig. 6 *Mouth Position for Lung Sound. Close the jaws so that teeth meet. Draw the corners of the mouth back.*

Second Cosmic Healing Sound:Kidney Sound

The Kidney Sound is a water sound and it activates the kidney Chi.

Associated Organ: Bladder
Element: Water
Season: Winter
Color: Dark Blue
Emotion: Fear
Virtue: Gentleness, Calmness and Stillness, Alertness
Parts of the Body: Sides of the Feet, Inner Legs, Chest
Senses: Hearing (Ears), Bones
Taste: Salty
Sound: ***Chooooooooo*** (As when blowing out a candle: lips forming an "0")

Exercise:

1. Sit with your back straight, your hands resting on your kidneys, and your eyes closed. Smile down to your kidneys. Be aware of the quality of the energy in the kidneys. Picture a blue light, the sun shining on the ocean.

2. Take a deep breath, open the eyes and put your legs together, ankles and knees touching. Lean forward and clasp the fingers of both hands together around your knees. Pull your arms straight from the lower back while bending the torso forward (This allows your back to protrude in the area of the kidneys). Simultaneously tilt your head up as you look straight ahead, maintaining the pull on your arms from the lower back. Feel the pull on your spine. Round the lips, and slightly exhale with the sound "***Chooooooo***" as if you were blowing out a candle.

Simultaneously contract your abdomen pulling it in toward your kidneys. At first you can produce the Kidney Sound out loud, but eventually you should practice it sub-vocally. Feel that the sound starts to move the Chi in the kidneys; any excess heat and toxins are expelled from the kidneys as the sacs surrounding the kidneys are compressed.

Fig. 7 *Smile to the Kidneys.*

3. After you have fully exhaled, sit erect, separate the legs and move your arms up to the crown and scoop up the blue light. Pour this light over the body and into the kidneys. Lower your arms and hold the palms on the kidneys. Radiate the blue light, the gentleness, and stillness into the kidneys.

Fig. 8 *Do the Kidney Sound.*

4. Return your hands to your kidneys. Rest, close your eyes, and be aware of your kidneys. Listen to your kidneys. Smile to them, and imagine that you are still making the Kidney Sound. Feel the vibration of the sound is moving and cleaning the energy in the kidneys.

Fig. 9 *Bring the energy down to the Kidneys.*

Breathe normally, and see your kidneys glowing with a cool blue light. This will strengthen your kidneys and activate the gentleness and stillness in the kidneys. With each breath, try to feel that bright blue water energy is replacing the excess hot, toxic, and fear energy.

Fig. 10 *Gather the energy into the Kidneys.*

5. Nurture good emotions. This is the most important part of this practice. Take as much time as you need to get in touch with the kidneys. When you get rid of the excess heat and let the cool blue water energy expand in the kidneys, good emotional qualities will have room to grow.

Concentrate on the feelings of gentleness, stillness, and alertness as you transform any fear. Feel the gentleness relaxing also the lower back. Try to maintain the sensation of this energy for increasingly longer periods after each practice, and in your daily life.

Repeat the steps from three to six times. You may repeat this exercise more times to alleviate fear, fatigue, dizziness, ringing in the ears, or back pain.

Fig. 11 *Round the lips, making the sound one makes when blowing out a candle.*

Third Cosmic Healing Sound: Liver Sound

The Liver Sound is a wood sound and it activates the liver Chi.
Associated Organ: Gall Bladder
Element: Wood
Season: Spring
Color: Green
Emotion: Anger
Virtue: Kindness
Parts of the Body: Inner Legs, Groin, Diaphragm, Ribs
Senses: Sight (Eyes), Tears
Taste: Sour
Sound: ***Shhhhhhh*** (Tongue near Palate)

Exercise:

1. Sit comfortably with your back straight, your hands resting on your liver and your eyes closed. Smile down to your liver until you feel you are in touch with your liver. Be aware of the quality of the energy in the liver. Picture a forest, a big green forest. See the sun shining on the forest creating life force and green light.

2. Take a deep breath, open the eyes and extend your arms out to your sides, palms up. Slowly raise the arms from the sides to the crown, following this action with your eyes. Intertwine the fingers, and rotate your joined hands over to face the ceiling, palms up. Push up and out with the heels of the hands and stretch the arms out from the shoulders; the elbows should be pushing to the back.

Bend slightly to the left, exerting a gentle pull on the liver. Open your eyes wider because they are the openings of the liver. Slowly exhale out the sound "***Shhhhhhh***" loud and eventually sub-vocally. Feel the sound start to move the energy in the liver and that all excess heat and toxins are expelled from the liver as the sac around it is compressed.

Fig. 12 *Smile to the Liver.*

3. After you have fully exhaled, sit erect, separate the hands and scoop up the green light. Pour this light over the body and into the liver. Slowly bring your arms down, palms facing out, and scoop up more green light and hold both hands before your liver. Radiate the green light, the forest energy, and kindness in the liver.

Fig. 13 *Do the Liver Sound.*

4. Return your hands to your liver. Rest. Close your eyes and be aware of your liver. Smile and look in your liver and imagine that you are still making the Liver Sound. Feel the vibration of the sound is moving and cleaning the energy in the liver.

Fig. 14 *Scoop green light as the hands return to the Liver.*

Breathe normally, and see your liver glowing with the green rejuvenating light. This will strengthen your liver and activate kindness in the liver. With each breath, try to feel that bright green wood energy is replacing the excess hot, toxic, anger, aggression and frustration energy.

Fig. 15 *Gather energy into the Liver.*

5. Nurture good emotions. This is the most important part of this practice. Take as much time as you need to get in touch with the liver. When you get rid of the excess heat and let the warm, moist, green wood energy expand in the liver, kindness will have room to grow.

Concentrate on the virtue of kindness and forgiveness as you transform any anger and aggression. Feel warm and energetic, and maintain this feeling for as long as you can after practice.

6. Repeat the steps from three to six times. Practice more to expel anger, to clear red or watery eyes, to remove a sour or bitter taste, and to detoxify the liver.

Fig. 16 *Exhale on the sound "**Shhhhhhh**"*

Fourth Cosmic Healing Sound: Heart Sound

The Heart Sound is the fire sound and activates the heart energy.

Associated Organ: Small Intestine
Element: Fire
Season: Summer
Color: Red
Emotions: Hastiness, Arrogance, Cruelty
Virtues: Joy, Honor, Sincerity
Parts of the Body: Armpits, Inner Arms
Senses: Tongue, Speech
Taste: Bitter
Sound: ***Hawwwwww*** (Mouth wide Open)

Exercise:

1. Sit comfortably with your back straight, your hands resting on your heart, and your eyes closed. Smile down to your heart until you feel you are in touch with your heart. Be aware of the quality of the energy in the heart. Picture a sunset on the ocean, a red light.

2. Take a deep breath, open the eyes and take the same position as for the Liver Sound. Unlike the former exercise, however, you will lean slightly to the right to pull gently against the heart, which is located just left of the center of your chest.

Focus on your heart, and feel the tongue's connection to the open mouth, round the lips, and slowly exhale the sound "***Hawwwwww***" out loud and eventually sub-vocally. Feel the sound start to move the energy in the heart and that excess heat and toxins are expelled from the heart as the sac around it is compressed.

Fig. 17 *Do the Heart Sound.*

3. After you have fully exhaled, sit erect, separate the hands and scoop up the red light. Pour this light over the body and into the heart. Slowly bring your arms down, palms facing out. Scoop up more red light and hold both hands before your heart. Radiate the red light, the love, and inner joy into your heart.

Fig. 18 *Gather energy into the Heart.*

4. Return your hands to your heart. Rest, close your eyes and be aware of your heart. Smile to your heart and imagine that you are still making the Heart Sound. Feel the vibration of the sound is moving and cleaning the energy in the heart. Breathe normally, and see your heart glowing with a red fire light.

Fig. 19 *Smile into the Heart.*

This will strengthen your heart and activate love, inner joy, and sincerity in your heart. With each breath, try to feel that the warm red light is replacing the excess hot, toxic energy and any hastiness, arrogance, and hate in the heart.

Fig. 20 *Turn the senses into the Heart.*

5. Nurture good emotions. This is the most important part of this practice. Take as much time as you need to get in touch with the heart.

Fig. 21 *Loving energy grows in the Heart.*

Fig. 22 *When the heart is relieved of its daily load and stress, all the organs smile!*

When you gel rid of the excess heat and let the red fire energy expand in the heart, good emotional qualities will have room to grow. Feel love, joy, honor, and respect radiate outwards.

Feel any hatred, arrogance, or impatience transform into loving energy as sincerity, honor, and respect grow in your heart. Try to maintain the feeling of the Heart Sound as long as you can after practice.

6. Repeat the steps from three to six times. Practice more to relieve sore throats, cold sores, swollen gums or tongue, jumpiness, moodiness, and heart disease.

***Fig. 23** "**Hawwwwww**" Sound*

Fifth Cosmic Healing Sound: Spleen Sound

The Spleen Sound is the earth sound, activating the energy of the stomach, the pancreas, and the spleen.

Associated Organs: Pancreas, Stomach
Element: Earth
Season: Indian Summer
Color: Yellow
Emotion: Worry
Virtues: Fairness, Openness
Parts of the Body: Lips, Mouth
Senses: Taste
Taste; Sweet, Neutral
Sound: ***Whoooooo*** (From the Throat, Guttural)

Exercise:

1. Sit comfortably with your back straight, your hands resting on your spleen, and your eyes closed. Smile down to your stomach and spleen until you feel you are in touch with them. Be aware of the quality of the energy in the stomach and the spleen. Picture a yellow light, the golden satiated light of the Indian Summer, a stable light.

2. Take a deep breath, open the eyes, move the arms to the front and place the three middle fingers of both hands just beneath the sternum on the left side of the rib cage.

Look up and gently press your fingers under the rib cage, pushing your stomach or spleen to the back and your middle back out wards you exhale out loud, eventually sub-vocally, the sound "***Whoooooo***" This is more guttural, or "throaty" than the kidney Sound. Unlike blowing out a candle, this sound originates from with in the chest, rather than from the mouth.

Fig. 24 *Smile to the Spleen.*

Feel the Spleen Sound vibrate the vocal cords. Feel the sound start to move the energy in the stomach and the spleen and that all excess heat and toxins are expelled from the stomach and the spleen as the sac around them is compressed.

Fig. 25 *Fingers under the left Rib Cage Preparing to press on Spleen, Pancreas and Stomach.*

3. After you have fully exhaled, move the arms outwards, embracing the earth and scoop up the yellow light. Pour this light into the stomach and spleen. Bring the arms and the hands to the stomach and/or the spleen. Radiate the yellow light, the fairness, openness, and stability into the stomach and the spleen.

Fig. 26 *Feel the Spleen Sound Vibrate.*

4. Rest, close your eyes and be aware of your stomach and spleen. Smile to them and imagine that you are still making the Spleen Sound. Feel the vibration of the sound is moving and cleaning the energy in the stomach and the spleen.

Fig. 27 *Openesss and Fairness Grow in the Spleen.*

Breathe normally, and see your stomach and spleen glow with a yellow light. This will strengthen these organs and activate openness, fairness, and stability in your stomach and spleen. With each breath, try to feel that the warm yellow light is replacing the excess hot, toxic energy and any worries in these organs.

5. Nurture good emotions. This is the most important part of this practice. Take as much time as you need to get in touch with the stomach and the spleen.

When you get rid of the excess heat and let the yellow earth energy expand in the stomach and the spleen, good emotional qualities will have room to grow. Feel the fairness, openness, balance, and harmony grow in these organs, transforming any worry in them. Try to maintain the feeling of the Spleen Sound as long as you can after practice.

6. Repeat the steps from three to six times. Practice more to eliminate indigestion, nausea, and diarrhea.

Fig. 28 *Exhale on the sound "**Whoooooo**"*

Sixth Cosmic Healing Sound: Triple Warmer

The Triple Warmer refers to the three energy centers of the body: The upper section (brain, heart, and lungs) is hot; the middle section (liver, kidneys, stomach, pancreas, and spleen) is warm; and the lower section (large and small intestines, bladder, and sexual organs) is cool.

The sound "***Heeeeeee***" serves to balance the temperature of the three levels by bringing hot energy down to the lower center and cold energy up to the higher center. Specifically, hot energy from the area of the heart is moved to the colder sexual region, and cold energy from the lower abdomen is moved up to the heart's region.

Exercise:

1.Lie on your back or lean back in the chair. Smile, move your arms up and gather the Chi, and bring your arms and hands to your face. As you make the *"**Heeeeeee**"* sound on exhalation, let the arms slowly move down the body bringing the energy down from the crown to the feet.

2. Inhale fully into all three cavities: chest, solar plexus, and lower abdomen, and then exhale completely. Exhale with the sound "***Heeeeeee***" sub-vocally, first flattening your chest, then your solar plexus, and finally your lower abdomen. Imagine a large, roller pressing out your breath and move the hot energy down as the arms move from your head down to your lower Tan Tien.

3. Rest, and concentrate. When you have fully exhaled, focus on the entire digestive tract.

4. Repeat the steps from three to six times. Practice more to relieve insomnia and stress.

***Note*:** The Triple Warmer can be done lying down to facilitate falling asleep.

Fig. 29 *Rest by breathing normally and focus on the Triple Warmer Sound.*

Fig. 30 *Gather the energy from all three Levels.*

Fig. 31 *Send the energy down the body.*

Fig. 32 *Upper Level*

Fig. 33 *Middle Level*

Fig. 34 *Lower Level.*

Fig. 35 *Excess heat flows out of the fingertips and toes into the Earth.*

Fig. 36 *Do the Triple Warner Sound.*

Fig. 37 *All the way down the body with the* ***"Heeeeeee"*** *Sound.*

Fig. 38 *"**Heeeeeee**" Sound*

Fig. 39 *Rest and absorb the Cosmic Forces.*

Daily Practice

1. We recommend that you practice the Six Healing Sounds before going to bed at night to relax the body, promote good sleep, and cool down any organs that are overheated. You may also do these sounds to enhance any of the other Taoist exercises whenever you feel like practicing. Do three rounds of each sound to prevent illness and maintain good health. Once learned, the procedures take only ten to fifteen minutes to complete.

2. Clear out any negative emotions, and let positive emotions grow before you go to sleep. You may feel a sense of emptiness as you disengage from your own mental activity to connect with the Universal Consciousness. This will also help you to avoid bad dreams while sleeping, as your body recharges through its connection with the Universal Force. If you have any problems, stress, or illnesses this is the best time to allow the Universal Consciousness to help you find the solution or cure. When you awaken after sleep, smile inwardly, and look for answers within.

3. You can devote extra time to an organ when you feel troubled by it or its associated emotions. You may also emphasize extra practice for an organ during its particular season. For example, in spring you would spend more time on the Liver Sound.

4. The order of the Six Healing Sounds follows the progression of the seasons.

Starting with autumn, practice the Lung Sound, followed by the sounds of the kidneys, liver, heart, and spleen. Finish with the Triple Warmer Sound.

5. When you are feeling tired or depressed at work, practice the Six Healing Sounds. If you do not have time to do them all, just practice the Lung Sound and the Kidney Sound.

Cosmic Sounds

Sounds that Heal

Mantak Chia

Illustrations by Udon Jandee

Cosmic Six Healing Sounds

The Sounds that Heal are the Six Healing Sounds and related postures helping to restore, balance, and cleanse the vital organs. They also stimulate the Chi flow throughout the body to enhance one's overall health and vitality. The Cosmic Six Healing Sounds and their postures help to release any excess heat that may be trapped in the cooling sacs which surround each organ. This booklet will show you how to assume the postures and produce the sounds sub-vocally; their vibrations redistribute any excess heat into cooler regions of the body where it can safely be stored or used. Once the organ energies are balanced, you have a good foundation for establishing and nurturing the virtue energies. This will help to maintain the Chi balance throughout the system.

Practice of the Cosmic Six Healing Sounds will restore and maintain your calmness and good health. Greater sexual pleasure and improved digestion will occur. Minor ailments, such as colds, flu, and sore throats, can be prevented or thrown off easily. Several psychologists have taught some of their patients to use the Cosmic Six Healing Sounds to relieve depression, anxiety or anger; and body work oriented healers have used the Six Healing Sounds to help speed up healing, and the healer spends less life force energy.

About the Authors

Mantak Chia

Master Mantak Chia

Master Mantak Chia is the creator of the Universal Healing Tao System and is the director of the Universal Healing Tao Center and Tao Garden Health Resort and Training Center in the beautiful northern countryside of Thailand. Since childhood he has been studying the Taoist approach to life. His mastery of this ancient knowledge, enhanced by his study of other disciplines, has resulted in the development of the Universal Healing Tao System which is now being taught throughout the world.

Mantak Chia was born in Thailand to Chinese parents in 1944. When he was six years old, Buddhist monks taught him how to sit and "still the mind." While still a grammar school student, he learned traditional Thai boxing. He was then taught Tai Chi Chuan by Master Lu, who soon introduced him to Aikido, Yoga and broader levels of Tai Chi.

Years later, when he was a student in Hong Kong excelling in track and field events, a senior classmate named Cheng Sue-Sue introduced him to his first esoteric teacher and Taoist Master, Master Yi Eng (I Yun). At this point, Master Chia began his studies of the Taoist way of life in earnest. He learned how to circulate energy through the Microcosmic Orbit and, through the practice of Fusion of the Five Elements, how to open the other Six Special Channels. As he studied Inner Alchemy further, he learned the Enlightenment of the Kan and Li, Sealing of the Five Senses, Congress of Heaven and Earth and Reunion of Heaven and Man. It was Master Yi Eng who authorized Master Chia to teach and heal.

When Mantak Chia was in his early twenties he studied with Master Meugi in Singapore, who taught him Kundalini, Taoist Yoga and the Buddha Palm. He was soon able to clear blockages to the flow of energy within his own body. He learned to pass the life force energy through his hands also, so that he could heal Master Meugi's patients. He then learned Chi Nei Tsang from Dr. Mui Yimwattana in Thailand.

A while later, he studied with Master Cheng Yao-Lun who taught him the Shao-Lin Method of Internal Power. He learned the closely guarded secret of the organs, glands and bone marrow exercise known as Bone Marrow Nei Kung and the exercise known as Strengthening and Renewal of the Tendons. Master Cheng Yao-Lun's system combined Thai boxing and Kung Fu. Master Chia also studied at this time with Master Pan Yu, whose system combined Taoist, Buddhist and Zen teachings. Master Pan Yu also taught him about the exchange of Yin and Yang power between men and women, and how to develop the Steel Body.

To understand the mechanisms behind healing energy better, Master Chia studied Western anatomy and medical science for two years. While pursuing his studies, he managed the Westetner Company.

Using his knowledge of Taoism, combined with the other disciplines, Master Chia began teaching the Universal Healing Tao Sys-

tem. He eventually trained other Instructors to communicate this knowledge and he established the Natural Healing Center in Thailand. Five years later, he decided to move to New York, where in 1979, he opened the Universal Healing Tao Center. During his years in America, Master Chia continued his studies in the Wu system of Tai Chi with Edward Yee in New York.

Since then, Master Chia has taught tens of thousands of students throughout the world. He has trained and certified over 1,500 instructors and practitioners from all over the world. Universal Healing Tao Centers, Chi Nei Tsang Institutes, Cosmic Healing Forums and Immortal Mountain Sanctuaries have opened in many locations in North America, Europe,South America, Asia, Africa and Australia.

In 1994, Master Chia moved back to Thailand, where he had begun construction of Tao Garden, the Universal Healing Tao Training Center in Chiang Mai.

Master Chia is a warm, friendly and helpful man who views himself primarily as a teacher. He presents the Universal Healing Tao System in a straightforward and practical manner, while always expanding his knowledge and approach to teaching. He uses a word processor for writing and is totally at ease with the latest computer technology.

Master Chia estimates that it will take fifty books to convey the full Universal Healing Tao System. In June 1990, at a dinner in San Francisco, Master Chia was honored by the International Congress of Chinese Medicine and Qi Gong (Chi Kung), who named him the Chi Kung Master of the Year. He is the first recipient of this annual award.

In December 2000, the Tao Garden Health Resort and Universal Healing Tao Training Center was completed with two Meditation Halls, two open air Simple Chi Kung Pavilions, indoor Tai Chi, Tao Tao Yin and Chi Nei Tsang Hall, Tai Chi Natural Swimming Pool, Pakua Center, Internal World Class Weight Lifting Hall and complete Eight Court Recreational Facilities.

In February 2002, the Immortal Tao practices were held at Tao Garden for the first time using the Dark Room technology creating a complete environment for the higher level Taoist practices.

In September 2003 Master Chia opened the Tao Garden Holistic Medical Spa using Western and Eastern Technology with Traditional Thai Massage, India Aveda Therapies and Chinese Chi

Nei Tsang Massage. The Spa is supervised by trained and certificated Medical Doctors, MDs with Holistic Degrees providing Colonic Therapy, Stem Cell Cancer Prevention and Natural Cancer Cure Treatments.

In March 2004 the Complete Holistic Mind, Body and Spirit Training was introduce at Tao Garden.

In July 2009 Master Chia introduced the Five Star Eight Forces Detox Spa with Saunas, Therapy Color Heated Pool, Jacuzzi, and Internal Massage Treatments. This was also introduced with Raw Food and Fasting Program with Organic Juice Bar.

In September 2010 the Universal Healing Tao Instructors celebrated thirty years of Master Chia's teaching with the Tao Congress at Tao Garden having over 200 instructors present for the celebration.

Master Mantak Chia has previously written and published these forty-three Universal Healing Tao books:

Awaken Healing Energy of the Tao 1983 - published by Aurora Press
Taoist Secrets of Love co-authored with Michael Winn 1984 - published by Aurora Press

W. U. Wei

Born after World War I, growing up in the Midwest area of the United States, trained in Catholicism; this student of the Tao started studying under Master Mantak Chia in the early 1980s and in the later 1980s became a Senior Instructor of the Universal Healing Tao (specializing on one on one training). In the early 1990s this Senior Instructor moved to Tao Garden, Thailand, and assisted Master Mantak Chia in building Tao Garden Taoist Training Center. For the next six years this student of the Tao travelled to over 30 countries teaching with Master Mantak Chia and serving as Marketing and Construction Coordinator for the Tao Garden. Upon completion of Tao Garden in December 2000 he became Project Manager (Winter) for the all Universal Tao Publications and products (coordinating the completion of an additional 35 titles). With the purchase of a mountain having four waterfalls in Southern Oregon, USA (late 1990s) this practitioner is presently (Summer) completing a Taoist Mountain Sanctuary for Personal Cultivation, Higher Level Practices and Ascension. The co-author of ***"Living in the Tao"***, the 360 Taoist poems from over 1,200 poems ***"Emerald River"*** expressing the feeling, essence and stillness of the Tao; and co-creator of the Universal Tao formula cards, "Chi Cards" (6 sets of over 240 formulas) & book form with Master Mantak Chia under the pen name the "The Professor - Master of Nothingness", the Myth that takes the Mystery out of Mysticism. William U. Wei also known as Wei Tzu is a pen name for this instructor so the instructor can remain anonymous and can continue to become a blade of grass in a field of grass.

Acknowledgments

The Universal Tao Publications staff involved in the preparation and production of ***Cosmic Nutrition - Taoist Understanding, Lifestyle & Longevity*** extend our gratitude to the many generations of Taoist Masters who have passed on their special lineage, in the form of an unbroken oral transmission, over thousands of years. We thank Taoist Master I Yun (Yi Eng) for his openness in transmitting the formulas of Taoist Inner Alchemy.

Thanks to Juan Li for the use of his beautiful and visionary paintings, illustrating Taoist esoteric practices.

We offer our eternal gratitude to our parents and teachers for their many gifts to us. Remembering them brings joy and satisfaction to our continued efforts in presenting the Universal Healing Tao System. For their gifts, we offer our eternal gratitude and love. As always, their contribution has been crucial in presenting the concepts and techniques of the Universal Healing Tao.

We wish to thank the thousands of unknown men and women of the Chinese healing arts who developed many of the methods and ideas presented in this book. We offer our gratitude to Bob Zuraw for sharing his kindness, healing techniques, inspiration and Taoist understandings without whom the book would not have come to be.

We wish to thank Bob Lewanski for his editorial work and writing contributions. We appreciate his research and great labor. We wish to thank Udon Jandee for his artisic contributions, as well as his ideas for the cover. As well as thanking our fellow Instructors, Colin Drown and Shashi Solluna, for their insightful contributions to the revised edition of various sections and proof reading of this book.

A special thanks goes to our ***Thai Production Team*** for their cover illustration and book design and layout: Hirunyathorn Punsan, Computer Graphics; Saysunee Yongyod, Photographer; Udon Jandee, Illustrator; and Saniem Chaisam, Production Designer.

Words of Caution

The practices described in this book have been used successfully for thousands of years by Taoists trained by personal instruction. Readers should not undertake the practice without receiving personal transmission and training from a certified instructor of the Universal Healing Tao, since certain of these practices, if done improperly, may cause injury or result in health problems. This book is intended to supplement individual training by the Universal Healing Tao and to serve as a reference guide for these practices. Anyone who undertakes these practices on the basis of this book alone, does so entirely at his or her own risk.

The meditations, practices and techniques described herein are **not** intended to be used as an alternative or substitute for professional medical treatment and care. If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training.

Neither the Universal Healing Tao nor its staff and instructors can be responsible for the consequences of any practice or misuse of the information contained in this book. If the reader undertakes any exercise without strictly following the instructions, notes and warnings, the responsibility must lie solely with the reader.

This book does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Introduction

The ancient sages and philosophers have long ago discovered the secret of regeneration. Man searches for outward cures when all the time the riddle of health lies within, by living in harmony with the natural laws of the universe.

From the health teachings passed down to our time has come the momentous discovery that the premature aging process which so quickly mars the human body is not Divinely caused; it is a chronic disease, caused by bad living habits.

Regarding aging as a disease or the breaking of natural health laws which create chronic conditions, it follows that the aging process must be subject to the universal law of cause and effect. To stop the symptoms of aging, which are sickness and decrepitude, remove the causes and the effects cannot come. At the present writing of the ancient secrets as laid down in this book, most, if not all the causes of aging and disease seem to have been clearly worked out. Most importantly of all, every one of these known causes is found to be preventable.

A fact long known to science is that the living tissue cells of our bodies are constantly wearing out and being replaced by new ones. The ancient sages, however, maintained that all human tissue is entirely renewed within seven years. If this is so, it means that every human body is actually a new body every seven years; and moreover, that if our bodies could be protected from the conditions which we know gradually bring about aging, they could live on indefinitely, barring accidents, in changeless youth and strength. By natural analogy it would appear that no human or other body could be expected to live forever, even if all the secrets of life were known to science. All things have a certain time during which they exist on the earth. If a man's time to stay is over, he will have to die. But many die before their time is over, not by a visitation of Providence, but because they are ignorant of the laws controlling their nature.

Life could be indefinitely prolonged if the problem of intestinal auto-intoxication could be solved and the two hundred year man could be as a probable result of the science of the immediate future.

We must all learn from nature, our supreme teacher, and never subject ourselves to any fanatical, rigidly enforced one-sidedness.

Air, sun, water, food, exercise, fasting, sleep and relaxation are all necessary and natural rejuvenating factors, each of equal value, each complimented and completing the others. It is our everyday task and duty to make use of them, at the right time and place, so that our vitality be strengthened, our health promoted, our well-being increased, and our ability to work preserved until the end of our days. If we carry out nature's plan properly, we shall not meet with an early, unnatural end thrust upon us by illness; we shall rather fade away in old age, without pain or torment of death, like a candle extinguishedand find eternal peace.

Medical science as a body, however, is still skeptical about procedures designed to prolong youth or rejuvenate aging. But this need not be taken as discouraging. The history of medicine and science teems with records of organized opposition to new and revolutionary developments. The accepted medical and scientific attitude toward such things has always had and always will have three states: First, it ignores them. Secondly, it becomes sarcastic and irritated about them. Thirdly, it accepts them and forgets that it has not always done so. But this organized resistance to new things works also for the good, in that it warns and protects, so far as it can, the innocent citizen against licensed fraudulent doctors and other advertising quick cure con men. These dishonest quacks should not be mistaken for the honest health practitioner or decent doctor.

Let us be warned by the mistakes of our scientific past and try to be open-minded, but not credulous toward this ancient and up-to-date knowledge of prolonging youth, preventing disease and creating a state of super health; remembering that the present advancement of science admonishes us against defining limits to possible human longevity, and more and more supports the words of an anicent sage written two thousand years ago that man does not die; he kills himself.

Your future health depends upon your daily personal habits of eating, living and thinking today. Reflect upon this ancient wisdom: If you will pay the small price now in learning and disciplining your body, mind and spirit, you will soon come to experience the joy of living in its truest sense.

This comprehensive health program should serve a very useful purpose both in securing better nutrition for those in need of it, and as a practical philosophy for those seeking a better way of living.

This book can be heartily commended for both the old and young, rich and the poor. Ones station in life does not change their biological, emotional, mental and spiritual needs. In fact, success and happiness is almost guaranteed when a wholesome attitude toward health, nutrition and a more natural lifestyle is adopted.

In the following pages you will learn not only the ancient and modern secrets of prolonging youth, preventing disease, building health and superior nutrition, but also the philosophy behind wholesome living. The final section contains invaluable information on attaining inward calm for mental and spiritual happiness and success in life. This philosophy is a practical and positive method toward attaining peace of mind, emotional stability and a vibrant state of health. What you want in life it will seek you, but when it comes, it is up to you to seize it.

Awaiting you is a rare experience. You will find this book like a passport to a wonderful new style and attitude of life. It is strange that science has largely neglected studying those of advanced age. It would seem that if more were known about the habits of those who reach 100, physicians could better advise those of us aspiring to such an age. Common sense dictates that long life must be more than chance and happenstance. There must be a combination of factors which increase man's chances for living to an advanced age, and the sooner this formula becomes common knowledge, the longer many of us can hope to survive. To that extent do diet, exercise, outside interests, and family inheritance contribute to man's length of life. Governments have given many grants for studies on various aspects of health and aging. But to date there has never been a major study to discover what factors may have contributed to longevity of our eldest citizens.

Here in this enlightening, inspiring and informative book you will discover the formulas and secret teachings that have been taught through-out the ages. This book is destined to become a classic in its field. It bridges the gap between Eastern Philosophy and Western Science. For the first time, in one volume, you will be given specific step-by-step instructions of exactly what you can do, with complete confidence, to help yourself and your loved ones to a superior way of living-and build a long, useful, satisfying life of health, success and happiness far into advanced age.

This creative book thus treats ancient health teachings in a new light, and new ideas from a unique but authentic point of view. You

cannot fail to be impressed by the sincerity, the bold directness, and the rare combination of simplicity and mastery of subject that the authors reveal as the result of years of experience, research, observation and practice in the natural health, new age psychology, spiritual and physical culture fields.

Persistent research and study into the vast mysteries of health, from all parts of the world, enables you to master any of your respective afflictions and you can accomplished it with the most gratifying results through correct nutrition. So can you, if you properly apply the physical, mental and spiritual teachings as set forth in this book. You will be introduced to proven principles, the personal application of which can literally transform your life for the better. With these safe teachings you can progress as far as you wish to go in regaining or maintaining superb health, beauty, strength and fitness.

And these Cosmic Nutrition secrets are all so simple and easy to follow. Every day that you apply these health teachings, you will build and improve your well-being. So why not start today, right now, and decide that you too can benefit by all of the wonderful restorative methods these authors reveal and discover for yourself what a dramatic transformation they will bring into your life.

Realize, health is a condition you have to personally earn for yourself. No one can do it for you. You must create your own conditions of health and physical fitness. Instead of merely treating disease, here are confidential disclosures showing you how to build the kind of magnificent health you are entitled to possess. However, in fairness to yourself, decide to apply these life principles faithfully, patiently, persistently and joyously. Stick to these advanced teachings with conviction. Believe and know that all will be well for you over a long and richly rewarding life. Because nothing else can pay you so well.

All the teachings in this tremendous volume have been fully endorsemented and complete approvaled through time tested understandings. And it is a genuine pleasure to unhesitatingly recommend that you adopt these Cosmic Nutrition rejuvenation teachings and make them a vital part of your life.

Decide to wisely join in this great, growing, popular, new, better and more satisfying way of living. Then let others marvel at the results you have achieved. May the Tao be with you and use the three greatest words in the English Language, ***"Do It Now!"***

Chapter 1

Philosophy of Health

Healthy People make Healthy Nations

When you been feeling below par with no energy, vitality, zest for living you wonder why. You are always tired throughout the day and you have to drag your weary, exhausted body out of bed mornings lacking that driving force during the day. You need ten cups of coffee to keep you going from morning until night and you are plagued with constant headaches, colds, aches, pains and sick nauseated feelings. We all have the desire to be healthy. Unfortunately, many people believe that they cannot live a life without disease, thinking a healthy, vibrant life is impossible, and give up in despair.

Approximately 2% of the people think logically for themselves, 8% of the people think when in pain and suffering and 90% would rather die than think. It is generally believed that sound health arises out of thin air, and that practically nothing can be done about it. With this apathetic public attitude toward personal health and physical fitness, is it any wonder why so few individuals radiate good health. There must be a cause for all of this suffering and disease. Observe closely what people are consuming in the name of food.

You will find them consuming tons of white sugar, white flour and it's products, salt, oils, fried foods, canned foods, TV dinners, cakes, pop, candy, alcohol, meat, cigarettes, spices, drugs and chemically treated food in boxes and packages. Nothing more needs to be said.

Cancer and other degenerative diseases are steadily on the rise. Forty years ago one out of 17 died of cancer; in 1980, that ratio narrowed to one out of five. Volumes could be written on the decaying health of civilized nations, but it would only clutter up this book. Our primary purpose is to inspire and encourage people, not to discourage them.

The ancients speak of regeneration (renewing youth) by living in accordance with universal law, the Tao. The wise person of today will also maintain youthful health and prevent disease as taught by these ancient cultures.

Health is your Natural Birthright

The individual who is in excellent health has a smile on his face, while the sick person wears a frown. Good health carries with it poise, power self-confidence, courage and success. Poor health leads to irritability, weakness, lack of confidence, fear and failure.

Good health develops personal attractiveness, for nothing adds so much to the appearance of men or women as a wholesome condition of mind and body. The person who is well can concentrate upon their work and can keep at it day after day with no sense of fatigue, depression, or discouragement. The person in ill health works spasmodically and is unable to bring to their work that energy and enthusiasm that begets success and fortune.

We are Truly a Civilized Nation

Observing the overall health of Americans today, disease is on the increase. Mental and nervous disturbances, heart disease, TB, MS, diabetes, kidney and liver disease, cancer, blood disorders, poor eyesight, etc. are evidenced more than ever before.

The Americans lead the world in science and technology, but our average life-span is only 60 to 70 years, far below that of healthful living people. Sickness and suffering affect almost the entire population of this country. Billions are poured into disease research, new wonder drugs and hospitals yearly. The civilized nations are not becoming healthier, but disease on the increase.

Who are the truly civilized nations of the world? Are they the indus-trialized countries, or the Hunzas of Northern India, the Russian peasants of the Black Sea area, Watusi tribes of Africa, Bulgarian mountain dwellers, and certain American Indian villages right the United States?

These cultures have one thing in common; no disease. Their average life-span is at least 100 years, and many reach the age of 150 and over. Disease is totally unknown to them and they work and enjoy life until the day they die. They enjoy long life in absolute health and happiness; and death is very peaceful and quiet, void of all suffering or disease. These"primitives" are very robust and strong physically, mentally, morally and spiritually. Also non-existent in these cultures, are jails, hospitals, mental institutions, homo-sexuality, divorces and police or military force.

It is a proven fact that excellent physical, mental, emotional and spiritual health create a truly civilized nation. The ancient sages, philosophers and wisemen of antiquity lived to an advanced age, as they taught and practiced the following Universal Secrets and Principles of the Tao.

Physical Health

This requires a natural diet of pure wholesome foods that include a daily balance of proteins, fats, carbohydrates, vitamins, minerals, etc. (Organically grown if possible); sufficient exercise, i.e., jogging, swimming, yoga, weightlifting, chi kung, walking, massage, herbs, tai chi, breathing techniques, cycling, etc.; fresh outside air and sunshine daily; fasting when necessary; adequate sleep (at least eight hours); resting when tired; and drinking pure water (distilled, rain water, or spring water).

Developing good physical health requires several years, depending upon one's present physical condition. The wheels of nature grind ever so slowly, but nevertheless, surely. Time and healthful eating and living habits are the primary requirements in attaining good physical health. Remember: The human body, like all phenomena in nature, possesses the inherent power of self-regeneration when the conditions of healthful existence are adopted.

Fig.1.1 Four Body into One

Emotional Health

Emotional turmoil is the result of ill-health and confusion in the mental realm, brought about by overwork, lack of rest and sleep, jealousy, greed, hate, worry, fear, and a life of constant debauchery. People in a state of emotional confusion have little or no control in any department of their lives. They react in a negative way and become emotionally upset when the world around them is not catering to their every whim or desire. Emotional calmness under trying circumstances marks the person of dynamic health and personal magnetism. Good Emotional Health leads to lofty Spiritual Attainment.

Mental Health

Good Physical Health is a foundation for the development of sound Mental Health. The ancients teach us to remain calm and to refrain from hindering or interfering with another's life. Professor Chee Soo, a Chinese Taoist states:

"Do fish In the water complain that It Is cold or dirty? Of course not. Do they complain because the sea becomes rough, or envy or try to exploit each other? No. They live in harmony constantly, never envying or hating anything. Life for them is simply living ..." "The way to the spirit is through constant good thoughts and good deeds, now and every minute of each day, and through this way of life everything becomes an "open door" and the Tao becomes apparent to you In everything you do, and in every thought that passes through your head."

A calm mental attitude is necessary to carry us through the trials of everyday life. Living in harmony with the universal rhythm of life (moderation in every undertaking) produces a healthy mental state.

Spiritual Health

Here we have the culmination and synthesis of the first three characteristics of true health; Physical, Mental and Emotional. Spirituality can be developed only when all conditions, circumstances and difficulties in the game of life have been mastered. When all selfishness, greed, thoughts of hate, fear, anger, worry, anxiety

are vanquished, it can then be said that you are on the road to Spirituality. A Spiritual person expresses total love to all people everywhere, whether they are good or bad, black or white, rich or poor, etc. They are unattached to worldly or material possessions, and are happy with or without these possessions. Happiness to them comes from realizing that "nothing in this world brings happiness except ***Peace of Mind***.

It is our human destiny to live in harmony with the order of the universe and attain good health, otherwise we attract mental and physical suffering and pain. Health cannot be purchased. It cannot be conferred by another. Health, happiness and a successfully abundant life cannot be voted in by a government legislature. Neither king, queen nor congress can guarantee the delivery of health, vitality and happiness to you. You must earn it through your own hour by hour, day by day efforts. Only then will you have learned the joy of living as taught by the ancients.

We urge all those who are interested in living a better life, to always keep an open mind and to constantly study, and to make improvements where necessary. This is the only way possible to arrive at any kind of scientific truth. We can learn something new every day if we have the desire to do so. Let us search together now and hopefully we will meet at the Golden Gates of Truth. Disease is an unnatural state to lone living a natural existence. To those who live unnaturally and surround themselves with artificial circumstances, disease is natural, for cause and effect decrees that normalcy shall generate normalcy and abnormality produce its kind. Hence all disease is seated in some shortcoming that opens the individual to such afflictions.

Four Bodies into One

If you look at a fan you can see its blades, when you start the fan up at the first speed, the blades are moving and you can see the blades. You turn the speed up the blades are moving faster but you can still barely see the blades. Then you turn it up to its highest speed and you cannot see the blades anymore. Are the blades still there? Yes. This is what happens with our first four bodies. They are just really one body with four different frequencies (Physical, Mental, Emotional and Spiritual). If you work on one body (frequency) you work on all of them at the same time.

Fan Still see Blades
Physical Body

Fan moving see blades
Mental Body

Fan moving faster Barely see blades
Emotional Body

Fan moving fastest, cannot see the blades
Spiritual Body

Fig.1.2 Four Frequencies of a Fan are the same as the Four Bodies: Physical Body, Emotional Body, Mental Body,Spiritual Body.

The physical body is the easiest to work with because it is in time and space and we can access it with our five senses which is the Taoist's approach. By working with the physical body through Cosmic Nutrition you are also healing and balancing the mental, emotional and spiritual bodies at the same time. We can also access our other bodies (Aethetric, Astral etc.) through further advance Taoist practices with our sixth and seventh senses (clairvoyance and telepathy) but again we work on all the bodies at the same time when we work on the physical body, because all the bodies are one body.

This is how the Taoist approach healing by first focusing on the physical body because it is the easiest connection.

Fig.1.3 Infinity Heavenly Realm - Yin and Yang Physical World

Toxemia, Drug Medication, Cure of Disease and Germ Theory

Oliver Wendell Holmes, M.D., that scholarly gentleman, who was far ahead of the medical world, so aptly voiced his verdict upon his own medical profession when he once stated;

"I firmly believe that, if the whole materia medica could be sunk to the bottom of the sea, it would be all the better for mankind and all the worse for the fishes,"

What is Toxemia? What is Disease? What is Cure? For the answers to these questions we have before us a book written by a medical doctor in 1926, entitled, "Toxemia Explained", skillfully penned by Dr. J. H. Tilden, in which he defines Toxemia and Crisis of Toxemia. In the process of tissue building metabolism there Is cell building anabolism and cell destruction catabolism. The broken down tissue is toxic. In health when nerve energy is normal it is eliminated from the blood as fast as evolved. When nerve energy is dissipated from any cause physical or mental excitement or bad habits the body becomes enervated; when enervated, elimination is checked causing a retention of toxin in the blood or Toxemia. Of the action of drugs we know little; yet we put them into bodies about which we know less, to cure disease of which we know nothing at all.

Action of Disease

Disease in and of itself is a remedial process; a crisis of toxemia"; the end point of years of enervating habitspoor foods, overeating, alcohol, smoking, lack of exercise, stress, little sleep etc. The body continually strives to heal itself, and disease is the process of self-healing. The organism attempts to eliminate or discharge that which is harmful to it; these are the symptoms of disease, which are generally accompanied by our early warning system called pain. If pain is heeded and the proper natural therapy applied, including correct eating and health habits, disease and the symptoms of disease can be overcome.

Chemical drugs merely palliate the symptoms of disease; they impair the body's self-healing process and drive the disease toxins deeper into the organs and tissues. Drugs produce "side effects", which are very often far worse than the original toxic dis-

ease. The side effects of drugs indicate that the body is using its vital energy in an attempt to eliminate the drug poison through the internal organs or other body parts. Medicines only relieve the "temporary" symptoms of disease, pain and distress; they do not overcome disease or improve one's state of health and well-being.

Drugs do not possess the quality or power to act in a living organism; the living organism acts or reacts to any drug or poison in an attempt to expel it before it causes any possible internal damage. The key word here is living. The human body cell is a living intelligence, and as a unit of life it knows when it is being ill-treated or poisoned by dead and inert substances inimical to its existence. Thus, we observe the side effects of drugs when the living, acting body goes into action against them.

Dr. H. M. Shelton, a leading health researcher writes about the action of drugs: When a drug is vomited, this is an action, but it's an action of the living organism and not of the lifeless drug. It Is absurd to write of the physiological actions of poisons: first, because they cannot act; and, second, because their presence always occasions pathological action. These so-called physiological effects of drugs are symptoms of disease. No pharmacologist, no pathologist, no physician will deny this. Dr. Anthony J. Sattilaro, who cured himself of cancer through diet, writes: If we can at least show that people can live better in their lifetimes, rather than suffering all the iatrogenic effects of the standard modalities that we have in Western medicine, I think we will have made a great contribution.

Drugtoxicity

Treating the sick with drugs only adds more to the existing toxemia within the body. It suppresses the healing power of the body. Drugs destroy red blood cells, cause anemia, and create a false illusion of being cured. The drugged patient returns again and again for stronger doses of medication and more experimental treatment. Remember: Health is built through everyday healthy eating and living habits. In addition, health can be restored by applying nature's wholistic therapies, i.e., fasting, herbs, acupuncture, massage, sunshine, oxygen, hydrotherapy, exercise therapy etc.

Drugs Do Not Cure

The following statement is a universal law oi healing: Medicines do not heal or cure the body. The true cure lies in the removal of the causes of disease, and adopting rational and healthful living habits. When this path is followed, the body will then have the energy and power to regenerate, recuperate and heal itself. We then become free from the causes and symptoms of disease.

There are no instant cures for diseased living habits. The process of disease takes many years to develop, as does the return to health. Nature works her wonders ever so slowly. We can dis-cover new wonder-cures everyday, however, we can never escape from the natural law of cause and effect, or whatever we sow, so shall we reap. Disease is created by diseased habits; health is created by natural health habits and principles.

Fig. 1.4. Toxic Phycial, Emotional, Metal & Spiritual Bodies

Fig. 1.5. The Root causes of Impaired Health - Tree of Toxemia

Enervation Causes Toxemia

A thousand and one enervating habits of living are the primary causes of toxemia. Without proper and adequate nerve energy, our food is not digested and assimilated properly; cellular elimination and renewal is checked; metabolic wastes are retained in the system, causing toxemia; this leads to a crisis of toxemia, or what is commonly called a disease. Disease is a crisis of elimination by a system overloaded with toxic waste and auto generated poisons. A fast, rest in bed, and the giving-up of enervating habits, mental and physical, will allow nature to eliminate the accumulated toxin; then, if enervating habits are given up, and rational living habits adopted, health will come back to stay.

Acute and Chronic Disease

Acute diseases are short termed. Their symptoms are often violent, but only temporary. Acute symptoms indicate that the body possesses sufficient vital nerve force and energy to eliminate internal toxic conditions, such as colds, flus, mumps, measles, acne etc. On the other hand, chronic diseased conditions are of a more long standing nature, in which pathological degeneration of the cells, tissues and organs has taken place, i.e., cancer.

Suppressing acute symptoms of disease with drugs, if continued for many years, will result in chronic ailments. Acute disease symptoms should be allowed to run their course, without suppressing them with drugs. Acute symptoms turn into chronic pathology by suppressing them. Drugs create chronic disease by suppressing the natural channels of eliminationkidneys, bowels, lungs and skin.

The indiscriminate use of medication when the body is already diseased (toxic) is an unwise gesture. If the organism has the inherent power of self-healing, self-cleansing, and self-regeneration, what then is the purpose of inducing drug medication in an attempt to cure the sick? Answer: There is no return to health with such a practice. It is just a practice and nothing more. Human beings are the willing guineapigs to these drug experimenters. The cures may come and the cures may go, but the curing goes on forever. Also, the billions of dollars involved in the research and the sale of drugs, goes on forever.

This outmoded suppression and treatment does not stop the cause of sickness, cannot prevent further illness and it certainly plays no part in the building and maintenance of healthy cells and tissues. It is not the Creator's intention that man should live by the aid of crutches (drugs and other artificial remedies) or turn this planet into one vast hospital for the sick.

Crisis of Toxemia

Every so-called disease is a Crisis of Toxemia, which means that toxic matter has accumulated in the blood above the point of toleration, and the crisis, the so-called disease call it cold, flu, pneumonia, headache, or typhoid feveris a vicarious elimination. Nature is endeavoring to rid the body of toxin. Any treatment that obstructs this effort of elimination, baffles nature in her efforts at self-curing.

Drugs, feeding, fear, and continuing to work prevent elimination. A cold is driven into chronic catarrh; "flu" may be forced to take on an infected state; pneumonia may end fatally if secretions are checked by drugs; thyphold will be forced into a septic state and greatly prolonged, if the patient is not killed. Drugging pain of any kind checks elimination and prevents the human organism from cleaning house.

Cancer, tuberculosis, Bright's disease, and all chronic diseases were once innocent colds "ameliorated" and which returned and were ameliorated again and again, each time accompanied by a greater constitutional enervation, and a greater constitutional toleration for toxin-poisoning, requiring a greater requisition of mucous membrane through which to eliminate the toxin.

To find the cause of cancer, start with colds and catarrh, and watch the pathology as It travels from irritation, catarrh, inflammation Induration, ulceratlon to cancer.

The proper way to study disease is to study health and every influence favorable or unfavorable to Its continuance. Disease Is perverted health. Any influence that lowers nerve-energy becomes disease-producing. Disease cannot be its own cause, neither can It be Its own cure, and certainly not its own prevention.

The treatment of disease is so simple that It staggers those who believe in drug curing. Heroic treatment is disease-building. Find in what way nerve-energy Is wasted, and stop it stop all nerve leaks. Then returning to normal Is a matter of time, in which nature attends to all repairs herself. And nature resents help medical officlousness.

Body Regenerates Itself

Western medicine too often tends to look at disease in small parts, forgetting that the whole body functions together as an entire unit. Instead of merely treating a particular symptom of disease, we must learn to look for the cause of disease, and eradicate it.

The real error arose when pharmacology and morphology (form and structure of living things) joined together to treat disease. An organ is treated with a drug, or an organ is transplanted. We are only temporarily palliating the symptoms of disease. The body functions as a whole, and will regenerate itself if properly cared for; it

was never meant to be taken apart or artifically poisoned. The organs work in a system within the body to overcome disease, balance itself and regain a state of equilibrium. This is the thrust of holistic medicine. The germ theory of disease will be laughed at during the next century as the crowning piece of folly of the present.

Germ Theory: Myth or Reality

How did the Germ Theory begin? In the mid-seventeenth century, Leeuwenhoek and O. F. Muller studied and reported several forms of bacteria. Around 1830, Ehrenberg separated and grouped microbes into species and genera. Early investigations were badly handicapped by poor microscopes and the lack of understanding and accuracy.

Louis Pasteur became famous as a result of the controversial research he conducted on the germ theory of disease. He is known mostly for the Pasteur treatment of hydrophobia and pasteurization. Pasteur claimed the body was like a barrel of beer, and said, like beer, our bodies were at the mercy, or subject to invasion from germs and bacteria. He pronounced the Germ Theory of Disease, thusly: Each type of germ was responsible for creating its own specific type of disease or sickness. And diseases are due to an outside invasion of specific germ organisms.This theory was merely an announcement or conjecture by Pasteur, but it was, unfortunately, heralded as the final answer and great advancement in science, though the theory had absolutley no foundation in fact. If this theory were true, and proved scientifically, we should all be dead immediately by germ invasion.

Over a century later Dr. Robert O. Young discovered while working with dark field phase-contrast microscope (This high-powered microscope can magnify objects up to 28,000 times, enabling one to clearly view bacterial and fungal forms in exact detail in the blood.) that a dying cell revered back to a living cell when the internal environment of the cell changed from an acid statement to an alkaline state. He was so overwhelmed that he research all the data on the germ theory dating back over a 150 years and discovered that our bloodstream and the inside of your body (cells) have a landscape or terrain and in a disease state the body tissues to become too acidic. This imbalance sets the stage for chaos and disease based on the acid/alkaline balance in the terrain when the body is not getting the raw materials (nutrients) it needs for maintenance and

repair to change the terrain back to normal. He concluded that germs are symptoms that are a result of thriving in an unbalanced terrain. Through Dr. Youngs research he discovered that Antoine Bechamp (1816-1908) a French Professor of Medical Chemistry and Pharmacy described the process of fermentation for what it is: a process of digestion by microscopic beings. He was the first to assert that the blood is not a liquid, but a flowing tissue and brought to the world in 1866 profound revelation that the granules were living ferments. He renamed them microzymas meaning small ferments as an independently living element within all living things, and is both the builder a recycler (Creative Cycle) and destroyer (Controlling Cycle) of organisms.In a state of health, the microzymas act harmoniously and fermentation occurs normally. But in the condition of disease, microzym become disturbed and change their form and function. Their function is a twofold and they are poised to recycle the physical body upon death into the earth (dust to dust). He referred to microzymas as the builders and destroyers of cells. Disease is a condition of our inner terrain and is not caused by attacking entities. This living particle of dust was first discovered by Professor Antoine Bechamp in 1864, and he found it to be physiologically imperishable and autonomously alive, meaning it have the ability to adapt to any circumstance while maintaining its purpose to enhance and organize life whether for the host or for itself. Bechamp stated that the microzyma was thoroughly impressionable and the only living entity capable of receiving and impression. These understandings of Bechamp and Young explaining the microzymas and the balancing of the pH factor (+ Yang & - Yin) confers with the all of the Taoist understandings of the Cosmic Dust Particulars(Star Dust) that give life to all beings and the balance of Yin and Yang in the body for health and well-being. In the morning at sunrise or in the evening at dust you can see them by squinting into the sun as shiny particulars giving life to all of the earth.

Pasteur himself, at a later date, proved the fallacy of the germ theory to his entire satisfaction despite his previously heralded announcement. However, since it departed from his first discovery, that germs cause disease, his new discovery was suppressed.

Pasteur stated that germs and bacteria are not the exact and primary cause of disease. He abandoned his earlier beliefs on the Germ Theory and became convinced that the germ was secondary and the disease came first. He said: The presence in the body

of a pathogenic agent is not neces-sarily synonymous with infectious disease. Pasteur finally opened his eyes to the fundamental fact that germs and bacteria change their forms according to their environment. He realized the truth of these facts in the mid-1880's. However, the stage was set, the propaganda had already began, the lie perpetuated by the regulars, and the error, unfortunately, has continued up to the present day. Thus arose the foundations of the modern germ theory of disease, and in the midst of the wildest conjectures and the worst of logic, a nucleus effect was won, which has since grown and Is growing daily.

Scientific Germ Discoveries

The investigations of Cohn, Pasteur, Koch, Nageli, Kurth and others were totally overlooked: They proved that bacteria are affected by the medium in which they are cultivated. Not only are the forms modified, but also the physiological activity varies in degree and time. There is no question that certain bacteria are associated with specific diseases, but the big question science must face is: Are these germs the accompaniment of the disease or are they the cause of the diseased condition?

The idea that bacteria of a certain specific kind was the accompaniment of the disease was ruled out because it was found that in any particular disease the same type of bacteria was always found So, in order to satisfy a doubting public and furnish an answer to the question, What makes me sick? The medical profession answered germs, of course.

However, in view of the scientific research which has been cast aside by medicine, It is just as reasonable to assume that the maggots and flies found In a manure pile caused the manure pile as it is to assume that the various kinds of germs and bacteria, bacilli, or micro-organisms, by whatever name you may call them, found In a thoroughly filthy body poisoned with (bad) food, drugs, and bad habits, caused the condition of ill health.

Long ago it was demonstrated that the living tissues of a healthy body exert actions which are antagonistic to any of these parasitic invaders; and later bacteriological research shows that the mere admission of a germ or bacteria into an animal does not necessarily cause disease. With the claim by Dr. Rawlins that 2% of the people are diphtheria carriers, in other words, have diphtheria germs in their noses and throats, and yet have no diphtheria, how is the germ theory as the cause of disease correct?

We constantly breathe in some 14,000 germs and bacteria per hour. You cannot keep them out of your body; they are everywhere. Why, then do we not all have some form of disease? Why are some people immune to many diseases, and others susceptible?

It was proven many years ago by Dr. Bosenow of the Mayo Clinic that bacteria change their form according to the medium in which they live. For example, he was able to 'reduce the pheumococcus (germ) to a streptococcus, and a streptococcus back to a staphylococcus,' simply by changing the medium and environment in which they live. This is very important for you to under-stand, for it will liberate you from the fear that germs can cause a disease. People fear from lack of understanding; and when they understand that both health and disease are created by then-own living and eating habits, they will no longer fear the (ubiquitous) ever-present germ.

Fig. 1.6. Learn to Live with Our Germs, they are our Friends

Truth about Germs

It is a scientifically known fact that: 1) Germs take on a form in accordance with their environment; and 2) So long as the internal environment and health of the body remains sound and vigo-rous, it will be completely immune; 3) Germs and bacteria are the lowest form of scavengers and they thrive and multiply in waste matter and filth within the system; 4) Disease germs and bacteria are not capable of affecting healthy living cells and tissues, for they do not have the strength or power to change or alter a higher living life form than themselves, i.e., germs only feed on the lifeless waste of an unhealthy and broken down condition of the body; 5) Bacteria are not the cause of disease, but may be considered as acces-sory factors or tertiary causes, analogous to the common garbage fly or vulture, who feed only when the refuse is placed in the garbage receptacle or an animal dies in the wild.

Germs are Necessary Beneficial to all Life

Microbes are spread throughout nature, are ubiquitous in fact. Human groups swarm with them. They are in the food we eat, the water we drink and the air we breathe. We are reared In an environment laden with them. We cannot escape them. We can destroy them only to a limited extent. We must accept them as one of the joys of life.

From the stand-point of Natural Science, germs cannot be regarded as the cause of disease, for if they were, we should all be victims of one or more germs at all times. Germs are saprophytes; that is, they live off dead inorganic matter. They are omnipresent scavengers in Nature's great laboratory, working over dead organic matter Into forms appropriate to the nourishment of growing vegetation. They are essential nitrifying agents in the soil. Without them, neither plant nor animal could long exist, and the earth would rapidly become encumbered with dead bodies. In the septic tank, sewage is reduced by them until it finally passes out pure water in which fish may live. From both, the esthetic and economic viewpoint, they are benefactors. They are friends of higher life. We live in a balanced and interdependent world, which Is too complex to ever fully understand, but our dependence upon the symbiotic support of germ life is, at least partly, known.

In the body, germs break up and consume dead and dying cells and discharges from the tissues. They perform the same function in the body that is ascribed to them everywhere else in nature. Viewed from this angle, they are purifying and beneficial agents.

Germs are really our best friends. All living matter and human health are totally and com-pletely dependent upon bacterial presence. They are fundamental to the existence of all higher organic life. The atmosphere has 4/5 nitrogen. The soil contains nitrogen fixing bacteria. No plant or animal can use nitrogen directly, with the sole exception of this soil bacteria, which converts nitrogen, with other elements, into nitrates and nitrites and thus develops material for the plant to develop protein. We obtain our nitrogen from the plants, and the plant gets it from the soil with the help of bacteria.

Scientific experiments have shown that when small animals were placed in completely germ free containers, they failed to develop normally; the intestinal tract became abnormal, liver deformed, lungs failed to develop properly and many deformities and ill-health followed. Bacteria is essential for normal development and health, for example, infants at birth are totally sterile, but in 24 hours there are millions of bacteria in the gastro-intestinal tract, which are necessary for the utilization of mother's milk.

Complete and adequate digestion of food is dependent upon a natural abundant supply of intestinal flora, which are referred to as bacterial enzymic activity. They are necessary for the breakdown, assimilation and absorption of all food material. When health Is normal the digestive secretions are sufficient protection against germs and parasites. Germs may cause putrefaction in a meal of lobsters when enervation prevents digestion; but when digestion is normal, the bacillus are utilized as food along with the lobster. Alt of the digestive juices are germicidal, and the normal digestion digests germs as readily as it does apples or bread.

Germs do not cause Disease

If germs are powerless against a healthy body, the logical preventative is the cultivation of health. If the body manufactures its own antiseptics and antitoxins, it should be supplied with the proper elements of sun, air, water, (natural) food, exercise, rest, etc., out of which to build these protective potencies, instead of being subjected to the present mad-house efforts to produce artificial immunity.

Pasteur said: “In a state of health the body is closed against the action of disease germs.” It is a mistake to single out one of the correlated factors that constitute cause and hold it responsible for pathology. Germs alone can no more pro-duce pathology than a seed alone can produce a tree. Just as a seed must have a fertile soil, moisture, air, water, warmth and sunshine, if it is to grow into a tree so the germ, if it is to add its complicating influence to an evolving pathology, must find certain essential conditions existing in the bodies of those it enters, before it can do the slightest harm. Normal nerve energy and pure blood in a word, good health are proof against germs of all kinds.

Impaired health provides the suitable soil in which germs thrive and grow. The soil is more important than the germ. Infection and degeneration can set in only when the soil is badly fertilized by inappropriate nutrition. Germs are imminent coagitators always secondary; a possible reinforcing or contingent cause, but never an exciting or primary cause.

A universal cause comes first; then the ferment, in the form of a germ, gaining access to the weakened tissues, takes on activity and attempts to assist the removal of undesirable material by liquifying it. The morbid material generated by this activity is more a by-product of the disintegrating tissue than a virulent poison resulting from bacterial maliciousness. Germ activity, in this view, is an outside accessory that facilitates the removal of auto-generated filth.” Germs “may complicate when there is a perversion of chemistry. But the germs of the so-called specific ‘diseases’ never take on specificity until the vitality of the different tissues is lowered and nutrition perverted because of dysemla the chemistry of the blood fails to supply the essential elements; then germs, previously innocent, take on virulency in keeping with the general enervation and systemic toxemia of the individual.

Four Postulates

Many years ago, the famous Dr. Koch, a bacteriologist, concluded, that the mere presence of a germ or bacteria in a cell, tissue, or organ is not adequate proof that it causes the disease, and he stated four requirements which must be met before any causal relationship between germs and disease are admitted:

1. Specific bacteria or germs must be found in every case of the disease.
2. Bacterium must never be discovered apart from the disease.
3. It should be possible to isolate the bacteria, culture them in a media and be capable of independent existence.
4. The introduction of a small amount of a pure germ culture should produce signs and symptoms of a specific disease in a healthy organism or body.

The Germ Theory, to be valid, must conform to all four requirements or postulates; all four postulates have been disproved, as demonstrated in the following explanations:

First Postulate: It is a scientifically known fact that specific bacteria are not found in every case of a specific disease. The well known physician, Sir Wm. Osier reported that the diph-theria bacillus is absent in 28 to 40 per cent of cases. According to Green's Medical Diagnosis: "Tubercule bacilli may be present early, more often late, or in rare instances be absent through-out." Koch's first condition is not fulfilled in tuberculosis, diphtheria, typhoid fever, pneu-monia or any other disease, because germs and bacteria are found in human and animal bodies which are healthy and free from the specific dis-ease, or diseases.

Second Postulate: The bacterium are found apart from the disease. It is a medically known fact that bacteria and germs are found in bodies, human and animal, which exhibit no signs and symptoms of any disease; proving beyond any doubt that the lowly innocent germ is not causing a disease. Healthy and disease free people of all ages, upon examination, will be found to harbour bacteria associated with many different diseases, yet, they do not have, have not had, and do not subsequently develop the 'diseases' these germs are supposed to cause. This second postulate holds not one bit of truth, and is rarely conformed to.

Third Postulate: Germs and bacteria are not capable of independent existence as they totally depend on the human or animal organism for their survival. If germs depend on the 'host organism' for survival, they cannot be considered as direct causes of disease, therefore, Koch's third postulate, just as the first two, fail to meet the 'acid test' of the germ theory of disease.

Fourth Postulate: Introducing germ cultures in a healthy body or organism does not produce signs and symptoms of the dis-

ease. The Bio-Chemical Society of Toronto conducted a number of very interesting experiments in which pure cultures of typhoid, diphtheria, pneumonia, tuberculosis and meningitis germs were consumed by the millions in food and drink by a group of volunteers. The results: no ill effects whatsoever. No diseased signs; tuberculosis germs were fed in water, milk, bread, cheese, butter and potatoes, meningitis germs were swabbed into the nostrils, tongues and ton-sils, diphtheria germs were taken in large doses, and the results of these tests showed absolutely no signs of disease. We have shown that fourth postulate that germs cause disease is a complete failure.

Germs vs Disease

If you have a particular disease, what should you do about It? You do not do anything about it. What you do, is you do something about the causes. That's most important. Find the causes of these various problems, and do some-thing about the causes. You do not do someting about the diseases. The disease represents the effort of resistance on the part of your body against the causes. It Is the causes of disease that bring about changes within the body; It is the causes of disease that bring about degeneration; it is the causes of disease that kill you, not the diseases. The disease Is the body's response, or its attempt to combat, overcome and destroy the causes. So, the disease is the process by which the body resists the causes of disease. Disease is the process of resistance, of action, of defense, remedial action, defensive action, or adaptive action.

As a patient's health status changes, bacteria found In the organism also change. Normal flora change into pathogenic as a result of a change of health. For example, a person in a hospital with normal or average bacteria flora in the body, after a cardiac arrest, within a matter of hours, the bacterial flora change and pathogenic bacteria are present. This indicates clearly that the person first develops the disease and then the bacteria change, pro-liferate, contribute perhaps, as secondary factors by elaborating their own toxins which the body has to deal with and in this way are associated with certain diseases, but not as causes.

Germs and bacteria are more In the nature of scaven-gers, more In the nature of organisms which are contributing positively

to the remedial process i.e., by the breakdown of certain decomposed organic products; by the partial digestion of the body's degenerated tissue, because the bacteria themselves elaborate enzymes which digest tissue and the damaged and unhealthy tissue may be broken down by the bacterial enzymes, there-fore, they are acting to some extent as scavengers.

Obviously, we can do nothing about germs in the way of destroying them. If It were possible to destroy them, we would also destroy the rest of organic existence. Consequently, germs are our benefactors, they are neces-sary to life, to normal development; they are intimately associated with certain diseases, acting constructively on our behalf. We should try to understand the inter-relation-ships between micro-organisms and man, and not be forever in fear of them or chasing methods and mechanisms of destroying them. It is, Indeed, difficult to understand why a whole pro-fession has gone insane on the subject of bugs, to the utter neglect of those states of metabolism and nutrition which, when vitiated, constitute the universal cause of all disease.

The medical profession believes that the blood can be immunized. Normal blood does not need it, and the process lowers its resistance; and the victim of low resistance toxemia is further deteriorated by such treatment. An unreasoning way to rid the victim of germs and parasites Is to destroy them with germicides and parasiticides. After killing them off what is to be done about the habitat the patient? The belief that germs can be killed Inside the body is untenable, for any chemical that destroys micro-organisms also destroys the body. Even If medical men are still trying to kill venereal germs with drugs, the fact still remains that they damage their patients more than they do the germs. If I would live my life over again I would devote it to proving that germs seek their natural habitat diseased tissue rather than being the cause of diseased tissue; e.g,, mosquitos seek the stagnant water, but do not cause the pool to become stagnant.

Germ Theory Conclusions

The great fact remains that germs, bacteria and microbes are our best friends instead of our worst enemies. They are necessary in both health and diseased conditions; in health, as friendly bacterial ferments (enzymes) to necessitate the proper digestion

and assimilation of foods; and in diseased conditions, by becoming active and assisting in the removal of undesirable material (dead cells, cellular wastes and filth) by liquifying it. Germ activity, in this view, is an outside accessory that facilitates the removal of autogenerated filth, which, if not released, will cause the dissolution of the body. With the filth go the germs. The search for 'germs' and 'germ killers' has lasted for over 100 years, and in all that time science has never found an anti-biotic, pill, or vaccine that would kill a germ that would not also kill the living body.

It is now known generally that the juices of a healthy body present far greater powers of immunity to all manner of germs than any anti-biotic that can be made. It would be more intelligent, instead of hunting for a magic pill, powder or medicine to kill off 'germs', to study the require-ments and conditions that bring about a state of health. By living in this "Super State of Health", one need not worry about resisting noxious bacteria, for you will once and for all rid your (temple) body of the filthy soil that is required for the life and propagation of 'germ scavengers'. For then, you and germs will be living together on friendly basis.

The entire philosophy of health is expressed in these words, Keep clean internally and externally, and learn to control and stay within the magnetic margins of your vitality and health. These health building suggestions, if followed faithfully, will reward one with superior health, vitality, energy and a zest for living far into advanced age. One will have no fear of germs, for through understanding they will gain knowledge, wisdom and the power to master the drama of life, including the lowly microbe. Neither ought you to attempt to cure the body without the soul; for the reason why the cure of many diseases is unknown to the physicians of Hellas is because they are ignorant of the whole, which ought to be studied also, for the part can never be well unless the whole is well.

American Death Ceremony

The death ceremony started as a crude ritual, back In the days of witchcraft. In recent years it has been developed Into a science. It usually takes from 10 to 15 years, however modern scientific advancements are shortening this period of time. It starts with one simple headache. When the one aspirin will no longer cover up the headache, take two.

After a few months, when two aspirin will no longer cover up the headache, you take one of the stronger compounds. By this time it becomes necessary to take something for the ulcers that have been caused by the aspirin. Now that you are taking two medicines, you have a good start. After a few months these medications will disrupt your liver function. If a good Infection develops, you can take some penicillin. Of course the penicillin will damage your red blood corpuscles and spleen so that you develop anemia. Another medication is then taken to cover up the anemia. By this time all of these medications will put such a strain on your kidneys they should break down. It is now time to take some antibiotics. When these destroy your natural resistance to disease, you can expect a general flare-up of all of your symptoms. The next step is to cover up all of these symptoms with sulfa drugs. When the kidneys finally plug up you can have them drained. Some poisons will build up in your system but you can keep going quite a while this way.

By now the medications will be so confused they will not know what they are supposed to be doing, but it does not really matter. If you have followed every step as directed you can now make an appointment with your undertaker. This game Is played by practically all Americans, except for the few ignorant souls who follow nature. Leave the drugs in the chemist's pot if you cannot heal yourself with nature's food.

Code of Health:

Balancing Yin & Yang Foods - Fasting or Eliminative Diet - Intestinal Cleanse - Sufficient Exercise - Stretching - Plenty of Fresh Air Exhaling Sufficiently - Proper Posture - Adequate Sunshine - Pure Water - Moderation - Correct Reading & Close Work - Self Control - Comfortable Clothing - Sufficient Rest & Sleep - Deep Breathing - Relaxation - Correct Eating - Acid & Alkaline Balance - Chewing Food Well - Personal Cleanliness - Knowing What You Want - Positive Thinking - Confidence - Compassion - Honesty - Eating Foods In Season & your Climate - Temperance in Habits - Eat only When Hungry & Thirsty - Cheerfulness - Thankfulness - Forgiveness & Love - Freedom - Meditation & Prayer

Fig. 1.7. Learn to Work with the Causes of Health

Causes of Disease:

Eating Extreme Yin & Yang Foods - Toxemia (From Enervating Habits) - Constipation Over or Lack of Exercise - Insufficient Stretching - Indoors Too Much - Insufficient Exhaling - Incorrect Posture - Lack of Sunshine or Over Exposure - Impure Water - Overwork - Incorrect Reading & Excessive Close Work - Nervousness - Lack of Self-Control - Restrictive Clothing - Insufficient Rest & Sleep - Working at Night - Tension & Worry - Malnutrition - Out of Acid/Alkaline Balance - Poor Personal Hygiene - Confusion - Fear & Doubt - Eating Foods Out of Season & your Climate - Using Prescription & Recretional Drugs or Alcohol - Overeating & Drinking - Self Righteousness - Discouragement - Self Pity - Fault Finding - Gloominess - Vengence & Hate

These are only a few of the basic causes of health and disease. Open your mind, for we can always learn more about life; ***Know Thyself***; keep the channels of your mind ever open for new causes. Remember: The mind is like a parachute; it functions only when open. Doctors cut, burn, dismember and torture the sick, and then demand of them an undeserved fee for such services.

Fig. 1.8. Learn to Work with the Causes of Disease

Take Charge of your Health

True understanding dispels fear. When we understand health and disease, in its whole form, we can no longer place the blame for our ill-health on the lowly germ or bacteria. We then look within for the answers to build our health force. No sane person wants to be ill; we all desire to be healthy and vibrant. It is tragic to witness loved ones in pain and suffering. Unfortunately, too few people understand or adhere to the natural laws that govern health and life. The ancients referred to sowing and reaping as karma or cause and effect. One may sow (cause) good karma by adhering diligently to the habits that create health. Conversely, one may also sow (cause) illness by ignoring the habits of natural health.

We can be the director of our destiny, captain of our soul and builder of our health if we pursue and practice the upward path as laid down thousands of years ago by the ancient masters. We recognize that the future of medicine is in prevention. Our idea is to give good nutritional and other advice so that people can keep themselves well and alive.

Chapter 2

Yin and Yang Principle

Force of the Universe

In ancient times human beings lived to over the age of a hundred. In our time, we are exhausted at the age of fifty. This is because of changes in circumstances, or is it that mankind is becoming negligent of the laws of nature.

Also in ancient times there were the so-called Spiritual Men: they mastered the Universe and controlled Yin and Yang. They breathed the essence of life (Cosmic Dust Particules), they were independent in preserving their spirit, and their muscles and flesh remained unchanged. Therefore they could enjoy a long life, just as there is no end for Heaven and Earth. All this was the result of their life In accordance with the Tao, the Right Way of Yin and Yang. This coming from profound statements were written some 5,000 years ago in the Huang Ti Nei Ching Su Wen (Yellow Emperor's Classic of Chinese Medicine), an ancient Chinese manuscripts on the subjects of health, healing and medicine.

The Oneness (Wu Chi) split and becomes two. These two are the poles and energies of yin and yang. They emerge continuously from this point within the expanse of infinity as a result of the endless movement within the primal sea. By their combination and interplay, the yin and the yang give rise to all the forms that inhabit the world of the relative universe. Thus, all antagonistic-complementary dualisms of the phenomenal world are but the two faces of the front and the back of one ultimate reality.

The secrets of health, life and longevity have been known and passed down from generation to generation by the ancient sages and wise men throughout history. The universal laws of Yin and Yang were formulated by the masters of the mysterious East. They observed all physical phenomena on earth as being duel in nature; that is, for every force, object or occurrence, there exists its opposite polarity.

Fig.2.1. Yin and Yang Principle (Cold & Hot)

In the food category, grains, eggs, meat, cooked foods are Yang; and fruits, vegetables, raw foods and juices are Yin. Yin is a centrifugal force in nature (cold, expansive, negative pole, alkaline, etc.). Yang is a centripetal force in nature (hot, contractive, positive pole and acid etc.).

The principles of Yin and Yang is not a fabricated theory or fad dietary practice of recent origin. The conception of Yin and Yang began with the conception of the universe and our physical world. It is the law of polarity or the law of opposites. Nothing exists except in relation to its opposites. To understand electricity, one must learn how to use positive and negative fields.

Yang is positive. Yin is negative. We would not know darkness (Yin) without light (Yang); heat (Yang), without cold (Yin); male (Yang), without female (Yin); hardness (Yang), without softness (Yin); and life (Yang), without death [Yin).

Although the forces of Yin and Yang are dual in nature, they proceed from, and are directed by one unifying force in the universe, known by various names such as God, the Tao, Brahmin, etc. It is a dualistic force emanating from one all-preyading power. There is only one presence and one power; and from that Supreme Power the relative duality of Yin and Yang flow.

The Yin and Yang Principle is relative in this constantly changing world. Nothing forever remains the same. No phenomena is purely Yin or purely Yang. Yin and Yang flow into each other like night and day, or inhaling and exhaling.

Eight Strands of the Brocade

History shows that the Chinese may have been direct descendants from the ancient sunken continents of Lumuria and Atlantis dating back some 12,000 to 25,000 years ago. The Chinese Taoists received the knowledge of the Yin and Yang Principle even before recorded history, stretching far back into antiquity. The Taoists sages teach us that the Principles of Yin and Yang have been passed down by highly spiritual beings called “Sons of Reflected Light” ages ago.

The Sons of Reflected Light brought to China the healing arts, known as the “Eight Strands of the Brocade”, which consisted of eight principals of health as follows:

1. Diagnosis
2. Yin/Yang Diet and Exercise
3. Herbal Therapy
4. Hydrotherapy
5. Acupuncture
6. Acupressure
7. Massage
8. Meditation or the Way of Occulsion

Fig.2.2. Yang within Yin & Yin within Yang

Taoist Principles of Life within Yin and Yang

1. All Phenomena exist within Infinite Space.
2. All Phenomena are Interrelated.
3. All Phenomena are Relative.
4. Everything has Energy or Vibration.
5. Everything is in a Constant State of Change.

Unique Taoist Principles of Yin and Yang

Seven Principles of the Order of the Universe

1. All things are differentiated apparatus of One infinity.
2. Everything changes.
3. All antagonisms are complimentary.
4. There is nothing identical.
5. What has a front has a back.
6. The bigger the front, the bigger the back.
7. What has a beginning has an end.

Twelve Theorems of the Unifying Principle

1. One infinity differentiates itself into Yin and Yang which are the poles that come into operation when the infinite centrifugally arrives at the geometric point of bifurcation.
2. Yin and Yang result continuously from the infinite centrifugality.
3. Yin is centrifugal. Yang is centripetal. Yin and Yang together produce energy and all phenomena.
4. Yin attracts Yang. Yang attracts Yin.
5. Yin repels Yang. Yang repels Yin.
6. The force of attraction and repulsion is proportional to the difference of the Yin and Yang components. Yin and Yang combined in varying proportion produce energy and all phenomena.
7. All phenomena are ephemeral, constantly changing their constitution of Yin and Yang components.
8. Nothing is solely Yin or solely Yang. Everything involves polarity.
9. There is nothing neuter. Either Yin or Yang is in excess in every occurrence.
10. Large Yin attracts small Yang. Large Yang attracts small Yin.
11. At the extremes, Yin produces Yang and Yang produces Yin.
12. All physical forms and objects are Yang at the center and Yin at the surface.

Yin and Yang create Physical Change

Change in the physical realm is inevitable; it manifests itself in a dual nature Yin and Yang which is opposite yet complimentary. Neither one is absolute and the interplay between them is a constant giving and taking, like the ebb and flow of the ocean tides acting and reacting, day flowing into night, summer (Yang) slowly giving way to winter (Yin). Yin and Yang are created by the Universal Force, the Tao, which is without duality. Although Yin and Yang operate apart in outward phenomena, they are one within their natural core.

According to the Nei Ching:

"The Canon of Medicine provides us with many examples of this interchange between Yin and Yang and of the duality preserved within a single thing. The most concrete example of this duality Is man. As a male, man belongs to Yang; as a female, man belongs to Yin. Yet both, male and female, are products of two primary elements, hence both qualities are contained in both sexes. The Principle of Yin and Yang Is the basis of the entire universe. It Is the principle of everything in creation. It brings about the transformation to parenthood; it is the root and source of life and death. Heaven was created by an accumulation of Yang; the Earth was created by an accumulation of Yin. The ways of Yin and Yang are to the left and to the right. Water and fire are the symbols of Yin and Yang. Yin and Yang are the source of power and the beginning of everything in creation (Alpha and Omega). Yang ascends to Heaven; Yin descends to Earth. Hence the universe (Heaven and Earth) represents motion and rest, controlled by the wisdom of nature. Nature grants the power to beget and to grow, to harvest and to store, to finish and to begin anew.

Yin and Yang in Health and Longevity

Nei Ching continues:

"Everything in creation is covered by Heaven and supported by the Earth. When nothing has as yet come forth the Earth is called: the place where Yin dwells. It is also known as the Yin within the Yin. Yang supplies that which is upright, while Yin acts as a ruler of Yang. The affinity of Yin and Yang to each other was held to have a decisive influence upon man's health. Perfect harmony between

the two primogenlal elements meant health; disharmony or undue preponderance of one element brought disease and death. But man is not helpessly exposed to the whims of Yin and Yang. Man had received the doctrine of the Tao as a means of maintaining perfect balance and to secure for himself health and long life."

The Tao as used in this book does not represent the masculine or father image. It refers here to the Supreme Creative Force of the universe. The Tao is also referred to as the one, that creates the Yin and Yang, negative and positive, centrifugal and centripetal, alkaline and acid, electron and proton and the polar opposites which manifest on the physical plane, earth. Yin and Yang is the physical reality of the One Spiritual Force. Male/Yang and female/Yin are also physical opposites of the One Creative Universal Force. The I Ching states:

"The Yang and the Yin of the Universe are called Tao. This knowledge of the Tao and of the workings of Yin and Yang was considered even strong enough to counteract the effect of age".

Thus, we find it said in the Nei Ching: "Those who have the true wisdom remain strong, while those who have no wisdom grow old and feeble. The official view of the Chinese Government regarding Yin and Yang states that it 'contains an original, spontaneously dialectical, and simple materialistic doctrine; it is free of superstition; it approximates scientific formulation; and it represents a progressive way of thinking.

Nature of Yin and Yang

The nature of health and diet is intimately connected and interrelated to the universal laws and operations of Yin and Yang; it is an inescapable principle of life; a duality stemming from infinity itself and manefesting in the physical world of polar opposites.

With this understanding we need to know how can we personally use the laws of Yin and Yang in our daily lives and how can it affect our diet, health and mental make-up. The Ancient Mystery Schools teach what we have not been taught in our modern schools. The following general list of Yin and Yang classifications and attributes will help one to understand what the ancients taught and clarify one's thinking on this most vast subject. Remember: The Yin and Yang Principle is the Law of Opposites in the Physical Realm. Study this chapter and subsequent ones to thoroughly acquaint yourself with the infinite variety and characteristics of Yin and Yang that abound in our midst.

Yin and Yang Characteristics

Yin	*(Its Opposite)*	*Yang*
Alkaline		*Acid*
Centrifugal		*Centripetal*
Negative		*Positive*
Potassium		*Sodium*
Cold		*Hot*
Moon		*Sun*
Water		*Fire*
Dark		*Light*
Night		*Day*
Moist		*Dry*
Fall & Winter		*Spring & Summer*
Female		*Male*
Rest		*Activity*
Vegetable		*Animal*
Expansion		*Contraction*
Outward Tendency		*Inward Tendency*
Narrow		*Wide*
Space		*Time*
Purple		*Red*
Soft		*Hard*
Mental		*Physical*
Periphery		*Center*
Earths Surface		*Earths Center*
Raw Food		*Cooked Food*
West & North		*East & South*
Sour, Sweet, Spicy		*Salty, Bitter*
Tall		*Short*
Slow		*Fast*
Passive		*Active*
Weak		*Strong*
Chronic Disease		*Acute Disease*
Even Numbers		*Odd Numbers*
Parasympathetic Nervous		*Sympathetic Nervous*
Catabolism		*Anabolism*
Fruitarian		*Carnivore*
Electron		*Proton*
Abdomen		*Back*

Yin	*(Its Opposite)*	*Yang*
Yin Organs		*Yang Organs*
Hollow		*Dense*
Absorption		*Blood Filled*
Discharge		*Regulators*
Store Energy		*Transport Energy*
Gall Bladder		*Liver*
Small Intestine		*Heart*
Stomach		*Spleen/Pancreas*
Large Intestine		*Lung*
Bladder		*Kidney*

Yin and Yang in Food & Environment

By studying and understanding the Yin and Yang foods and weather conditions we can know what to eat, how to eat, when to eat and how much to eat at any given time of the day or year.

Hot (Yang) climates produce expanded (Yin) fruits, vegetables, flowers and plants, with the aid of much rain which is Yin and expansive. This climate produces food that is large, watery, sweeter, with an abundance of the potassium element. These are cooling (Yin) foods eaten in Hot (Yang) weather. So, if you are down south or in the tropics, the natural tendency is to consume more of the Yin foods grown in that climate. These foods are also considered base forming or alkaline elements. The blood must maintain a slightly alkaline condition, 7.8 on the pH scale. If the blood becomes positively acid, one would die immediately.

Cold (Yin) climates produces more contracted (Yang) foods such as smaller grains, vegetables and fruits with less liquid within them. Cold climates require more warming foods in the diet, such as cooked grains, soups, bread, and other cooked foods. Foods grown in Northern climates contain an abundance of the sodium element (Yang), which is necessary to keep our body warm and contracted during the cold winter months. Yin juicy fruits and vegetables are also Alkaline. Yang foods, such as grains, eggs and meat are considered Acid forming. The key is to balance the Yin and Yang and the Acid/Alkaline in the diet.

Generally, eat more Yang foods during the Cold (Yin) winter, about 60 to 85 percent Yang and 10 to 30 percent Yin foods and reverse in summer.

In balancing the diet, one must learn to listen to that small inner voice within; or body intelligence, which instinctively instructs us as to the proper choice of foods in the varied environments. If one can tune-in to their true bodily needs, Yin and Yang balance can easily be achieved, resulting in superior health.

Yin is considered anything that grows large and fast in a short period of time. Any substance, for example, drugs, marijuana, medicine, sugar, alcohol are extremely Yin (expansive) and they tend to dissipate and expand the cells and tissues of the body and brain causing light-headedness or a spaced out feeling and lack of judgment.

Since Yin is centrifugal and expanding outward, it requires a great deal of Yang binding and contracting force to equalize the extreme expansion caused by excessive Yin foods and Ying mind-expanding substances.

Salt, time, heat and pressure create Yang conditions in nature and in food preparation. Salt preserves food and in the body it contracts (Yang) the cells and keeps them from expanding. Yang foods counteract Yin (expansion). We all need a balance of both Yin and Yang to maintain a healthy body chemistry.

Sun, heat and activity are Yang. The Moon, cold and rest are Yin. The sun and heat bring on summer outdoor activity. The air is magnetic and charged with Yang elements, which produce Yin summer fruits and vegetables. Cold weather is Yin, passive, tending toward indoor activity; it produces more Yang root, dense vegetables and grains, and smaller Yang fruits or none at all, as in the Arctic.

We are living in a universe of positive (Yang) and negative (Yin) magnetic energy fields, which continually vibrate at tremendous speeds and produce magnetic currents. These magnetic currents register on our brain in a color spectrum visible to the eye. The ultraviolet rays of the spectrum are Yin; and the infrared rays are Yang. From Yin to Yang in this order: violet, indigo, blue, green, yellow, brown, orange, and red.

Eat According to Seasons

The influence of food, climate and environment affects and intimately binds mankind to the inescapable natural laws of Yin and Yang. Cold weather creates an inner biologic need for warmth, fire and Yang foods. Hot or warm weather creates an inner biologic Yin need for Yin foods, which are cooling and refreshing, such as, more water, juicy fruits and vegetables.

An excessive consumption of cook Yang foods eaten in Yang hot weather overheats the body, blood and internal organs, resulting in extra heart beats, a rise in blood pressure, profuse sweating and fatigue. An excessive consumption of raw fruits, juices, liquids or raw vegetables eaten in Yin cold climates will automatically lower ones blood pressure, (due to expansion of vessels) thinning the blood, causing cold hands and feet and weakening the heart and circulatory system.

As the old saying goes, we are what we eat. The changing weather conditions can affect us in a detrimental way if we do not learn how to acclimate ourselves to the changing environment. Just as the weather changes, so must our diet change to meet the demands made upon it. If one lives in hot climates, less Yang foods should be eaten, including a moderate use of raw fruits and vegetables. To balance body chemistry in northern climates, eat more Yang quality grains, beans, seaweed, soups, stews, and less of the Yin fruits and vegetables.

In the food category, eggs, meat protein (lean part), salt and fish are extreme Yang foods; while all grains, legumes, peas, and seaweed are more balanced and healthfully Yang foods. Extreme Yin foods are sugar, alcohol, cow milk, ice cream, tropical fruits, drugs etc. (Refer to Yin and Yang food chart in another chapter). Balanced and healthy Yin foods are; apples, plums, peaches, pumpkin, most vegetables, most seeds and nuts etc.

Yin and Yang Scale

From Yin to Yang in this order:

1. Drugs
2. Sugar
3. Oil
4. Cow Cheese
5. Ice Cream
6. Tropical Fruit
7. Fruit Juice
8. Baker's Yeast
9. Honey
10. *Fruit (In Season)
11. *Water
12. Nuts & Seeds
13. Nutritional Yeast
14. *Sea Vegetables
15. *Land Vegetables
16. *Beans
17. *Grains
18. Chicken
19. Fish
20. Miso
21. Lean Meat
22. Egg
23. Sea Salt

*Staple foods to be used daily in season.

Fig.2.3. Yin and Yang Food Scale

Time, heat and salt will turn Yin vegetables more Yang. Cooked and salted Yang foods become more Yang. Raw eggs are not as Yang as cooked ones. Raw apples are more Yin than cooked ones. Sprouted grains are Yin; cooked and salted grains are more Yang. Dehydration yangizes food. Fats in meat, whole cow cheese, whole milk, cream cheese and ice cream are extremely Yin due to their high fat content. Foods should comprise the main part of ones diet. Consume miso, cold pressed vegetables oils and sea salt during cold weather to maintain internal balance and body warmth.

It takes wisdom and intelligence to understand and apply the universal laws of Yin and Yang. The more it is applied, the more one is guided in life by the Tao. The ultimate key to this unifying principle is very simple. Moderation or adhering to the middle path in life and avoiding extremes in activity will automatically create a Yin and Yang balance, leading to harmony in body, happiness in mind and soul and success in life.

Fig.2.4. Yang Contracting & Force Yin Expending Force

Contracting centripetal force from the upper atmosphere toward the center of the earth produces the Yang-Male organism. Expending centrifugal forces from the center of the earth upwards, produces the Yin-Female organism.

Cosmic Energy Vortex

A clairvoyant's picture of the heart of the universe; the ultimate physical atom seen as a manifestation of pure light force spinning perpetually through itself interacting in the opposites of Yin and Yang.

Fig.2.5. Yin & Yang Cosmic Energy Vortex

Yin and Yang

From the interaction of the Subtle Origin in the Mysterious Mother and the balanced energy of Yin and Yang, all phenomena of life came forth. Yang energy is subtle and spiritual. It is positive and has action as its nature. Yin is coarse and physical and is referred to as earth. It is negative and receptiveness is its nature. Both energies are equal and support each other in perfect harmony.

Under the Law of Great Transformation, the energies are constantly changing, never static. Their movement in change is constant. Therefore, the future of a person has several possibilities, but nothing is certain, until the person makes it so.

Fig.2.6. Yin & Yang Life's Spiral

Lifes Spiral Unfolds

1. Infinity (Wu Chi), the Tao.
2. Yin and Yang - Relative World begins.
3. Energy, Emotion & Thought - Phenomenal World begins.
4. Fire, Pre-Atom - Material World formed.
5. World of Elements & Minerals is formed.
6. Vegetable Organic World begins.
7. Human Beings and Animal Kingdom begins.

Yin Yang Theory

Taoist Wisdom comes from observation of nature and her laws. By understanding nature's flows we can understand our own internal alchemy and also the dynamics of the universe. The microcosm reflects the macrocosm. The Taoist creation story is that Oneness, or Wu Chi, the source of all, manifests into this life of duality that we observe. Nature is a perfect manifestation of Wu Chi, and so we can learn a lot about life from observing, understanding and living according to nature's laws.

One of the first aspects of nature we can observe is duality: the existence of apparent opposites. For example, we see night and day; we can feel the difference between winter and summer; we experience both light and dark; we can feel warmth and coldness. These apparent opposites are not separate from one another, but are the same energy at different stages of a cycle. Thus we can observe the seasonal cycle taking us from the coldest part of winter through to the warmest part of summer and back again.

The Taoist s called these apparent opposites Yin and Yang. As a way of reminding us how they are not separate entities, but in continuous flow, they created a symbol called the Tai Chi, which shows this flow in its spiralling and dynamic nature. One dot of black appears on the white half and a white dot in the black half. This symbolises how even when we reach extreme Yang, there is Yin within in it, and vice versa.

Fig.2.7. Yin & Yang Opposites of the Universal

Yin

This describes the feminine principle of life and energy in its most contracted form. Winter, night time and dark moon are all examples of energy at its most contracted. In winter we feel to stay in more (we contract socially). At night time we sleep (we contract our activity levels). At dark moon we become introspective (we contract psychologically). When energy contracts it becomes solid: thus all things manifest and solid are described as Yin: the body, the blood, the earth etc.

Yang

This describes the masculine principle of life and energy in its most expanded form. Summer, day time and full moon are all examples of energy at its most expanded. In summer we feel lively and sociable. During the day time we are at our most active. At full moon we feel more inclined to go out and connect with others. When energy expands it becomes more intangible (just as when water is heated it becomes a gas). Thus all things that are less solid are described as Yang: the spirit, the chi, heaven etc.

Yang within Yin

As previously mentioned, the dot of white within the black is there to tell us that extreme Yin contains the seed of Yang, and vice versa. This part of the theory is often hard for people to understand. Once again, looking to Nature can help us to grasp this. In the middle of winter it is hard to see the seed of summer! Yet after mid-winter (Winter Solstice, December 21st) the days begin to get longer each day. This is the seed of summer.

We may describe a big crowd as Yang and a vast empty space in Nature as Yin. The crowd is sociable, the space is unsociable. And yet we can feel extremely lonely in the midst of a crowd. We can feel connected to the entire universe when we are alone in a vast part of Nature. This is another example of Yin within Yang (lonely in a crowd) and Yang within Yin (connected to all in vast space).

Because each opposite contains the seed of the other, when we push to an extreme, we find we suddenly shift to the opposite. Thus if we push something to extreme Yang, it will become Yin, and vice versa.

For example, when we are cold, we contract and become still; we can describe as Yin. In the summer we feel more flexible and active; described as Yang. But in extreme cold we begin to shiver, moving very, very fast extreme Yin has become Yang, in the hottest part of a hot summer we may simply lie motionless under a tree. Yang has turned to Yin.

Another example of the extremes is when we become a workaholic and work excessively hard (Yang), we may suddenly have a breakdown and develop fatigue (Yin). Likewise, people who are forced into a Yin state of not being able to be active, such as being confined into a small space, become very restless (Yang).

Yin and Yang

We can compare opposite pairs as Yin and Yang. However, it is important to remember that these opposites are not separate: they are one entity at different stages of its cycle, or Oneness reflected as two.

Yin	*Yang*
Night	*Day*
Winter	*Summer*
Dark Moon	*Full Moon*
Dark	*Light*
Introvert	*Extrovert*
Intuition	*Analysis*
Rest	*Activity*
Feminine	*Masculine*
Body	*Spirit*
Material	*Immaterial*
Contracted	*Expanded*

There can be a tendency to try to perceive Yin and Yang as being separate when we try to understand oriental theory through the dualistic modern mind: this leads automatically to judgment. We may try to choose between Yin and Yang, almost subconsciously, to decide which one is good and which one is bad. Our cultural bias tends to be towards labeling all Yin aspects as bad and Yang as good. The whole purpose of the Tao path is to transcend dualistic thought and to recognize that all of life is indeed One. Therefore, we need to be careful not to make judgments, but see how apparent opposites are simply different stages of the cycle, or reflections of the whole.

By observing Nature, we can begin to eliminate such judgements. When one has developed a deep relationship with Nature, one cannot choose between winter and summer or between sunset and sunrise. Rather we begin to embrace all and see it as one cycle that has different stages, Nature can teach us how to live in a harmonious way. Nature has no resistances to what is: the tree does not try to hold onto its leaves when autumn comes; the rock does not fight the ocean waves that break against it, but gently wears away. Thus we can learn to accept what is, and yet to walk our path: the path is The Way; it is the Tao.

Chapter 3

Great Physician Within

Fasting is Natural

The phenomenon of fasting is probably the least understood and the most abused health measure that has ever been used in the history of man. Understood and used with the proper knowledge of its processes, it is life saving and health promoting. Misunderstood and abused without thorough knowledge of its principles, it can be disease producing and death dealing.

To set the record straight, fasting or abstinence from food is an intimate part or process of every breathing life form, either plant or animal, (including human) that has ever existed since the beginning of Creation.

Just as we must all rest, mentally and physically from our daily activities, and give our bodies a chance to recharge its batteries through sleep, so must we allow our digestive and eliminative organs a rest (fast) from all food for the purpose of cleansing, purifying and revitalizing worn out cells, tissues, blood and all physiological functions.

There is nothing, mysterious, or occult about fasting. Although fasting has been used in various religious cults throughout history, it has not been generally recognized for its true value in the scientific care of the sick, the maintenance of health and the extension of life.

The word occult means secret. Fasting is an occult mystery only to those who have not taken the time to study it. And it will continue to be a mystery to all those who condemn it without first giving it a thorough investigation and fair trial.

A great sage once said: Condemnation before investigation, is the greatest bar to all knowledge. Let us not condemn the natural process of fasting, for it has been proven through scientific research and testing to be of true value in all states of health and disease. Abstinence is one of the best of all remedies and alone cures with out danger. Instead of using medicines, rather fast a day. Fasting is the royal road to internal purity.

Fig. 3.1. Great Healing Physician Within

Fasting Defined

Fasting is defined as a complete and total abstinence from all food, including juices, for a shorter or longer period of time for any number of purposes, i.e., illness, weight loss, etc.

It can be said that we all fast or abstain from all food during sleep and we customarily break-the-fast with the morning breakfast.

Everyone fasts in rest or sleep whether he knows it or not. Continual eating without periods of fasting would cause internal toxemia or food poisoning. However, nature dearly cares for us by taking away our hunger after a certain amount of food is consumed. It is a built-in safety valve, otherwise we would all die from gluttony.

Any food eaten in excess of bodily needs and natural hunger will cause a toxic overload in the system of undigested waste products (toxemia) within the cells and tissues. This in turn overworks the body's eliminative organs.

We can now detect the first state of the disease process; overworked organs of elimination, followed by toxemia or poisoned blood, and ending with pathology, disease and an early grave.

Fasting allows the eliminative organs to catch up on their work. The body is always striving to maintain a balance, and when it is given a physiologic rest, (fast), it will carry out its prime objective without the aid of drugs, medicines, or any other unnatural cures.

The cure of disease lies in preventing the cause of disease. There is no disease without a cause, and the causes are many, i.e., overeating wrong foods, alcohol, smoking, worry, fear, hate, overwork, lack of exercise, sunshine, rest and sleep.

Fear of Fasting or Starving

Fasting has been feared by many people, due to misinformation and fear tactics by the press, radio, and T.V., including the unwillingness or ignorance of the medical authorities to investigate and reveal the truth of the matter to the people.

The press has run articles telling of plane crash victims and survivors of other natural disasters, in which they survived for many days or weeks without food and medical help. Subsisting almost entirely on water, they come out of it with improved health, and freedom from previous disease conditions. These cases definitely substantiate the claim that the human body is inherently capable of surviving under adverse situations with no ill or adverse effects.

Hospital authorities believe that a patient will starve to death if not fed three square meals a day of the conventional over-cooked fare. Those who are supposed to know about our health and welfare are completely ignorant about the distinction between fasting and starving. Fasting and starvation are two completely different conditions. The first is beneficial and rejuvenating; the latter is destructive and death-dealing. Starvation begins where fasting leaves off.

Fasting is a process whereby the body exists on its stored reserves of fat, protein and minerals, until they are used up or exhausted. Then it is time to break the fast. To go beyond this point is starvation. Fasting does not use up the vital tissues or organs.

Starvation is a state or condition that goes beyond the stored reserves of fasting. It is a pathological skeletal condition which ends in death. Countless people have fasted with or without supervision for a variety of reasons from a few days to many weeks. The results of these fasts have been proven to be of utmost value in achieving superior health. There is no question but that scientific fasting eliminates the bodily poisons, adipose tissue, and breaks down destructive cells. If carried out properly and scientifically, the fast is a means of acquiring complete rejuvenation and vigorous, robust health.

Experimental and Scientific Fasting

It is unfortunate for the American people that the medical society, refuses to acknowledge, recognize, or teach the value of fasting as a natural form of correct care in sickness.

In European countries, fasting, juice diets and other natural therapeutic measures, are used by their best doctors in clinics and sanitariums. One such well-known clinic is the Buchinger Sanitarium in Bad Pyrmont, Germany, where over 70,000 fasts or juice fasts were conducted. In Australia, Dr. Alec Burton has conducted thousands of fasts at his Natural Hygiene resort for many years. In this country, Dr. H. M. Shelton has personally supervised over 30,000 fasts in his 50 years of practice in Texas. In Sweden, in the year of 1954 and again in 1964, Dr. Lennart Edren led a 300 mile walkathon while fasting. A total of 30 people started and finished the walk with no ill effects. All medical tests on the fast-walkers proved to be positive, with no adverse side effects. This experiment clearly proves that man is able to fast even under strenuous physical exertion.

Dr. Shelton writes about some interesting cases of feats of strength while fasting in Volume III of the Hygienic System, Chapter XVI. He states that Bernarn Macfadden, the Father of Physical Culture, held a fasting and strength contest in Madison Square Garden in 1903. After a 7 day fast, J. H. Waltering captured 1st place by winning the 50 yard dash in 6 minutes. A 6 minute mile in 1903 was considered quite fast at that time.

Even more fantastic was Mr. Gilman Low, a weight-lifter from Boston. In 15 seconds he lifted 500 lbs., 20 times, and in 20 seconds 900 lbs. twice. On the 7th day of his fast, he lifted in 19 seconds, 1 ton 22 times. All of this was closely observed by medical

doctors. Mr. Low asserted that after a 15 day fast previously, he could have whipped his weight in wildcats. These feats were accomplished after 7 days without a bit of food.

Does this indicate a state of starvation, weakness or death? No. It simply means that the human body has a tremendous storehouse of reserve food material by which it sustains itself during periods of fasting or food shortage.

Dick Gregory, the famous black comedian, writer, and author of many books, one being on Natural Health and Vegetarian Nutrition, has undergone many fasts while engaged in long distance running (15 miles) non-stop.

We have personally gone on extended water fasts up to 2-4 weeks, and on watery fruit diets for up to 48 days, thus regaining our health and well-being. We do not recommend a fast or fruit diet for this length of time unless under proper supervision, or if you are well-versed in the procedure.

Animals and Fasting

We all can learn a lesson about fasting by observing the habits of wild and domestic animals. Animals will not eat when sick or wounded, but will retreat to a quiet location and rest, drinking only water until well.

It has been observed that some animals will consume a small amount of grass when sick. There is something in the grass and plant life that the animal craves when sick. The green chlorphyll supplies the missing elements or cleansing properties that are needed in sickness.

The household animal will recover of its own accord when left alone. It will let you know when it is ready to eat. It would be well for man to follow the same course of action as do all animals, that is, when sick, diseased or emotionally upset, take a physiological rest; abstain from all food, (fast), rest in bed, keep warm, quiet and drink only pure water as thirst demands until recovered. The humans are the only creature that eats at all hours of the night and day, and continues to do so when sick, diseased and emotionally upset.

They are the only living being that refuses to resort to fasting when sick. In their foolishness they partake of food and imbibes poisonous medications in a futile attempt to restore their sick body to health. Nothing adds to the fires of disease like drug treatment

and forced feeding. This procedure has caused much suffering and agony, sending millions of unwary souls to an early grave.

All living organisms, from the one-celled amoeba to human, the highest form of intelligent life on earth are subject to the same Universal Natural Laws of Life and Existence, namely, the inherent qualities of self-healing, self-regeneration and self-rejuvenation.

It has been noted by research scientists that scores of insects and animals abstain from food from a few days to many months during the winter season. The breeding season of numerous lower animals is a period of fasting and resting. The silver salmon fasts for weeks while swimming hundreds of miles upstream to the spawning ground. The queen ant eats nothing until her eggs are hatched, and then the hatched workers finally bring her food. An incredible period of many weeks pass before she is again ready for food. The common earth worm has been kept alive for well over 15 generations in laboratory experiments because of the periodic fasts they underwent. It behooves every medical scientist and nutritional researcher to investigate the truths nature has to offer, and to use her natural principles for the benefit of all humankind.

Fig. 3.2. Fasting is Internal Resting.

Historical Fasting

Let us again remind our medical bretheren that the father of medicine, Hippocrates, recommended fasting in the care of the sick. He said, if a sick person is fed, one feeds the disease. On the other hand, if the sufferer is witheld from food the disease is fasted out.

All nations of antiquity followed the natural principles and methods of fasting and frugal eating as advocated by their great philosophers and sages: Socrates, Plato, Pliny, Senneca, Pythagores, Moses, Jesus, Budda, Mohammed, Galen, Benjamin Franklin, Thomas Edison, and many, many more.

Jesus reportedly fasted 40 days in the mountains, and thereafter could not be tempted by the devil. Likewise, Gandhi subjected himself to fasting and prayer frequently. Moses followed suit; fasted and prayed, and he decended from the mountains a wiser man.

In early Rome, certain drug doctors were not allowed to dispense their concoctions. The great Paracelsus once said that fasting is the greatest, the physician within, that heals us. Confucius, Buddha, Lao Tzu, Christ, Moses, and others fasted for internal purity and illumination.

By following the advice and example of these great men, you too can become disease free. There is nothing to fear, but fear itself, is an old adage that can be applied to the fear of fasting. Fear not for you will be guided by the Spirit of the Great Ones who have also tread the straight and narrow way.

What to Expect while Fasting

The first two or three days of the fast are the most difficult, especially for sick people. Because the faster has, for the first time in his life missed the accustomed stimulating meal. Like a drug addict, the food addict will go through two or three days of withdrawal symptoms. At this point of the fast, the tongue may become coated white and the breath may smell bad. There may be a foul taste in the mouth, and nausea, accompanied by dizziness upon arising, topped off by an empty feeling in the stomach. After three days these symptoms will usually disappear as the body's reserve forces will draw on themselves for nourishment.

These symptoms may also reappear as the fast progresses, as the elimination process continues. Near the end of the fast these unpleasant effects will subside and a feeling of well-being will take their place. It must be understood that the elimination of toxic material thrown out into the blood stream for expulsion is a necessary cleansing process.

If a crisis overtakes you during a fast, do not panic. Here are some crisis symptoms: feverishness or chills, due to toxic material being thrown into the blood stream for elimination; cramps, retention of urine, diarrhea, headaches, and insomnia are some of the temporary eliminative symptoms one may experience before reaching normal physiological balance and high level health. Fasters require plenty of rest, sleep, fresh air, sunshine and freedom from all stress to facilitate internal healing; this especially holds true for those weakened by a debilitating disease.

Many people prefer to drink warm water during a fast, and to place a ginger compress or hot water bottle on the stomach, intestines or bowels to attract blood to the area for healing.

It is amazing how a person's hunger will vanish after the fifth day of fasting. In fact, the mere mention of food will sometimes cause nausea. As the reserve food supply within the body takes over the job of sustaining the body, other conditions are going on within to maintain a balance, i.e., the pulse rate slows down, the blood pressure decreases, and the stomach secretions are reduce. The eyes become brighter and the hearing becomes more acute. The blood cells increase in number.

As the fast nears completion, the symptoms of elimination will also disappear. The breath smells sweet. The foul taste and nausea are gone. The pulse rate, blood pressure, and temperature return to normal. The stomach secretions and hunger lacking before, now returns in full force. The mouth waters and there is a desire for the simplest of food.

There is a feeling of well-being and a new zest for living. The length of the fast cannot be determined before hand. Each case is unique and every person has different quantities of toxic poisons within them and various degrees of organic constitutional weaknesses. Nature will always indicate how long one should fast. Take it day by day.

Fig. 3.3. Short and Long Fasts in Nature

Long Fasts

Remember, one fast will never completely cleanse the body. It requires from one to three years of periodic fasting and correct eating to obtain a thorough cleansing and return to vibrant health.

One long fast may produce a clean, pink tongue, but this does not necessarily indicate a totally pure and cleansed body. When the tongue has become pink, it either indicates that the body is pure or that its reserve fuel supplies and vital force has been used up for cleansing during that particular fast.

Many times the faster will run out of energy and vitality well before the tongue clears up and becomes pink. In this case, it is imperative to break the fast and resume the feeding. Nothing is ever gained by trying to break records while fasting, at the expense of the recovery ability of the body. Fasting too much and too often can make a nervous wreck out of the strongest willed person, not to mention a sickly one.

Long fasts must be taken only under proper supervision by one who knows the procedure thoroughly. Remember: The sicker the body, the more crisis reaction it will have. Therefore, the necessity to be supervised by a competent health doctor. Most people can withstand a seven to ten day fast without supervision, provided some studying has been done on the subject. Between each fast maintain a well balanced diet, obtain sufficient exercise, sunshine, fresh air, rest and sleep and emotional poise.

Precautions in Fasting:
Fasting is most beneficial in acute diseases, but not in degenerative conditions. Acute disease is a violent or quick release of toxins in the system; it is a sign that the body has enough reserve vital power to discharge and eliminate the internal poisons and heal the organism. Chronic disease is a condition of long standing (degeneration) leaving an individual with weak vital healing power.

Degenerative diseases, such as cancer, diabetes, rheumatoid arthritis, Parkinsons disease, tuberculosis, heart disease and extreme malnutrition (anorexia nervosa), do not readily respond to long fasts. Other natural health and biological therapies are recommended to regain health and balance body and blood chemistry. Some of these therapies include: herbs, acupuncture, vitamin/mineral food supplements, balanced individual dietary measures, color and music therapy, hydrotherapy, corrective exercise movements, shiatsu massage, sunshine, sufficient rest and sleep, harmonious environment, and positive physical and mental conditions.

Dr. John Tilden, an early 1900's fasting physician, advocated only short fasts from 3 to 10 days for certain chronic diseases, and thereafter fed his patients only one meal per day until they recovered. He never advocated long exhausting fasts to completion, as he believed they were too depleting to the nervous system.

Consult a natural health or biologically oriented doctor in your area for a professional evaluation and consultation of your condition.

Reasons for Fasting

Fasting can be undertaken for many reasons:

1. For Body and Blood Cleansing
2. For Colds or Flu
3. When Mentally and Physically Fatigued
4. For Spiritual Development
5. For Rejuvenating Internal Glands and Hormones
6. For Losing Weight
7. To prevent Acute and Chronic Disease
8. To Feel and Look Better
9. To Eat Less and Save Money
10. To Lower Cholesterol Levels and Blood Pressure
11. To overcome Drugs, Smoking, Alcohol etc.
12. To overcome Stress and Sleep Better
13. To improve Digestion and Bowel Movements
14. To increase Mental and Physical Discipline

Addictions to stimulating foods will cause withdrawal symptoms. Stomach rumblings, headaches, nausea, weakness, fatigue, irritability, coated tongue are definite signs that one needs a fast; and afterwards, a change to a more wholesome, natural, non-stimulating dietary. The most sensible health policy one can follow is to eat only when truly hungry, which is indicated when the mouth waters, and there is a zest and relish for natural unstimulating food. If food is not relished at regular mealtimes, skip the meal and fast until true hunger returns.

Breaking a Fast

Extreme care should be taken in breaking a 5 to 10 day fast. The first day after the fast drink 4 ounces of apple or orange juice and 4 ounces of water, mixed; one glass every two hours. The second day eat fresh fruit according to hunger. The third day continue a well balanced diet. It is best to consume the fruit and vegetables grown in the region and climate where you live, i.e., apples, berries, peaches and cherries and winter vegetables in the northern region and oranges, grapefruits and melons in the southern region.

Fig. 3.4. Breaking the Fast

Fasting Recommendations

We do not recommend raw fooders or strict fruitarians to fast for any length of time; what is needed in these cases is a well balanced natural diet. These extreme alkaline diets are already naturally cleansing to the system, but are deficient in many nutrients that are necessary for tissue repair, healing and body-weight maintenance. Any further fasting in these cases will lead to disease and compound the problem.

The ancients teach that it is more beneficial to fast when ill or not hungry; all animals in nature follow this procedure. This is in conformity with the natural flow of life.

Many people attempt to set a scheduled day for fasting; but when their prearranged day arrives, they may find themselves hungry or in no mood to fast. Instead of heeding their inner psychological voice not to fast, they fast anyway. This is not a healthful practice, because the body is not in need or ready for a cleansing at that time; what one requires is wholesome food.

Many health enthusiasts believe the erroneous concept that fasting is a cure all; it is not. Fasting too long and too often, when one is not physiologically ready can lead to nervous exhaustion, anorexia, and may also lead to junk food binging. The former conditions can be fatal.

The best advice is to fast only when necessary, especially when hunger is not present, or when physically or emotionally exhausted. Missing a meal or two occasionally improves digestion, elimination, clears the mind, and increases health and longevity. Fasting in its proper time and need enables one to cleanse, heal and balance the body chemistry in a normal cycle.

Summary of Fasting

To sum up in a condensed version the benefits of fasting, we quote the leading advocate of fasting in America, Dr. H. M. Shelton:

1. Fasting does not cause the stomach to shrink up.
2. Fasting does not cause the walls of the stomach to grow together.
3. Fasting does not cause the digestive fluids of the stomach to turn upon it and digest the stomach.
4. Fasting does not paralyze the bowels.
5. Fasting does not impoverish the blood nor produce anemia.
6. Fasting does not produce acidosis.
7. Fasting does not cause the heart to weaken collapse.
8. Fasting does not produce malnutritional edema.
9. Fasting does not produce tuberculosis nor predispose to its development.
10. Fasting does not reduce resistance to disease.
11. Fasting does not injure the teeth.
12. Fasting does not injure the nervous system.
13. Fasting does not injure any of the vital organs.
14. Fasting does not injure the body's glands.
15. Fasting does not cause abnormal psychism.

On the Positive Side, Fasting does the following:

1. It gives the vital organs a complete rest.
2. It stops the intake of food, which may decompose in the in testines and poison the body.
3. It empties the digestive tract and disposes of putrefactive bacteria.
4. It gives the organs of elimination an opportunity to catch up with their work, and promotes elimination.
5. It reestablishes normal physiological chemistry and normal secretions.
6. It promotes the breaking down and absorption of exudates, deposits, diseased tissues, and abnormal growths.
7. It restores a youthful condition to the cells and tissues, and rejuvenates the body.
8. It permits the conservation and recanalization of energy.
9. It increases the powers of digestion assimilation.
10. It clears and strengthens the mind.
11. It improves function throughout the body.

Rejuvenating Power of Raw Juices

Natural science has rediscovered the regenerating and youthifying properties of raw foods and fasting as passed down throughout the ages from ancient teachings. In the days gone by, man was known to have lived to great ages in perfect health and vitality. Today, the European health clinics are utilizing the principles of this Secret Youth Formula in the form of Therapeutic Juice Fasting, including the use of fresh, raw fruit and vegetable juices, vegetable broths, youth giving herb teas and mineral waters.

Juice Therapy Fasting

In unhealthy, diseased, and acid/Yang conditions raw juice cleansing therapy is a beneficial alternative to the conventional water fast method. Both methods of fasting are useful and will rejuvenate and cleanse the body, however, a juice, vegetable broth and herb program will provide the demineralized and depleted body with the necessary elements as follows:

1. Live raw enzymes, trace mineral elements, vitamins & minerals.
2. Raw juices and broths act as remineralizers. They alkalize, purify and neutralize the acid-toxins and internal waste, as they are poured out into the blood system.

3. The blood-sugar level remains close to normal during a raw juice fast, while building up the alkaline reserves to neutralize the excessive acids in the tissues and blood.
4. The vitamins, minerals and enzymes are extremely necessary factors in supplying the life giving elements for the glands, organs, tissues and blood to increase the recovery ability and healing of the entire body.
5. Juices and liquids do not impair or tax the digestive process and are very effortlessly absorbed quickly into the blood stream, cells and tissues.
6. A juice faster does not experience much weakness or low energy lags during or after the fast, as many times occurs on a strict water fast.
7. The recovery rate after the juice fast, in many cases has been proven to be quicker and more stable. The beneficial results of the fast will be enhanced provided the person adopt a natural food & living lifestyle afterwards, as suggested in this book.
8. Raw fresh fruits and vegetables contain highly nutritive solar-energy electricity and enzymes, that operate to preserve and prolong the life of the living cells.

The morality of clean blood ought to be one of the first lessons taught us by our pastors and teachers. The physical is the substratum of the spiritual; and this fact ought to give to the food we eat, and the air we breathe, a transcendent significance.

Eliminative Diet

The Eliminative Diet consists of consuming only raw fruits, vegetables and juices, excluding proteins, fats and starches, and this list also includes the heavier acid forming fruits and vegetables such as, bananas, dates, dried fruits, potatoes, nuts, avocado, etc. Raw fruits, vegetables and juices are easy to digest and assimilate, thus enabling the remaining body energy to expend itself on self-healing and cleansing. If one consumes starch, fat, or protein foods during this cleansing diet, the healing process will be delayed. Heavier Yang/acid foods are more difficult to digest and take longer to be absorbed into the blood stream, therefore they should be avoided during a cleansing period.

The Eliminative Diet is a superb method of cleansing the body of internal impurities. A few days to a week on juicy fruits and veg-

etables, with sufficient rest, will allow the body to eliminate accumulated waste products, fatty deposits and excess weight. The best time for this type of Yin-Eliminative Diet is during hot summer months. One can expect to lose from 7 to 10 pounds of body weight and fat per week on this diet; it will also normalize blood cholesterol levels and lower high blood pressure.

Fig. 3.5. Cleansing Foods

Eliminative Crisis

Acute and chronic diseases can be attributed to the over-consumption of protein, fat and high-calorie processed starch foods. One should not be too concerned about eating high protein or other acid forming foods; the main concern here is internal cleanliness first, then afterwards a return to a wholesome nutritional program, which includes grains, legumes, vegetables, fruits, seeds and nuts (germinated), sprouts and a moderate amount of low-fat yogurt, buttermilk, cottage cheese (all raw), if you desire it.

During an Eliminative Diet one may experience varying degrees of aches, pains, headaches, diarrhea, dizziness, nausea, etc. Understand: These temporary symptoms are merely a cleansing process which are necessary before a healing can take place within and good health experienced.

These cleansing symptoms indicate that the organism is working to eliminate years of accumulated internal waste products. A crisis resulting from an Eliminative Diet or Fast is a physiologically preventative measure much less painful than the possibility of degenerative or chronic disease years later, i.e., cancer, heart disease, arthritis, etc.

Cleansing Foods

If you are an extremely busy person and do not have the time or inclination to go on a total fast for a few weeks at a Health Spa, then the Eliminative Diet and the Raw Juice Cleansing rejuvenation program is for you. The program consists of consuming only raw fruits and vegetables and their juices, to be eaten at mealtimes or at any other time during the day that you feel hungry. The following Raw Foods are excellent blood cleansers & purifiers.

Grapes	Apples	Cantaloupe
Nectarines	Raspberries	Tomatoes
Watermelon	Blackberries	Huckleberries
Grapefruit	Persimmons	Cucumbers
Cherries	Praches	Honeydew
Papaya	Oranges	Apricots (Fresh)
Pears	Plums	Mulberries
Pineapples	Blueberries	Strawberries

These foods may be used as disinfectors and mucous dissolvers in a salad consisting of tomatoes, cucumbers, green peppers and tender celery.

Onions	Garlic	Leeks
Radishes	Lemon Juice	Cayenne Pepper

The following vegetables are utilized more efficiently to cleanse the cells and tissues, build the blood and purify the internal organs. They must be freshly squeezed in a juice extractor and sipped slowly. Use carrot juice as a base, about five ounces, and add three ounces of any of the vegetables listed here:

Alfalfa	Cabbage	Alfalfa
Dandelion	Lettuce	Potato
String Bean	Squash	Asparagus
Endive	Parsley	Sorrell
Turnip	Swiss Chard	Beet
Cucumber	Kale	Parsnip
Spinach	Watercress	Carrot
Brussell Sprouts	Kelp	Green Pepper
Tomato	Zucchini	Celery

Feel Like a Million

You will be amazed at how much better you will look and feel after a fast or an eliminative diet, maybe even years younger. Without cleansing the body, one cannot possibly attain health. That is how important it is. Never eat when ill, instead rest in bed, drink distilled water when thirsty, have proper ventilation and warmth, and in a few days to a few weeks you will feel like a million.

Fasting and eliminative diets are the greatest means of cleansing the body, says Dr. J. H. Tilden, as it strengthens the nerves, aids digestion and helps to build a powerful organism.

Make up your mind that when your body requires a thorough internal house cleaning, to call on nature's maids in the form of the Water Fast, Raw Juice Cleansing or Eliminative Diet. Remember, your body must be clean before you will experience super health. Do not make a thousand excuses why you cannot begin on a sound health program. Only failures quit. The successful people in life are the ones who follow a truly logical and correct plan of living in harmony with Nature's Laws.

Fig. 3.6. Feel Like a Million in the Tao

Yin and Yang Juices

Yin and Yang refers to the potassium/sodium content of foods and juices. Basically, it involves using the food grown in the climate where you live. For instance, if you live in the North, you will obtain much better results if you consume the fruit and vegetable juices that are grown in that region; apple, pear, plum, berries, cherries, grapes, peaches, melons, carrots, beans (green), squash, celery, green pepper, cucumber, parsley, etc. These foods are grown in cold, (Yin), climates and they are classified as more Yang than tropical foods because of their higher sodium content. Northern (sodium/Yang) foods are more sustaining and warming in cold weather.

Yin, (potassium), foods are grown in hot Southern, (Yang), climates. Southerners can best utilize the foods grown in their region, such as, all citrus fruits, tomato, papaya, persimmons, mangoes, melons, peaches, berries and all vegetables grown in the South. These plant foods are high in potassium (Yin) and very cooling to the system, to withstand the hot weather.

Daily Ration of Juice

Juice is best taken on an empty stomach, or one half hour before a meal. The daily ration of vegetable juice should be from 4 to 6 ounces, unless you are on a juice cleansing program for a specified period of days, in which you can drink a quart or more per day. Any more than four to six ounces of vegetable juice on a daily basis may overwork the liver, causing yellow/orange skin, or what is known as carotene anemia. This is a result of the liver's inability to utilize vitamin A in large amounts. The darker races should observe the whites of the eyes for yellowness.

No more than four to six ounces of fruit juice should be taken daily. An excessive consumption of fruit juice overworks the kidneys and pancreas because of then concentrated sugar content, which depletes the adrenals and waterlogs the kidney/bladder organs. A healthy body produces only a small amount of insulin daily. An excessive intake of sweet juice will make the body produce excessive insulin and lead to hypoglycemia, (low blood sugar).

An excessive consumption of fruits and juices creates high alkalinity (Yin condition) in the system and overworks the adrenal

glands in its effort to maintain the pH balance between 6.5 and 7.0 of the urine. This Yin condition decreases the hydrochloric acid in the stomach, thus lowering protein and calcium absorption. An eliminative diet or fast is not recommended for diabetics, hypoglycemics or other degenerative diseases.

Remember: Consume fruit in season only; but not excessively; more fruit can be eaten in the summer for Yin and Yang balance. Use good judgment in the choice and amount of raw foods at all times. A note to the seriously ill: Please consult a natural health practitioner or a competent doctor who thoroughly understands the process of fasting, natural healing, nutritional therapy and the Yin and Yang principle. A professional of this caliber can determine more accurately, through Oriental Diagnosis, Iridology, etc., what can be accomplished in one's individual case. Disease is nature's effort to get you well. Regain your health by living away disease. Hippocrates claimed that chronic disease came from auto-intoxication, ie., self-poisoning due to constipation. The deposits of accumulated waste in the colon release toxins which inflame the nerves producing rheumatism, neuralgia, melancholia, hysteria, exzema, acne, headaches, and many many other health problems. Hippocrates also taught the way to handle disease.

Overcoming Constipation

Constipation is a worldwide problem. However, it seems to be concentrated in the so called civilized Western nations to a greater extent. Constipation was known back in the time of Hippocrates, where certain days of the month were set aside for taking purgatives, enemas and emetics. It has grown to epidemic proportions especially in stress filled modern society where unnatural living habits are more prevalent, and tons of refined, processed and artificial junk foods and drugs are consumed daily. Constipation precedes most disease conditions. Constipation can be defined as the inability to evacuate the bowels; impacted colon; lack of intestinal strength and paristalsis activity; lack of complete bowel movement; improper stools and infrequent movements. There can also be constipation of the liver, kidneys and bladder because of a clogged condition from overeating.

Yin and Yang Constipation

Atonic constipation is a Yin condition; expanded colon and intestines. The symptoms of this disease are: lack of muscular tone in the colon and abdominal cavity; fallen and pushed out intestines with gas pockets and clogged fecal matter.

Clause: Overeating, excessive fruits, fats, liquids, sugars and other Yin foods to excess; excessive use of cathartics and improper and overuse of enemas.

Constipation is a disease of civilization. Wild men and wild animals do not suffer from this malady, which is perhaps responsible for more human misery and mental and moral disaster than any other single cause.

Spastic constipation is a Yang condition; the colon is constricted or tense and the fecal matter is evacuated in small lumps and stringy.

Cause: Excessive intake of meat, fish, fowl, eggs, white flour products and salt.

Atonic Constipation Spastic Constipation

Fig. 3.7. Colon in Atonic & Spastic Constipation

Constipation is virtually unknown in undeveloped and agricultural based countries. Compare the healthy normal colon with the abnormal diseased colon, and resolve to eat healthfully and perform internal exercises daily to maintain a normal colon and good health.

Fig. 3.8. Colon in Atonic & Spastic Constipation

The following are the Most Common causes of Constipation:

1. Constant Overeating and Improper Diet
2. Too many Food Combinations at Meals
3. Improper Mastication
4. Drinking with Meals (Excessively)
5. Eating when not Truly Hungry
6. Ignoring Nature's Call
7. Eating when Emotionally Upset, Angry or Tired
8. Eating too many Constipating Foods
9. Not Eating Enough Fresh Raw Foods
10. Lack of Abdominal Tone and Physical Fitness
11. Excessive Fruits, Liquids and Sugars
12. Excessive Meat, Eggs, White Flour Products and Salt

Causes of Constipation

1. Overeating bloats and overtaxes the digestive system and organs; and along with improper foods, makes the condition worse. An overloaded stomach cannot digest food properly and this mass of fermenting food coats up the walls of the intestines and colon, making it very difficult to evacuate waste matter. Internal secretions also fail to handle the excessive amount of food eaten.
2. Too many food combinations at one meal can easily upset the body and blood chemistry causing indigestion and toxemia. A mono-diet of just one food per meal, i.e., grapes or apples can do wonders in overcoming constipation.

3. Improper mastication overburdens the stomach and digestive organs. Food must be chewed into a semi-liquid state before the digestive system can handle it without trouble. Swallowing foods half chewed places all the work on the stomach and intestines causing blockages in the colon.
4. Excessive drinking with meals dilutes the digestive juices causing indigestion and constipation; it also hampers proper salivation of foods, which impedes digestion. If liquid is taken at a meal, simply sip slowly and mix with the saliva. The Chinese herbalists recommend a small cup of herb tea after meals to help cut any fat (vegetable or animal) eaten during the meal, and to aid digestion.
5. Eating when true hunger is not present is a burden to the stomach, internal secretions and intestines. True hunger is present when the mouth waters for wholesome unprocessed foods. Stomach pangs, pain or rumblings are all signs of indigestion and false appetite cravings. It is best to eat at regular hours, but if not hungry, skip that meal and wait until true hunger returns; or eat a light meal of fruit or vegetable broth.
6. Ignoring Nature's call to evacuate causes an accumulation of fecal matter in the lower bowel, making it insensitive to further movements. This directly leads to colitis, piles, colon prolapsus, auto-intoxication and constipation. No matter what you're doing at the time, always heed the call of nature.
7. Food is very poorly digested and assimilated when eaten in a state of emotional turmoil; the mouth becomes dry, saliva does not flow freely; stomach secretions stop or slow down and there is no real appetite; therefore, no nerve power t digest and utilize food properly, resulting in constipation. It is the same with fatigue; rest when tired. If you cannot sing or laugh before a mea skip it until you can.
8. Eating too many constipating foods, such as, meats, cheeses, nuts, white flour, white sugar, pastries, nut butters, oils, fatty foods, fried foods, too much popcorn and excessive use of lettuce or spinach raw, are direct causes and major constipating factors which leads to disease, if not counter-balanced by high fiber or anti-constipating foods, such as, whole grains, fruits, sprout: vegetables and juices, bens and yogurt.

9. Not eating a sufficient amount of fresh raw foods can cause constricted kidneys and liver and also hardening of fecal matter in the colon and bowels, which is a Yang condition. Lack of raw food deprives one of vitamins, minerals and enzymes necessary to the proper functioning of the digestive and eliminative system.
10. Lack of fitness, especially abdominal tone can cause prolapsus of the internal organs. The diaphragm muscles must be strengthened to build up tone and health in this area. Those who exercise daily (especially the abdominal region) rarely experience constipation. An overall exercise program also stimulates internal secretions, horones and organs.
11. Overeating of fruits, liquids, sugars etc. causes Atonic or Yin constipation.
12. An excessive intake of meat, eggs, white flour and salt causes Spastic or Yang constipation.

Detecting Constipation

Health and disease can be detected by observing the form and color of the feces. The stools should be firm and shaped like a banana or cigar, without odor; odor is a sign of internal stasis or constipation. Light colored feces are caused by an excess of raw fruits and vegetables. The normal feces should be medium brown; if they are dark or black, excessive animal products have been consumed, or there may be internal bleeding. Reddish feces are usually an indication of bleeding hemorrhoids. Greenish stools mean an overconsumption of Yin fruits and sweets. A baby's feces is yellow and soft. The feces should float; if not, excessive Yin foods, fruits, sugars and liquid have been eaten; also eating without thorough mastication and bad food combinations. When eating wholesome foods, thoroughly chewed and digested, the feces will be brown, firm and float on top.

Excessive salt consumption causes intestinal water absorption, which results in small and dry feces. Excessive use of dairy products, fruits, sugar and fats (all Yin), result in shapeless feces or diarrhea. The bowels should move after each meal. If you eat three meals per day, and have only one movement, you are constipated. In this case your body wastes are usually retained for two days or more. If you have small or scanty bowel movements three times per day, you are still constipated.

Foul smelling stools are an unnatural and unhealthy condition, common to meat eaters only. Vegetarian gorillas and apes who are physiologically built like a human, have odorless stools, which are large and mushy. Their intestines and skin are free from parasites. Pin worms and parasites are always a sign of intestinal toxemia and constipation. More than 80 percent of all people have pin worm and many other types of worms. A diet of processed junk foods, meats, fried foods, sugar etc. will surely attract worms in your system.

Meat eaters invariably have bad smelling stool, along with a coated tongue and foul breath. In the case of the dog, tiger and lion and the meat-eater there are always to be found fragments of decaying flesh in the colon; while the colon of vegetarian animals like sheep, cow, deer and the nursing infant or flesh-abstainer, there is no decay or foul odors.

Internal Bath

A high enema of hot water 100°F will soften the deposits of the large intestine or colon and should be taken at least three days in succession to eliminate the hardened waste matter.

Fill your two quart enema bag with 1½ pints of water. Hang the bag 3 feet above the floor so that the pressure goes in slowly, without cramping, and allowing the water to penetrate the deep crevices. Lie on your back; draw knees up and relax the abdomen. Insert the regular 6 inch nozzle at the end of the tube, well-lubricated with vaseline, into the anal opening. Do not hurry the water into the colon; pinch the hose if necessary to avoid stomach cramps; discomfort will pass if done slowly. Now massage the stomach area with your hands for 1 or 2 minutes; next, get into a squatting position and expel the water and fecal matter. Repeat the above process again with warm water. Use cold water for the third enema; this tones-up the entire bowel area. Hold the second enema in for 10 or 15 minutes and pump the stomach in and out several times.

If you are extremely toxic, continue with 3 enemas per day for a three day period. You can never get all the waste out in one enema or in one day. Afterwards, use an enema when you have the flu, colds, sickness, fatigue or toxemia. It will work wonders for your health and well-being. You may also add lemon juice to your enema bag, or garlic and cayenne, to help cleanse the bowels.

Flaxseed Cure for Colon Cleansing

Cook or soak a handful of figs and prunes and blend them thoroughly; make enough to last a few days. Also add enough water to blender to allow for a liquid consistency. To 2 ounces of the fruit, add about 2 or 3 tablespoonsful of cleansed flaxseed, mixing it thoroughly. Eat this mixture after breakfast and before retiring at night. Flaxseed taken in this manner is tasteless and slides down easily. If the constipation is really stubborn, increase the flaxseed to six tablespoonsful per meal. This is necessary to cleanse the walls of the colon.

Flaxseed is not only lubricating, but healing and nourishing as well, as much of the oil is taken by the tissues. The flaxseed treatment to be effective requires that one drink enough water for the seeds to absorb the fluids in the intestines. This swells up and produces a slimy mass that not only cleanses the colon, but will in time restore the elasticity of the intestines with the resultant effect of a complete evacuation or bowel movement after each meal. Try this wonderful treatment and watch your health improve.

Use this treatment only to overcome constipation; never remain on it after the condition is corrected. Maintaining a wholesome diet, plus sufficient and proper internal exercises, will give one healthy and regular bowel movements indefinitely.

Banana Diet for Intestinal Disorders

Bananas are one of the best cures for most intestinal diseases. The gastro-intestinal tract, in terms of our personal health, is the most vital area in the body. Experts in autopsy state they have found that 60 to 80 percent of the colons examined have foreign matter, such as worms, accumulations of old feces-stones, and decaying undigested food residues. The average so-called healthy man of today is carrying continually within him, since childhood, several pounds of never eliminated feces. No wonder constipation is so prevalent today; it is a natural disorder. Poor intestinal health can easily lead to serious metabolic and organic complications.

However, do not lose hope; the mighty banana can rescue you from this internal disorder and restore intestinal fortitude. Fully ripened bananas contain powerful digestive enzymes that help digest other starches and sugars. In all intestinal disorders the body loses the ability to extract any nutriment from all types of carbohydrate foods.

Bananas are an excellent laxative food, which aid the tiny intestinal villi to expel old waste matter; they increase the absorbing surfaces of the entire gastro-intestinal tract. The mashed pulp of fully-ripened (brown speckled) bananas tremendously alters the internal chemistry of the digestive tract, restoring its ability to digest, absorb and totally assimilate complex carbohydrates, and other food elements.

When feeling bloated, no appetite, constipated, fatigued and cranky, try an exclusive banana eliminative diet for a day or two, or up to a week. Mashed ripe bananas are easier to absorb than a whole banana; they also taste like pudding. Mash them into a creamy pulp with a fork. Eat a bowl of this delicious banana pudding at your regular meal times, or when feeling hungry. Mash 3 to 5 bananas per meal, and eat as often as hungry.

For best results, eat no other food during the banana diet, except for pure water. We recommend this for occasional use only as an internal house cleansing. The whipped banana pulp diet feeds and helps to increase billions of friendly intestinal bacteria, or intestinal flora.

Fig. 3.9. Internal Bath

Other Laxative and Digestive Aid Foods

Apples: contain natural bulk, fruit fiber, iron, malic acid all acting to produce a healthy digestive tract.
Prunes: Rich in iron and potassium. Highly laxative & cleansing.
Pineapple: Contains bromelin, an excellent aid in protein digestion, and enzymic action. Helps to relieve Yang constipation.
Pears: Abundant in malic acid & kidney flushing action; beneficial in overcoming congested kidneys & impacted Yang colon.
Figs: Highly laxative due to its natural fiber, tiny seeds & fruit sugars feeding colon germs. High in iron, minerals & vitamins.
Whole Grains: High in B-complex vitamins, bulk (cellulose) and natural laxative qualities. Use grains in diet for superior health.

Intestinal Cleanse for Internal Health

Practice this Intestinal Program every Mornings:

1. Upon awakening in the morning perform from 10 to 15 sit-ups. Increase the number up to 20 as you become stronger.
2. Next, drink a glass of herb tea.
3. Now do some more abdominal exercises, such as, toe touching, side bends, pulling the stomach in and out. Try to pull the contents of the abdomen upwards, then force it downwards. Wiggle your insides, tossing them from side to side. Strive to control these vital muscles and make them work at will.
4. Continue the exercises until the need for a bowel movement, usually five or ten minutes will be enough.

Constipation is not overcome in a day or two; it takes time for the body to eliminate years of toxic wastes, and rebuild and strengthen itself. Relax and get plenty of rest, exercise, fresh air, sunshine and natural foods. Be persistent in performing the "Intestinal Cleanse" each morning. Within a couple days or weeks on this program you will experience normal and complete morning bowel movements. The key point to remember is to strengthen the entire abdominal cavity, i.e., diaphragm, stomach muscles and the internal organs. When these vital body parts are strengthened, you will vibrate with healthy personal attractiveness.

The Oriental belly dancers have excellent control of their abdominal muscles and diaphragm. Through their action of drawing in large quantities of fresh air and exercising, these girls have mar-

velous complexions, skin tone, sparkling bright eyes and the grace of a fawn. Include some abdominal exercises, hula or belly dancing movements in your morning routine; be imaginative. Never ignore the call of nature for bowel evacuation, whatever you may be doing during the day.

Abdominal Lift

Stand with feet apart, knees slightly bent and lean a little forward from the hips with the back straight. Inhale deeply and then exhale as much air as possible from the lungs. Next, pull in the abdominal muscles with a firm upward movement until a hollow appears under the rib cage. Hold this position for a few seconds; without inhaling, and then relax. Practice this Abdominal Lift on an empty stomach throughout the day, or preferably with the morning Intestinal Cleanse. This super exercise is great for the wasp-like waist appearance. It will provide your internal organs and intestinal canal freedom from unnecessary wastes, and keep the muscles and skin firm and youthful.

If these instructions are carried out regularly, one will receive the marvelous results of superior physical health and well-being. Drugs, laxatives, stomach and bowel remedies, along with their injurious side-effects, can be thrown out with the rest of the garbage!

Fig. 3.10. Abdominal Lift - Rolling the Abdominal Ball

Exercises to Overcome Constipation

Exercise #1: Stomach, intestines and chest strengthener. Rock the body to & fro on the abdomen for 30 to 60 seconds as shown. Also tones & trims the waist, hips, legs, arms, shoulders & back.

Exercise #2: Tones & strengthens the abdominal muscles, stomach, lower intestines & reduces the hips. Lie flat on the back, raise legs & sway the legs & hips from side to side. Repeat every day.

Exercise #3: Massages the stomach, intestines and internal organs; trims the waist and strengthen the chest and back. Spread feet 3 or 4 feet apart, knees bent. Inhale while stretching backward with arms overhead; while swinging forward and downward, exhale completely and vigorously. Repeat movement 6 to 8 times per day, especially mornings.

Chapter 4

Signs of Health and Disease

Self-Diagnosis

Many people really do not know what good health really is and what to look for it or what causes it and the lack of it. Many individuals honestly do not take the time and effort necessary to discover who and what they are or study deeply into the Universal Laws of health and life. It is almost a tragedy to hear people boastfully claim that they are in perfect health, when in the fact of visible diagnostic symptoms are the complete opposite.

Peopel do not see their skin pale and anemic. They do not see the body weak and fatigued after the least exertion or the complexion waxy, yellow or pimply. They do not look to see that their eyes are dull and listless or their eyesight failing requiring eyeglasses.They do not understand when their hearing is impaired or that they are plagued with insomnia, worry, hate, fear, nervousness, irritableness, pessimism and anger. These are signs and symptoms of failing health and diagnostic conditions of disease.

Physical diagnosis, according to the ancient Chinese and Japanese physicians is the observation of ones external condition, stemming from internal organic disorders.

We are living in a universe of law: cause and effect; yin and yang; positive and negative; acid and alkaline etc. Disease is an outcome (effect) of our daily eating and living habits (cause); and also our heredity, which is the effect of our ancestor's living and eating habits. We all inherit constitutional weaknesses and strengths from our parents, our habits and nutrition since birth this makes us what we are today.

The causes of illness are many. There are no simple spontaneous causes or quick remedies. The human body is not attacked by disease; disease is the process of degeneration and the symptoms can easily be diagnosed on the face, body, hands, voice and nails etc. before chronic conditions develop. This is the just law of nature and no person can escape its consequences. We can however, live in relative harmony with the Tao or Nature and reap the benefits of good health.

Every body organ affects every other organ, which in turn affects the entire system and manifests itself in observable physical symptoms, which are diagnosable to the trained eye. The physical symptoms can often be diagnosed before a serious disease sets in. It is all in knowing how and what to look for that one can detect a malfunction in the body. This is due to the biological changes the body goes through under various conditions of health, disease and the aging process.

Our external physical conditions, for instance, voice, skin tone, hair, nails and daily vitality depend on the condition of our blood, skeletal, organ and nervous systems, which in turn depend on our total daily eating and living habits.

Four Phases of Oriental Diagnosis

1. ***Bo-Shin:*** The art of observational diagnosis, using the eyes to detect and observe im-balances in the face, hands, nails, posture, skin tone and color, eyes and general habits of living and eating.
2. ***Bun-Shin:*** The art of diagnosing by sounds, such as voice texture, tone, tempo, pitch and breathing.
3. ***Mon-Shin:*** Diagnosing by questioning a person about personal habits, diet, family history, employment problems and psychological tendencies.
4. ***Setsu-Shin:*** The art of touch diagnosis, for instance, acupressure, acupuncture points, pulse diagnosis, skin texture and sense of touch.

This chapter will cover mainly the art of (1) observational diagnosis; and briefly (2) the art of diagnosing by sounds/voice. These can assist one in discovering and overcoming many diagnosable conditions with some conscientious study and research. Diagnosing by questioning and touch require deeper technical research and study by doctors, health practitioners and others involved in clinical patient care.

In diagnosing people of the darker races, the symptoms and colors of health and disease are more detected on the nails, eyes, hair and mouth.

Fig. 4.1. Balance of Yin and Yang

Five Classes of Yin and Yang People

Each individual is born with a certain body type; a Yin or Yang constitution. In diagnosing, there are two factors to consider: inherited constitution, and the present health condition. The Yin and Yang principle is variable, and there are varying degrees of both Yin and Yang people. For example, on a scale from 1 to 10, 1 is Yang and Yin is 10, and 5 is balanced. Body conditions can be diagnosed in a general overall way; to diagnose accurately and precisely, each body organ and body part must be diagnosed separately. No person or phenomena is exclusively Yin or Yang. People are called Yin or Yang because one or the other of these forces dominate in the body; if one is % Yang and % Yin, they are considered Yang; the same with Yin, and vice-versa. We can alter our Yin or Yang condition by the way we eat and live.

There are five classifications of Yin and Yang conditions: Greater Yang and Lesser Yang, Greater Yin and Lesser Yin, and Healthy Balanced Yin and Yang. The balanced person does not exhibit extreme Yin or Yang symptoms. When one shows Greater Yin or Yang signs, they are referred to as Yin or Yang Full; when they show Lesser Yin or Yang signs, we refer to them as Empty Yin or Yang. This tells us how much vitality or energy a person possesses.

A Full or Empty Yang person is much more active; a Full or Empty Yin is less active and energetic. A Yin and Yang Healthy Balanced person is moderate in all activities; neither too slow or fast, but even-tempered in thought and action. This person can eat a wide variety of natural foods in moderation; his digestion, and internal organs function properly; good muscle tone; no constipation; transparent complexion, (glowing); eats seasonally, and never over-eats; performs internal and external exercises moder-

ately daily and weekly; meditates daily; does not crave extreme Yin or Yang junk foods; neither underweight nor overweight; eats more Yang balanced foods in winter, with some Yin, more Yin in hot weather, with Yang foods; his or her attitude is gentle, kind, helpful, giving, loving and inspires those around him. He walks the middle path to truth, enlightenment, good deeds and wisdom ever listening to the Tao within for the secrets of the universe.

Fig. 4.2. Empty and Full Yin and Yang

Facial Symptoms of Disease

a. ***Cleft Chin:*** Strong Constitution and Amorous
b. ***Vertical Line between Eyebrows:*** Yang Liver
c. ***Horizontal Forehead Lines:*** Denotes Excess Intake of Liquids, Expanded Large Intestine and Kidneys
d. ***Broken and Uneven Forehead Lines:*** Small Intestine Disorders, Yin Condition
e. ***Cheeks Sunken In:*** Malnutrition, Poor Assimilation
f. ***Horizontal Line on Nose Bridge:*** Denotes Yang Liver Condition, Excessive Animal Foods
g. ***Swollen Area Above Upper Lip:*** Shows Expanded (Yin) Condition of Pancreas, Sex Glands, Spleen and Stomach
h. ***Cleft on Nose Lip:*** Heart and Circulatory Disease
i. ***Horizontal Line Above Upper Lip:*** Female Sex Gland and Organ Weakness
j. ***Bags under Eyes:*** Expanded (Yin) Kidneys
k. ***Puffy Half Circles (Bags) an Inch Below Eyes:*** Intestinal Toxemia and Weak Lungs

Fig. 4.3. Facial Symptoms of Disease

l. ***Spleen Area:*** Weak Stomach
m. ***Bladder Area:*** Lines indicate a Yin Bladder
n. ***Dark Blue under Eyes:*** Kidney, Bladder & Sexual Disorders
o. ***Swollen/Projecting Lower Lip:*** Intestinal Toxemia/Constipation
p. ***Stomach Area:*** Swollen, Cracked or Inflamed (Redness) indicates Stomach Disorders & Expanded (Yin) Condition.
q. ***Amativeness:*** Strong, Protruding Chin denotes Persistance and Determination, Amorous Nature
r. ***White under Iris:*** Sanpaku (Three-Whites) indicates Extreme Yin Condition in Body
s. ***Kidney Area:*** Ears Red or Swollen Snow Kidney Disorders
t. ***Wide Nostrils:*** Strong Lungs, Vitality
ta. ***Narrow Nostrile:*** Weak Lungs
u. ***Duodenum Area:*** Cracked or Swollen Corners indicates Diseased Duodenum
v. ***Pancreas Area:*** Red, Swollen or Veined denotes Pancreatic Disease
w. ***Double Chin:*** Denotes Excessive Cholesterol in System and Yin Condition
x. ***Pointed Ears:*** Excessive Meat (Yang) Intake & Disordered Eating
y. ***Sparse Eyebrows:*** Degenerative Condition and Weak Vitality
z. ***Hollow on Front of Ear:*** Poor Assimilation and Digestion

Diagnose and Balance Empty/Full and Yin/Yang Constitutions

Diagnosing Yang Full People:

Over-Energetic
Reddish Complexion
Yang Liver and Kidneys
High Blood Pressure
Enjoys Cold Weather
Eats Meat, Dairy, Salt & Eggs
Generally Constipated
Round, Fleshy Face, Wide Jaw
Positive & Aggressive
Works Hard & Heals Quickly
Over-Active Organs
Overweight, Strong Pulse
Heart Disorders
Strong Digestion and Appetite
Energetic and Strong Talk
Likes Drink or Alcohol
Circulatory Diseases
Needs Little Sleep
Fat-Strong Abdomen Muscles

Balancing Yang Full People:

In Extreme Yang Conditions: Induce Diarrhea, Sweating and Vomiting; this Diminishes Excess Energy in the Body. Less Yang People with Constipation: Avoid Vomiting and induce Diarrhea and Sweating.

Dietary Recommendations for Yang Full People:

Eat Less Cooked Food, more Raw Fruit and Vegetables, use much Less Salt, Tamari and Miso. Use thinner Broth Soups. Exercise and Sweat more. Use Watermelons, Grapefruit, Lemons, Celery, Parsley, Cucumber, Sprouts, Radishes, Greens etc.

Avoid: Fats, Cheese, Red Meat, Alcohol, Oils, Fried Foods, Ice Cream, Pastries. Drink more Liquid; Herb Teas. Herbs: Juniper Berries, Dandelion Leaf. Oregon Grape Root, Asparagus, Sage, Chaparral, Gravel Root.

Diagnosing Yang Empty People:

Over-Active, Energetic
Tan to Brown Skin
Kidney and Liver Trouble
Weaker Digestion and Appetite
Yang Constipation
Easily Fatigued,
Needs more Rest & Sleep
Takes Longer to Heal
Flat Abdomen & Firm Muscles
Slim to Underweight
More Athletic Prowess
Nervous Condition
Energetic Talk
Thin, Square or Bony Face
Tight Skin; Penetrating
Contracted Eyes
Positive and Aggressive
Moderate Drinker

Balancing Yang Empty People:

Must be kept Warm. Avoid Noise and Inharmonious Surrounding. Obtain sufficient Sleep and Rest. Dress Warm in Cold Weather. Extreme Yang Empty Conditions should eat more Yin-Quality Food.

Dietary Recommendations for Yang Empty People:

Eat less Salt, Miso, etc. Eat Softer Cooked Foods. Drink Moderate amount of Liquid. Eat Warm Foods. Eat more Cooked Vegetables. Eat Less Protein & Fat. Eat Fruits & Vegetables in Season. Chew Food 30 to 40 times.

Avoid: Fats, Meat, Cheese, Ice Cream, Alcohol, Oils, Ungerminated Seeds & Nuts & Citrus Fruits.

Herbs: Cammomile, Comfrey, Yarrow, Juniper Berry, Parsley Leaf, Dandelion Leaf, Alfalfa, Sage, Yam, Plantain and Chaparrel.

Diagnosing Yin Full People:

Underactive Thyroid
Cold Hands and Feet
Overweight
Poor Memory & Thinking
Weak Heart
Underactive Organs
Does not like Exercise
Overweight, Loose Flesh
Prolapsed Abdomen,
Falling Organs
Low Blood Pressure
Blue or Yellow Color
Yin Liver and Kidneys
Likes Warm Weather
Eats too much Sugar, Fat
Cold Drinks, Pastries
Round Fleshy Face
Bruises Easy
Menstrual Difficulties

Balancing Yin Full People:

Sweat to induce Harmony. Extreme Yin Full People should not Fast at all. Regularly eat Whole Cooked Grains & Vegetables. Needs Daily Exercise and Deep Breathing.

Dietary Recommendations for Yin Full People:

Less Salt, Less Liquid. Less Protein and Fat. Some Fresh Raw Fruits and Vegetables. Eat Slow, Chew Well. Warm Soup Broths. Avoid: Pastries, Ice Cream, Milk, Cheese, Coffee, Sugar Products, Ungerminated Nuts, etc.

Some Citrus is Good. Mushrooms, Potato, Radish, Lettuce. Herbs: Oatstraw, Horsetail, Watercress, Nettle, Marshmallow Root, Licorice, Garlic, Slippery Elm.

Diagnosing Yin Empty People:

Inactive, Low Energy
Can develop T.B.
Hypoglycemia
Poor Memory & Thinking
Cold Hands and Feet
Lack of Exercise
Likes Warm Weather
No Strength, Weak Muscles
Anemic and Pale Complexion
Poor Digestion and Assimilation
Hyperactive Thyroid
Weak Heart and Internal Organs
Yin Liver and Kidneys
Underweight, Thin
Eats too much Yin Food

Balancing Yin Empty People:

Needs to be given much Energy. Must live in Harmonious Surroundings. No Fasting. Keep Body Warm. Start with very light Internal Exercises and work up slowly to more Muscular Movements over several months.

Dietary Recommendations for Yin Empty People:

More Yang Food: Grains, Yang Beverages, Thick Vegetable & Grain Soups. Eat Slow, Chew Well.

Avoid: Yin Foods: Juices, Tropical Fruit, Ice Cream, Dairy Products, Slightly more Salt, Miso, or Tamari. Eat Less Liquid. Eat Less Raw Foods. Herbs: Same as Yin Full. Use Ginseng, Burdock.

Face, Hand and Body Diagnosis

Nose:

Long Thin Nostrils: Indicates weak lung power and less physical stamina. Excessive intake of sugars, fats, dairy and animal foods during the embryonic period. A person with long thin nostrils requires plenty of exercise, deep breathing, and outside fresh air. To help widen the nostrils, pull them apart and outward, this will open up the breathing channels, help sinus problems and increase this person's energy. Practice one minute daily.

Wide Nostrils: Indicates strong lung power and good physical vitality, strength and self-confidence. Wide nostril people make excellent athletes, good orators and are self reliant, and have unlimited energy to achieve success. This is due to their larger lung capacity, and ability to take in large quantities of oxygen, which feeds and sharpens the mind and imparts great energy.

Upturned Nose with Wide Nostrils: A sign of a strong yang constitution and physical aggression. This type of nose imparts one with initiative and a hopeful optimistic attitude. They are cheerful and amiable people with a desire to help others. They are also inquisitive, but they need encouragement to carry out their work.

Long Thin Bony Nose: A Yin Sign, more mentally inclined. The voice of a thin nosed person is generally high pitched. They are curious about life, nature and people; refined in manners. They are sharp and quick to perceive; inquisitive; they like details and sometimes overly analytical and judgmental. To balance this Yin personality, more whole grains and cooked vegetables are required. Deep breathing, outside fresh air, and vigorous exercise will strengthen this type of individual.

Red, Bulbous and Greasy Nose (Veins): Indicates high blood pressure, heart and liver disorders. Excessive alcohol, or sugar, fats and meat are the main cause. A swollen nose is a sign of an enlarged heart.

Cleft on the Tip of the Nose: Indicates heart or circulatory disorders. A dull ache in the nose indicates blood stagnation and heart trouble from eating rancid oils. A soft watery nose shows excessive intake of Yin foods and swollen heart. Sneezing is a discharge of excess Yin in the system, i.e., sugars, liquids, drugs etc.

Fig. 4.4. Nose Diagnosis

Face:

Forward Bulging Forehead: Indicates inactive internal secretions and poor body circulation.

Hollow & Sunken Cheeks: Indicates weak lungs and digestive organs; improper nutrition or malnutrition; physical exhaustion and poor endurance. A hollow area in front of the ear opening denotes subnormal secretion of saliva and inefficient food assimilation.

Face Pimples Pimples: Indicates a consumption of extreme Yin foods, i.e., sugars, fats, tropical fruits, juices, pastries, candy, etc., in addition to an intake of extreme Yang foods, i.e., meat, eggs, fish, etc. Yin sweet foods eaten with Yang protein foods results in poor protein assimilation and is eliminated through the skin as eruptions. Intestinal toxemia, poor quality blood and constipation are usually present.

Red & White Spots or Habitual Red Flushed Face: Indicates heart disease, biliousness, fever and inflamations caused by extreme Yang and Yin foods such as animal protein, salt and sugar; disorderly eating. Blood becomes too thick to circulate through the body and results in stagnation and redness.

Orange or Yellow Skin: Shows liver, gall bladder, spleen and pancreas disorders. In vegetarians it indicates an excessive intake of raw vegetables and carrot juice. Sweets are contributing causes.

Green Skin: Indicates liver disease and possible cancer.

Pallor or Pale Face & Cheeks: Indicates weak glands, congested and inactive liver and anemia.

Thin, White Transparent Cheek: Shows weak glands, stomach, lungs and lack of energy. Tendency toward melancholy and introversion caused by poor quality food, weak assimilation, lack of oxygen and proper exercise, yin foods (sugar and sweets). Tendency to consumption and weak intestines.

White Patches: On face or body show liver and kidney disorders caused by excessive dairy foods, fats and sugars.

Veins and Blood Vessels: Showing at temples indicates heart, liver and gall bladder disease.

Cheeks with Veins: Indicates heart & stomach disorders due to gluttony, alcohol & disorderly eating.

Damp, Clammy & Excessive Perspiration: On face indicates extreme Yin and Yang food intake; heart and kidney disease.

Yellow, Waxy or Pasty Face: Shows liver, stomach and gall bladder trouble; dropsical condition of the fluid system caused by excessive fat and animal consumption and sugars.

Warts, Moles and Beauty Marks: Indicates excessive animal protein intake, fats & sugars. Liver & kidney disorders are indicated.
Double Chin: Sign of excessive cholesterol and fatty deposits throughout the system caused by fats, animal foods, salt and sugars; lack of exercise and natural foods.
Well-Developed Chin: Shows a strong heart inheritance, physical strength, and determination to succeed.
Small, Narrow & Receding Chin: Denotes less physical endurance/determination; heart functioning is not as strong as prominent chin caused by poor quality foods during pregnancy, especially calcium deficiency resulting in insufficient jaw formation.

Fig. 4.5. Face - Forward Bulging Forehead

Mouth and Lips:

Normal Nose/Mouth Relationship: Shows normal vertical and horizontal size of mouth. The mouth should be as wide as the outer edges of the nostrils. The mouth and lips are uppermost position of the digestive system, which ends in the anus. Conditions of the mouth and lips indicate deeper internal problems.
Balanced Mouth: Shows that the mother ate a balanced diet during the embryonic period. We inherit the effects of our mother's eating habits.
Pale or Red Lips: Indicates disorders in the stomach and intestines, for instance, compacted colon, constipation, indigestion. Extreme Yin or Yang foods cause internal disease and its symptoms to show up on the mouth and lips. Also show healthy and strong sex glands and hormones with well defined, long vertical crease from the upper lip to the base of the nose; wide horizontal area between the base of the nose and upper lip; and even heart-shaped lips.

Mouth Extended beyond Nostrils: Shows the mouth extending beyond the outer nostrils. It indicates the consumption of extreme Yang and Yin foods during pregnancy and early childhood. Any imbalances in diet cause imbalances in facial features. This condition can be normalized over a period of several years by balancing the diet and avoiding extremes.

Mouth Extended Horizontally and Vertically: Shows weaker internal organs. Generally a Yin or expanded internal condition from generations of Yin foods such as tropical fruits and vegetables, fats, sugar, fried foods, white flour etc. A return to proper eating will eventually contract (Yangize) the internal organs and normalize the exterior features.

Lips Higher Vertically: Indicates a weaker digestive system. Horizontally, the lips are Yang; balanced food was eaten during the mother's pregnancy; but the vertical height shows extreme Yin food during childhood. Also show weak sex glands with a lack of the vertical indentation, short distance between nose-base.

Upper Lip & Thin Pale Lips: Denotes weak internal glands, hormones and sexual powers.

Horizontal Crease Between Upper Lip & Nose-Base: Indicates malfunctioning sex glands.

Large, Loose, open Mouth and Lips: Indicates a Yin expanded stomach and colon; extreme Yin and Yang foods were eaten throughout life. It shows a generally rebellious and uncontrolled nature in mental and physical habits. Can be corrected by natural eating and living habits.

Closed, Evenly Set Mouth & Lips (Heart Shaped Lips): Shows a controlled mental and physical nature. These people direct their lives according to discipline and principle. Their eating habits are more balanced and they avoid extremes in living habits.

Wrinkles above the Lips: Indicate sexual and hormonal malfunctioning; also extreme Yang (dehydration) of body. Excessive intake of salt, spices, protein; insufficient raw foods and liquids.

Cracked Corners of the Mouth: Shows vitamin B-2 deficiency, digestive and stomach disorders caused by extreme Yang & Yin foods, such as animal protein, sugar and fats.

Cleft Pallet: Indicates excessive (Yin) sugars during pregnancy.

Sores on Lips: Indicates intestinal, stomach toxemia and general body congestion.

Tight Constricted Lips: Shows contraction of intestines & vagina.

Small Mouth: Shows much Yang energy & physical & mental vitality. Constant covering of the mouth shows overeating.
Swollen Upper Lip: Denotes stomach disorders; excessive Yin food intake.
Expanded Protruding Lower Lip: Indicates expanded and fallen intestines and constipation. A Yin condition from sugar, fat and excessive liquid intake.
Dry, Thin, Scaly & Mottled Appearance of Lower Lip: Indicates a disorder of the salivary glands.
Thin, Pale & Dry Upper Lip: Indicates weakness of reproductive system. If the upper lip is extremely short (weak spinal column).
Whiteness around Mouth & Pale Lips: Indicates anemia, poor circulation, blood stagnation and lack of expression caused by excessive intake of cheese, ice cream, milk (fats), sugar and high protein (animal).
Pink Lips (Caucasian): Indicates balanced nutrition, good circulation and health.
Darker Races: Observe the condition of the gums; they should be pink (good health). White gums show poor health and anemia.
Dark Lips (Causcasian): Shows liver, kidney and gall bladder trouble. Excessive bright red lips show high blood pressure, acute disease or infection, toxic liver and hemmorrhoids.
Purple Lips: Indicates blood stagnation, diseased heart and circulatory system.
Corners of Mouth Turned Down: Shows intestinal stasis & stomach disorders caused by Dairy foods, fats; cold food and drinks.

Fig. 4.6. Mouth & Lips Self-Diagnosis

Eyes:

Lower Sanpaku: Shows a condition of the eye known as Sanpaku or three whites eye whites are visible at the bottom and both sides of the iris. The iris is rolled up, leaving the white part of the eyeball exposed. This is a poor health sign. It indicates an extreme Yin or expanded condition of the brain, nerves, organs and body. In lower sanpaku, the higher the iris rises, the more one is beset with tragedy usually self-inflicted misfortune, accidents, problems in relationships with friends or loved ones etc. Sanpaku denotes a disorderly pattern of eating and living. Excessive amounts of fruits (tropical), juices, alcohol, sugars, fats, ice cream, dairy and fats; in addition to overworking, over exercising, malnutrition, lack of sleep and stress conditions will contribute to and cause sanpaku, and its attendent consequences.

Generally, people with this condition are fearful, suspicious and they lack physical and mental stamina. The criminal mind has also been shown to possess sanpaku. Famous people who possessed sanpaku before dying violently or tragically were: Ghandi, Caesar, the Kennedy brothers, Hitler, Martin Luther King, Elvis Presley and Freddie Printz (Chico and the Man). Many fashion models have varying degrees of sanpaku, due to strict crash weight-loss or starvation diets to maintain the modern skinny look.

A person showing signs of sanpaku is very often difficult to relate to and is skeptical of any help or advice. An honest person with upper sanpaku is more likely to be a victim of violence than a perpetrator. A return to whole foods, centered around grains, vegetables, legumes, seeds and seasonal fruit; including proper exercise, sufficient sleep, stress-free work, meditation and harmonious surroundings, can correct and improve ones overall health and center the iris.

Upper Sanpaku: Yang condition, especially of the liver, kidneys, and related internal organs. The iris is rolled-down in this condition and indicates a cruel nature, physical (Yang) aggressiveness, anger and a fighting character. This is usually caused by an intake of extreme Yang foods, such as animal protein. This person is easily provoked into anger or fighting, so be agreeable in his presence. Being vindictive and merciless, they often meet violent deaths.

Excessive Blinking: Body's attempt to expel excess Yin from the system. Babies blink one or two times per minute; their iris covers almost the entire eyewhite. We should blink no more than two to four times per minute the less the better indicating one in sound

health and in control of mind and body. In the animal realm, cats seldom blink; their eyes shine and glow in the dark; they are very independent and in total control of their actions. Humans can accomplish the same; but it may take many years of discipline in diet, health habits, exercise and meditation to attain superior health and control over one's nervous system and bodily functions.

Four White Sided Eye: It is usually accompanied by a bloodshot reddish hue, and is uncontrolled. There is usually a psychological problem or conflict in the person's life, accompanied often by a violent temper, outrage, oversensitiveness and assault. The individual's eating habits range from extreme Yin to Yang; starvation diets to gluttony.

Eyes Turned Inward: Shows a Yang or contracted iris; one that is turned inward toward the nose. It is a Yang condition, resulting in high blood pressure and heart problems. An excessive intake of meat, eggs, salt, eaten during the embryonic period or during early childhood. Balancing the diet can help to correct this condition.

Eyes Turned Outward: Shows a Yin or expanded condition of the eyeball; the liver, stomach and kidneys are also Yin. Cause: Excessive intake of Yin foods, i.e., sugars, sodas, ice cream, fats, tropical fruits, drugs and alcohol. The extreme of this condition may be prone to chronic disease. A Yin and Yang balanced diet can help correct this condition in due time.

Centered Normal Healthy Eyes: The upper and lower eyelids should touch the iris, with very little eye whites showing on the sides of the iris. The eye pupils should function properly in both light and darkness. Healthy eyes do not require glasses or contacts; neither do they squint or function poorly in close and distant vision; the sight is sharp and clear at all times; the eyes sparkle and the eye whites are clear.

Dark Eye Bags: Weak female organs and constricted (Yang) kidneys are indicated by a dark brown (half-circle) coloring under the eyes. Swelling, veined or dark blue under the eyes denotes kidney stones, gall stones, blood stagnation and anemia, caused by extreme Yin and Yang foods. Purple under eyes denotes adrenal exhaustion. Discolored puffy circles one to two inches below the eyes indicates lung disorders. A person with this condition is generally afflicted with diseases such as, lung cancer, tuberculosis, asthma and other respiratory disorders. Cause: tobacco smoke, sugar, high fat dairy products, (cheese, milk, butter) and a host of other extreme Yin and Yang junk foods.

Fig. 4.7. Eye Self-Diagnosis

Swollen Upper Eyelid: Indicates gall bladder stones, heart and sexual manfunctioning. The swelling usually subsides when the stones pass. Cause: Sugar, fats & animal foods eaten to excess. ***Bulging Eyes:*** Indicates lack of iodine in early childhood or embryonic period and thyroid disorder; also a Yin/expanded condition of organs. Excess intake of liquids and sugar.

Wide Staring Eyes: Indicates poor judgment, credulity, or if the expression is anxious, fear and apprehension. Orators & linguists have the full or convex eye. Fullness below the eye verbosity.
Puffiness or Bags under the Eyes: Indicates disease from dissipation; it is not the same as fullness. The eye foretells the truth when all the other features deceive us. When the eye says one thing and the tongue another, the practical man relies on the former.
Dark, Hollow, Sunken Eyes: Indicates extreme emaciation, deficiency of muscular development, nerve and physical exhaustion. Cause: Extremes in diet, starvation, or malnutrition.
Eyes with Light Blue: Indicates internal parasites & kidney trouble.
Scant Lower Eye Lashes: Deficiency in sexual glands & hormones.
Scant Upper Eye Lashes: Denotes (Yang) mental deficiency.
Itchy Eyes: Indicates liver malfunctioning and lung problems.
Hard Yellow Spots in Eye-Whites: Indicates worms in system.
Dry & Inflamed Eyeballs: Indicates an extreme Yang liver disorder and vitamin A deficiency.
Sties Growths on Eyelids: Shows an excessive intake of protein.
Pale, Colorless, White Eyelid (Upper & Lower): Denotes anemia; the eyelids should be pink in good health.
Yellow Eye Whites or Yellow Deposits in Eyes: Indicates excessive cholesterol in the system and liver and gall bladder blockage caused by excessive intake of fats, oils, fried foods, cheese, ice cream, milk, sugar and animal protein.
Entire Eye is Yellow: Jaundice is indicated. A Yin and Yang balanced diet can correct this situation in due time.
Bloodshot Eyes (Habitual): Indicates inflamed condition of the intestines and brain. The liver, gall bladder are affected. Eye strain, poor lighting, constant sun glare and late night reading can also cause bloodshot eyes caused by cheese, sugars, drugs, all fats, alcohol, dairy foods, animal foods etc. leading to chronic disease.
Dull, Lackluster Glassy Eye: The nervous system is under strain and pressure. Poor circulation, extremes in diet, hardened arteries and liver are indicated. A person with glassy eyes requires a complete change in diet and living habits. All drugs, alcohol, cigarettes, marijuana, overwork, excessive sex, stress and tension must be discontinued if a return to good health is desired. Also, meat, animal fats, dairy products, sugars, pastries, oils, etc., are causes of nerve disorders and consequently the dull glassy eyes.

Excessive Large Pupil: In daylight denotes nerve exhaustion and extremes in diet. It is a Yin, expanded condition of the kidneys, stomach, spleen intestines and bladder; adrenal weakness and brain expansion. Excessive intake of raw food (Yin). A balanced grain, vegetable, seeds and legume diet, including seasonal fruit should normalize the eye pupil in due time.

White Ring around the Iris: Indicates excessive intake of table salt, nerve weakness, poor circulation to brain, anemia and possible senility. Disordered eating, living and extremes in diet are contributing factors.

Fig. 4.8. Eyebrow Self-Diagnosis

Eyebrows:

Eyes Slanting Intoward: Indicates Yang and aggressive nature caused by generations of animal food consumption.

Eyes Slanting Down & Outward: Shows a gentler & compassionate nature caused by vegetarian diet.

Sparse Eyebrows: Indicates a weakening health condition. Extremes in diet, such as excessive intake of sugars, liquids, fats, tropical fruits, juices; and animal foods. It shows weak life force, tendency to chronic disease and degeneration.

Connected Brows: Indicates strong life force, vitality, and artistic ability. It also shows generations of fatty animal food & dairy intake. The spleen, liver and pancreas are weakened by these foods.

Thick/Separated Brows: Shows superb health & long life potential.

High-Arched Brows: Denotes a person with a dramatic and creative flair, with the emphasis on active showmanship and leadership. Somewhat eccentric in character and mentality.

Ears:

Large Ears: Indicates strong inherited constitution; strong kidneys and adrenals showing are sign of health and longevity. Generations of basically vegetarian foods.

Thickness & Height in the Outer Upper Ear: Shows excellent blood circulation throughout the body and creative mental capacity; also the ability to accumulate and successfully handle finances and material possessions.

Large & Well Formed Inner Ear Area: Indicates good digestive and assimilation powers.

Fleshy & Thick Inner Ridge: Shows nerve force & inner strength.

Creased Ear Lobe: Shows heart disorders or diabetes.

Large Ear Lobe: Shows a healthy inherited constitution.

Small Ears & Lobes: Shows weak adrenals and small kidneys; generations of meat eating; energy generally low with little interest in mental pursuits. Small eared people should avoid excessive intake of animal protein, as their kidneys are unable to handle it.

Small Ears & Lobes: Shows a weak inherited constitution. Small eared people should emphasize whole grains, vegetables, soaked seeds and nuts, sprouts, fruits in season, with a minimum intake of protein foods. Cooked legumes should be eaten moderately. Sufficient rest, sleep and harmonious surroundings are recommended; exercise moderately, but never to exhaustion.

Fig. 4.9. Ear Self-Diagnosis

Ears Protruding: Shows a Yin constitution. Impulsive & emotional activity. Mother ate too much Yin food during pregnancy.
Ears Close to Head: Indicates balance in mind and movement. Mother ate a more balanced Yin and Yang diet during pregnancy.
Ears High on Head: Indicates self-pride, egotistical nature, base instincts and material cravings and desires to excess. Mother ate excessively of animal foods & salt during embryonic period.
Ears Top Level with the Eye Corners: Indicates balanced mental and physical development.
Red Ears: Indicates a toxic, overworked kidney (Yang); excessive salt and protein. Spleen disease is indicated if the outer portion of the ear is red. Avoid extreme Yang foods.
Ear Wax: Sign of excessive intake of fats, oils, animal foods, and fried foods. It will not develop if these foods are not eaten.

Teeth:

Long Front Teeth: Indicates a Yin constitution. Short front teeth and ones that angle inward are Yang and indicate an uncontrolled character. Teeth that angle outward show a passive character.
Pointed Teeth: Excessive meat eating & other Yang foods over generations causes pointed teeth, especially the canines. The canine teeth will diminish in size as less meat is eaten over generations. Natural & orderly eating results in balanced & normal teeth.
Tooth Decay: Result of excessive intake of sugars, fats, animal foods, protein, liquids; and insufficient calcium from natural whole foods, such as grains, seaweeds, legumes, vegetables, seeds & fruits. Animal protein & sugar diminishes calcium absorption from other foods; calcium deficiency is the end result of tooth decay.
Crowding Teeth & Extra Teeth: Caused by extreme Yin & Yang foods during pregnancy.

Pointed Teeth

Fig. 4.10. Teeth Self-Diagnosis

Hands:

Swollen Kunckles & Fingers: Indicates expanded (Yin) kidneys, artheroscerosis and high blood pressure.
Bluish Wrist: Indicates sex gland weakness.
Reddish Palms with White Spots: Shows disorderly eating and poor blood circulation; excessive intake of animal protein and fats.
Bluish Palms: Denotes circulatory and heart trouble.
Dark Red Palm Heel: Indicates bladder & sexual disorders.
Yellow or Orange Palms: Indicates pancreas, spleen and liver disorders. Excessive intake of fats, raw greens or carrot juice are factors to be considered in causing this problem. In good health, the hands should be slightly pink and warm, dry and be firm, but not hard.
Hot, Moist & Red Hands: Indicates Yang congested liver & kidneys.Red hands are caused from excess Yang foods.
Cold, Clammy & Pale Hands: Indicates Yin expanded kidneys, bladder, stomach and intestines; weak nerves and anemia. Pale, cold hands are caused from excess Yin foods.
Flexible Fingers: If the health and blood circulation are normal, the four fingers should bend back 90° to the hand. This indicates a flexible mental and physical character, able to adapt to outward changing conditions; it shows healthy organs and good nerve and blood flow. A less than 90° backward bend indicates calcification or hardening of the bones, nerves, muscles, organs and reproductive system; a stubborn and unchangeable character usually accompanies inflexibility and hardening of the joints and muscles. The cause is from an excessive intake of sugars, salt, fats, oils, cheese and animal protein. Orderly eating can reverse this condition before terminal degeneration has set in. The less angle, more the hardening. Arthritic & painful joints show diseased kidneys.

Fig. 4.11. Flexible Wrist

Flexible Wrist: Should also have a 90° angle.
Raised Blood Vessels on the Back of the Hand: Indicates an excessive intake of Yin foods and a Yin kidney.
Trembling Fingers: Indicates weak nerves, nervousness and heart disorders.
Brown Spots on the Back of the Hands, Arms or Body: Denotes liver and gall bladder congestion; excessive intake of animal foods, dairy, fats and sugars.
Webbed Fingers: Indicates over-consumption of Yin foods and liquids during the embryonic period.
Wide Palm with Firm Flesh: Indicates strong inherited constitution with an active, aggressive nature & robust health (Yang).
Narrow Hand & Long Thin Fingers: Indicates sensitiveness, intellectual and artistic personality, and delicate health (Yin).
Round Bulge Appears on the Wrist: When the palm is pressed with the opposite thumb, above the wrist, the body is holding excessive liquids or sugar (Yin condition); the hands are usually moist.

Fig. 4.12. Hand Self-Diagnosis

Fingers and Nails:

The nails are hard or clawlike extensions of the fingers; the fingers, in turn, are extensions of the entire nervous system; the nervous system is intricately connected to the brain, organs and every cell and tissue in the body. In acupuncture, these nerve pathways are known as merridians. If there is a blockage of circulation or stagnation of blood, or an excess of energy in any internal or external area of the body, this deficiency or excess can easily be detected & diagnosed in extremities (hands, nails, fingers & feet).

Visual Diagnosis: One who is trained in visual diagnosis can detect symptoms before they start to appear. One of the methods to do this is to look at the fingernails. For example, if the nail thickens noticeably it is one sign of circulatory weakness, lymph gland malfunction or blood diseases. When a fingernail has a tendency to become yellow, it may be an early sign of liver disease. Diabetes can be recognized by the gradual disappearance of the pink coloration of the nail.

Looking Glass: The fingernails are a looking glass or mirror, reflecting inner physiological conditions. Pink nails indicate good blood circulation to the fingertips showing blood flow through the mirror (nail). Lack of blood flow to the fingertips shows up as clear white nails, and is diagnosed as anemia. One can give an accurate prognoses and avert future health problems by reading and diagnosing the fingers and nails. Proper health measures and corrective eating and living habits can then be recommended to overcome the diagnosed symptoms. The entire hand can show past and more recent conditions of the individual, and it can indicate health or disease tendencies in the future or near future through prognoses.

Inflamed/Reddish Finger: Indicates acute or short term illness.

Hardened, Rigid & Chalky White Nails: Indicates severe and chronic or organic disease.

Wide-Short Fingers & Nails: Indicates a strong Yang constitution; practical, persistent, physically active and aggressive.

Long-Narrow Fingers & Nails: Indicates a Yin constitution; artistic, sensitive, imaginative, delicate;tendency to bronchial disorders.

Extremely Narrow Fingers & Nails: Denotes a delicate inherited constitution and less physical energy.

Finger/Organ Relationsdhip: The fingers are connected via nerves and merridians to body organs. The corresponding reflex finger/organ areas are listed as follows: thumb, lungs; first

phallange, liver/large intestine; second phallange, circulatory system (heart governor) and sex glands; third phallange, kidneys (triple heater); fourth phallange, heart and small intestines.

Lack of Half-Moons: Indicates sodium/potassium imbalance; underactive thyroid gland; weak healing power in system; lack of circulation and low blood pressure. It is usually a Yin condition from an excessive intake of sugars, fats, juices and raw foods. Can also mean possible liver disorder. Indicates little or no physical exercise. It can also be caused by an excess of meat and salt.

Excessive Half-Moons: Half moons more than one quarter of the nail shows an over-active thyroid condition; tendency to excessive physical and mental activity and nervousness. An excessive intake of high potassium (Yin) foods can cause overdevelopment of the half-moons; however, in time the moons may disappear due to the extreme potassium/sodium imbalance and result in disease or poor health. Excessive half-moons can also mean high blood pressure. On the other hand, an excessive intake of sodium (Yang) foods may also cause the half-moons to disappear. Generally a lack of raw fruits and vegetables contribute to a Yang system. Regardless of age, the half-moons should always be present; if not, the important healing and beauty mineral element, potassium, will be missing, resulting in deficiency diseases. Yin, internal conditions change into Yang, and Yang ones change into Yin, (the process of biological transmutation) which is the natural order of Tao.

Healthy Half-Moon: A healthy half-moon should be no more than one-fourth of the nail, indicating potassium/sodium balance; vital healing power in the system; mental and physical energy and a balance between activity and rest. The Taoists teach that the normal sized half-moon indicates freedom from chronic disease and good health. The half-moon should show on all nails.

White Spots on Fingernails: Indicates zinc, pantothenic acid and calcium deficiency; poor protein absorption, pancreatic disorders and insulin deficiency; weak stomach acids and possible worms. Sugars and other excessive Yin foods and substances, such as drugs, chemicals, marijuana and alcohol neutralizes stomach acids causing calcium and mineral deficiencies. This also includes dairy products, honey, tropical fruits, sodas, cakes and candy. Nails take from 6 to 9 months to grow from bottom to top. One can determine, by the location of the white spot, the time of high Yin food intake, diseased organ and sugar in the blood stream. White spots can also mean kidney disease.

Nail Color:

Pale & Chalky Nails: Indicates poor circulation, nerve exhaustion and possible stroke; anemia and poor iron and protein assimilation. Cause: Extreme Yin and Yang foods.

Green Nails: Denotes improper copper disposal and congenital liver ailment.

Bluish Nails: Indicates lack of oxygen and circulation to heart and heart disorder.

Tiny Red Dots under the Nails: Shows possible pin worms.

Transverse White Lines across Nails: Denotes fever, heart and kidney disease and malnutrition.

Biting Nails: Denotes intestinal and stomach problems and possible parasites in the body.

Red or Purple Hemorrhages under the Nails: Indicates an inflamed heart lining.

Soft Nails: Denotes calcium, vitamin, mineral and protein deficiency from an excess of sugars, dairy, fats and animal foods in the diet, weak will power and general fatigue.

Excessively Hard & Brittle Nails: Denotes anemia and hormonal imbalance.

Wide, Short Fingers

Long Narrow Fingers

Lack of Half-Moons

Excessive Half-Moons

Healthy Half-Moon

White Spots

Fig. 4.13. Nail Self-Diagnosis

Excessive Shiny Nails: Shows an overactive thyroid gland.
Excessive Red, Dark Blue or Purple Nails, Fingers & Swollen Hands: Shows heart and circulatory problems.
Triangle Shaped Nail: Indicates a weak inherited constitution and a ten-dency to nerve diseases, such as paralysis or palsy. This individual should watch his or her health, taking care to eat wholesome foods and obtaining proper sleep and exercise.
Short, Shrunk & Whithered Nail: Denotes a hypertensive nervous system and extreme malnutrition or malabsorption of food; extremes in diet during pregnancy or through early childhood; chronic disorders and critical & fault finding character.
Convex or Hour-Glass Nail: Denotes lung ailments, scrofula, dyspepsia and a possible Yang liver; excessive mucous and possible tendency to tuberculosis. A Yin lung condition from excessive intake of Yin foods.
Concave or Spoon-Shaped Nail: Shows tendency to infections, chronic anemia, possible hook worms, hyperthroidism and malnutrition; extremes in diet.

Triangle Shaped Nail Short Nail Hour-Glass Nail Spoon-Shaped Nail

Vertical Ridges Horizontal Ridges Round Bulging Nail

Fig. 4.14. Nail Color Self-Diagnosis

Anemia Test: One way of detecting anemia is by pressing any fingernail with the thumb; the nail will turn white from the thumb pressure; if after releasing the thumb pressure, the whiteness remains longer than a second, anemia is indicated. A pink color should show up immediately after releasing thumb pressure, indicating good blood circulation and absence of anemia.
Vertical Ridges: Denotes intestinal, liver & kidney disorders; circulation & skin impairment; poor protein & calcium absorption.
Ridges with Convex & White Chalky Nails: Denotes advanced chronic disease, such as stroke, cancer & hardened arteries.
Cracked & Split Nails: Calcium deficiency & weak sex glands.
Deep Horizontal Ridges: Indicates severe calcium and protein deficiency; acute illness; nerve exhaustion; anemia and psoriasis; extreme dietary eating patterns and changes in environment. For example, moving from north to south frequently and changing from Yang to Yin diets, or hinging on junk foods to Yang foods to fruitarian and raw foods/fasting and repeating the cycle over and over.
Round Bulging Nail: Denotes lung disorders; possible liver trouble and hardened arteries; this is a Yang sign.
Thick Raised Cuticle: Denotes an excessive intake of animal protein; extreme dietary changes, kidney and liver disorders.
Red or Bleeding Cuticle: Extreme condition of the above problems caused by excess Yin food intake.
Flat Nails: Indicates a weak lymphatic system, proneness to mumps, tonsils, appendicites, including other acute disorders. This is a Yin condition.
Square Nails: Indicates kidney disorders; excessive intake of animal protein or malabsorption of food.

Fig. 4.15. Nail Shape Self-Diagnosis

Feet:

Foot: Indicators of health or disease throughout the body. Certain symptoms in the feet signal trouble in the reflex body organs.
Athletes Foot: Sign of kidney problems caused from excessive animal protein intake.
Fallen Arches (Yin Condition): Indicates weak nerves.
Foul Smelling Feet: Sign of excess animal protein intake, liver & kidney disease.
Hard Callouses on Feet or Hands: Denotes excessive dairy products and animal protein in the diet.
Cracked Nails: Shows liver, kidney, spleen and pancreatic disease; excessive Yin and Yang foods.
Toes: Each Toes is connected to a body organ via Nerve Pathways (Merridians) as follows: Big Toe, Liver; 2nd Toe, Stomach; 3rd Toe, Bladder; 4th Toe, Gall Bladder; 5th Toe, Kidneys. Each toe can be massaged or pressed for one or two minutes to help improve the corresponding organ.
Hard, Whitered-Inflexible Toes/Nails: Denotes organic disorders.
Pain or Swelling in a Toe or the Feet: Indicates a disorder in the corresponding organ.

Fig. 4.16. Feet Self-Diagnosis with Five Vital Organs

Hair:

Premature Grey or White Hair: Sign of an excessive intake of Yang animal protein and Yin sweet foods. This indicates a liver, gall bladder and kidney malfunction. White haired people are generally more set in their ways, and it is hard for them to change and be more flexible.

Much Body Hair: Denotes a Yang inherited constitution and excessive animal protein consumption over generations.

Split Hair Ends: Indicates malfunctioning sex glands and hormones in both male and female. Excessive sugars, fats, and animal protein are the main cause of split ends. Poor hair circulation, overeating and lack of exercise are other contributing factors.

Dry Hair: Indicates liver, gall bladder, spleen and pancreatic disorders caused by fats, sugars, animal protein.

Oily Hair: Caused by excessive fats and oils in the diet.

Dandruff: Caused by excessive animal protein, fats, oils and sugars and kidney malfunction.

Hair Loss: Indicates internal organic disorders, especially from excessive animal protein, fats and sugars.

Hair Loss Front of Head: Caused by excessive Yin liquids, sugars, fruits, alcohol which lowers kidney & bladder functioning.

Hair Loss Top of Head: Indicates excessive animal protein. The lungs and large intestines are adversely affected.

Hair Loss Back of Head: Denotes excessive intake of chemicals, drugs, marijuana & medicine affecting liver & gall bladder.

Hair Loss Temples: Indicates excessive intake of drugs and sugar foods. The lungs and large intestines are affected.

Front Head Hair Loss

Top and Side Hair Loss

Fig. 4.17. Hair Self-Diagnosis

Tongue:

The tongue is an extension of the gastrointestinal track, which terminates in the anal canal. Any problems or disease symptoms on the tongue indicate disorders in the stomach, intestines and colon. Diseases can be diagnosed from the condition of the tongue. Any disorder in the *Middle of Tongue (Stomach); Sides of Tongue (Liver); Root of Tongue (Kidneys) & Tip of Tongue (Heart)*.

White/Yellow Color & Dry Coated Tongue: Indicates stomach fermentation, intestinal toxemia, liver and gall bladder disorders caused by excessive intake of dairy foods, fats, animal foods and overeating. A short water fast is indicated in this condition.

Green Tongue Color: Shows liver and kidney disorders.

Blue Tongue Color: Shows kidney and bladder trouble; disorderly eating. A balanced natural diet will balance the organs.

Violet Tongue Color: Shows liver & heart disease (Alcoholics).

Grey or Black Tongue Color: Indicates kidney and heart disease; black at the tongue base shows possible cancer.

Purple Tongue Color: Denotes sex and bladder disease.

Crease down the Middle of Tongue: Denotes intestinal disorders & vitamin B complex deficiency and extremes in diet.

Trembling Tongue: Shows a nerve condition & brain weakness.

Sties or Growths on Tongue: Indicates excessive intake of animal protein, kidney disease & a Yang heart. Also intestinal toxemia and constipation are generally indicated. Avoid over-eating, especially extreme Yang foods, meat, eggs, fish & salt & extreme Yin foods, i.e., ice cream, white sugar, pastries, alcohol & all fats.

Soft, Loose Tongue: Shows an expanded gastrointestinal system; excessive Yin foods.

Hard, Tense Tongue: Denotes excessive mucous in the system; animal foods, dairy, sugars and disorderly eating are indicated.

Line on Tongue Sties on Tongue

Fig. 4.17. Tongue Self-Diagnosis

Voice:

Many diseases can be diagnosed from the sound and texture of the voice. The sound of the voice corresponds to inner physiological conditions. A crackling, hoarse voice always denotes degenerative disease of the sexual glands & hormones.

Voice Sounds: Designated into Yin and Yang as follows:

Yang	***Yin***
Strong Voice	Weak Voice
Low Pitch	High Pitch
Fast Speech	Slow Speech
Loudness	Softness
Dry Sound	Wet Sound
Tenseness	Looseness
Distinct Sound	Unclear Sound

Watery, Loose Voice, with Slow Speech: Indicates an excessive intake of (Yin) liquids, fruits and sugars. The result is kidney expansion, weakness and mucous.

Unclear & Weak Voice (Yin): Denotes lack of inner energy & vibrant health. For example, if one's health is poor, with low energy, the body lacks the force or vitality to express itself in a clear vibrant tone. Very sick people always speak quietly in a trembling tone.

Tense, Dry, Fast or High Pitched Voice: Indicates intestinal congestion, sexual degeneration, constipation; bladder, high blood pressure and circulatory trouble. Cause: Excessive intake of Yang foods, such as meat, eggs and salt contract the sex glands, kidney and liver, causing the person to shout or talk in a loud voice.

Fast Speech: Denotes an overactive heart; a Yang condition.

Stuttering: Indicates extremes in diet (heart & nervous conditions).

Voice Resonates: From various sections of the body; congestion and mucous can be detected according to location in the body. One can help to heal a congested section by making the sound of the designated vowel or letter for a minute or two, and focus the concentration on the area to be healed. For example, if one has sinus congestion, place the tongue on the upper palate and hum the sound "N" several minutes a day.

Magnetic Voice: A healthy voice is enjoyable to hear. It is neither too high or too low, but resonates and vibrates in a clear musical tone; this is the magnetic voice; it soothes and heals those who hear it. Consuming the balanced Yin and Yang foods and correcting the living habits will eventually improve ones voice.

Vibrant, Pleasant Voice: One must speak with an open throat and from deep down in the lower diaphragm-abdominal region.
Voice Exercise: Take a deep breath; open the mouth wide, and make the sound "AH" from the lower abdomen for five seconds, then stop. Inhale again and repeat for ten seconds and stop; continue in this manner up to 20, 30, 40 or 50 seconds, or as long as comfortable. Always start at the zero second mark and work up with five second intervals, i.e., 0-5, 0-5-10, 0-5-10-15 and so on. After a few weeks practice, of a minute or two per day, one can be up to 30 or 40 seconds non-stop, and the throat will then be opened and relaxed; the voice will be more vibrant and pleasant. If one reaches the sixty or seventy second mark while humming "AH" non-stop, they are on the way to developing a pure magnetic voice, one that others will gladly listen to. One may also practice this humming tone with the other body sounds M, N,, E, O, U.
Excessive & Confused Talking or Slow Talking: Indicates extremes in diet and excessive or disorderly eating. If one is not understood, it is because he does not understand himself due to inner physiological and psychological confusion and dietary imbalances. A healthy person speaks little, says much.
Strong, Clear Voice: Indicates healthy kidneys, liver, stomach, lungs, and strong sex power.
Weak, Trembling Voice: Denotes kidney & sex gland disorders.

Urine:

Dark Yellow or Brownish Color Urine with a pH under 6.5: Denotes a sluggish Yang liver and bile backed up in the blood caused by excessive intake of animal protein, fats, chemicals and sugar. The kidneys are constricted (Yang).
Light Colored or Clear Urine with a pH over 7.5: Denotes an expanded (Yin) kidney and liver caused by excessive intake of Yin foods; sugars, juices, alcohol, tropical fruits, liquids and raw foods.
Excessive Urination: Denotes expanded (Yin) kidneys caused from an excessive intake of Yin foods. Excessive urination with an excessive appetite, a glazed and furrowed tongue, diarrhea and loss of sexual and mental powers indicates a diabetic condition caused by diet too high in fats, sugars, animal protein, empty calories; excessive intake of Yin and Yang (extreme) foods.
Healthy Urine: Should be straw colored or the color of light beer, which will be 7.0 or balanced on the pH scale. This denotes a balanced Yin and Yang and Acid and Alkaline diet.

General Body Symptoms

Belching, heart burn, nausea, loss of appetite and dyspepsia are caused by an overloaded stomach, excessive fats, protein, oils and sugars in the diet. Toxemia and fermentation result from overeating, disorderly eating and various other enervating living habits. Constipation is usually present.

A swollen abdomen, itching about the anus and genitals and an offensive bad breath indicates pin worms or tape worms in the stomach or intestines, constipation and general body toxemia. Disorderly eating, overeating and extremes in diet are general causes of this condition. A pain in the lower back, in many cases, can be attributed to Yang (overworked) kidneys; the kidneys are located just above the right and left hip bone in the lower back region. An excessive intake of animal protein contracts (Yang) the kidneys and causes pain in the lower back.

An unlively, slow and mincing walk, when habitual, indicates premature nerve degeneration or senility. This can happen at any age, depending on the individual's living and eating habits. One can be young, active and full of vitality at 80, or burned out and aged at 30 or 40; it all depends on the health habits and attitude of the individual. Constant colds, flu or sinus trouble is a definite indication of an excessive intake of fatty foods, cheeses, oils, fruits, liquids, sugars and animal protein. Excessive fruit eating can also lower stomach acids, depress kidney and lung activity and result in chronic mucous. Nuts, cheese, milk and fruits can cause colds and mucous just as fast as regular junk food.

Vibrant Health and Human Beauty

The idea of beauty of person is synonymous with that of health and a perfect organization. What an inspiration it is to see a truly robust and healthy man or women. A radiantly healthy man is always handsome; an energetic healthy woman is always beautiful.

They possess a magnetic charm that draws attention and compels admiration wherever they go. Beauty is but the reflection of wholeness, of health. Partial beauty, fading beauty, decaying beauty these are but expressions of partial, fading or decaying health.

An abundantly healthy individual is in perfect symmetry and proportion of body. The complexion glows and is free from blemishes, with the red blood shining through at the cheeks, fingers and toes. The hair sheens, is strong and full of life. The eyes are clear and sparkling, lips are rosy in color, the teeth pearly white, sound and even. An unmistakable look of confidence, courage, alertness, love and joy radiate upon the countenance. If you love beauty in body, mind and spirit, and desire it for yourself and for your offspring, there is only one way to attain it, and that way is to live in harmony with the laws of life.

If you possess most of these positive vibrant health qualities, you are living in accordance with natural law; if not, start on a rejuvenation health program today.

1. A healthy, normal appetite for natural wholesome foods.
2. Sound undisturbed sleep, and a zest for living upon rising mornings; free from fatigue.
3. Calm nerves, clear thinking and a steady magnetic gaze.
4. A clear, strong and musical voice in both sexes.
5. Hair that is strong, lustrous, plentiful and sheening; no dandruff or dryness.
6. A clear complexion, bright and glowing.
7. A firm, powerful and flexible grip.
8. A clear alert mind, with a good memory; no absent-mindedness or forget fulness.
9. Constructive and happy thoughts about yourself & others.
10. The attitude is confident, loving, cheerful & positive; a realist.
11. Perfect eyesight without glasses; eyes clear and sparkling; hearing perfect.
12. The tongue is pink & uncoated; the breath is sweet and clean.
13. No dark circles or puffiness under eyes.
14. A good sense of humor about yourself and others; a calm, peaceful nature.
15. A proper upright-posture & carriage; neither bent or inflexible.
16. Body weight proportionate to height and bone structure; neither thin or fat, but firm.
17. Body joints flexible & free from stiffness & calcium deposits.
18. You are taking total responsibility for all your actions, and circumstances.

19. Teeth are even and shiny white; gums do not bleed; no cavities and strong bite.
20. Muscles are firm, strong and smooth; an energetic springing step; athletic ability.
21. Internal organs and glands in their proper place and functioning healthfully.
22. No sensations of pain, pressure, swellings, soreness, tiredness, stress or indigestion.
23. Neither cold hands or feet; body temperature & blood pressure normal; pulse not too high or low but even & steady.
24. A grateful and thankful feeling for being alive, and appreciation for the things you now have.
25. You are orderly and precise in thought and action; neither hasty or plodding.
26. You are an independent thinker, free from dogmas, prejudices, and false notions.
27. You do follow organizations, groups, teachers or cults without question, failing to reason and thin about the truth of life by your own intelligence and creativity.
28. Your goal in life is to help other people; you are not self-centered and egocentric.
29. You do have plans and goals in life based on your own creativity and individuality.
30. You do know who you are, where you are going, and what is the purpose of your life.

Price of Health

Perfect Health is your natural right. The glossy hair, bright eyes, clear skin, active brain, steady nerves and happy disposition, together with the strength, vigor and unlimited energy of a truly healthy human being are all yours if you want them enough to pay the price. But these things cannot be purchased with money. They are not for sale in any store and cannot be found in boxes or bottles. They can be maintained or regained only one way and that is by carefully obeying the laws of nature every day. Health and beauty are born companions.

Yin and Yang of Health

In Taoist healing we are always looking at the balance between Yin and Yang as a measure of health. They say that when Yin and Yang finally separate, we have death. The Yin body returns to the Earth and the Yang spirit ascends to Heaven. Thus the work of a Taoist healer is to maintain a balance between Yin and Yang in order to preserve life. Healing is about becoming whole. In order to feel balanced and health, we have to have a flow between our Yin aspects and our Yang aspects.

Yin: Ability to stay calm; rejuvenation; detoxification; sleep.
Yang: Ability to take action; exercise; movement; zest for life.

If these are out of balance, then health problems may follow physical, mental or emotional. We can see this immediately by observing the extreme cases:

If one is excessively Yin without enough Yang, for example sitting at home on the couch all day watching TV, no exercise, no working soon enough one may suffer from overweight, fatigue and depression.

If one is excessively Yang without enough Yin, for example working long hours, spending time off working out fanatically in a gym, always rushing about and never resting sooner or later one may suffer from panic attacks, hyperactivity, sleeping problems and heart problems.

We must remember that Yin and Yang are not separate opposites: this is an over simplification of the Yin & Yang theory. Rather it is about flow. There is no problem to be busy, as long as one takes time to unwind and relax later. Likewise, there is no problem completely relaxing and being still, as long as one takes time to exercise and move later on.

Thus Yin and Yang do not have to be in balance at any one moment. But they must flow in a smooth and regular cycle for health to ensue. Just as night and day do not have to co-exist, they each have their time and flow one into the other in a smooth cycle.

In terms of health, there are some signs of imbalance that we are overly Yin (or do not have enough Yang), and others that we are overly Yang (or do not have enough Yin). Some imbalances are a result of our constitutional traits and others are due more to our lifestyle factors.

Here are some examples of symptoms that may indicate that we are becoming either overly Yin or overly Yang:

Overly Yin	***Overly Yang***
Excessively Cold	Excessively Hot
Deficient Chi	Excess Chi
Fatigued	Hyper
Weak	Rigid
Excess Fluids	Dryness in the Body
Low Blood Pressure	High Blood Pressure
Slow Respiratory Rate	Fast Respiratory Rate

Health is about harmony: smooth flow and overall balance. If we experience one of these symptoms (such as feeling cold) it is not necessarily a problem unless it is consistent and unbalanced. The more we connect to nature, the more we can see how we flow harmoniously with nature's cycles, For example, human beings naturally operate well when they are awake and active during the daytime and rest and sleep during the night. We are more comfortable if we stay in more during the winter months and spend more time in the outdoors during summer.

Thus, if you are very active during the day, this does not mean you have an overly Yang problem. But if it persists and you are unable to sleep well at night, then this indicates an imbalance, if you are cold during the winter, no problem, But if you continue to feel cold even in the summer months, there may be a deeper problem. Likewise, when we force our bodies out of harmony with nature for extended periods, we usually fall ill. A prime example is that of the night-shift worker. Even though a person may be sleeping a full 8 hours every day, if they always work at night then they are acting against the natural flow, it is not uncommon for night shift workers to begin to experience imbalances.

Yin & Yang theory gives us a model to understand health and illness that is dynamic. Many models of health make the mistake of using a static model: assuming that there is a point of good health to attain. For those seeking a static goal of health, this is very hard, indeed impossible. Our bodies are constantly changing and evolving, responding to the world around us. For example, our bodies tend to put on a little extra weight during colder months and become lighter in the summer. Thus if we are trying to stick to a single static weight, we are fighting against nature. The Oriental therapies give us a more fluid model, and yet a model with very clear ways of understanding our health and illness.

Yin and Yang of Illness

We can also view different illness in terms of Yin and Yang, though it must be remembered that this is only an approximation and does not apply to every case, in ancient times when Oriental Therapy was used, the names of diseases were often not known. A Chinese doctor would simply look at the symptoms and examine the person's energy to decide how to treat them. However, we can see that there are often similar patterns in particular diseases, and thus we can make an estimation of Yin & Yang imbalances. Always look at the individual's expression of the illness and their unique symptoms (such as heat, cold, weakness etc) before deciding.

Overly Yin	***Overly Yang***
Headaches (Front of Head)	Headaches (Back of Head)
Diabetes II	Syndrome X
Colitis	Duodenal Ulcers
Asthma	Gout
Hypothyroid	Hyperthyroid
Meningitis	Appendicitis

Excess and Deficiency

From the surface we may identify things as being overly Yin, Yang or balanced. However, in Chinese Medicinal Theory it was know that there are different underlying situations that can create each surface appearance.

An overly Yin situation may be caused by two possibilities:

1. Excess Yin
2. Deficient Yang

In other words, it may be that the person has built up an excess of Yin energies, habits or foods, or it may be that they do not have enough Yang qualities to balance their Yin. We can understand this by making simple charts to demonstrate. Balanced Yin and Yang would look like this:

Fig. 4.18. Balanced Yin & Yang

Yin may become excessive. This may be our constitutional tendency, or it may be of our behavior. For example, if we take too many cold watery foods and drinks which are Yin. It could be that we are in a very cold damp environment, and thus develop an excessively Yin situation. Therefore, there are a number of ways that we can develop too much Yin, which can be illustrated as so:

Fig. 4.19. Unbalanced Yin & Yang

The other scenario which looks externally the same is deficient Yang. This may be our constitution, or may develop out of our behaviors. For example, we may lose Yang when we avoid stimulating activities and sports. If we are lazy and sedentary, we may become deficient in Yang, or if we do not spend enough time with other people we can develop a deficiency. Deficient Yang may be illustrated as so:

Fig. 4.20. Unbalanced Yin & DeficientYang

Thus Excess Yin and Deficient Yang look externally the same, but under the surface there is a slightly different cause. Excess is always the result of too much of something (e.g. too many iced drinks) and deficiency a result of a lack (e.g. not enough exercise).

Fig. 4.21. Excess Yin & DeficientYang

The same can be found when we examine and overly Yang situation. This has two possibilities:

1. Excess Yang
2. Deficient Yin

It may be that the person has built up an excess of Yang energies, habits or foods, or it may be that they do not have enough Yin qualities to balance their Yang. An excess Yang situation may be constitutional, or it may be the result of too many Yang foods, exercises and habits. For example, if we eat too many rich and spicy foods then we can develop Excess Yang. It can be illustrated as so:

Fig. 4.22. Deficient Yin & Excess Yang

Deficient Yin maybe a constitution or we may develop it from not nourishing our Yin qualities. For example, if we do not take enough rest, do not take enough time alone and do not surrender into relaxing pasttimes we may develop a lack of Yin. This can be Illustrated as so:

Fig. 4.23. Lack of Yin & Excess Yang

Thus we can see that from the surface level, Excess Yang and Deficient Yin look the same, though they have different underlying patterns.

Fig. 4.24. Excess Yang & Deficient Yin

Therefore, in Oriental Theory, we distinguish between different underlying patterns so that we can understand the situation even deeper and know how to respond to it in an appropriate way.

Yin and Yang Types

Thus we can find two main different types: the Yin and the Yang. But when we look deeper we find four different subgroups. The following table shows the four different groups identified in Yin & Yang diagnostics:

	Overly Yang	***Overly Yin***
Yin Imbalances	Deficient Yin	Excess Yin
Yang Imbalances	Excess Yang	Deficient Yang

The external appearances are two groups: Overly Yang and Overly Yin. The internal imbalances may take four different forms, depending on whether it is a predominantly Yin imbalance or a predominantly Yang imbalance. Understanding our health problems from this perspective can help us to gain deeper insight into the nature of our issue, and of how to remedy it.

Theory in Practice

These theories are used directly in the practical application of Oriental Therapies. To a certain extent we can treat simply Overly Yin and Overly Yang situations the same, However, this deeper insight can give us even more understanding of the current imbalance and thus show us how we can treat the situation even more effectively. Oriental Therapy has many applications. Acupuncture, Chinese Herbs, Massage, Medical Qigong and Shiatsu are all based on the same theories.

However, the focus of this book will be on Nutritional Therapy. This can be used alone or combined with other treatments. Ancient Taoist theory is the foundation for two popular nutritional systems: Macrobiotics and Five Element Nutrition. Macrobiotics is concerned with the balance and harmony between Yin and Yang; whereas Five Element Nutrition looks with more details into the health of each organ system. Macrobiotics has been highly developed in Japanese culture, whereas Five Element Nutrition is more widespread in China. Both can be used alone or the systems can be integrated.

Chapter 5

Increase your Life Force

How to eat, when to eat, what to eat and where to eat are some of the basic questions people ask when starting a program of natural eating. We all should eat to live, not live to eat. An old Chinese proverb says: When feasts are spread the doctor rolls his pills. In fifty dishes lie a hundred ills. Most people today live to eat and they end up with enormous medical bills for all of their ills.

The three vital functions of food are to rebuild the living tissues; to supply energy; and to preserve a proper medium in which the biochemical processes of the body can take place.

We might add that the food must be in an assimilable form and that the combinations of food must be correct in order to insure perfect digestion. Otherwise, fermentation and gas will result from faulty combining. Here then are the rules of how to eat.

Twelve Keys to Good Health

1. Eat only when hungry stop before full.
2. Proper Acid and Alkaline and Yin and Yang balance.
3. Chew your food well mix thoroughly with saliva.
4. Refrain from eating when emotionally upset or physically exhausted.
5. Eat food at room temperature.
6. Use fresh natural organic raw and cooked foods daily.
7. Fasting or Eliminative Diet when necessary.
8. Combine food properly.
9. Refrain from close eye or brain work before, during, or after meals.
10. Consume your last meal at least three to four hours before bedtime.
11. Keep cheerful and calm at meals.
12. Follow the Law of Moderation (rhythm). Never overeat.

Eat Only When Hungry

Do not eat unless you have absolute hunger. True hunger is a mouth and throat sensation. The mouth waters when true hunger is present. True hunger is not stomach pangs or that empty feeling at the pit of the stomach. These symptoms are a form of addiction to highly seasoned and stimulating foods, such as meat products, coffee, salt, spices, and alcohol. When these foods are eaten they create withdrawal symptoms and the body again craves them with a burning desire. True hunger leaves the body in a relaxed state with no morbid cravings for junk foods. Eat only to satisfy hunger, no more. Hunger is the true spice of eating.

A completely full furnace smokes and will not readily burn. The stomach acts in the same manner; when completely full, it will not digest the excess load of food, but instead will ferment and putrify, poisoning the body and causing toxemia. A furnace not quite full will burn beautifully. The stomach, not quite full, will also burn (digest) beautifully. Overeating causes malnutrition. Surveys taken on individuals living past the age of 100, never fail to show that they are always moderate eaters. The glutton will never reach the age of 100. If you are not hungry at meal time or in the morning, skip that meal and you will enjoy your next meal. Eating three full meals a day, in most cases, overworks the digestion and internal organs. Listen to that small inner voice within you. It will tell you what to eat, how much to eat and when to eat; and you will seldom go wrong. Never eat between meals. Eat a meal, then do not eat again until you experience true hunger. Your stomach will thank you. To lengthen your life, lesson your meals. Who is strong? The ones that can conquer their bad habits.

Proper Acid/Alkaline & Yin/Yang Balance

Alkaline quality foods are classified as all watery type fruits, vegetables and their juices. To achieve Yin and Yang balance, simply consume the foods grown near or in the climate in which you live and in season. Use more cooked grains, legumes, vegetable stews and soups in the winter, and eat more raw food during the summer months.

Alkaline Foods (General Percentages)

Summer	60% to 70%
Winter	25% to 35%
Fall	50% to 60%
Spring	50% to 60%

The Yin and Yang Balance is a different ratio and will be discussed in another Chapter. The foods falling into the Acid quality are all proteins, starches, fats and sugars, i.e., all nuts, seeds, cheeses, bread, potatoes, rice, oils, dried and sweet fruit, like dates, raisins, figs, bananas, etc.

Acid Foods (General Yearly Percentage)

Summer	30% to 40%
Winter	65% to 75%
Fall	40% to 50%
Spring	40% to 50%

Listen to your inner bodily needs; you may require more or less of the Acid foods at different times. All heavy type foods are acid forming and they show up acid on the pH urine scale. Also, eat sparingly of fats and sugary type foods, i.e., honey, dried fruits.

The human body requires just the right amount of proteins, starches, sugars, fats, minerals, vitamins and liquids. An excess or deficiency of any one food element, over a period of time, can cause acute, chronic or deficiency diseases, i.e., diabetes, cancer, obesity, high and low blood pressure, emaciation, hypoglycemia, schizophrenia etc. A balanced and moderate amount of all food elements, coupled with physical fitness, is the master key to good health, nutrition and longevity.

For example, too much protein damages the kidneys, ages the cells and tissues, pollutes the blood stream with uric acid and toxins. A deficiency of protein atrophys the kidneys, causes anemia, falling hair, emaciation, fatigue and mental depression.

An excess of starch injures the liver, causes nerve depletion, constipation, skin eruptions and mental fatigue. A deficiency of starch causes cold hands and feet, weight loss, a nervous and irritable condition, loss of energy and lack of body heat during cold weather.

All sugars eaten to excess impair the pancreas, kidneys and causes poor eyesight, falling hair, tooth decay, impotence, schizophrenia, paranoia and premature aging.

An excess of fat overworks the gall bladder and liver, and together with refined sugar raises the blood cholesterol. Fat is difficult to digest if eaten in excess of the bodily needs, and causes anemia, skin problems and obesity. A deficiency or an excess causes nerve disorders, falling hair, poor eyesight, lack of body heat and general fatigue.

Vitamins and minerals are essential in preventing various deficiencies and diseases. Lack of adequate vitamins and minerals has caused such deficiency as: beriberi, pellagra, rickets, scurvy and others. Severe mineral and vitamin depletion can be fatal An excess of minerals and vitamins can cause disease. Likewise, an excess of vitamin and mineral supplements in megadoes can be dangerous. Consult a competent health doctor of nutrition to advise you on their use.

Learn to listen to your inner bodily cravings for the proper amount of proteins, starches, sugars, fats, vitamins, and minerals; this will lead you to health and longevity.

Masticate & Salivate your Food

Indigestion is a universal malady. One of the main causes of stomach ailments is bolting food in a hurry. Nothing ages one faster than this pernicious habit. The stomach has no teeth to break up large particles of food. Nature has endowed man with a set of teeth to break down food into fine, almost liquid particles, so that the digestive enzymes and juices may easily mix with it. Sufficient mastication and salivation of all food, including liquids, insures healthy and thorough digestion and assimilation. Mastication allows us to enjoy and taste our food to the highest degree. Eating should be a pleasurable experience. Swallowing and hurried eating never allows one to really enjoy their meals. Adequate chewing enables one to eat less and to digest, assimilate and utilize their food better. Chew your food to a liquid then drink it, your stomach has no teeth; and also, chew your liquids.

Never Eat When Upset

Animals will not eat if wounded, sick, excited, frightened or maddened. Working under mental or physical strain will retard or suspend digestion. Never eat during a fever, as it will only feed the fires. Eating food when upset or under physical strain will cause

faulty digestion and the result is toxemia. Eating under these adverse conditions slows down and impedes the peristaltic action of the stomach and its juices. The rule is then, when sick or in distress, stop eating until normal hunger returns. Rest, and a short fast will be the only remedies.

Eat Food at Room Temperature

Cold and hot food suspend digestion for some time. A great amount of body energy is wasted by this ill-habit. It is best to allow food and drink to reach room temperature before consuming it. In China one of the causes for failing to achieve longevity is considered to be the use of ice in food and drink.

Cooked & Raw Foods Daily

Eat according to season, climate and weather variations. Eat some cooked and raw food daily. Consuming only 100% cooked or 100% raw food exclusively is not conducive to vibrant health.

Consume more cooked grains, legumes and vegetables during the winter; and more raw foods during the summer.

Fasting or Eliminative Diet

A fast or an eliminative diet, when necessary is an excellent way to cleanse the body. Fast 3 to 5 days on distilled water with plenty of rest and fresh air, followed by a day of fruit. The eliminative diet of three days on watery fruits or vegetables or juices will bring superb health results. Refer to chapter on fasting and eliminative diet for more details. A temperate diet arms the body against all external accidents, so that they are not so easily hurt by the heat, cold or labor.

Combine Food Properly

The body and blood chemistry can easily be upset by continually consuming improper and incompatible food combinations, i.e., raw fruit with starch foods and fruit with animal protein are the most inharmonious combinations. See chapter on food combining.

Avoid Close Work during Meals

This is so important that it will add many years to your life. Oxygen is necessary to properly digest and assimilate the food eaten. Performing close work or reading or staying indoors after eating will hinder digestion and result in poor eyesight and other ills, because close work diverts the blood out of the stomach and into the head and brain area, causing a lack of blood for proper food digestion. After meals, go out into the open air and look into the distance. This will relax the entire nervous system resulting in improved digestion, assimilation and better health. Never lie down after eating, because the digestive juices do not flow freely in this position, and results in fermentation and gas. Too many people, including Health Culturists, are wearing glasses and weakening their eyes, because of the practice of not resting the brain and not getting fresh air after eating.

Eat your Last Meal 4 Hours before Bedtime

The body has the least amount of energy and vitality at night, which prevents the proper digestion and assimilation of foods eaten at a late hour. Good sound sleep is necessary for the repair of the cells, tissues and organs of the body. Eating a heavy meal at night before going to bed prevents the body from repairing and replenishing itself from the daily activities.

By evening, the body's energy has been mostly expended. Because of this low energy flow, the food consumed in the evening hours should be relatively light and easy to digest. After sunset, the ionic charge of the atmosphere drops, and the later one eats, the more likely the food is to be improperly digested. The last meal of the day should be taken on or before sunset. If you are hungry later in the evening, eat an apple or pear, or a few grapes and berries. Heavy food eaten before bedtime causes muscle twitching and cramps. Yellow and bilious skin can be attributed to this practice, as well as anemia and poor circulation.

This faulty habit weakens the vital organs and uses up a large amount of energy, causing a lack of good sound sleep. The best time to eat the heavier foods is earlier in the day, when the body has the vital energy to digest and assimilate the food properly. The average person does just the opposite; they eat a big meal just before bed time. No wonder there are so few magnetically healthy

people around today. An abundance of energy can be yours when you learn to obey nature's laws.

Be Cheerful and Calm at Mealtime

Anger, hate, anxiety and worry stop digestion. At meal time keep calm and think about the lovely and beautiful things in life. Above all, enjoy your meal, and do not become a hypochondriac over your health or natural eating, learn the rules, practice them always, make them your habit, and then take up a worthwhile hobby or profession with the zest for living and doing.

These little secrets of correct eating may not seem like a big deal, and you may want to neglect them, but we can assure you they are very important for the maintenance and preservation of your health and happiness.

Moderation is the Key to Health and Long Life

Moderation is the natural law of temperance, not only in eating and drinking, but in sleeping, working, exercising, studying, meditation and all other activities. Overdoing anything in life tends to weaken ones vitality and physical powers. Excessive sleeping can make one sluggish, lazy and dull; the proper amount of sleep revitalizes and rejuvenates the body for daily activity. Excessive exercise, work or mental activity can lead to nerve and adrenal exhaustion, and the consequent loss of personal magnetism, vitality and health. If one lives within these magnetic margins (moderation) they can build a reserve energy supply to cope with any stress or heavy physical or mental emergency situation.

Moderation in all of the healthy activities and functions of life is the key to attaining vitality and good health. The ancients teach us that one cannot be moderate and attain good health and spiritual development by even the smallest use of drugs, alcohol, dope, sugar foods, smoking, lying, cheating, hate, anger, or swearing etc. Any amount of these negative habits in ones life are harmful to the spirutual and physical body and cause untold misery and suffering. They are contrary to the Tao and the order of the universe.

Sleep, activity and proper eating habits are the three most essential functions of life. When any one of these essentials are out of balance in some degree, one must suffer the consequences.

We learn through experience, and if we have suffered enough and learned our lessons well, we may alleviate our sickness and self-induced misery. Natural law will not be violated with impunity; the rich and poor are equal in respect to the Yin and Yang laws that govern physical life.

Remember these Suggestions on Moderation:

Eat only when hungry and stop before full.
Drink pure liquids when thirsty.
Rest or sleep when fatigued or exhausted.
Exercise daily, with moderation.
Cultivate cleanliness of body and mind.
Study and read when alert and willing.
Maintain a poised, confident, cheerful and thankful attitude.

Happiness and Laughter are Medicines

Chinese Taoist physicians say that the liver churns and exercises when we laugh. The liver circulation is quickened, the respirations are deeper and more profound, and we feel warmer all over. Mirth promotes digestion, while gloom and depression of spirits will produce dyspepsia and indigestion. He or she who is habitually joyful, calm and happy will generally possess good health. A philosopher once said that he would always trust one who whistled while working.

It is impossible to reach old age with a bad stomach. There is a great deal of truth in the statement that a good stomach is not affected by aggravations, sadness, or insults. All these emotions affect primarily the stomach. Of all man's functions that affect the body and soul together, laughter is the healthiest. Laughter aids digestion, circulation, sweating, and has a refreshing effect on the strength of all organs.

Cheerfullness and gladness are not only of value in preserving health, but they are of equal service as a remedy in disease. No one should visit a hospital who is gloomy or despondent; the patient will pick up the vibrations and feel more depressed and ill.

A calm, happy, and positive attitude lifts the soul and body, and inspires all who come in view of such a person. The longest lived and healthiest people throughout the world are always happy and full of inspiration and good cheer. Health is the most precious jewel and greatest possession upon earth.

Health Wisdom of Benjamin Franklin

To lengthen your life, lessen your meals. I saw few die of hunger; of eating, 100,000. Eat to live, and not live to eat. A full belly makes a dull brain. Hold your council before dinner; the full belly hates thinking as well as acting. He that never eats too much, will never be lazy. Eat few suppers, and you will need few medicines. Many dishes, many diseases; many medicines, few cures. Hunger is the best pickle. To live long it is necessary to live slowly. Wish not so much to live long, as to live well. Keep out of the sight of feasts of banquets as much as possible. If a man casually exceeds (overeats), let him fast the next meal, and all may be well again. A temperate diet frees from diseases and illnesses. Early to bed and early to rise, makes a man healthy, wealthy and wise. A sober diet makes a man vigorous; it preserves the memory and helps the understanding; it makes the body a fit tabernacle of the Lord to dwell in. Drink does not drown care, but waters it, and makes it grow faster. He is the best physician that knows the worthlessness of most medicines. Health is not lost by accident, not can it be repurchased at the drug store. It is lost by physiological errors, and can be regained only by erroring no more. Disease is nature's protest against a gross violation of her laws. The reward for service is more service.

Food Combining made Easy

You are what you eat is an old health saying that is only partly true. More importantly, you are what you digest, assimilate, absorb and utilize. Our total health depends, not only on what we eat, but how efficient our digestive and assimilative powers are. Understanding proper food combining can make a tremendous difference in our over-all health and well-being. It can even extend our lives far beyond the average, and slow down the aging process.

Most people consume food indiscriminately, that is, without regard to what happens to the incompatible food mixtures when they reach the stomach, i.e., gas, flatulence and indigestion. It is not necessary to get bogged down in strict unbending food combining rules in order to achieve good health. One need only apply a few important combining principles, as outlined here, to obtain excellent health benefits.

Eight Food Combining Principles

Most Important Food Combining Principles:

1. Salads should not be eaten before protein or starch (beans, grains), always with or after these foods. Food is digested much easier when eating from Yang foods to Yin ones. Protein and Yang foods require plenty of stomach hydrochloric acid for proper digestion. If one eats Yin salads, fruits or other light carbohydrate foods first, for which hydrochloric acid is not needed, and protein/ Yang foods are eaten last, the Yin foods will interfere with protein/ Yang food digestion because of diminished hydrochloric acid in the stomach. Therefore, when eating a grain/bean dish, cheese, yogurt etc., eat them before or with the vegetable salad, never after. One can alleviate much gas and indigestion by eating in this manner. The body secretes enzymes and hormones at all times on a healthy and well balanced diet: there is no need to eat salads first in the meal to supply any missing enzymes to digest protein or Yang foods.

2. Many foods, such as grains and beans contain both protein and starch, which are the principal foods of people worldwide. Eaten in moderation, protein and starch foods are not incompatible, as some erroneously believe. Complex carbohydrate foods, in fact, have a sparing effect on protein foods, thus saving the protein for its hormone and tissue building work. Complex carbohydrates, like grains, beans and root vegetables are energy and heat producers. If an insufficient amount of these are eaten with a protein, the protein is then used as a secondary source of energy and heat which requires extensive energy conversion and deprives protein of its main function hormone and tissue repair. Generations of healthy people have eaten protein and starch foods at the same meal. Nature produces a variety of protein and starch mixed foods, such as wheat, peas, beans, corn, buckwheat, potatoes, seeds, nuts, rye and all other grains.

3. Acid and sub-acid fruits combine fairwith pure protein foods, such as yogurt, cottage cheese, buttermilk, raw milk, eggs, etc. Milk always curdles as soon as it is mixed with the gastric juice, and this is a help rather than a hindrance to digestion, as it would leave the stomach too quickly if it remained in the fluid state. Fruit acids are mild compared to gastric secretions, therefore, they will not interfere with the digestion of a pure protein food eaten in moderation. This mixture can be eaten more in hot weather or tropical climates.

4. This is the most important food combining principle to follow! The worse combination of all is mixing acid or sub-acid fruits with starch foods, such as beans, bread, grains. The acids in the fruit impede starch digestion considerably, causing fermentation and gas. It is best to eat fruit alone. Stewed or baked fruit with a starch meal, however, will not cause any problems. Cooking fruits diminish their acids, and can be eaten occasionally with grains or other starch foods.

5. Avoid protein and sweet fruit or any other sweets, such as honey, sugar, corn syrup etc. Sweets inhibit stomach secretions (hydrochloric acid), and result in poor protein assimilation and digestion, along with fermentation and gas. Sweet fruits, such as melons, bananas and dates should be eaten on an empty stomach. You may eat fruit or melons in the morning, at least one-half hour before a protein or Yang food meal. Fruit for breakfast gives the stomach natural bulk and acts as an intestinal cleaner and eliminator.

6. Foods rich in fat, especially high fat cheeses, meats, nuts, milk, oils, butter, etc., inhibits the flow of gastric secretions, slows down digestion and delays the emptying of the stomach by several hours. If an excess of fatty foods are eaten at one meal, there will be digestive problems.

7. Avoid sulphur foods, such as onions, garlic, leeks, etc. at the same meals with sweet foods, such as fruits or honey. Stomach pains, gas, fermentation and indigestion can easily result from this poor combination.

8. The three most important points to remember are to: a) never overeat at mealtimes; b) eat only when truly hungry; and c) limit the combination and variety of foods at a meal 3 or 4 items per meal are sufficient for health and nourishment. Generally, the more foods that are mixed at one meal, the more digestive trouble one will have. Keep your meals simple, but delicious and nutritious. Eat to live, and not live to eat. With many dishes, comes many diseases.

Help for Weak Digestive Systems

Those with very weak digestive systems will benefit greatly by eating only 1 or 2 foods at a meal, thus lessening the burden on the entire digestive process. If you are sick, eat only one meal per day until your digestion is back to normal; it usually takes about

one week to get back your normal digestion. The one meal per day plan can include cooked grains and vegetables in winter and a sub-acid fruit with the seed/nut milk or fruit alone; or cultured raw dairy products alone.

Food Combining Groups

Try to follow these simple food combining principles as much as possible but do not become a fanatic over the subject of food combining and nutrition. When visiting friends, relatives or restaurants, do not become a food combining crank by lecturing others on dietetics. Do not give advice unless asked, and then give just a little. Listen more and talk less no one likes a know-it-all. Extend the freedom onto others to do as they wish. Living by example is a far better teacher than excessive talking or preaching. Be careful of giving advice wise people do not need it, and fools will not heed it anyway.

The following is a list of food classifications and food combining groups, to be used at your own discretion, according to your individual needs and requirements. The food we eat is as important as the most potent medicine, even more so. For what we eat becomes part of us, part of our blood, our heart, our brain.

Million Dollar Minerals

Are you timid and shy? Do you constantly worry and show fear? Are you easily discouraged? Do you bite your nails? Are you anemic, weak, underweight or overweight? Are you a negative thinker? Is your memory poor? Why are some people serene, dynamic and vital? What makes certain women kissable at any age? Why is fear unknown to others? Why can some people sell snowballs in Alaska while others cannot sell water in a desert? Why can some men and women entice the fortunes of life to themselves? What is it? What is the secret of Super Health, Youth and Vitality?

The answer to these often asked questions lies in the powerful mineral elements that compose your body. You will learn all about these miraculous vital mineral elements how to use them harness them direct them and transform your life with their life giving power. These body elements must be raised through plant life, not given in drugs, to become yours. Most of us who study, work and read, are hungry for those tiny units of power the sixteen mineral elements.

Group A: Proteins

Nuts & Seeds
Dairy
Beans & Peas
All Meat
Eggs

Group B: Starches

All Grains	Carrots	Parsnips
Potatoes	Legumes	Bananas
Cauliflower	Chestnuts	Rutabaga
Pumpkin	All nuts	Bread
Turnips	Beets	

Group C: Fats

All Oils	Avocado
Butter	Olives
Cream	Nuts
Milk	Cheese
Margarine	Fat Meats

Group D: Acid Fruits

Orange	Lemon
Pomegrante	Grapefruit
Lime	Sour Apple
Pineapple	Strawberry
Sour	Plum
Tomato	Sour
Grape	Tangerines

Group E: Sub-Acid Fruits

Pear	Papaya	Figs
Apple	Huckleberry	Plum
Peaches	Grape	Apricot
Blackberry	Guava	Mango
Raspberry	Quince	
Nectarine	Blueberry	

Group F: Sweet Fruits

Fresh Raw	***Dried Fruit***	
Bananas	Peach	Figs
Cantaloupe	Plum	Dates
Watermelon	Apricot	Raisins
Crenshaw	Pear	Prunes
All Melons	Apple	
Persimmons	Pineapple	

Group G: Non-Starchy Vegetables

Alfalfa	Sweet Pepper	Broccoli	Escarole
Garlic	Asparagus	Fresh Peas	Spinach
Chard	Zucchini	String Beans	Mushrooms
Okra	Squash	Radish	Lettuce
Chicory	Bamboo Shoots	Kale	Parsley
Celery	Eggplant	Cucumbers	Watercress
Sorrell	Cabbage	Brussel Sprouts	Sprouts
Leeks	Artichoke	Water Chestnut	Onions

How to Combine the Groups:

Group A and Group G: Good
Group A and Group D: Fair
Group B and Group C: Fair
Group A and Group F: Poor
Group D and Group E: Good
Group B and Group D: Poor
Group B and Group F: Poor
Group A and Group C: Fair
Group B and Group G: Good
Group A and Group E: Fair
Group C and Group G: Good
Group D and Group F: Poor
Group E and Group F: Good
Group B and Group E: Poor
Group A and Group B: Fair

Fig. 5.1. Food Combining Groups made Easy.

Glamorous Minerals

Charm your world with sulphur and iodine. Master your world with calcium and fluorin. Laugh with your world with silicon and potassium. Prosper in your world with manganese, iodine, calcium and phosphorus. Entertain and fascinate your world with sodium, magnesium, Iodine and chlorine. Love your world with iron, copper, phosphorous and potassium. Be self-confident in your world with all the powerful minerals which regulate our social, mental, health, business and esthetic life.

Many business executives have conquered their nerves and fatigue as well as other serious deficiencies by using all twelve of the body minerals. Some perpetually tired people may be hungry for only iodine, sulphur, phosphorus and manganese, to reenforce their vital system. Arthritic sufferers are hungry for sodium, chlorin, iodine and sulphur. Diabetics need sodium. Fearful, timid people need calcium, fluorin, iodine and oxygen, attracted to the body by the use of potassium. Those low in muscular power need Vitamin C with potassium, sodium and chlorin. Sad, melancholy and easily infected types need silicon, fluorin and iodine. Only a little lack brings disastrous consequences.

Through very small amounts of these precious elements are contained in the normal body, they have tremendously important work to do. The mineral elements work hand in hand with the glandular system. Nature placed these elements in the soil and not upon the drug shelf. More powerful than drugs in lasting nourishment, they provide the spark of life, the immunity against disease, the enthusiasm of youth, the endurance of health, the enchantment of well-being and calmness. To neglect them in our diet is to turn our face from bountiful supply in nature.

Only a tiny amount of copper, yet that mineral is like an electric dynamo charging complexion, hair, blood stream, and even the intestinal tract with an essence which enables other minerals to give forth their benefits. Copper, manganese and iron are an unbreakable corporation in the financial affairs of body chemistry. They are needed by tired mental workers, who are low in drive, energy and easily fatigued.

Phosphorus, calcium, silicon, and fluorin hunger are found in tuberculosis. Fluorin starvation means erratic characteristics, infections, premature aging and greying. Potassium hunger is found in those with no come back, no resilience of muscle, and those

who suffer with intestinal atony. Sodium, chlorin and potassium assist assimilation and elimination. Sulphur, queen of enthusiasm, beauty and golden nerves, yet taken without balance, a Vesuvius of drying, scorching irritation. Magnesium and silicon, diplomats of optimism and poise, who never let one down. Iodine, the confidence artist, the clever, original life enjoyment chemical which turns back the clock toward youthful appearance and ambitions. You may combine iodine with any of the other minerals which you lack because it accelerates assimilation.

Power of Minerals

Minerals are found in small quantities within the body, about five percent, but they are vitally important to your health and well-being. They have very individual and distinct physiological functions to perform. They are necessary to the life process of plant, animal and man. These precious little minerals preserve our life, repair our tissues and bony structures. They impart firmness, form and grace to our body. Without them, our glands would stop functioning, because the glands maintain metabolism, secretions, digestion, mental activity and all physiological functions. The body fails to rebuild, repair and regenerate without an adequate supply of these dynamic little wonder-workers.

They give us vital electricity and magnetic power, ceaselessly working to recharge physical and mental batteries; and they carry the life sustaining oxygen to all parts of the body. They provide the spark of life and immunity against disease and poor health.

They are powerful neutralizers of toxins and wastes, purifying the blood and casting out of the system, uric acid and other poisons. They are the natural healers and give the body vital resistance and immunity against so-called germs of disease.

Raw fruit and vegetable juices contain the organic minerals the body can use. The cholrophyll found in the green coloring matter of plants, made into juice, is a superior storehouse of these vital mineral elements. They aid the body in producing and sustaining the supply of internal hormones, enzymes and secretions to keep you youthful and zestfully alive. They are necessary for the proper digestion and assimilation of proteins, starches and fats.

Our bodies are composed of these ***16 Mineral Elements***, primarily, plus over ***30 Other Trace Minerals:***

Iron	Sulphur	Chlorine	Oxygen
Silicon	Fluorine	Iodine	Carbon
Calcium	Sodium	Manganese	Nitrogen
Phosphorus	Magnesium	Potassium	Hydrogen

Our cells are constantly being used up and repaired daily, and this repair comes from within. Minerals and vitamins require daily replenishment. They supply the body through the bloodstream, therefore, the blood must contain and deliver all sixteen mineral elements that the body vitally needs and is composed of. Without all of the 16 elements, the body fails to function properly, hence sickness and poor health will follow. There are also over 30 trace mineral elements needed in small quantities by the body.

Wholesome, organic and natural foods adequately supply the body with minerals. However, if mostly unnatural and devitalized foods are eaten, only a small fraction of the requirements are supplied, resulting in severe mineral starvation and depletion, leading to ill-health, depression, fatigue and the common low-energy symptoms.

Minerals and Richest Food Sources

Iron (Blood Builder Mineral): It is an oxygen carrier in the blood and is found in the hemoglobin of the red blood corpuscles. Anemia cannot be present when the blood has a good supply of Iron flowing through it. Iron in the blood allows you to utilize the oxygen out of the air. The thyroid is considered the oxygen gland and iron helps the thyroid gland, along with the oxygen, to eliminate the cellular wastes, use them up, and make our foods in the body ready for blood assimilation. Iron imparts strength, vitality, courage, warmth, creativity and mental power. It gives you ambition to succeed and to be a live go-getter.

Inorganic Iron, as found in drugs, irritate the kidneys and cannot be assimilated by the body. Organic Iron, as found in natural foods, builds rich red blood. Anemic, pale, thin, depressed and sick people need large quantities of Iron from quality organic products. The lack of Iron brings on sleeplessness, irritability, neurasthenia, starvation, disease and unhappiness. If you want success, happiness and love to be a part of your life, use organic iron-rich foods.

Food Sources: Spinach, sorrel, lettuce, cherries, grapes, raw egg yolks, sunflower seeds, strawberries, asparagus, cucumbers, rye, goat cheese, blackberries, blueberries, apricots, lentils, currants, pomegranates, prunes, carrots, walnuts, figs, apples, wheat, pumpkins, tomatoes, radishes, cabbage, onions & chard.

Silicon (Optimism Mineral): It makes you happy, joyful and zippy. It builds the bones, hair, teeth, eyes, nails, eyesight and improves the complexion and is needed in the structural system, membranes and arterial walls. It brings beauty and firmness to the cells and tissues. Silicon is a good antiseptic, alkaline in composition. It is a great body toner and builds up body resistance. People plagued with sexual weakness, tumors, bad circulation, liver problems and constipation are in need of Silicon. Skins of fruits and vegetables and the outer coats of whole grain cereals are high in Silicon.

Food Sources: Whole wheat, seeds, oats, barley, figs, strawberries, apples, grapes, cherries, peaches, carrots, greens, walnuts, almonds, rye, onions, spinach, egg yolk, asparagus and lettuce.

Calcium (Will Power Mineral): It gives strength and durability and maintains the bone structure. It builds teeth, nails and steadies the nerves. It adds strength and firmness to the arteries and pulse. Calcium imparts endurance, will power, good memory, strong bones and teeth. It heals wounds and neutralizes toxic acids in the system. It is needed for concentration and strengthens the heart and courage. Calcium is destroyed in the body by white flour products, white sugar, candy, etc. It extends life and prolongs youth. Pregnant women need Calcium to produce healthy children and to maintain health. The infant will draw the Calcium from the mother's bones if she has a lack of it in her diet. Lack of Calcium brings on rotten teeth, rickets, anemia, weak & soft bones & diseased bodies. Calcium requires Vitamin D for proper assimilation.

Food Sources: Goat milk, egg yolk, Canadian wheat, kale, swiss cheese, buttermilk, green vegetables and juices, garlic, oats, lemons, oranges, berries, cabbage, dates, prunes, apricots, sesame and sunflower seeds and cauliflower.

Phosphorus (Brain and Nerve Building Mineral): Stimulates powerful mental thought and brain activity. It helps promote digestion, and better metabolism of carbohydrates and fats. Phosphorus works along with calcium as a bone builder, assisted by Vitamin D. The diet should consist of 2.5 calcium to 1 phosphorus to maintain a healthy ratio within the body. People eat too much phosphorus and consequently need to increase their intake of calcium.

Lack of this magic mineral will make you look old, but it maintains your youth if eaten daily. Lack of phosphorus can cause nerve and brain disorders, fatigue, weakness and poor elimination.

Food Sources: Almonds, rye, egg yolk, wheat bran, rice bran, goat cheese, turnips, soy beans, oats, barley, seeds, nuts, peas, beans, lentils, buckwheat, asparagus, yellow corn, parsnips, whey, cauliflower and kale.

Sulphur (Sex Appeal Mineral): It cleans, tones and purifies the system, feeds the nerves and gives life and beauty and an abundant growth of hair. Sulphur is associated with insulin, the hormone secreted by the pancreatic gland to properly digest carbohydrates. It throws out body impurities and promotes bile secretions, enabling the liver to utilize all food minerals. It promotes better bowel action and helps manufacture hormones for the generative system. It increases feelings and emotions. Lack of Sulphur produces dull brains, poor blood, lustreless hair, impotence, nervousness.

Food Sources: Cabbage, onions, garlic, radishes, raw egg yolk, asparagus, almonds, chestnuts, cauliflower, kale, brussel sprouts, pecans, mustard greens, broccoli, leeks, horseradish, string beans, endive, thyme and figs.

Sodium (Youth Mineral): It cleanses and sweetens the body. It builds the glands, ligaments and blood. Sodium neutralizes acidosis, helps digestion, overcomes fermentation. Prevents hardening of the arteries and joints. High strung people need this mineral in abundance. It improves good nature in the personality. Lack of Sodium results in catarrh and congestion and slows the mental processes. Depressed, discontented and downhearted people are usually deficient in it. Increase your Sodium intake and watch yourself become optimistic and contented.

Food Sources: Celery, carrots, asparagus, seeds, beets, pumpkin, squash, apples, cherries, egg yolk, berries, turnips, spinach, rice, goat cheese, black figs, string beans, oats, dandelions, whey, radish and goat milk.

Magnesium (Nerve Relaxer Mineral): This wonderful mineral calms and steadies the nerves, relieves mental fatigue. It helps keep the brain and emotions cool and calm. It relaxes the nerves and has a laxative effect. It is a sleep enhancer; calms irritatility and hot tempers. It helps overcome constipation and toxemia. Magnesium has recently been found to activate about 30 enzymes within the body and helps to metabolize protein, starch and fat. It

also promotes vitamin and hormone activity. Lack of Magnesium leads to hysteria, nerve disorders, insanity, constipation and fainting spells. It protects against strontium 90 fallout in the air. City tap water (high in fluorides) will immobilize the usable magnesium in the body. Drink pure distilled water and be safe.

Food Sources: Nuts, seeds, whole grain foods, greens, peas, beans, almonds, apples, brown rice, goat milk, raw egg yolk, whole barley, black figs, walnuts, apricots, wheat, dandelion, garbanzo peas, pomegranates and corn.

Chlorine (Body Cleanser Mineral): It purifies, cleanses and cleans out body waste. It disinfects, freshens and sweetens the entire system; promotes joint agility and flexibility; cuts down fat and auto-intoxication. Lack of Chlorine may cause mucus, fear, anemia, depression, kidney problems, indigestion and no ambition to succeed.

Food Sources: Beets, red cabbage, cucumbers, spinach, radishes, sea salt, goat cheese and milk, carrots, egg yolk, lettuce, olives and pears.

Iodine (Thyroid Regulator Mineral): It normalizes the metabolism and protects the brain and nervous system from body toxins. It is a natural germicide, protecting, balancing and immunizing the internal system. Iodine nor-malizes the body weight through the function of the thyroid gland. The thyroid produces a horhome called thyroxin containing 65% iodine. Thyroxin controls the glandular secretions and the heat and energy production in the body. It helps digestion and assimilation. It slows aging and prolongs life. Iodine detoxifies the cells and tissues. Iodine regulates the cellular structures and the heart and circulatory system. It prevents goiter, loss of hair, brain fatigue, shyness, glandular problems, excitability and irregular pulse rate.

Food Sources: Sea kelp, dulse, irish moss, pineapple, brown rice, garlic, apples, raw egg yolk, strawberries, potato skin, watercress, sea foods, carrots, onions, tomatoes and artichokes.

Manganese (Nerve Controller Mineral): A thought coordinator, it increases mental and nerve force, quick recuperation and improves memory. It feeds the brain and nerves; and increases resistance to disease. It is the mineral controlling the emotions and affections, giving social poise, confidence and steady nerves. It also imparts to the body elasticity and fast recuperative ability. Lack of Manganese causes confusion and scatter-brained activity in work, studies and love. It can lead to nerve disorders if deficient too long.

Food Sources: Almonds, walnuts, endive, wintergreen, raw egg yolk, prunes, peppermint tea, parsley, pignolia nuts, rye meal, sun dried fruits and greens.

Potassium (Strengthen Mineral): It nourishes, gives health, strength and quick recuperative powers. It puts fire and zip into the body. It reduces pain and regulates the brain and body. It promotes elastic and supple muscles, and creates grace, beauty and good disposition. It helps to prevent constipation. It activates the liver and is alkaline to the body. It aids the tissues and internal secretions. Stress depletes the potassium in the body and this leads to an acid condition. People on the go need potassium. It helps to control temper. Get your share of this magic mineral daily.

Food Sources: Potato skin, almonds, parsley, watercress, carrots, berries, cherries, figs, grapes, lemons, olives, alfalfa, cucumber, dandelion, sage, dill, lettuce, peaches, oranges & tropical fruits.

Fluorine (Beautifier & Youth Mineral): It protects against sickness; knits bones, aids teeth enamel and strengthens tendons. As the youth element, it gives you strong mental powers and keeps you elastic. It works with calcium to build strong tooth enamel, bone structure, hair and elastic tissues. Fluorine is the rejuvenation mineral and helps to keep you young. It improves the eyes, hair and nails. The lack of fluorine causes premature old age, fear, hair loss, brain and body fatigue, tuberculosis, paralysis and a run down condition.

Food Sources: Raw goat milk/cheece, spinach, cress, garlic, oats, greens, beets, wheat, brussel sprouts, cabbage and cauliflower.

Oxygen (Life-Giving Mineral): Oxygen is primarily found in the air. Mountain and ocean air is the purest type available. City air is polluted and its oxygen is full of chemicals. Pure oxygen gives us brain and body stimulation. Oxygen comprises over half the body weight. Normal breathing is not enough. We must get out into the fresh air, exercise and expand our chest to its fullest capacity with the life-giving oxygen. Fresh oxygen helps to digest our food. It purifies and blood stream and cleans out the lungs. It is necessary for the metabolism and all processes of the body. Oxygen makes us happy, bouyant and fresh. Lack of it causes depression, anemia, low energy and a hopeless outlook on life.

Food Sources: Pure water, all fresh fruits, vegetables, juices, and pure outside air.

Carbon (Body Heater Mineral): One fifth of the body is composed of carbon. Only so much carbon is needed by the body. Too much can break down the liver and cause disease. Carbon is the fuel and heater to the body. Carbon is mostly found in fats, and they yield 4040 calories per pound, while carbohydrates furnish only 1820 calories per pound. Fats are composed of about 76 percent carbon, 12 percent hydrogen and 12 percent oxygen. After digestion, fats are absorbed and then oxidized to produce energy, carbon dioxide, and water. Eaten to excess, fats may be stored as body fat or converted into carbohydrate and stored as glycogen. Lack of carbon may cause coldness, forgetfulness, laziness, fear, brain deficiency and over all lack of energy. White flour products, white sugar, lard, fatty animal foods and fried foods are dangerous to life and health.
Food Sources: Rice bran, oats, corn, millet, cheese, butter, egg yolk, goat milk, avocado, pure vegetable oils, nuts, rye, wheat bran, barley, pecans, brazil nuts, walnuts, peanuts and coconuts.
Nitrogen (Muscle Builder Mineral): Nitrogen is mainly found in the form of protein, which is composed of carbon, oxygen, hydrogen, sulphur and nitrogen. Nitrogen furnishes building material to keep the cells and tissues together. In the construction of the protein molecules of plants, nitrogen is absorbed from the soil in soluble forms, as compounds of nitrates and ammonium salts, which are converted first into amino acids and then into protein. The body takes up this protein and converts it into amino acids for the promotion of growth, life, health and vitality. This is known as the Nitrogen Cycle, and all plant and animal life are dependent upon it for existence. The atmosphere is ¾ Nitrogen, with oxygen, carbon and hydrogen composing the rest of the ether. We could not breathe or live on 100% pure oxygen without the other three elements. Nitrogen keeps the oxygen from burning up in the body.
Food Sources: Nuts, seeds, legumes, milk, eggs, whole grains, cheese and all other foods high in protein.
Hydrogen (Cooling Mineral): Hydrogen maintains body coolness and body temperature. It is the youth mineral that helps to overcome inflammation and pain. It also flushes the inner organs of toxins and waste matter. It is involved in the nitrogen cycle of plants and animals. It is located in the atmosphere and fresh foods.
Food Sources: Fresh fruits and vegetables, lettuce, tomatoes, celery, juices, cucumber, water & all foods with a liquid content.

Trace Minerals: Copper, zinc, cobalt, selenium and the over 28 other trace minerals are found in very small quantities in the body. However, they are vitally important, and as necessary to your health and well-being as the other 16 Magic Minerals. These trace elements are found in all plant life.
Zinc: It is found in the hair, nails, bones, liver, skin, glands, kidneys and the prostrate gland. It increases blood production in weak areas. Wounds heal faster with zinc, and it can act as an antidote to certain poisons. Zinc deficiencies cause diabetes, retardation, schizophrenia, fatigue, infection, and poor skin. If you have white spots on your fingernails, you have a zinc deficiency.
Food Sources: Apricots, nutritional yeast, nuts, pumpkin and sunflower seeds, wheatgerm, egg yolk, soy beans, spinach and mushrooms.
Copper: It assists in forming rich red blood cells. It prevents anemia, builds the bones and circulator system. It heals the body, improves the hair and skin. Lack of Copper causes weakness, skin trouble, poor respiration, baldness and fatigue.
Food Sources: Nuts, raisins, molasses, soybeans, legumes, apricots, dark fruits and juices.
Cobalt: It is needed in small amounts only. It assists the absorption of B-12 in the body. It is contained in a variety of natural foods listed under the other minerals.
Selenium: Small amounts are needed. In functions similar to vitamin E in the system. It is located in small traces in sea water. It is contained in all natural foods.

Your food shall be your medicine, and your medicine shall be your food. Eat sparingly and defy the physician. The human is the most helpless creature on the face of the earth. When they come into existence they have to be taught everything which become their habits. But this is our salvation. If man is a creature of habits why not be a slave to good habits? We can reeducate ourselves and take control of our own destiny. Love does not dominate; it cultivates.

Natural Foods contain all the vitamins that have been discovered and will be discovered. Scurvy, pellagra, beriberi, and most all diseases are the result, partially at least, of vitamin deficiencies. Cheat the body of vitamin-rich food and you are on a disease-producing diet. Quality foods count, not quantity.

Vitamins for Vitality

Vitamins were discovered by Dr. Casmir Funk about 62 years ago. The word vitamin comes from the Latin word vita, which means life, and amins, meaning amino acids, which form the life substances of protoplasm or organic compounds, of which the growth and life of plants and animals depend. They are composed mainly of carbon, hydrogen, oxygen and nitrogen.

Actually, vitamins provide no heat, energy, or material for tissue building, however, they are vitally important for proper growth and good health. The minerals are the nutritional elements necessary for building and repairing cells and tissues. Vitamins are those atomically small sparks of food energy elements that carry on the process of metabolism; the activation, assimilation and utilization of minerals, fats, carbohydrates, trace elements and other nutritional factors in our food.

Vitamins keep the fires of life aglow. They secretly control the internal chemical process; converting food into blood, tissue and dynamic energy. The body needs vitamins from outside sources and they must be eaten daily, for it cannot store them.

Through the process of photosynthesis, (air, light and water), nature manufactures the organic vitamins, mineral salts, and enzymes through plant life; fruits, vegetables, seeds, nuts and sea vegetation. All earthly life forms are created and sustained by this process. Plant life is the number one source of nutriment for all beings and creatures on this planet.

Natural Vitamins are Superior

Nature makes no artificial substitutes for vitamins and minerals. No other substances can take their place in human and animal chemistry. We need them in abundance daily, in whole food form and in natural food supplement form to assure adequate and complete nutrition. The difference between synthetic and natural vitamins may be the difference between disease and health. Synthetic vitamins and minerals are inorganic chemical substances and cannot be utilized by the cells and tissues of the body. The chemist will never produce a single blade of grass, yet the body can assimilate and utilize that blade of grass, while rejecting the chemist's synthetic formula.

Scurvy, pellagra, beri-beri, rickets and similar diseases are caused by a vitamin starved body. When the body is lacking the

essential vital nutrients, it will develop disease. Healthy bodies are built by quality foods, not quantity. Natural foods and natural food supplements will meet those needs to the fullest. Super Health will result with the intelligent use of them.

Major Vitamins and their Food Sources

Vitamin A *(Fat Soluble)*

It is destroyed by high heat in the presence of oxygen. It is stored in the fatty tissues for future use. Stress and strain will quickly use up Vitamin A. It builds resistance to colds, lung and sinus trouble. It is necessary for visual purple production and night vision. Increases growth and increases blood quality with the help of B complex, Vitamin C, D, E, F, Calcium, Phosphorus and Zinc. It helps conditions of acne, colds, allergies, eczema, diabetes, stress, and arthritis. Lack of this vitamin may cause night blindness, poor eyesight, rough skin, infections, dry hair and fatigue.
Food Sources: Alfalfa, green vegetables, carrots, tomatoes, apricots, cherries, egg yolk, papaya. RDA: 5,000 to 25,000 International Units daily. A glass of fresh carrot juice contains 9,000 to 12,000 units.

Vitamin B Complex *(Water Soluble)*

The B Complex family consists of the following B Vitamins: B1 (Thiamine), B2 (Riboflavin), B6 (Pyridoxine), B12 (Cobalamin), Biotine, Choline, Folic Acid, Inositol, Niacin (Niacinamide), Pantothenic Acid, Para-Aminobenzoic Acid and Pangamic Acid. The first three of these vitamins are the most important. They are stored in limited quantities in the body. They are active in enzyme production. They improve the digestive tract, skin, nerves, eyes and liver. They improve the absorption of food, and calm the nervous system. B Vitamins help metabolize fats, starches and proteins; reduce blood cholesterol; increase appetite; increase cell life; build rich red blood; prevent gray hair; promote sex hormone production; controls weight; maintains the sodium-potassium balance of the body and nerves; aids circulation of blood and lymph; improves friendly bacteria activity in digestive tract; helps depression, insomnia and fatigue; overcomes anemia, skin disorders, acne, dizziness, irritability, learning disabilities, weakness and hair loss and can help heart disease, gland and nerve disorders.

Food Sources: Nutritional Yeast, wheat germ, whole grains, egg yolks, brown rice, sunflower, pumpkin and sesame seeds, mushrooms, brown rice polishings, beans, buckwheat, lentils, peas, spinach, walnuts, goat milk, asparagus, tomatoes, green juices, berries, rye, wheat, almonds. These foods eaten in moderate daily quantities will supply all the B Complex required.

Vitamin C *(Water Soluble)*

This vitamin is destroyed by high heat, antibiotics, aspirin, tobacco, fever, stress, cortisone and other drugs. Essential for tissue respiration, improves appetite, builds capillary walls and connective tissue; gums, heart, skin, teeth and bones. Good for colds, shock and infection and tooth decay. Vitamin C works best with all vitamins and minerals, calcium, magnesium and bioflavo-noids. It improves anemia, bleeding gums, cavities, poor digestion and tissue damage.

Food Sources: Citrus fruits, all berries, green peppers, strawberries, tomatoes, currants, cress, cabbage, apples, green vegetable juices, papaya, melons, lettuce, peas and pineapple. It is not stored in the body and must be supplied daily. Fruits and vegetables eaten in season and grown locally will meet your daily vitamin C requirements. Rosehip powder can be used to supplement your diet with extra C.

Vitamin D *(Fat Soluble)*

Heat or oxidation does not affect this Vitamin. A limited amount of Vitamin D is stored in the body. The greatest source is from the sun; exposing the skin to the sunlight. The ultra-violet rays change the ergosterol in the skin into small amounts of Vitamin D. It helps the absorption of calcium and phosphorus. It is a good bone builder. It controls mineral metabolism. It favors good posture, bone growth and tooth development, fatigue, caries, nerve disorder, infections, poor skin tone, rickets and constipation.

Food Sources: Fruit and vegetables grown in the sunshine and their juices, butter, chlorophyl, goat milk and plenty of solar light. Crude mineral oil destroys Vitamin D in the body. Daily amount should be from 500 to 1,000 IU.

Vitamin E *(Tocopherol - Fat Soluble)*

It is not affected by heat or oxidation. The body stores a limited supply of Vitamin E. An adequate supply increases fertility, healthy skin and reduces abnormal hair growth on women. It is good for lactation, menstrual disorders, miscarriage and reproduction. Deficiencies of Vitamin E can cause sterility, loss of vitality and virility, lack of courage, pessimism and impaired mentality. It improves blood vessel and heart function. It builds the nerves and promotes the pituitary gland into activity. It helps to retard aging, controls blood cholesterol, tones muscles and nerves, keeps the blood from clotting, protects the lungs from pollution, increases male and female fertility and potency, and strengthens blood vessels, arteries and veins.

Food Sources: All whole grain foods, green vegetables, wheat germ, olive oil, corn, most fruits, cottage cheese, goat milk, soybeans, tomatoes, egg yolks and oats. Vitamin E is destroyed by birth control pills, tap water, crude mineral oil and hard fat. Vitamin E oil can be used topically for burns, wounds, warts and scars with good results.

Vitamin F *(Unsaturated Fatty Acids - Fat Soluble)*

Excessive heat destroys Vitamin F. Radiation and x-rays harm this vitamin in the body. It prevents stiff joints and hardened arteries. It controls blood cholesterol, improves blood pressure and glandular activity. It helps functioning of adrenal and thyroid glands. It calms the nerves and beautifies the skin. Lack of Vitamin F causes acne, gall stones, diarrhea, allergies, poor nails and hair, underweight and varicose veins. It makes for stunted growth, poor sexual development and loss of appetite.

Food Sources: Nutritional yeast, spinach, fruits, all seeds and nuts, egg yolks, wheat germ, olive oil, sunflower oil; whole grains, orange juice and root vegetables. Adequate supply from above foods should be eaten in moderation.

Vitamin K *(Menadione - Fat Soluble)*

X-rays, radiation, drugs, hard oils and fats destroy this vitamin. It improves the blood clotting system, and can be used for hemorrhages, menstrual problems and bruising. Lack of Vitamin K causes nosebleeds, diarrhea, tendency to hemorrhage and possible miscarriages.

Food Sources: Blackstrap molasses, yogurt, safflower oil, green juices and vegetables, oats, tomatoes, green peas, carrots, cauliflower and spinach. One to two milligrams per day are enough.

Vitamin P *(Biof Lavonoids - Water Soluble)*

It is part of Vitamin C. It builds and maintains the blood, connective tissues, skin, gums, bones, teeth and capillary walls. Good for coldsores, colds and the flu.
Food Sources: Cherries, apricots, grapes, grapefruit, lemons, plums and the inner skins of most fruits. Same daily allowances as Vitamin C.

Vitamins and Mineral Food Supplements

1. ***Alfalfa Liquid, Powder or Tablets:*** Two teaspoonfuls or 3 to 5 tablets daily.
2. ***Nutritional Yeast:*** B-Complex and protein source. Two to four tablespoons daily.
3. ***Wheat Germ Oil or Flakes:*** Vitamin E, protein, B-complex, minerals. Must be fresh. Two to 4 tablespoons daily of flakes.
4. ***Sea Kelp or Dulse:*** High in iodine, trace minerals. Use in salads, cooking, eat 3 to 5 tablets, or 1 teaspoon daily.
5. ***Pure Rosehip Powder:*** High in vitamin C, bioflavonoids and enzymes. One teaspoon.
6. ***Pure Cold Pressed Vegetable Oils:*** High in unsaturated fatty acids. Use sesame, sunflower or safflower oils. No more than one tablespoon in summer and two in winter.
7. ***Rice Polishings:*** High in B-Complex vitamins and minerals. Two teaspoons daily.
8. ***Fresh Squeezed Vegetable Juices:*** Vitamins, minerals and enzymes. 4 to 8 ounces in summer - less in winter.
9. ***Spirulina Plankton:*** High in vitamins, minerals, enzymes and protein. Protects against radioactive agents. Two to four tablets, or two teaspoons daily.
10. ***Powdered Carrot Calcium (Dr. Bronner):*** High in Calcium and minerals. One teaspoon daily.

Vitamins seem to offer the kick to the minerals that enter our bodies. They are little invisible helpers ready to right every wrong that may come about in the complicated processes of building and maintaining a perfect body.

Power of Enzymes

All growing and living things, including the foods we eat, contain enzymes. Where we find minerals, vitamins, protein etc., we also find enzymes. Enzymes are tiny almost invisible ferments, which cannot even be seen by the strongest microscopes. They help us digest our food and keep the fires of metabolism alive in our system. Enzymes are contained in proteins and some vitamins. Enzymes require a protein carrier to charge us with health and vitality. In fact, if we eat raw food exclusively, i.e., raw fruits and vegetables, our enzyme activity will decrease. The body needs a certain amount of all natural elements to function properly and increase the enzymes in our system. When enzyme activity slows down, we age and slowly die. If enzyme activity is increased in the system, our health and longevity improves. Enzyme levels are generally low in cases of chronic disease.

Foods that lower enzyme activity: Fats, ungerminated seeds and nuts, nut butters, excess oils, alcohol, eggs, sugar, white flour and excess fruits. Overeating, which causes constipation and obesity also reduces internal enzymes. Foods and habits that increase enzyme activity: germinated or sprouted seeds, nuts and grains; fermented seeds, miso, tofu, tempeh, tamari, cultured products these foods contain aspergillus plant enzymes, the highest source of enzymes as yet discovered. Fasting when not hungry and obtaining sufficient exercise, sunshine and fresh air aid our enzyme production.

The body produces only two Enzymes Amylase and Protease, which digest carbohydrates and proteins. Without sufficient enzymes vitamins, minerals and hormones cannot carry on their activity. Biochemist and enzyme researcher, Dr. Edward Howell states: Enzymes are substances which make life possible. They are needed for every chemical reaction that occurs in our body. Enzymes may be the key factor in preventing chronic disease and extending the human lifespan. A balanced natural food diet with healthful living habits produces the ultimate results in superior health and longevity.

It is the opinion of those who best understand the physical system, that if the physical laws were strictly observed from generation to generation, there would be an end to the frightful diseases that cut life short, and make life a torment or a trial. The more you know the less you know but the more you become.

Perhaps the most predominant food fallacy is the high protein intake usually recommended. Protein in excess of our needs is not utilized by the body.

Protein Requirements

Where do you get your protein if you do not eat meat? How many times have vegetarians been asked this question throughout the history of nutrition? Why not ask how a cow produces milk and attains great size on vegetable matter; or where an elephant, gorilla and rhinoceros obtain their protein. Better yet, ask the vegetarian centenarians, worldwide, where their sources of protein come from.

There are people living in the mountains of Russia, Turkey, India, Northern Hunza, Iran and Poland who live over 100 years in good health. Their main diet consists of whole unprocessed grains, i.e., rye, wheat, oats, millet, buckwheat and rice; seeds, nuts, locally grown fruits, vegetables and raw cultured milk products. Their diet is basically high in natural complex carbohydrates and never high in protein. Their approximate protein intake ranges from 25 to 40 grams daily. People who subsist on these natural whole foods contract *no* disease of any kind. These centenarians work all day long in the fields and never experience fatigue as we know it. They are not protein deficient. Westerners are just protein hypochrondriacs. They know nothing of high protein or other fad diets. They exist healthfully and happily, and they are not skinny or fat, but firm, muscled, robust, and energetic. Did you ever see a fat native Chinese or Japanese who subsisted on their typical traditional diet who use meat mainly as a condoment in soups and vegetable stir fries. We have personally observed these tireless people subsist on a bowl of rice, beans and vegetables daily. Young Oriental women who did not look a day over 18 or 20, we discovered, were 35 and 40 years old, with youthful smooth skin and sparkling eyes to match. These people know nothing about protein. They simply radiate beauty and tranquility. They possess well-formed physiques, and maintain the same body weight throughout a long healthy life.

These are empirical (derived from observation without reliance on theory) facts, not based on personal opinions. These dietary patterns have been tried and tested for centuries. One only has to observe how the longed-lived people live and eat, and gently follow in their footsteps.

The nutritional skeptics of the West should take an example from these wise and healthy old people. Their diets, habits and cultures have been around long before America was discovered; and long before books and magazines were published on health and nutrition. We must remember that super markets, processed foods, drug companies, protein and other trendy diets are all modern inventions, not more than 60 to 80 years old; mere seconds in the history of the world.

Protein and Amino Acid Metabolism

Proteins, like carbohydrates and fats, are composed of carbon, hydrogen and oxygen, with the addition of nitrogen, sulphur and phosphorus. Plants can synthesize protein elements from the nitrates, ammonia in the soil and decomposing vegetable matter, along with water and carbon dioxide from the air. Therefore, humans are dependent upon plants for nitrogen-rich foods.

There are eight essential and fourteen non-essential amino acids necessary for growth. The essential ones are: isoleucine, leucine, lysine, methionine, phenylalanine, tryptophane, threonine, and valine. All 22 amino acids are necessary for health, however, the eight essential ones must be supplied in the diet daily. The fourteen other amino acids are alanine, arginine, aspartic acid, cystine, glutamic acid, glycine, histidine, hydro-xyglutamic acid, hydroxylsine, hydroxproline, norleucine, proline, serine, & tyrosine.

A good quality complete protein supplies all the essential eight amino acids for normal growth and health. Incomplete proteins are the ones that lack one or more of the eight essential amino acids, and can neither support normal growth or good health. Over fifty percent of our body is composed of protein including skeletal muscles, intestines, skin, ligaments, cartilage, eye, hair, nerve fibers, bones and blood. Protein is necessary for blood clotting; and produces hormones and all enzymes. Lack of sufficient protein can cause anemia, skin disorders, constipation and even death.

Protein is converted into amino acidswhich are the basic buildingblocks of our body. Protein is used to build the various body structures, for example, muscle protein is called myosin; connective tissue uses collagen protein; and hair is made up of keratin protein. An excess as well as a deficiency of protein can cause health problems. The residue of excess protein is converted into fat and carbohydrate which is highly toxic and disease producing.

To understand this it might be well to know something of the structure of an amino acid. As the name implies, the backbone of every amino acid is an amino (nitrogen) group, NH^2, and an acid(carboxyl) group, COOH, held together by a single carbon atom, To the carbon atom is also attached a chain of organic compounds (usually denoted as R) which give each amino acid its special characteristic. These individualizing chains are made up of carbon, nitrogen, hydrogen, oxygen and sometimes sulphur.

Hence the base of every amino acid looks like this:

$$NH^2 \qquad \begin{matrix} H \\ C \\ R \end{matrix} \qquad COOH$$

Now, whenever the body cannot use an amino acid, the liver breaks it down into its various parts and uses the oxygen, hydrogen, and carbon atoms to form glucose or saturated fat. The rest, meaning the amino groups and sulphur groups it discards as ammonia and sulphuric acid. Get enough of those two elements in your system and you will be set up for all kinds of health disasters.

The ammonia (NH^3) is usualy taken care of by uniting with carbon dioxide which forms urea, a less nitrogenous substance which can be easily eliminated from the kidneys. An excess of ammonia can be converted into uric acid, however, which has the tendency to accumulate in the system and cause trouble. And sometimes the ammonia just remains as free NH^3. When there is a sufficient supply of minerals in the body, the acids, including sulphuric acid, combine with them and are eliminated as salts. Without enough minerals present, they get stuck in the body and clog up the functions of the cells. It is very important, therefore, to make sure that one's protein intake meets the body's needs, but no more. An excess of protein can create an excess of fat, raise the cholesterol level in the process, and fill the body with troublesome toxins.

Proteins are not Fuel Foods

Most recent research, worldwide, both scientific and empirical, shows more and more convincingly that our past beliefs in regard to high requirement of protein are outdated and incorrect, and that the actual daily need for protein in human nutrition Is far below that which has long been considered necessary.

The metabolism of proteins consumed In excess of the actual need leaves toxic residues of metabolic wastes in tissues, causes autotoxemia, over-acidity and nutritional deficiencies, accumulation of uric acid and purines in the tissues, intestinal putrefaction, can contribute to the development of our most common diseases such as arthritis, kidney damage, pyorrhea, schizophrenia, osteoporosis, atherosclerosis, heart disease, and cancer.

Proteins are among the most complex organic compounds found in nature. Proteins are used in the body for repair and replacement of worn out cells and tissues, but are not equally useful as fuel foods.

Carbohydrates and starchs are the primary fuel and energy supplying foods. Your need for protein can be drastically reduced by including in your diet complex carbohydrates such as, whole grains, legumes, peas, whole grain breads, whole grain noodles etc. These foods also contain an adequate supply of protein in the right proportion, especially when legumes and grains are combined at a meal.

Worldwide Protein Research

American health is declining. As a nation Americans are 21st in life expectancy, and 18th in infant mortality. They lead the world in cancer, heart disease, kidney disease, diabetes, osteoporosis, arthritis and hypoglycemia. Every cell in our body is built of protein, but that is not all we are built of. We are also 70% or more water with small amounts of minerals, vitamins etc. Proteins are needed for cell building and repair, enzyme and hormone synthesis, mineral metabolism. We need protein. But how much is too much?

Early European investigators advocated from 100 to 150 grams of proteins as a daily requirement. These erroneous figures were based on observation of what people were actually eating. Meat consumption was very high during the time of these investigations and it is easy to see how these scientists arrived at their conclusions. In the early nineteenth century conducted scientific tests on students and discovered that they could remain in nitrogen balance on less than a third of the amount of protein previously recommended and considered necessary. In fact, we have been made to believe that the more protein we consume, the better. We just could not get too much of it. Yet, the most recent worldwide research shows that the actual daily need of protein in human nutrition is far below that which has long been considered necessary.

Pritikin Diet Program

The internationally renown Pritikin Nutrition Program recommends that we ingest no more than 15 or 16% of our total calories in protein. Anything over that amount and you go into negative mineral balance. Pritikin states: "For example, if you drank a quart and a half of milk per day, more calcium would be expelled through your urine than you take in. High protein diets change the body's metabolism so that it must draw calcium from the bones to neutralize the acid conditions set up by amino acids and high protein, producing increased calcium and mineral excretion through the urine. Vegetarians always ask about getting enough protein. But I do not know any nutrition expert that can plan a diet of natural foods resulting in a protein deficiency, so long as you are not deficient in calories. You need only 6% of total calories in protein to maintain a positive nitrogen balance and it is practically impossible to get below 9% in ordinary diets. African Bantu women take in only 350 mg. of calcium per day. They bear nine children during their lifetime and breast feed them for two years. They never have a calcium deficiency, seldom break a bone, rarely lose a tooth. Their children grow up nice and strong. How can they do that on 350 mg. of calcium a day, When the American recommendation is 1200 mg. They are on a low protein diet that does not kick the calcium out of the body. In our country, those who can afford it are eating 20% of total calories in protein, which guaranties negative mineral balance, not only of calcium, but of magnesium, zinc and iron. It is all directly correlated to the amount of protein you eat".

If you maintain your calories with whole grains, legumes, seeds, vegetables, fruits etc., you will obtain sufficient protein to keep you healthy. We are in total agreement with the food intake percentages of the Pritikin Diet: Fat intake is 5-10%, protein 10-15%, and complex carbohydrates, primarily unrefined.

Dr. Paavo Airola on Protein

Dr. Airola reports of a recent American research effort performed under the direction of Dr. Lennart Krook, showing that overeating meat leads to serious mineral imbalance, especially with respect to calcium and phosphorus. Dr. Airola goes on to report of another recent study conducted at the U. S. Army Medical Research and Nutrition Laboratory in Denver, Colorado, demonstrating that a high

meat intake results in significant vitamin B6 losses. He adds that a high protein diet also causes severe deficiencies in magnesium, calcium, and niacin. Dr. Airola reports further of research conducted in Germany by Dr. Ph. Schwarz, of Frankfort University, and of those performed by the famous Swiss biochemist, Dr. Ralph Bircher, showing that the aging process is initiated by amyloid, a by-product of protein metabolism, which collects in connective tissues causing cellular and tissue degeneration. This process carried on throughout an entire organism seems to be the leading cause of premature aging.

Those peoples of the world who show the highest average life expectancy (Hunzas, Bulgarians Russians, Yucatan Indians, etc.) have traditionally subsisted on low protein diets, whereas those people who show the lowest life expectancy in the world of between 30 and 40 years (Eskimos, Lapplanders, etc.) have consumed large animal high protein diets.

Dr. Hindhede, in Protein and Nutrition; “a rich protein diet is a cause of various ailments, that luxurious habits especially overindulgence in meat, can give rise to various stomach, kidney and arthritical complaints, is reported by manifold experience. The office of the liver is to render harmless, by conversion Into urea, the ammonium, compounds which arise from the decomposition of animal protein in the intestines, and suggests that the ogran performs the same service in regard to various other waste products of metabolism. It is easy to conceive that the liver is to a certain degree composed of these poisonous products, but there are limits to the functional ability of the organ to render these poisons harmless, which may possibly explain some to the maladies from which those who indulge largely in meat suffer.”

Protein and Calcium Metabolism

A series of studies with young adults of both sexes show clearly that as protein intake is increased retention of bone calcium decreases. Researchers at the University of Wisconsin found that when the protein intake of young men was raised to 140 grams per day, the subjects proceeded to lose bone calcium at a rate which, if continued, would have left them no bones at all by their early 50’s. Not one subject failed to experience rapid bone deterioration, even though they took liberal amounts of calcium and their phosphorus intakes were kept artificially low. Studies with young

women show that they too respond to high protein intake with marked bone erosion. It requires even lower protien intakes to effect the losses in women but this can be explained by their smaller body sizes. Young men had strong bone retention with protein intakes in the range of 50 grams per day. Unfortunately, young American adults are taking on the average as much as 100 grams of protein per day, suggests that our young may be experiencing rapid bone deterioration.

A build-up in blood urea Is associated with kidney failure and doctors in Italy, Hungary, Canada, Russia, and more recently in the U.S., report success in treating kidney patients with low protein diets. A Quebec physician, Dr. M. G. Bergerson, states that a low protein diet can be highly beneficial for kidney patients, even when they have reached the some stage. An Italian rsearcher reports patients with chronic kidney insufficiency can be rendered symptom free for years on a diet containing 20 grams of protein per day. A Russian group reports prolonged use of diets containing 18-24 grams of protein per day has netted good results with patients suffering from kidney insufficiency. The Russians have made extensive use of a potato diet for kidney patients and American researchers found plant proteins were far more effective than animal proteins in keeping blood urea levels down.

Russian Research on Protein

Dr. Uri Nikolayev is probably the most successful psychiatrist in history; the mentor of Moscow's prestigious Psychiatric Institute has cured thousands of desperately ill schizophrenics. What his technique does is rid the body of protein derivatives and other chemical abnormalities that Psychiatry Digest cites as the apparent cause of all forms of schizophrenia. His technique is of course, fasting. Fasting, it should be noted, Is the ultimate in low protien diets, low calorie diets, even protein-free low calorie diets, sharply curtail the excretion of protein wastes, only a fast can in the short run, at least, purge the body of the excesses of a lifetime. Dr. Nikolayev's treatment of fasting has received wide acclaim which it richly deserves. What has escaped attention is the second phase of his treatment, that is the treatment that follows a successful fast. For only with the adaption of a low-protein vegetarian diet are the results lasting, a return to a meat-based diet is a return to emotional stress.

Excess Protein causes Cancer

High protein intake is strongly linked to cancer. A Cornell researcher places the blame on ammonia. Ammonia, and possible other protein wastes, may indeed play roles in cancer, but protein partners cancer in a number of ways. High protein intake incites a cancer-like frenzy of activity at the cellular level. It weakens the body's capacity to resist cancer by weakening the liver, it stimulates the production of hormones involved in widespread hormone-dependent cancers, and it promotes the kind of growth on which cancer thrives.

High protein intake causes sharp increases in the rates of breakdown of existing protein and of synthesis of new protein at the cellular level. In the presence of adequate caloric intake the synthesis of new protein tends to exceed the breakdown of existing protein. The resulting protein build-up causes the cells to grow and divide. Rapid cell growth and rapid cell division are hallmarks of cancer. Tumors are the result of a concentration of frenzied protein synthesis and cell division at the site.

The rapid cell division that accompanies elevated protein intake begins as a general body phenomenon rather than being concentrated in on small region as It would with cancer. And finally, women should find this fact most convincing: High protein intake leads to increase production of estrogens (female sex hormones) in women; increased estrogen output tends to promote various female cancers.

Protein Reducing Diets

Most so-called reducing diets are harmful, and although damaged health. High protein diets and low or no carbohydrate diets are especially harmful. Severe restriction of carbohydrates with no restriction of fats and proteins may take weight off effectively, but can have the disastrous effect of causing irreparable damage to brain, nerve system and heart. A high protein diet, always popular with reducers, will admittedly help to reduce, but always with severe health damage as the result. Over indulgence in proteins is one of the prime causes of such dreaded diseases as arthritis, osteoporosis, heart disease and cancer.

Scientific Consensus

Perhaps the following fact will convince you more than anything else. The Food and Nutrition Board of the National Academy of Science, in collaboration with the World Health Organization, publishes every four years the Table of Recommended Daily Allowances of various nutrients. In the last two decades, they have lowered the daily recommendation for protein from 120 grams to only 46 grams. This was prompted by world-wide scientific consensus and a growing concern that an excess of protein in the diet, just like an excess of anything else, can be extremely harmful and can contribute to the development of biochemical and metabolic imbalances and diseases.

Protein Requirements and Sources

The protein requirements for each individual are totally different. Each person is unique in his nutritional needs, requiring certain foods for his own metabolism, glands and body structure. Hard and fast nutritional rules cannot be applied generally. Everyone must take a close look at themselves, and determine through self-diagnosis, habits and heredity, exactly what they require to improve their own health. No book can do this for you; a book can only be a guidepost to teach us universal principles, so that we may apply them to our own individual needs.

Generally, the protein intake for growing children is higher than for an elderly person. Pregnant women and nursing mothers may need a little extra supply of protein to provide nourishment for two organisms. The supply should only meet the demands of the body, and no more. Weight lifters and bodybuilders need more grams of good quality protein to make good the breakdown and loss of their cells and tissues.

You, as a unique organism, must determine what your protein requirements are on a day to day basis. Some days your inner voice or body intelligence will require that you consume additional amounts of natural protein, other days you will not feel the need for half that much protein. Stress conditions, exercise, hot and cold weather, sleep and rest, unforseen environmental factors, and human physical and physhological variables all play an extremely important role in your daily protein requirements.

Grams of Protein in Various Foods

Seeds and Nuts		Grams
Filberts	½ cup	6
Almonds, Raw	½ cup	13
Brazil Nuts	½ cup	10
Cashews, Unsalted	½ cup	12
Pecans	½ cup	5
Sesame Seeds	½ cup	9
Sunflower Seeds	½ cup	12
Walnuts	½ cup	7
Pumpkin Seeds	½ cup	14
Grains, Fruits and Vegetables		
Barley, Whole	½ cup	13
Buckwheat, Whole	¾ cup	12
Lima Beans, Cooked	1 cup	16
Kidney Beans	1 cup	15
Broccoli, Steamed	1 cup	6
Cauliflower	1 cup	3
Corn, Steamed	1 ear	3
Kale	1 cup	4
Lentils	1 cup	15
Peas, Steamed	1 cup	5
Peas, Split	½ cup	8
Potatoes, Baked	1 med	2
Squash, Winter	1 cup	4
Avocado	½	2
Apricots, Soaked	½ cup	4
Blackberries	1 cup	2
Dates, Soaked	1 cup	4
Prunes, Soaked	1 cup	3
Raisins, Soaked	½ cup	2
Wheat Bread	1 sl.	2
Corn Bread	1 sl.	3
Soy Flour, Powder	1 cup	39
Oatmeal	1 cup	5
Rice, Brown	1 cup	15
Rice Polish	½ cup	6
Wheat Germ	1 cup	17
Bean Soups	1 cup	8
Creamed Veg. Soups	1 cup	7
Nutritional Yeast	¼ cup	13
Nutritional Yeast	1 T	6
Soy Powder, Concentrate	1 T	12

	*Dairy-Animal	
Raw Goat Milk	1 cup	8
Buttermilk	1 cup	9
Yogurt (Low Fat)	1 cup	8
Skim Milk	1 cup	8
Cottage Cheese	1 cup	35
Swiss Cheese	1 oz.	7
Egg	1	6
Skim Milk Cheese	1 oz.	8
Flesh	4 oz.	20

*Use these foods sparingly. Listed for clarity and information.

It should also be understood that under stress conditions and anemic conditions the body needs extra amounts of the entire B-Complex vitamines, and the best source of B-12, B-6, etc. is whole unprocessed grains: rice, rye, buckwheat, millet, wheat germ, and brewers yeast. For a calm disposition and steady nerves, grains, fruits, vegetables, seeds and nuts will provide the essential nutrients to overcome stress.

The most reliable indicator of protein need is our present overall health. Are we full of pep and energy? How about our skin, nails, hair and eyes? Is the skin smooth and clear? Are the nails without ridges, pink and smooth, with small half-moons at the base and are they free of white spots? Does the hair sheen and bounce with vitality? Do your eyes sparkle? Are they clear, without redness or yellowness? Is there dark circles under them? These are all self-diagnosing indicators of health and vitality of our organs. Also, is your digestion good? Are you always uncomfortable, bloated or experience gas after meals? Are you constipated? Is your elimination poor? Ask questions and experiment on yourself. No authority can decide for you what you need on any given day or hour. One must ultimately depend upon his own body wisdom to determine his or her own nutritional needs.

Muscleman advocates Low Protein

Vegetarian world champion bodybuilder, Bill Pearl (Mr. America, Mr. Universe), states quite emphatically that a growing bodybuilder simply does not need 300-400 grams of protein to reach his potential. Mr. Pearl believes that one can build health, strength and muscles on 50 to 70 grams of protein per day on a well balanced

vegetarian diet. Beef is actually fairly low in protein, because once you remove all the fiber, water and uric acid from the prime steak, very little protein remains. Pearl has been a vegetarian since 1971 and has been pumping iron for 50 years. He is now near 80 years old and weighs well over 200 pounds of solid muscle with Herculean strength to match. He further says that there is absolutely no question that it Is possible to build a high-class physique and be a vegetarian at the same time. Vegetarian eating has had numerous positive effects on his body. His cholesterol gradually dropped down to a normal level of 198, and the blood pressure lowered. His pulse rate and other physiological processes are much better, and overall he is in better shape than he was 15 years ago.

One of the most dramatic changes has been in his uric acid levels. His uric acid is now down to zero, but before it was so sky high that every joint in his body ached. His uric acid was once so high that he could hardly move my hands. He actually thought he was getting arthritis. Now his energy levels are incredible, and he feels like a million dollars all of the time. His 33rd year of training starts in August (1979), and he definitely feel as good today as he did 30 years ago. There is nobody in his club, or anyone he have ever trained with, that he could not stay up with in a hard workout. His energy is greater that ever, and they do not need to knock off 15 cows a year to keep him fed.

The biggest change has been in his attitude toward himself and my fellow man. Perhaps this sounds crazy, but he is not as aggressive as he was in the past. There have been times in his life that he has wanted to go out and fight some guy for saying something to me. Or he would scream and holler, and really make an ass of himself. Now he catches himself smiling and trying to work out a problem. Vegetarianism has definitely had a mellowing effect on me. Once you are eating as a vegetarian, you cannot be swayed away from it by anyone, regardless of what he says. If a person offered him $50,000 to eat a steak, he would tell him to stick it in his pocket. What is the sense of making a commitment if you are not committed? He is a firm believer in sticking to convictions.

Mayo Clinic Report

According to Nutritionist, Dr. R. A. Nelson, of the Mayo Medical School: Animals fed high protein diets have increased urea production. Kidney hypertrophy occurs in animals on long term protein diets; more strikingly, if one kidney is removed, the degree of hypertrophy of the remaining kidney is directly related to the amount of protein ingested. High protein diets increase albumin and casts in animal urine. Rabbits on high protein diets develop nephritis, as do rats if the diet is continued long enough. Trout fed a low protein diet live twice as long as trout given a high protein diet.

Protein vs Complex Carbohydrates

An article appearing in Iron Man Magazine, Sept., 1978, entitled "Carbohydrates-No Villain", written by Vince Gironda, body building champion, exercise and nutrition researcher, states: "I advocate a relatively low protein intake, about 45 grams per day. Too much protein creates a negative nitrogen balance which in turn leads to gout, sluggishness, and liver and kidney problems. The body cannot digest more than 20 grams per meal, and anything beyond that leads to problems. At least one meal per day should be carbohydrates in the form of vegetables or grains, thereby giving the body a protein break. Futhermore, it has been demonstrated repeatedly that protein combustion is not higher during heavy exercise than under resting conditions, while on the other hand the body uses carbohydrates stored first before it turns to other sources. Even after depleting the carbohydrate deposits, continued exercise does not hike protein needs significantly. According to my research, athletes performing strenuous, endurance tasks such as bodybuilding, and burning up 9,000 calories per day, show no noticeable increase in protein needs. If this all is not enough to turn your heads, Dr. Per-Olaf Astrand, a famous exercise physiologist in Sweden, performed a study which concluded that endurance tends to decrease as protein intake is elevated. He discovered that a high protein diet lowered endurance as well as reduced buildups in muscle carbohydrate, more than high carbohydrate diet. Experiments by Christensen and Hansen found that in heavy work such as powerllfting or bodybuilding, the major participant towards endurance was, once again, carbohydrates. Also, the subjects were able to perform three times longer on a carbohydrate diet than a protein or fat diet.

Probably the most asked question now is, if body building essentially is the tearing down and building up again of muscle tissue, then is not increased protein necessary for that process? The answer is no. A high protein intake even after a sustained injury, does not prevent a transient rise in nitrogen losses. Dr. Doris Callaway and a team of researchers found that animals fed three times as much protein as normal recovered no better than those on normal amount of protein. Now let us get one thing straight before we go any further. There is a quality difference between carbohydrates. Do not go out and load yourself up with candy and that type of junk carbohydrates. Carbohydrate loading with sugar is a mistake. Carbohydrates replace glycogen which the body stores and uses for energy. Sugar in any form leaches the stored glycogen from the liver and produces nervousness, irritability, fears, doubts, and various psychic changes in the personality. The major sources of carbohydrates should be from, as stated earlier, grains, and vegetables.

The protein contained in seeds and nuts, (soaked over night or germinated) all grains, all legumes, vegetables, sprouts, fruits; supplemented with nutritional yeast, soybean, tofu, soy powder, miso, and sea weed products are biologically superior, and pound for pound much cheaper than meat, eggs or dairy.

Vegetable Protein Superior

The animal cannot exist without the vegetal. The human body cannot digest inorganic substances or manufacture them from proteins, carbohydrates, vitamins or minerals, etc. The synthesizing and vitalizing of inorganic elements is a vegetal function. This process is called autotrophism. Only the vegetable kingdom can perform this phenomenon. Vegetables absorb inorganic elements and convert them into organic foods, which are very complicated in their composition and construction. This is a veritable miracle produced by the interworking of the forces of nature. Biologically speaking, we are children of the vegetal mother, and spring from the vegetal. Without vegetable life, no animal on the earth would survive. We depend upon vegetal products. Our hemoglobin is derived from chlorophyl. All vegetal foods are virgin materials for the purpose of maintaining or constructing our body. Neither meat nor animal products are pure virgin material for us. We must eat vegetables and their direct products. This is the biological principle and fundamental law: vegetables are the superior food.

Important Protein Points

1. Always go outside after eating, especially protein meals. Outdoor oxygen is absolutely necessary for normal protein assimilation and utilization.
2. Eat your protein meals earlier in the day if possible, but never over an hour after sunset. Daytime is for assimilation and digestion of foods. Night hours are for sleep & recuperation.
3. It is best to consume no more than 20 grams of protein at one meal. The body cannot utilize more than this at one time.
4. As a general percentage, the body requires from 30 to 60 grams of protein daily, depending on age, sex, activity, stress, sleep, weather, food quality and environment.
5. Eat the protein foods that your body can tolerate and easily digest and utilize. Consume only what agrees with your constitution and body intelligence. Meat, dairy and eggs are not absolutely necessary for protein requirements and health.
6. Legumes can be combined with grains and seeds to form complete and adequate proteins.
7. Junk food cravings are directly linked to protein deficiencies, incomplete dietary protein or poor protein utilization.
8. Germinated or soaked (overnight) seeds and nuts liquified in a blender will increase their quality and net protein utilization. Raw dried seeds and nuts, unsoaked or ungerminated are inferior foods and do not contain complete proteins.
9. An excess of protein in the diet, especially animal meat protein, including fish and poultry, leaves poisonous residues and uric acid in the system causing Yang disease symtoms, such as constricted (Yang) kidneys, high blood pressure, liver congestion, constipation, cancer etc.
10. The long lived people in many sections of the world (Russia, Hunzas, Bulgarians) consume a moderate amount of protein daily, and they remain in vibrant health and vitality past the 100 year mark. They are able to healthfully sustain themselves on a low protein diet because of their superior, pure organically grown food, pure fresh unpolluted air, clean fresh water, no stress and their joyous attitude. Their meat intake is almost nothing, and they consume mostly raw dairy products (fresh), grains, seeds, nuts, fruits and vegetables.

11. Americans consume more meat and other proteins than any other nation on earth, and they suffer from the most degenerative diseases known to humankind.
12. An excess or lack of protein in the diet can be a quick way to lose beauty, health and strength; you can develop unsightly facial wrinkles, hair loss, poor sight and hearing, underweight or overweight, premature aging, low blood sugar and many other disease symptoms. Listen to your inner body (voice) or intelligence for the proper amount you require daily. Only you can be the final judge.

Carbohydrates and Sugars

Carbohydrates are composed of carbon, hydrogen and oxygen. They are fuel, heat and energy producing foods. The main sources of carbohydrates are all grains, fruits, vegetbles, seeds, nuts, legumes, potatoes etc.

Starch foods begin digestion in the alkaline saliva of the mouth and are completed in the small intestine. For this reason, starches should be thoroughly masticated and insalivated in the mouth before swallowing. Starches are converted into dextrines and sugars, then into dextrose and glucose before entering the blood stream, where they are readily utilized and produce animal heat.

Cooked starch is acted upon by saliva and pancreatic juice very quickly; raw starch is not. Raw starch granules are surrounded by an envelope of cellulose, which the saliva penetrates very slowly; the same for pancreatic juice. The digestibility of starch (grains, legumes, potatoes etc.) depends upon the cooking. Improperly cooked or imperfectly chewed starch food pass mostly undigested into the feces. This is also true to poorly baked bread.

Glycogen like starch is insoluble. Hence, it is stored in the liver until needed for use; it is also stored in the muscles. Every cell in the body contains a small amount of glycogen. When fuel is needed, the glycogen is again transformed into sugar, dextrose, which nourishes the body. The body maintains its heat by the burning of glycogen. Muscular work is supported by the energy set free by the burning of glycogen just as the work of a steam engine is performed through the energy obtained from coal. When glycogen becomes exhausted, the bodily forces fail. The heart consumes glycogen with every beat. Without glycogen the heart could not beat and no muscle in the body could contract. The body contains

about four percent glycogen. The greatest source of glycogen is found in natural foodstuffs, i,e., grains, vegetables, fruits, seeds, nuts, legumes etc.

When no starches or carbohydrates are eaten, the body makes glycogen by splitting the protein molecule. By this means, about half the weight of protein may be converted into glycogen. The other half of the protein is converted first into ammonia then into urea. The fuel value of protein is then only half its face value, and the body is taxed in the disposal of the large amount of poisonous waste. Consequently, protein is a very poor fuel food. In other words, carbohydrates are protein sparing, instead of the body converting protein into glucose for energy, it provides the heat, energy and fuel so that protein may be used for tissue building. Proteins are utilized more fully for tissue repair if some form of natural carbohydrate food is consumed at the same meal.

Fig. 5.1. Where our Energy Comes From.

Start with the intestines on the lower left hand corner. Here the starch, after being swallowed, is converted into glucose in the intestines, absorbed and carried by the blood stream to the liver, where it is converted into glycogen. When a muscle contracts it needs fuel so the glycogen is carried by a blood vessel from the liver to the muscle, converted again into glucose, mixed with oxygen from the lungs, and fired by insulin from the pancreas, producing energy.

Tea and coffee, both of which contain considerable amounts of tannic acid, prevents the action of saliva upon starch foods. Tea and coffee drinkers experience much gastric acidity and poor digestion and health.

Fruit Sugars

Natural fruit sugars are digested and absorbed into the blood stream within 30 to 60 minutes. The natural sugars contained in all fruits, dried fruits, honey, maple syrup etc., contain fructose, grape sugar, and levelose. Honey contains equal amounts of dextrose and levulose. Milk sugar contains lactose. Refined white sugar, commercial sugars, brown sugar, saccharine, (made from coal tar products), chemically treated sweets, ice cream, candy, cakes, pies and sodas are all devoid of vitamin and mineral elements, and create calcium loss, and cause conditions from anemia to schizophrenia. If you value you health, avoid these junk food refined sugars.

Natural sugars from fruit eaten in season (moderately) will satisfy your sweet tooth, and give the body wholesome minerals, vitamins and natural fiber/bulk for intestinal health. Eat more raw fruit in summer and sparingly in winter. Fruit is Yin and is high in potassium, needed for hot weather. The body does not require much Yin food in cold weather; but rather it needs more Yang foods, such as grains, legumes, miso, soups, steamed vegetables. Yin foods help to cool the body during hot weather. Yang foods warm the body during cold winter weather. We must learn how to change our diet according to seasonal changes. This is living in harmony with heaven and earth and gives us increased health and freedom.

Fats

Fats are called hydrocarbons because they produce oil when heated. Fats are used in the body as heat, energy and fuel. They are found in butter, cream, olive oil, seeds, nuts, avocado, cheese, milk, egg yolks and all oils. Fats are digested slowly, and remain in the liver and stomach longer, delaying hunger for quite some time. Fats differ from other foods in that they are stored in the body in almost unlimited amounts. Fat is somewhat of a reserve fuel that the body draws upon when the sugar stores are greatly reduced. A

normal amount of fat is stored in the body to maintain body heat, protect and lubricate internal vital organs, and give a graceful contour and shape to muscles and skin. An over consumption of fatty foods will congest the liver and weaken the digestive organs. Fats are needed more in cold weather than hot to keep the body warm.

Cholesterol is a chemical component of oils and fats. The body forms fat from starch and sugar foods. If no natural fats are included in the diet, the body will produce fats from starch and sugar foods. It is best to take fat in small quantities giving the body a chance to manufacture its own fat. If a person's diet is aduquate in B vitamins, fresh fruits, grains, vegetables, seeds, nuts and soya products, he can produce all the lecithin and anti-cholesterol agents his body needs.

An excessive consumption of eggs, meat, cheese etc., can contribute to a rise in body cholesterol. Other cholesterol forming foods are: hydrogenated oils, margerine, butter and white flour, white sugar and salt. A small amount of natural fats eaten daily will maintain the body in good health and vitality. Remember, the body will produce its own fat if the diet is deficient in it.

Percentages of some fatty foods: Butter is nearly 90 to 100% fat. Nuts contain a large amount of fat 40% to 70%. Cream is from 25% to 40% fat. Avocados contain from 25% to 40% fat; the same as the ripe olive. The soy bean contains about 20% to 30% fat. Meat contains 40% to 50% fat. Regular cheese contains from 60% to 80% fat, except skim milk cheese. Eggs are 10% to 20% fat. Ice cream is very high in fat, from 70% to 90%, plus high in sugar. Vegetable oil is 80% to 90% fat. Natural foods, such as avocados, nuts and soybeans, because of their high fat content, should not be used excessively; they are not staple foods and should be eaten very sparingly.

The greatest cause of cholesterol build-up is a combination of two things: First, fatty foods, sugar foods, white flour, salt etc. Second, a lack of daily exercise and lack of fresh outdoor oxygen, and stressful conditions. To help overcome this, consume a low fat, low protein, and high natural carbohydrate diet, including: whole grains, low fat dairy, legumes, peas, seeds, fruits, vegetables, and obtain sufficient daily exercise, fresh air, sunshine and sleep. Avoid stress. Eventually, this diet will balance the internal organs and stabilize the mind and emotions. The body weight will also normalize itself, along with blood pressure, pulse rate and cholesterol levels. Exercise helps keep the blood stream flowing freely and the arteries free of cholesterol deposits.

Free Fats are Harmful

All extracted or refined oils, whether animal or vegetable are referred to as free fats or triglycerides; all of the bulk, fiber, vitamins, enzymes and minerals are removed from the food, and we no longer have a water soluble food. Even pure vegetable or nut oils are harmful, if taken to excess, especially if eaten in hot weather. A small amount, (one teaspoon per day) may be used in cold weather for body warmth. The body can obtain its fatty acids from whole foods such as, legumes, grains, and germinated seeds and nuts. The human system cannot properly handle extracted or fractionated free fatty oils in any form. These include: butter, cream, sour cream, peanut butter, nut butters, egg yolks, mayonnaise, margarine, lard, seed/nut oils, and vegetable oils. Pure vegetable oils are the least harmful, but should also be used sparingly.

Polyunsaturated fats can cause disease as well as saturated ones. Polyunsaturates do lower serum cholesterol levels in the blood; however, the cholesterol moves out of the blood and into the cells and tussues. These free fats then clog and block the oxygen carrying red blood cell from entering the tissues. Oxygen is thus reduced to the brain and body cells, which cause many internal disorders. All fats animal or vegetable if eaten beyond the needs of the body, can cause the following diseases; gallstones, diabetes, tumors, skin diseases, liver disorders, obesity, colitis, cancer, heart disease, lung disorders etc.

Human requirements for fatty foods are very low. We do not need an extra abundance of free fats in our diet; this only leads to ill health. Obtain your fats from whole foods in their natural state, and watch your health improve tremendously. When you realize that each body cell is a small battery, needing constant recharging through the food you eat, you will really begin to think about diet.

Fig. 5.2. Life starts with nature and blooms with Life.

Whole Food Supplements

Why cannot we obtain good nutrition from wholesome food in its natural state? We agree that under idea conditions, food supplements would not be needed. But what is considered ideal conditions? They are: 1.) All foods grown in rich, natural, organically fertilized soils year around. 2.) These organically grown foods should be available and raised in your locality. 3.) Living in a totally stress free, natural and unpolluted environment. Are you living in this naturally perfect environment? Are you obtaining all your food from such organically rich soil? Are you eating the organic food grown in your locality, not shipped from across the country? Are you living and working outdoors daily under natural lights, and without stress conditions? Do you spend hours each day in the outdoor atmosphere? Do you obtain suffcient exercise?

The majority of individuals cannot answer yes to most of the above questions: They can tremendously benefit from the daily use of natural whole food supplements and organic food concentrates, which furnish the missing organic minerals, vitamins and trace elements required by every cell of the body.

If one constantly craves junk foods, a dietary deficiency may be present and one may be severely in need of a balanced dietary program, plus whole food supplements. These nutrition rich food concentrates can help one to overcome the junk food syndrome and protect against any possible deficiencies from the use of commercially grown mineral poor foods.

Our first obligation to ourselves and our families should be to obtain the highest quality food grown locally, prepared in a nutritionally healthful manner and also, if conditions permit, to grow as many organic foods as possible in our own backyard garden. If we all had our own gardens on well mineralized fertile soil, vitamins might not be needed. If we ate foods that were not overprocessed and overmilled, the capsule might never have been invented. If we ate for nourishment rather than for palatability and if sixty times as much mineral values were not taken each year from the soil as are restored to it in fertilizer, and if in some households up to 77% of the mineral values were not lost or destroyed by heat and oxidation, we would not require the use of food supplements.

There are those who would have the Western public believe that present day foods are adequate in their vitamin and mineral content and that vitamin deficiency diseases and subclinical defi-

ciencies are too rare to be a threat to public health. The majority of Americans are poorly nourished and consume nutritionally poor food. Hereditary factors also play an important part in your over-all health and nutritional needs. If your parents were in poor health and consumed mineral deficient foods, you may require more food supplements than a person who had parents with strong and healthy constitutions and ate mineral rich and nutritionally superior organic foods. One must judge their own nutritional needs and eat the whole foods and food supplements that fulfill the requirements of their totally individual body.

Food supplements should not be taken with the erroneous idea that they will give one Super Health while living on a diet of conventional calamity foods. They will, however, add some improvement to the conventional Western diet. It is true that food supplements would not be necessary if our food crops and top soil were rich in organic mineral elements, and all of our foods were grown on chemically free soils: unfortunately, these quality foods are a rarity, and as a result, most persons consume mineral deficient foods, causing malnutrition.

The following food supplements are some of the best known health aides to insure us of obtaining complete nutrition for superior health. Use them daily.

Alfalfa (Liquid, Tablets or Powder)

This amazing plant travels 24 feet into the soil and picks up the trace minerals that the average person is so lacking in. Alfalfa contains 8 essential enzymes, which help in the buildup of the internal bodily enzymes. Alfalfa closely approximates the blood hemoglobin, and is one of the most highly potent vitamin and mineral foods. It is rich in protein and contains every essential amino acid.

Many diseases are caused not only from excesses, but also from deficiencies of the necessary trace elements to maintain the body in proper chemical balance. If the body is not in balance, it can lead to a host of diseases from colds to cancer. Alfalfa grown on organic soil and made into liquid, tablet, powder or tea can be used with great benefit by all persons, healthy or sick.

The ancients knew its value, yet men forgot the ancient learning. For centuries sick farmers watched their cattle grow sleek and robust on alfalfa without the glimmer of an idea that this remarkable plant might help them. Even today, when food scientists

cite the countless cases of benefits achieved by the use of alfalfa, the uninformed raise skeptical eyebrows. It may be a generation before most of our physicians and the general public wake up and grasp the truth about the place of alfalfa in human nutrition.

The same opinion was voiced by C. H. Burgess of the Michigan State Agricultural College, who said: "Rich in medicinal properties beneficial to the human race, the real value of alfalfa is but little known." But, with the passing years, the evidence that alfalfa has more total food minerals and trace elements than any other known plant that grows on land is beyond dispute. The famed farmer-writer, Louis Bromfield spoke of alfalfa's unique ability to tap the deep mineral richness of soil and to bring that richness upward to the sunlight and the air. The alfalfa root will reach down, in some instances, as much as 125 feet in order to do so.

Alfalfa is an excellent food; it improves digestion and a lagging appetite, as it is filled with several digestive enzymes:

Lipase Fat splitting enzyme.
Amylase acts upon starches.
Coagulase coagulates milk and clots the blood.
Emulsin acts upon sugar.
Invertase converts cane sugar into dextrose.
Peroxidase has an oxidizing effect on the blood.
Pectinase forms a vegetable jelly from a pectin substance.
Protase digests protein.

Alfalfa contains Vitamin U, an element that is an aid for peptic ulcers. It is a good diuretic and excellent regulator of the bowels. It has sufficient Vitamin D and phosphorus to build strong bones and teeth. Alfalfa has Vitamin K, flavones, growth and anti-stiffness factors. This remarkable product helps to prevent fatigue, and provides a perfect calcium-phosphorus ratio (2:1). The pure vegetarian or vegan, who uses no dairy products will be happy to know that alfalfa has .3 meg of Vitamin B-12 per 100 grams, and contains all essential amino acids.

Kelp and Seaweed

Kelp is a great source of iodine. Our soils are almost totally lacking in this very essential element. This is why certain sections of the country are known as goiter belts. Iodine is necessary for the proper functioning of the thyroid gland, which effects body growth, metabolism and over all health.

Hiziki and nori are also good seaweed products to include in salads, soups, or grain and bean dishes. Kelp and dulce are sea plants high in iron and copper, even more so than a pound of spinach or 7½ pounds of tomatoes. It contains more phosphorus than 1½ lbs. of carrots and more iodine in kelp than in oysters.

Scientific tests have shown that seaweed contains over thirty vital mineral elements and life sustaining organic substances that are absolutely necessary for a high state of health. The body loses these essential minerals daily, and they must be replaced by organic mineral-rich foods such as found in seaweed products. Here are a few of the major minerals and trace elements found in kelp:

Nitrogen helps to build and repair the body.
Iodine prevention against goiters.
Iron Blood Builder.
Copper together with iron builds the blood and helps the body to absorb oxygen.
Silicon helps to give beautiful sheen to the hair, nails and skin; prevents wrinkles and sagging skin.
Sodium helps to digest food, purifies the blood and prevents acidosis.
Sulphur builds the body cells.
Manganese builds the reproductive organs and is necessary for bone formation. It is a protective agent, especially for the heart, blood vessels, brain, and urinary passages.
Zinc helps prevent diabetes and prostate problems.

Kelp, dulce or other seaweed foods can be purchased in dried, powdered or liquid form. You can eat them whole, chew the kelp tablets, add the liquid to soups or sprinkle the powder over your favorite vegetable salads and grain meals. Kelp is a Yang food and can be consumed year around. Be sure to include kelp in your daily diet for better health and long life.

Nutritional Yeast

Brewer's Yeast from beer breweries is a thing of the past. Yeast, as a supplement many years ago, was available only as a by-product of the beer vat. Today, it is no longer associated with the brewing industry, although many people still call it Brewer's Yeast. The correct name now is primary grown nutritional yeast.

A recent science writer once called the tiny yeast cell a terrific chemical factory for the manufacture of all the vitamins of the B complex. The yeast cell is a terrifically small unit of living matter, and similar to the cells of the human body. Many health authorities state that yeast contains more nutritional power than any other single food factor known to man. Yeast, as a food is grown without soil, takes up very little space in its growing process. Nutritional yeast has a very pleasant taste and is higher in nutritional value than the old time Brewer's Yeast.

The ancient Egyptians are said to have used yeast; and it has been used for baking, brewing and other uses throughout history. "Yeast is the smallest of all cultivated plants about l/4000th of an inch in diameter or about the size of a human blood corpuscle, as written in "The Complete Book of Food and Nutrition," edited by J. I. Rodale. Rodale continues:

The yeast plant stores enormous quantities of vitamins for its own use. These are then utilized as a food supplement by human beings, after the yeast plant is dried. Brewer's Yeast contains all the elements of the Vitamin B complex. It is also a rich source of complete protein. Brewer's Yeast contains 16 of the 20 amino acids forms of protein that are essential for the proper functioning of our bodies for longevity, for resistance to disease, for rebuilding tissues.

Nutritional yeast is reported to contain anti-aging and youth sustaining elements called nucleic acids RNA and DNA. Laboratory tests have shown that RNA and DNA protect mice and rats against lethal radiation doses. Yeast also contains the amino acids lysine and tryptophan, which may be missing from certain cereal and grain foods. Due to Its high natural B-Complex factors and minerals, it helps to build strong nerves and calmness under stress and other living conditions. A lack of the essential B Vitamins results in nerve disorders, irritability, depression, fatigue, skin problems, muscular weakness and underweight conditions. Nutritional yeast can put an end to the junkyism syndrome once and for all. It is rich in

essential super food factors necessary for complete nutrition. It is one of nature's most complete and perfect foods. Yeast cakes used for baking bread should not be eaten raw, as they rob the body of B Vitamins.

Yeast is a miniature sprout of high nutritional value, and is dried in such a manner as to preserve its wealth of nutrients. Nutritional yeast can be used in soups, salads and other dishes to improve the nutritional value of foods. Yeast is also available in various concentrated forms in powder, flakes or tablets. Some people prefer to take yeast mixed in a glass of their favorite juice on an empty stomach, assuring quicker assimilation and no digestive interference with other foods. If yeast causes you gas, when eaten with other foods, try this method.

Miso

Miso is a dark paste made from fermented soybeans and other grains. The three types of miso are: Rome, made from soybeans and rice; Mugi, made of barley and soybeans and Hacho made soybeans only. Miso is aged from 3 to 18 months in wooden barrels, depending on the type. Hacho miso should be used more in winter due to its Yang quality. Mugi or Kome miso can be used moderately in the summer. Miso is a healthful salt substitute, which can be used in soups, bean and grain dishes, casseroles and wherever a salty flavor is required in cooking. Miso is one of the best sources of iron and vitamin B-12. Due to its fermented quality, miso builds up the intestinal flora & helps to overcome anemia.

Miso broth aids digestion and food absorption; it helps to alkalize the system, and balances the metabolism. It can be sipped slowly on cold winter days to keep one warm and cozy on the inside. Miso is also a protein source.

Soya Sauce

Soya sauce is a close kin to miso also fermented and made from soybeans with the addition of sea salt, wheat and water. It contains easily absorbed proteins, vitamins and minerals. Soya sauce can be used in soups, vegetable and grain dishes.

Tofu

Tofu is a soybean product with a consistency of farmer's or pot cheese. It is a very delicious, nutritious protein packed food. It can be used in soups, salads, sandwich spreads, grain, bean and vegetable stews. It contains vitamin B-12 and builds friendly intestinal bacteria, due to its fermented quality. Tofu is a highly concentrated food, containing all of the amino acids necessary for healthy growth.

Beet Juice *(Tablets or Powder)*

Beets are a powerful blood builder, with a high and easily assimilable iron content. It is used in diabetic disorders. Beets contain several digestive enzymes. Beets should be used only in small amounts because they may overwork the liver if over eaten.

Garlic

Garlic has been used successfully for high blood pressure, intestinal problems, colds, flus and lung disorders. Chinese herbalists caution against the use of garlic and sweets at the same time, as this mixture can cause nausea and indigestion. Garlic should not be used excessively every day, as the body will begin to emit a garlic odor in public, and one may chase away more than colds.

Garlic is also a powerful internal germicide and bactericide, keeping the system free from pathogenic or cancer causing agents. Garlic is used by all of the long lived people throughout the world.

Balanced Mineral Salt

This is a seasoning vegetable powder to be used in place of the salt shaker. It contains minerals and trace elements in balanced pro-portion, such as powdered soy beans, anise seed, calcium-magnesium phosophate, dulce, parsley, lecithin, vitamin C, rosehips, thyme and other dried vegetable ingredients. It can be used on all main dishesgrains, beans, vegetable stews, soups etc. It is very delicious and nutritious.

Calcium *(Carrot-Poxtoer)*

Calcium is one of the most important, but difficult to obtain foods in the dietary. This calcium supplement is made from pure fresh raw carrot juice, from high mineralized soil grown carrots dehydrated into a pure powdered concentrate and easily assimilable. Calcium is missing from almost all processed, canned and packaged super market foods. Calcium builds strong teeth, bones, hair, connective tissue and organic structures. One level teaspoonful of carrot-calcium supplies 1000 mgs. of pure calcium. The body requires from 800 - 1000 mgs. of this important element each day.

Umeboshi *(Salted)* Plum

Umeboshi Plums are pickled in salt for about two years, by an acid bacterial method. They have been used for centuries in Japan as a mainstay in cooking. They are used in main dishes, dressings and take the place of vinegar. They help to alkalize the system. Umeboshi Plums are used as remedies for stomach trouble, headaches and internal acidity; it aids the digestion and assimilation of food. It also helps in cases of dysentery and fatigue. They are especially delicious with rice and other grains.

Spirulina Plankton

Spirulina Plankton is a microalgae, like hijiki, nori and wakame. It grows in lakes and salt water, however, the best spirulina is said to come from fresh water ponds. The Aztecs ate spirulina over 400 years ago. They ate it with corn and millet. Spirulina is mass produced in two locations; from Lake Texcoco in Mexico and from Thailand. The nutrients in Spirulina are up to 95 percent digestible. Spirulina is twenty times as high in protein as soybeans, forty times as much as corn, 400 times as much as beef. Spirulina is low in the amino acid methionine, therefore, one should eat other grains, beans and seeds at the same meal or during the day to make up the loss. One tablespoon of spirulina contains:

6 to 7 Grams of Protein
35% of the RDA for Vitamin B1 - 25% of B2 - 6% of B3
90% of Carotene (Provitamin A)
10 % of Vitamin E
29% of Iron
(Small %) Trace Vitamins, Minerals and Enzymes

Spirulina Plankton is the most basic food in the whole food chain. It is a simple hydrocarbon made directly from photosynthesisthe interaction of sunlight and water. It is the most concentrated form of any known organic food; a complete protein containing 18 of the 22 known amino acids (the building blocks for living cells), including the eight essential amino acids. It contains the highest natural known source of Vitamin B-12, as well as many other vitamins, and all the cell salts and enzymes essential for body metabolism.

This new food from sunlight provides 4 times the protein power of beef 250% more Vitamin B-12 than liver 26 times the calcium of milk. Spirulina has incredibly long strings of amino acids of several kinds. The proteins of spirulina are 80-85% assimilated compared to 20% for beef protein. Spirulina is 65-71% protein; beef is about 18%. Spirulina contains the biologically active sugar rhamnose. The research on this effect was pioneered by Dr. Christopher Hills during his over 25 years of research into microalgae. Spirulina can be purchased in tablet, powder or liquid form. There is a new pasta on the market made with spirulina pastalina, a combination of wheat, soybeans and spirulina. It is delicious and highly nutritious. Spirulina is also helpful in removing radioactive agents and other pollutive metals from the body.

Herbs *(Elixirs of Life)*

"And God said, Behold, I have given you every herb yielding seed, which is upon the face of all the earthy and every tree, in which is the fruit of a tree yielding seed; to you it shall be for meat." (Bible, Genesis-Chapter 1, Verses 29-31). Herbs are the true life-givers and healers of nature. Their use has become a lost art, but fortunately, they are gaining in popularity and usage by intelligent and advanced thinking physicians today. Herbs have been used since the beginning of time. The ancient Egyptians, Greeks, Lemurians and Chinese studied herbs systematically, and they respected the powerful rejuvenating qualities of nature's healing plants.

Hippocrates, probably the first herbal physician to make an art of nature's medicines, lived some 2,500 years ago. He is known as the Father of Medicine. Hippocrates believed in the powers of the human body to heal itself. And he used the constructive properties of herbs to facilitate the healing. He said: "The body has within itself the power to heal."

About 1,500 A.D. Hohemhein began using inorganic chemicals to treat disease. He and the medical men that followed him believed that the body could be healed and purified chemically. They burned the books of Hippocrates and Galen, in public, for they wanted no competition from the natural methods of healing. Medical men wanted full power over the lives of sick people, to administer chemicals in place of herbs. Hohemhein was the first practitioner to give mercury as a medicine.

The true successors and pupils of Galen and Hippocrates are the herbal doctors of Great Britain. Hohemhien's successors are today's modern medical profession. The early Native Americans were well-versed in the use of herbs and plants. They were seldom sick, always full of vitality, stamina, endurance and fighting force. Our first colonists learned many things from the Native Americans; the use of herbs in the treatment of disease and maintaining vigorous health.

Fig. 5.3. Red Emperor, Shen-Neng, Patron Saint of Chinese Herbalism

Biblical Records

Moses taught the Israelites to subsist on natural simple foods and to use the herbs of the field for disease. The Good Book also instructs us to eat the fruit of the trees as nourishment and the leaves or herbs of nature for medicine. Paul recommended the consumption of herbs for fatigue and sickness.

The best Biblical argument for the use of natural foods and herbs is found in Gen. 1:29, which states: "And God said, Behold, I have given you every herb bearing seed, which is upon the face of all the earth, and every tree in which is the fruit of a tree yielding seed; to you it shall be for meat". Leave your drugs in the chemises pot if you cannot heal the patient with food. He who for an ordinary cause resigns the fate of his patient to mercury (chemicals) is a vile enemy to the sick.

Herbs for Life, Health and Vitality

Hippocrates relied on the course of nature to restore health. He taught Moderation in all things. He had a working knowledge of over 400 various herbs. He was a true physician. Inter-estingly, the word physician is derived from physics, a Greek work for nature. So, Hippocrates was a doctor of nature. Nature has provided man with herbs in all parts of the world. Herbs are natural remedies; modern medicines are alkaloid chemicals taken from a plant and do not contain the health-building and restoring properties as herb teas used from the original plant. Medicines only relieve symptoms temporarily, while herbs and natural foods are more beneficial in the long run to restore and maintain health indefinitely. Given the proper care and nourishment, our bodies will remain free from disease.

Dr. Otto Mausert states that: "Chemistry of today has accomplished wonderful results in many ways, but all the laboratories in the world will never be able to supplant the remarkably fine process which takes place in the living cell. They will never successfully imitate the wonderful methods that Nature uses in performing its work in the plant, as well as in the human body."

The great American inventor, Thomas A. Edison, once wrote: "Until man duplicates a blade of grass, Nature can laugh at his so-called scientific knowledge."

Drugs vs. Plant Herbs

Herb teas assist nature in purifying the body, while chemical medicines squelch the symptoms and drive the disease deeper into the body, latrogenic diseases (drug induced) side-effects are far more harmful than the original sickness. This is the result of direct drug interference of the body's own natural healing powers.

Modern medical drugs are powerful-reacting chemical agents; most of them are Yin-expanding in action, while a few are Yang-contractive in quality. The Yin drugs spaces out or expands the brain and body cells, causing one to lose sight of reality, i.e., grogginess, loss of will and unclear thinking and perception. Hospitals and clinics are full of pickled brains and bodies. The list of drug induced diseases is growing every year. The AMA admits there is always a great risk in drugging a person. Chloromycetin, for example, is toxic to the blood producing system. About 20% of the drugs in vogue 20 years ago are now listed as harmful, yet many were considered wonder-drug discoveries.

Why is the average person very careful about the new car he buys? It must be perfect in every respect. The owner has it checked every few months to insure that it runs like new. He would not think of putting sand or water in the gas tank; No! The best grade of gas and oil must go into that car, and it must have the best possible main-tenance and care available at all costs. And the auto-mechanic must fix it right, or the owner does not pay him. Yet, the average person blindly accepts, without a word of objection, a dose of some medicine, tablet or drug, without thinking of what it might do to his or her body. Or more harmful serums and vaccines are injected into the bloodstream without a whimper or question as to what the substance is, or what value or harm it will do.

In his new book, "Herb Growing for Health," Dr. Donald Law writes: "The whole theory of botanic medicine is based upon the logical and simple practice of building up the human body to strengthen all the natural eliminating and healing processes. . ." "Botanic medicine does not seek to cure you by "killing off germs", it strengthens your natural func-tions of phagocyte production, (the little cells that eat up alien organisms invading your body); it strenghtens your liver and kidneys to do their clearing out functions better, and It makes defecation and perspiration function effeciently so as to expel the toxic matter you have acquired."

Another intelligent author, Dr. Otto Mausert, writing in his book, ''Herbs for Health,'' states: "Herbs contain the vital elements, vitamins and organic minerals that are deficient or lacking in the diseased body. They contain them in such a finely distributed and prepared state that they may be readily assimilated by the system and conveyed to the blood. Herbs also promote the elimination of waste matter and poisons from the system by simple, natural means. When correctly used, they support nature in the fight against disease."

In the future, science promises to those races who will take advantage of the newer knowledge of nutrition, a larger stature, greater vigor, increased longevity and a higher level of cultural attainment. Those who travel go nowhere until they journey within. They who see are blind and see not, until they look within. They who seek the Tao, find not, until they know the Tao is within. Credo of a Taoist: Feel like a boy, act like a gentleman, speak like a saint, and work like a horse, because the journey is within.

Health Aide Guide:

Foods to Avoid	**Replacements**
Tea, Coffee, Alcohol, Sodas, Tap Water	*Herbal Teas*
Chocolate, Candy, Artificial Sweets	*Dried or Fresh Fruit, Honey*
Gelatin	*Agar*
Canned Bouillon, Meat Broths	*Vegetable Broth, Miso*
Cold Drinks, Sodas, Sugared Beverages	*Fresh Fruit & Vegetable Juice*
Tap Water	*Spring, Distilled or Pure Water*
Devitalized Commercial Sugared Cereals	*Whole Grain Cereals*
White Commercial Crackers & Snacks	*Rye Krisp, Corn & Wheat Chips*
White Bread	*100% Whole Wheat, Rye Breads*
Lard, Margarine, Butter	*Sesame, Tahini Sauce, Seed Butters*
White Vinegar, Wine Vinegar	*Lemon Juice, Apple Cider Vinegar*
Commercial Vegetable Oils	*Cold Pressed Olive & Sunflower Oils*
White Rice, White Flour Noodles	*Whole Brown Rice, Noodles & Pasta*
Cow Milk Cheeses & Other Dairy Foods	*Tofu, Soy Milk, Seed & Nut Milks*
Salted, Roasted Seeds & Nuts	*Raw Soaked Seeds & Nuts*
White Flour Pastries	*Whole Grain Baked Pastries*
Meat, Fish, Fowl, Eggs	*Seeds, Grains, Legumes, Nuts*
Common Salt, Pepper, Condiments	*Kelp, Dulce, Thyme, Parsley, Ginger*
Spices, Mustard, etc.	*Vegetable Seasoning, Tamari, Sea Salt*
Baking Powder	*Nutritional Yeast, Wheat Germ*
Pasteurized Cow's Milk & Cheeses	*Raw Cow's Milk, Yogurt & Goat Milk*
Food Thickening Agents (Eggs, Gelatin)	*Arrowroot, Agar, Seaweed*

Chapter 6

Transformations of the Five Elements and Yin/Yang Within

From the eternal Tao or creative force of the universe evolves Yin and Yang. The cycles of Yin and Yang produce the five elements of earth, which in turn produce all other physical phenomena: Wood, Fire, Earth, Metal (Air), and Water. The universe is the macrocosm of which humans are the microcosm and subject to the interplay of these five ancient forces. The five elements/transformations operate according to natural rhythms, i.e., seasonal changes, the moon's influence on agriculture and oceans, astrological changes, daily, monthly and yearly nutritional variations and variable psychological patterns.

The Theory of the Five Elements/Transformations is attributed to the Nei Ching, The Yellow Emperor's Classic of Internal Medicine, which dates back to the Chinese physician Chang Chuug-Ching in the second century A.D. Subsequent Chinese philosophers and physicians have since contributed material to the Nei Ching, which now contains twenty-four books.

Other groups of five elements include: The five Yin body organs, the five Yang organs, the five sense organs, the five tastes, the five planets, the five grains, the five directions, the five emotions etc.

Five Elements in Life

All biological forms are made up of these five elements, for life is a dynamic interplay of both heaven and earth Yin and Yang respectively. We may live a healthy and harmonious life by applying these universal principles to our everyday needs whether it be to overcome a disease, to use observational diagnostic procedures, to plant crops and to measure our everyday nutritional requirements.

Huang-Ti, the Yellow Emperor, is respectfully known as the father of Chinese Medicine. He is the author of the Huang-Ti-Nei-Ching Yellow Emperor's Classic of Internal Medicine written about 6,000 years ago.

Fig. 6.1. Huang-Ti, the Yellow Emperor

The Five Elements are not only expressed as physical reality fire, earth, metal (air), water and wood but are more intimately associated with the energy they express in their formation. These energy transformations are used in oriental diagnosis, massage, acupuncture, shiatsu, exercise therapy and dietary considerations.

Each of the Five Elements give birth to a corresponding food flavor; Wood creates the sour, Fire creates bitter, Earth creates sweet, Metal creates a hot (pungent) taste and Water creates a salty flavor. Each organ corresponds to one of the five different flavors and the body requires each of these flavors in a moderate amount daily. An excessive intake of one flavor will harm the associated organ and its corresponding one, i.e., an excessive intake of the sweet flavor injures the stomach/pancreas, the associated organs, and also harms the corresponding organ the Kidneys. The key is to balance the five flavors according to seasonal changes and inner biological needs on a day to day basis. If one consumes an excessive amount of salty foods, one will automatically desire or crave sweet foods to create a balance in the taste, which corresponds to an inner (organ) physiological need.

Fig. 6.2. Five Element Relationships

The Nei Ching explains the five elements in various relationships as follows:

Five Fluid Secretions as connected with the Viscera:

Perspiration is connected with the Heart.
Mucus is connected with the Lungs.
Tears are connected with the Liver.
Saliva is connected with the Spleen.
Spittle is connected with the Kidneys.

Five Climates as they affect the Viscera:

Heat injures the Heart.
Cold/Dry injures the Lungs.
Wind injures the Liver.
Humidity injures the Spleen.
Dryness/Cold injures the Kidneys.

Controls exerted by the Viscera:

Heart controls the ***Pulse***.
Lungs control the ***Skin***.
Liver controls the ***Muscles***.
Spleen controls the ***Flesh***.
Kidneys control the ***Bones***.

Effect of the Flavors upon the body:

Excess of ***Salty*** flavor hardens the Pulse.
Excess of ***Bitter*** flavor withers the Skin.
Excess of ***Pungent*** flavor knots the Muscles.
Excess of ***Sour*** flavor toughens the Flesh.
Excess of ***Sweet*** flavor causes aches in the Bones.

Five Spiritual Resources as Controlled by the Viscera:

Liver controls the ***Soul***.
Heart controls the ***Spirit***.
Spleen controls the ***Ideas***.
Lungs control the ***Animal Spirit***.
Kidneys controls the ***Will Power***.

Effects of the Five Flavors:

Pungent flavor has a dispersing effect required in ***Fall***.
Sour flavor has a gathering effect required in ***Spring***.
Sweet flavor has a retarding effect required at ***All Times***.
Bitter flavor has a strengthening effect, required in ***Summer***.
Salty flavor has a softening effect, required in ***Winter***.

Injuries caused by Season's Climate following Next Season:

Injuries caused by the ***Cold of Winter*** cause a recurrence of the ***Illness in Spring***.
Injuries caused by the ***Wind of Spring*** make people unable to ***Retain Food in Summer***.
Injuries caused by the ***Heat of Summer*** cause intermittent ***Fever in Fall***.
Injuries caused by ***Humidity of Fall*** cause ***Cough in Winter.***

Five Organs and Body Relationships:

Heart is connected with the ***Pulse*** and rules over the kidneys.
Lungs are connected with the ***Skin*** and rule over the heart.
Liver is connected with the ***Muscles*** and rules over the lungs.
Spleen is connected with the ***Flesh*** and rules over the lungs.
Kidneys are connected with the ***Bones*** and rule over the spleen.

Five Nourishing Organ and Body Relationships:

The liver nourishes the muscles; the muscles strengthen the heart; the liver governs the eyes.

The heart nourishes the blood and the blood strengthens the stomach; the heart rules over the tongue.

The stomach nourishes the flesh; the flesh strengthens the lungs; the stomach rules over the mouth.

The lungs nourish the skin and the hair; the skin and the hair strengthen the kidneys; the lungs govern the nose.

The kidneys nourish the bones and the marrow; the bones and the marrow strengthen the liver; the kidneys rule over the ears.

Five Moods in Relation to the Organs and Daily Time Cycles:

People troubled with liver disorders appear mentally alert during the morning hours, are active and bright toward sundown and of quiet mind at midnight.

People troubled with heart disorders are mentally alert at noontime, active and bright at midnight & quiet in the early morning.

People troubled with spleen disorders are mentally alert just after sundown active and bright at sunrise, and are quiet during the afternoon.

People troubled with lung/respiratory disorders are mentally alert just before sundown active and bright at noon, and are quiet at midnight.

People troubled with kidney disorders are mentally alert at midnight, active and bright during the last days of the four seasons, and are most quiet before sundown.

Five Element Creation Cycle:

Wood burns to create ***Fire***.
Fire leaves behind ashes and compose into ***Earth***.
Earth which are created and mined and become ***Metal***.
Metal which if heated and melted become molten like ***Water***.
Water produces & nourishes trees, plants & ***Wood***.

Five Element Destruction Cycle *(Subjugation)*:

Wood is cut and felled by ***Metal***.
Fire is extinguished by ***Water***.
Earth is penetrated by ***Wood***.
Metal is dissolved or melted by ***Fire***.
Water is halted, absorbed and obstructed by ***Earth***.

Five Emotional to Oragn Relationships:

Anger is injurious to Liver, but ***Grief*** counteracts Anger.
Extra Joy is injurious to Heart, but ***Fear*** counteracts Joy.
Extra Sympathy is injurious to Stomach, but ***Anger*** counteracts Sympathy.
Extreme Grief is injurious to Lungs, but ***Joy*** counteracts grief.
Extreme Fear is injurious to Kidneys, but ***Sympathy*** overcome fear.

Five Food Tastes and their Corresponding Organs:

Excessive Salt injures the heart, and the pulse hardens, tears make their appearance and the complexion changes.

Excessive Bitter injures the lungs, and the skin becomes withered and the body hair falls out.

Excessive Pungent food injures the liver, and the muscles become knotty and the finger and toe nails wither and decay.

Excessive Sour food injures the spleen and stomach, and the flesh hardens and wrinkles and the skin becomes slack.

Excessive Sweet food injures the kidneys, and the bones ache and the hair on the head fall out.

Fig. 6.3. This diagram shows the general position of the 5 major organs of the trunk, in relation to each other. The method by which veins and arteries maintain circulation of the blood is shown also.

	Metal	***Water***	***Wood***	***Fire***	***Earth***
Tissues:	*Skin*	*Bones*	*Nerves*	*Blood*	*Muscles*
Bodies:	*Emotional*	*Dream*	*Mental*	*Spiritual*	*hysical*
Mental:	*Sensitivity*	*Creativity*	*Thinking*	*Intuition*	*ontaneity*
	Non-Judgmental	*Concept*	*Planning*	*Communication*	*Judgment*
	Discrimination	*Will Power*	*Strategy*	*Consciousness*	*Cleverness*
Function:	*Detoxification*	*Creation*	*Elimination*	*Circulation*	*Digestion*
Kingdom:	*Jester*	*Queen*	*General*	*King*	*Prime Minster*

Solar Calendar (Western) 13 Weeks-Lunar Calendar (Chinese) 13 Months or 13 Cycles:
Sunday-Sun; Monday-Moon; Tuesday-Fire; Wednesday-Water; Thursday-Wood; Friday-Metal; Saturday- Earth.

Controlling Cycle (Ko Cycle):
Fire Forges Metal - Metal Cuts Wood - Wood Roots Earth - Earth Dams Water - Water Puts Out Fire
Wood Covers Earth - Fire Melts Metal - Earth Contain Water - Metal Cuts Wood - Water Puts Out Fire.

Emotions: Anger Injures Liver - Sadness Controls Anger - Excess Joy Hurts Heart - Fear Controls Joy - Sadness Affects Lungs - Joy Controls Sadness - Fear Injures Kidneys - Thinking Controls Fear.

Way of Yin and Yang

Nei Ching says:
The sages did not overexert their bodies at physical labour and they did not overexert their minds by strenuous meditation. They were not concerned about anything, they regarded inner happiness and peace as fundamental, and contentment as highest acheivement. Their bodies could never be harmed and their mental faculties never be dissipated. Thus, they could reach the age of one hundred years or more.

Those who rebel against the basic rules of the universe sever their own roots and ruin their true selves. Yin and Yang, the two principles in nature, and the four seasons are the beginning and the end of everything and they are also the cause of life and death. Those who disobey the laws of the universe will give rise to calamities and visitations, while those who follow the laws of the universe remain free from dangerous illness, for they are the ones who have obtained the Tao, the Right Way.

Tao was practiced by the sages and admired by the ignorant people. Obedience to the laws of Yin and Yang means life; disobedience means death. The obedient ones will rule while the rebels will be in disorder and confusion. Anything contrary to harmony (with nature) is disobedience and means rebellion to nature.

Hence, the sages did not treat those who were already ill; they instructed those who were not yet ill. They did not want to rule those who were already rebellious; they guided those who were not yet rebellious. This is the meaning of the entire preceding discussion. To administer medicines to diseases which have already developed is comparable to the behavior of those persons who begin to dig a well after they have become thirsty, and of those who begin to cast weapons after they have already engaged in battle.

No matter whether people are rebellious or obedient, there is method and regularity in the workings of the four seasons and Yin and Yang. Everything is subject to their invariable rules and regulations, which govern the relationship between external and internal influences.

Wisdom increases Longevity

Nei Ching continues:

Those who have the true wisdon remain strong while those who have no knowledge and wisdom grow old and feeble. Therefore the people should share this wisdom and their names will become famous. Those who are wise inquire and search together, while those who are ignorant and stupid inquire and search apart from each other. Those who are stupid and ignorant do not exert themselves enough in the search for the Right Way, while those who are wise search beyond the natural limits.

Those who search beyond the natural limits will retain good hearing and clear vision, their bodies will remain light and strong, and although they grow old in what the mind can conceive and years they will remain able bodied and flourishing; and those who are able bodied can govern to great advantage. In their pleasures and joys they (sages) were dignified and tranquil. They followed their own desires and they never directed their will and ambition toward the protection of a purpose that was empty of meaning. Thus their allotted span of life was without limit, like Heaven and Earth.

Yang, the lucid element, ascends to heaven. Yin, the turbid element, returns to earth hence the universe (Heaven and Earth) represents motion and rest, controlled by the wisdom of nature (the Tao). Nature grants the power to beget and to grow, to harvest and to store, to finish and to begin anew. The Humankind of Virtues matched heaven when they cultivated their minds; they resembled the earth when they provided sufficient nourishment; and they were by the side of the people in the care of the five viscera.

The heavenly climate circulates within the lungs; the climate of the earth circulates within the throat; the wind circulates within the liver, thunder penetrates the heart; the air of a ravine penetrates the stomach; and the rain penetrates the kidneys. The six arteries generate streams; the bowels and the stomach generate the oceans; the nine orifices generate flowing water; and heaven and earth generate Yin and Yang (the two opposing principles).

The laws of nature are just, but terrible. There is no weak mercy in them. Cause and consequence are inseparable and inevitable. The elements have no forbearance. The fire burns, the water drowns, the air consumes, the earth buries. And perhaps it would be well for any race if the punishment of crimes against the laws of humans were as inevitable as the punishment of crimes against the laws of nature, were humankind as unerring in thier judgements as nature.

Fig. 6.4. What the mind can conceive and believe, the mind can achieve is inherited in the wisdom of the Tao.

Transformations of the Five Elements

	More Yang	Less Yang	Center Yin/Yang	Less Yin	More Yin
Five Elements:	Wood	Fire	Earth	Air	Water
Yang Organs:	Liver	Heart	Spleen/Pancreas	Lungs	Kidneys
Yin Organs:	Gall Bladder	S.Intestines	Stomach	L.Intestine	Bladder
Inner Anatomy:	Muscles	Blood Vessels	Flesh	Skin	Bones
Outer Anatomy:	Nails	Complexion	Breast/Lips	Hair/ Breath	Head Hair
Sense Organ:	Eyes	Tongue	Mouth	Nose	Ears
5 Senses:	Sight	Speech	Taste	Smell	Hearing
Body Fluids:	Tears	Sweat	Saliva	Mucous	Urine
Direction:	East	South	Center/Earth	West	North
Climate:	Windy	Hot	Humid	Dry	Cold
Seasons:	Spring	Summer	Late Summer	Autumn	Winter
5 Sounds:	Shouting	Laughing	Singing	Weeping	Groaning
5 Emotions:	Anger	Joy	Worry	Depression	Fear
Body Changes:	Control	Anxious	Sobbing/Belch	Coughing	Trembling
Creation:	Inspiration	Aspiration	Intellect	Dominance	Will
5 Functions:	Color	Odor	Taste	Voice	Fluid
Skin Color:	Blue/Grey	Red	Yellow/ Milky	Pale	Black/Dark
Daily Periods:	Morning	Noon	Afternoon	Evening	Night
Weather:	Crisp/Dry	Fog/Mist	Mellow	Snow	Ice/Frost
Planet:	Jupiter	Mars	Earth/ Saturn	Venus	Mercury
Monthly Cycle:	(+)Half-Moon	Full Moon	Hidden Moon	(-)Half-Moon	New Moon
Number:	8	7	5	9	6
Color:	Green	Red	Yellow	White	Black
Controler:	Spiritual	Soul	Mind	Ambition	Body Strength
Energy:	Upward	Active	Downward	Solidified	Floating
Examples:	Gas	Plasma	Condensation	Solid	Liquid
	Tree	Heat	Soil	Metal	Water
5 Tastes:	Sour	Bitter	Sweet	Pungent	Salty
Grains:	Wheat	Red Millet	Yellow Millet	Rice	Legumes
Fruits:	Apple/Plum	Berries	Dates/Olives	Melon	Citrus
Vegetables:	Leeks	Shallots	Mallow	Onions	Greens
Foods to Avoid:	Rancid, Oily	Burnt	Fragrant	Rotten	Putrid
Disease Areas:	Nerves	Viscera	Tongue	Upper Back	Cavities
Modalities:	Prayer	Healthy Habits	Herbals	Acupuncture	Heat Therapy

Fig. 6.5. Classification of the Five Elements and Transformations

Liver & Gall Bladder Conditions

General Toxicity Signs of Malfunctioning Yin or Yang Liver and Gall Bladder

Blockage of the Tear Ducts or Excessive Tears	Shouting and Anger
Soft Ridged Nails	Weak Knees and Muscles
Poor Vision and Light Sensitivity	Fuzzy Thinking
Bloodshot Eyes	Liver Pain (Under Right Rib Cage)

Symptoms of Yang (Contracted) Liver and Gall Bladder

Dizziness	Incomnia
Headaches	Nosebleed
Red Eyes	Cataracts
Aversion to Heat	Irritability
Impaired Hearing	Farsightedness

Symptoms of Yin (Expanded) Liver and Gall Bladder

Nausea
Poor appetite
Depression
Apprehension
Nearsightedness

Foods Discharge Toxins from Liver and Gall Bladder

Radishes
Potatoes
Lettuce
Mushrooms

Eaten Moderately Sour Foods Strengthen Liver and Gall Bladder

Grains	*Fruits*	*Vegetables*	
Wheat	Plums	Beets	Cabbage
Rye	Berries	Artichoke	Watercress
	Cherries	Celery	Burdock
	Apples	Leeks	Parsley

Liver and Gall Bladder are Weakened by an Excess of:

Fats, Butter, Dairy	Sweets	All Rancid Fats & Oils	Alcohol
Eggs and Vinegar	Outdoor Wind	All Drugs	Cold Drinks/Foods
Nuts & Nut Butters	Overeating	All Chemicals	

These Herbs in Small Amounts Discharge Toxins from Liver/Gall Bladder

Burdock	Golden Seal
Dandelion	Raspberry Leaf
Holy thistle	

These Yin Herbs Balance Yang Symptoms of Liver/Gall Bladder

Sage	Wild Yam
Chaparral	Oregon Grape
Echinacea Root	

Yin Herbs Balance Yang Symptoms of Liver/Gall Bladder

Watercress	Nettle	Licorice
Garlic	Slippery Elm	Marshmallow

Mental Healthy Signs of Liver/Gall Bladder

Good Decisions and Ability to Make Plans
Confidence to achieve Success
Agreeable Personality and Disposition

1. *Excessive sour food injures the spleen and stomach, toughens and wrinkles the flesh, and the skin and lips become slack, and is balanced by a moderate amount of pungent food.*
2. *Excessive and/or lack of sour food injures the Liver and Gall Bladder.*
3. *Eat more steamed food during Spring to Strengthen Liver & Gall Bladder.*
4. *Anger is injurious to the Liver and Gall Bladder.*
5. *Excessive Running or Walking injures the Liver and Gall Bladder.*
6. *Excessive blowing wind injures the Liver and Gall Bladder.*
7. *A malfunctioning Liver and Gall Bladder causes Anger and Irritability.*
8. *A healthy Liver and Gall Bladder instills Peacefulness and Calmness.*

Fig. 6.6. Balancing Body Organs: Liver & Gall Bladder Conditions

Heart & Small Intestines Conditions

General Toxicity Signs of Malfunctioning Yin or Yang Heart & Small Intestines

Swollen Nose and Hands
Cleft in Nose
Excessive Joy
Excessive Sweating or not at all
Excessive Laughing
Emotional Ups and Downs

Symptoms of Yang (Contracted) Heart and Small Intestines

Chest Constriction
Excess Perspiration
Dizziness
Stroke
Dry Palate
Back Pain
Laughing Fits
Little Talk

Symptoms of Yin (Expanded) Heart and Small Intestines

Shortness of Breath
Rambling Talk
Sorrowful and Listless
Sciatic and Lumbar Pains
Facial Pallor

Foods Discharge Toxins from Heart and Small Intestines

White Beans
Vegetables Oils
Seaweed
Beans

Eaten Moderately Sour Foods Strengthen Heart and Small Intestines

Grains	*Fruits*	*Vegetables*	
Red Millet	Apricots	White Beans	Pumpkin
Corn	Strawberries	Oils	Chickpea
Nuts	Cherries	Seaweed	Scallion
Almonds		Garlic	Burdock
		All Greens	

Heart and Small Intestines are Weakened by an Excess of:

Overdressing (Hot Clothing)
Burnt Food
Hot Drinks and Food
Excess Salt & Spice

These Herbs in Small Amounts Discharge Toxins from Heart/Small Intestines

Mint
Cayenne
Motherwort
Bayberry

These Yin Herbs Balance Yang Symptoms of Heart/Small Intestines

Black Cohosh
Caraway Seed

Yin Herbs Balance Yang Symptoms of Heart/Small Intestines

Borage
Gensing
Hawthorne Berry
Comfrey Root

Mental Healthy Signs of Heart/Small Intestines

Honesty and Integrity
Optimistic Personality
Poised in Mind and Body
Extends Love to Humanity and own Family

1. *Excessive Bitter Food injures the lungs, whithers the skin, body hair falls out, stomach becomes congested, and is balanced by a moderate amount of Salty food.*
2. *Excessive and/or lack of Bitter foods injure the Heart and Small Intestines.*
3. *Eat more Raw food during Summer to Strengthen Heart & Small Intestines.*
4. *Excessive Joy and Excitement are injurious to the Heart & Small Intestines.*
5. *Excessive eye focusing, reading and close work weaken Heart & Eyesight.*
6. *Excessive Heat injures the Heart and Small intestines.*
7. *A malfunctioning Heart and Small Intestine causes Hysteria.*
8. *A healthy Heart and Small Intestine instills Happiness.*

Fig. 6.7. Balancing Body Organs: Heart & Small Intestines Conditions

Stomach, Spleen & Pancreas Conditions

General Toxicity Signs of Malfunctioning Yin or Yang Stomach, Spleen & Pancreas

Ulcers	Vomiting	Fatigue	Obsession
Drolling	Heavy Limbs	Abdominal Pains	Overweight
Lack of Taste	Low Energy	Mental Depression	Intestinal Problems
Excess or Diminished Salavia		A Sing-Song Voice	Excessive Worry

Symptoms of Yang (Contracted) Stomach, Spleen and Pancreas

Watery Stools	Constipation
Light Headedness	Quarrelsome Moods
Flatulent Stomach	Sweet/Greasy Mouth Taste

Symptoms of Yin (Expanded) Stomach, Spleen and Pancreas

Indigestion	Diarrhea
Heaviness	Gastric Cramps
Emaciation	Nausea

Foods Discharge Toxins from Stomach, Spleen and Pancreas

Dark Greens
Herb Spices

Eaten Moderately Sour Foods Strengthen Stomach, Spleen and Pancreas

Grains	*Fruits*	*Vegetables*	
Yellow Millet	Dates	Squash	Dark Greens
	Olives	Parsnips	

Stomach, Spleen and Pancreas are Weakened by an Excess of:

Hot Food	Excessive Sweets	Lack of Mastication
Damp Clothing	Eating too Fast-Overeating	Damp Ground

These Herbs in Small Amounts Discharge Toxins from Stomach, Spleen/Pancreas

Ginger	Gential	Vervain
Golden Seal	Juniperberry	

These Yin Herbs Balance Yang Symptoms of Stomach, Spleen/Pancreas

Lobelia	Basil
Fennel	Catnip

Yin Herbs Balance Yang Symptoms of Stomach, Spleen/Pancreas

Ginseng	Fennel
Orange Peel	Licorice

Mental Healthy Signs of Stomach, Spleen/Pancreas

Constructive Thinking and Action
Calm Disposition and Satisfaction
Sound Ideas and an Excellent Memory
Sympathetic Nature and a Balanced Critical Faculty

1. *Excessive sweet food injures the kidneys, causes hair loss, aching bones, and is balanced by a moderate amount of Sour food.*
2. *Excessive and/or lack of sweet food injures the Stomach, Spleen/Pancreas.*
3. *Eat more Stewed food during late summer to strengthen the Stomach, Spleen and Pancreas.*
4. *Extreme Sympathy, Moodiness and Worry is injurious to the Stomach, Spleen and Pancreas.*
5. *Prolonged Sitting weakens the Stomach, Spleen/Pancreas.*
6. *Excessive humidity (moisture) injures the Stomach, Spleen/Pancreas.*
7. *A malfunctioning Stomach, Spleen/Pancreas causes suspicion & mistrust.*
8. *A healthy Stomach, Spleen and Pancreas instills Trust.*

Fig. 6.8. Balancing Body Organs: Stomach, Spleen & Pancreas Conditions

Lungs & Large Intestines Conditions

General Toxicity Signs of Malfunctioning Yin or Yang Lungs & Large Intestines

Whimpering and Sorrow
Hemorrhoids
Sinus and Mucous Problems
Chest Congestion
Anguish and Helplessness
Bowel Difficulties

Symptoms of Yang (Contracted) Lungs and Large Intestines

Rapid and Deep Breath
Carcked Lips
Non-Productive Cough
Dry Rough Skin
Chest Pain

Symptoms of Yin (Expanded) Lungs and Large Intestines

Shallow Respiration
Shortness of Breath
Cold Hands and Feet
Never Thirsty
Drowsiness
Emaciation
Cramps
Loose Stools

Foods Discharge Toxins from Lungs Large Intestines

Green Peas
Cider Vinegar
Lemon
Tomato
Radish

Eaten Moderately Sour Foods Strengthen Lungs and Large Intestines

Grains	*Fruits*	*Vegetables*	
Rice	Peaches	Onion	Radish
Oats	Lemon	Comfrey	Cider Vinegar
Barley	Melons	Garlic	Hot Pepper
	Tomato	Green Pea	

Lungs and Large Intestines are Weakened by an Excess of:

Excess Fats
Excess Dairy
All Cold Foods
Under-Dressing in Cold Weather
All Cold Drinks
Excess Oils

These Herbs in Small Amounts Discharge Toxins from Lungs/Large Intestines

Horehound
Golden Seal
Wild Cherry Bark
Slippery Elm
Elecampagne

These Yin Herbs Balance Yang Symptoms of Lungs/Large Intestines

Pleurisy Root
Coltsfoot
Myrrh
Eucalyptus
Lobelia
Mullein
Garlic
Ginger

Yin Herbs Balance Yang Symptoms of Lungs/Large Intestines

Comfrey
Yarrow
Ohsa Root
Cayenne

Mental Healthy Signs of Lungs/Large Intestines

Physical Strength and Endurance
Good Mind and Body Rhythm
Harmonious Personality and Intuition
Buoyant Health and Vitality

1. *Excessive Pungent foods injure the liver, knot the muscles, slow the pulse and injure the spirit, and are balanced by a moderate amount of Bitter food.*
2. *Excessive and/or lack of Pungent food injures the Lungs/Large Intestines.*
3. *Eat more Baked foods during the Fall season to Strengthen the Lungs And Large Intestines.*
4. *Extreme Grief is injurious to the Lungs and Large Intestines.*
5. *Excessive lying down or sleeping weakens the Lungs/Large Intestines.*
6. *Excessive Dryness (Extreme Low Humidity) injures Lungs/Large Intestines.*
7. *Malfunctioning Lungs and Large Intestines causes Depression.*
8. *Healthy Lungs and Large Intestines instill Positiveness and Confidence.*

Fig. 6.9. Balancing Body Organs: Lungs & Large Intestines Conditions

Kidneys & Bladder Conditions

General Toxicity Signs of Malfunctioning Yin or Yang Kidneys & Bladder

Frequent Urination	Scant Urination	Poor Hearing	Moaning Sound
Hair Loss	Dandruff	Weak Ankles	Sex Problems
Arthritis	Painful Joints	Backache	General Fatigue

Symptoms of Yang (Contracted) Kidneys & Bladder

Dry Mouth	Nymphomania
Excess Mucous	Painful Swelling
Fevers	Cold Diseases
Restlessness	Perspiration after Eating

Symptoms of Yin (Expanded) Kidneys & Bladder

Soft Speech	Fatigue
Poor Memory	Weak Joints
Impotence	Chills/Coldness
Headaches	Swollen Legs
Ulcers	Indecisiveness

Foods Discharge Toxins from Kidneys & Bladder

Aduki Beans
Black Beans
Cider Vinegar
Oils (Vegetable)
Cirtus Fruit

Eaten Moderately Sour Foods Strengthen Kidneys & Bladder

Grains	*Fruits*	*Vegetables*	
Buckwheat	Grapes	Green Vegetables	Beans
	Grapefruit	Aduki Beans	Parsley
	Oranges	Black Beans	Seaweed
		Cauliflower	Cabbage
		Sea Salt	Miso

Kidneys & Bladder are Weakened by an Excess of:

Scalding Hot Food	Scalding Hot Drinks	Excess Protein and Vinegar
Excess Sweets/Liquid	Drugs/Chemicals Alcohol	Hot Clothing (Over-Dressing)

These Herbs in Small Amounts Discharge Toxins from Kidneys & Bladder

Raspberry Leaf	Cleavers	Nettles
Plantain Leaf	Saw Palmetto	Berries

These Yin Herbs Balance Yang Symptoms of Kidneys & Bladder

Juniper Berry	Gravel Root
Parsley Leaf	Myrrh
Asparagus Root	Dandelion

Yin Herbs Balance Yang Symptoms of Kidneys & Bladder

Oat Straw	Horsetail
Marshmallow Root	

Mental Healthy Signs of Kidneys & Bladder

Excellent Concentration
Clear Beautiful Voice
Tenacious Will Power
Strong Sex Glands and Personal Magnetism

1. *Excessive Salty food injures the heart, causes high blood pressure, hardened pulse, and weak bones and is balanced by a moderate amount of Sweet food.*
2. *Excessive and/or lack of Salty food injures the Kidneys and Bladder.*
3. *Eat more Sauted Food during Winter to Strengthen the Kidneys/Bladder.*
4. *Extreme Fear and Moaning is injurious to the Kidneys and Bladder,*
5. *Prolonged Standing is harmful to the Kidneys and Bladder.*
6. *Excessive Cold Temperature injures the Kidneys and Bladder.*
7. *Malfunctioning Kidneys and Bladder cause Fear and Depression.*
8. *Healthy Kidneys and Bladder instill Courage and Fortitude.*

Fig. 6.10. Balancing Body Organs: Kidneys & Bladder Conditions

Using Herbs according to Five Elements

1. Use only the specific herb designated for a particular symptom or condition as explained in the Five Elements. Herbs should not be used indiscriminately without regard for their Yin or Yang qualities as is commonly practiced by most American herbalists. The Chinese Yin/Yang herbal system is far more accurate and scientific in their diagnosis, treatment and use of herbs.
2. Herbal teas are best utilized and assimilated on an empty stomach, in the morning, or before a meal. However, a small amount of tea may be used after a meal to help to assimilate fat eaten in the meal and aid digestion; no more than 2 to 4 ounces may be taken after meals, sipped slowly.
3. Herbal teas should be limited to one or two cups per day. An excess of an herb tea can cause a reverse condition or symptom in the body. The Chinese herbalists teach that what an herb can cure, it can cause the very same condition or problem, if it is taken in excess or the cause of the disorder is not stopped. For example, if one attempts to correct or balance Yang (contracted) constipation with a Yin herb, such as senna leaf tea, without removing the initial cause (overeating, white flour, salt, meat, dairy products etc.), the tea will help for a few days or weeks, temporarily, and the constipation will still remain a problem. If larger doses of senna leaf tea are taken to correct constipation, it will help for only short period of time, however, it will compound the problem by further weakening the intestines. The continuous use of laxatives, such as Senna leaf, in large doses, poisons and irritates the system. The body cures or heals itself; herbs are used only for remedial measures and to balance the organs and blood, provided the causes of the disorder are discontinued, and proper health and living habits are adopted. Herbs do not cure, they balance.

Another example: If one suffers from frequent or excessive urination, a Yin (expanded Kidney/Bladder) condition caused by an excessive consumption of liquids, fruits, juices, tropical fruits, melons, sugar etc. one or two cups per day of corn silk tea will help to constrict and strengthen the kidneys and bladder, and eventually correct the Yin condition, provided the above mentioned causes of the disorder are removed. Many herbalists today, recommend drinking large quantities of water, and using Yin herbs, i.e., parsley and Yin foods, i.e., cucumber and watermelon for kidney and bladder problems, without regard to whether the disorder is a Yin or Yang condition. If (Yin) parsley and Yin foods are used

for Yin (expanded) kidneys and bladder, it will further weaken and expand them. Most herbs and herb teas should be used only to balance diseased conditions or symptoms. Discontinue their use after the health problem is overcome. Some herbs, such as alfalfa, dandelion, bancha, cinnamon, chicory, grain beverages, etc., can be consumed in small amounts (1 or 2 cups) daily for better health and enjoyment. Moderation in foods as well as herbs is the key to superior health.

4. Herbal teas should be used for short periods of time only (2 to 4 months); discontinue their use, or change to different herbs for your condition. Herbs are strong agents, and should not be used for too long a time, as the body will not respond or heal as quickly if used continually.

5. Yin herbal teas are used for Yang conditions and ailments, i.e., heavy meat, egg and salt consumers. Yang herbal teas are used for Yin condition, such as those who have been on a strict (Yin) raw food or fruitarian diet, or those eating excessively of fats and sugars, such as ice cream, cheese, sweets, donuts, soft drinks, etc.

6. Body Organs for the correct herbs used in balancing Yin or Yang diseased symptoms and for discharging toxins from the system. Use one or two herbs from the discharge toxins category; and one or two herbs from either the Yin or Yang category necessary for your specific symptoms or condition.

7. For specific disease conditions, herbs always remedy, correct and balance the system with optimum results when the cause or causes of disease (improper food, overeating, poor health habits, etc.) are eliminated and rational, healthful living and eating habits are adopted.

There is a delicious herb tea recipe is called Dr. Chang's Long Life Tea. It contains the following ingredients: Peppermint, Honeysuckle, Licorice, Ginseng, Cinnamon, Poria & Chrysanthemum.

Dr. Chang is trained in both Chinese and Western medicine, herbology, and acupuncture. He says this about herbs: "Herbs, like the regular foods, work by adjusting the flow of vital energy in the entire body of the human being. This is accomplished by increasing the energy where it is too low and lessening the energy where it is too high. When herbs are assimilated by the body their vitality is absorbed too. The herb's vitality passes through the pathways of energy (meridians) to reach the internal organs and to

support and adjust them to their optimal functioning. The most useful purpose of herbs is the prevention of illness, rejuvenation and longevity. Everyone, whether sick or healthy, can benefit from herbs. A complete diet should include both regular foods and herbs. No one can obtain perfect health unless he has a complete diet program. Anyone who stops learning is older whether this happens at 20 or 80. Anyone who keeps on learning not only remains young but becomes constantly more valuable, regardless of physical capacity.

Diet and Longevity Secrets

The food question is infinitely the most important problem of the present day, and if properly dealt with must result in the disappearance of the vast bulk of disease, misery and death. Dr. Harvey W. Wiley, who was responsible for our pure food laws, joins Sir Arburhnot Lane, in saying that: "I believe I would not be far out of the way if I should say diet may be said to be a factor in every disease to which man is heir."

Natural Science teaches us that we must eat for replenishment, drink for replenishment and breathe for replenishment. Nutritional replenishment means that we must put back into our body and blood what has been used up in the process of living. The ultimate purpose of blood circulation is to feed the hungry cells of your body, and this is accomplished by vitalizing and building a rich red blood stream through a balanced program of natural foods. This is the great Law of Life.

Hidden Hunger

Inadequate and incomplete nutrition along with poor food assimilation and lack of intestinal and muscular tone are some of the major initial causes why many individuals experience hidden hunger pangs or abnormal cravings, which compels them to constantly consume junk food. A well-balanced nutrition, exercise, fitness, and antistress program can help alleviate the problem in a short time. Natural whole food supplies in easily available form valuable elements that the human body is composed of, namely: vitamins, minerals, trace elements, enzymes, proteins, carbohydrates and fatty acids. The presence of these life sustaining components in their proper balance determines our state of health, vitality, and

length of life. When any one of these natural elements become depleted or reduced below the body's requirements, that instant, health and vitality begin to diminish, and will continue to do so until disease appears. If the body's requirements are adequately met in every department, health will be the natural outcome.

Nutritional Power

Health minded individuals are becoming more concerned with nutrition power. Through the power of nutrition, the food we consume daily, we become physically and mentally what we are now and in the future. Food can build us into dynamos of health, strength and power or break us down into sick, weak and powerless individuals. The quality and not the quantity of foods is the determining factor in our overall health and well-being.

If civilized peoples do not use natural foods, if their food is changed from the condition in which nature supplies it, we have located at least one civilized habit that must tend towards body degeneration, organic strain and illness. Every human being knows that a building cannot be any more perfect than the materials used in its construction. Foods, just as they come from nature's hand, are capable of building perfect human bodies.

Confusion about Nutrition and Health

What is a proper diet of man? Is there one good diet that is good for everyone, everywhere, and will end all argument on what one should eat? One authority says to eat only fruits, nuts and vegetables; another says, eat only rice and no fruits. Still another advocates eating only fruit. One recommends a high protein diet, low fat diet. Some say to eat everything, because man is an omnivore. There are diets from each nation around the world, and we can take our pick. One author is against eating breakfast, another says to eat a big breakfast. One says to fast one day a week and another advises to fast 40 days at a time.

Here are a few national diets advocated by various authorities in the West:

Low Cholesterol	High Fiber Diet	Policeman's Diet
Weight Watcher's Diet	Air Force Diet	Mucousless Diet
Orange Diet	Grapefruit Diet	Grape Diet
High Carbo Diet	Low Carbo Diet	High Protein Diet
Low Protein Diet	Save Your Life Diet	Working Man's Diet
Drinking Man's Diet	Rockerfeller Diet	Mayo Diet
Eat All You Want Diet	No-Risk Diet	Diet Revolution
Inches-Off Diet	Milk Diet	Bran Diet
Fruitarian Diet	Breatharian Diet	Rice Diet

Some of these diets can be used for a limited period of time without harm in certain conditions, for instance, weight loss, lowering cholesterol, or for cleansing purposes, such as recommended in this book. However, there are no health or longevity advantages of living on any exclusive or extreme dietary fad or program beyond a few days or weeks. Superior health can only result from a balanced dietary program and proper living habits.

Is the meat diet the answer? What about the all fruit diet? And the grain only diet? Should I use food supplements? One groups says that honey, onions, garlic and grains are taboo. We have personally experimented with many of these diets, including the rice diet, high protein diet, fruitarian diet, vegetable, the cooked diet, the raw diet, the juice diet, the water diet, and yes, even the breatharian diet of only pure air. What is humans most optimum diet? What diet plan will impart superior nutrition and good health? As can be seen by the above diet statements and lists, confusion and contradiction is rampant in the health and nutrition field.

One thing is certain: Positive results in health and nutrition are of prime importance; not theory or speculation that look impressive on paper, but fail to produce healthy specimens in real life. In order to arrive at a logical and truthful conclusion, we must seek all the facts clinical and empirical that produce actual physical results, and not mere opinions and theories that do not produce positive, healthful results.

We must all learn to remain open minded in all of our research and study, investigating all sides of the issue before reaching answers or conclusions. The mind is like a parachute; it only functions when open. No one religion or philosophy has all the answers, but we can learn from them all. Unfortunately, all too often,

we allow our own subjective ego's to obstruct our thinking and reasoning processes. Being human, we tend to hold on to our pet theories and opinions on health, diet and life, not opening our minds to a higher truth or superior method. When individual consciousness learns how to flow with the universal consciousness or natural law, one may easily discern the proper and true nature of health and life.

The ancient sage Buddha, during his earlier life, attempted to subsist on almost nothing, while fasting and praying in the mountains. One day he became enlightened, fled the mountains, and proclaimed to the masses, that fleeing society and depriving oneself of food and other necessities was not the answer to reach heaven or God. He revealed the answer to health, happiness and long life with one word: Moderation. Moderation in all the good and beneficial things of life. Moderation in diet, exercise, working, playing, sleeping, etc., is the answer to living a well-balanced and healthy life. Always keep this important point in mind when studying and practicing health and nutrition. To preserve health is a moral and religious duty, for health is the basis of all social virtues. We can no longer be useful when not well.

Fig. 6.11. Bodhidharma, the Ting Yun-peng, who came from India to China preaching a kind of Buddhism which ultimately evolved into Ch'an or Zen Buddhism. Courtesy of Field Museum of Natural History, Chicago.

We are What We Eat

Improper or one sided nutriton can cause serious metabolic and chemical disorders that can take years to correct. For example, a heavy meat and protein diet is the cause of many diseases such as, kidney (contracted), arthritis, gout, premature aging and cancer tumors. Meat protein is extremely high in phosphorus, which can cause high calcium loss and bone cancer; it is deficient in almost all vitamins, minerals, enzymes and base elements. Meat can impart strength and power (Yang) for a short time, but it is not conducive to a healthy long life. Exclusive meat diets are extremely Yang and acid, resulting in very aggressive, hot-tempered, over-sexed and dictatorial characters. Grains, legumes, vegetables, seeds and fruit are superior sources of protein and biologically and more healthfully superior to meat protein. The exclusive cooked grain, legume and vegetable diet lacks the elements of raw food and potassium the beauty mineral. This diet usually leads to extreme underweight conditions or emaciation. Mentally, this diet produces Yang temperaments and organic contraction; fevers; sometimes uncompromising and arrogant. This diet lacks in sufficient raw fruits and vegetables, especially during summer weather; too much cooked food in hot weather; may lack sufficient protein and alkaline vitamins and minerals.

The Fruitarian Diet (watery fruit) is extremism on the alkaline side (yin) and will result in low blood pressure, poor circulation, cold feet and hands, anemia and nervousness. This last symptom is caused by a lack of sufficient proteins and grains which builds powerful nerve force in the body. Blood is not built by fruit alone, but by a combination of alkaline and acid food together. Mentally, the alkaline fruitarians tend to be over-critical. They whine and complain continually, feeling that no one is as moral or as perfect as themselves. They withdraw from society thinking that everyone else is headed for destruction.

The authors writing on fruitarianism, juicearianism, breatharianism and mucuslessarianism have not been able to live up to their own teachings. They live on the diet for a time, but nature always pulls them back to eat the heavier type of acid foods, i.e., protein, and carbohydrates. The reasoning is, that on some future day, when they have cleaned out every speck of mucus from the body, they will be ready to live on air. If Breatharianism were possible, it could be done only through divine intervention

(grace) through Taoist practices, and not by consciously going to the extreme in any phase of life and living. There is an underlying truth to the vast sub-ject of health, diet and nutrition that must be considered before advocating a specific nutrition plan for anyone. Natural Law settles and answers the question as to what each of us shall eat in the following section. There is a natural affinity between natural foods and the human body. They share the earth as source, and the body so fed holds energies to be found in no other way. We call it health.

Locally Grown Foods for Optimum Health

Nature decides what foods we are to eat; and that decision is made according to the zone or region in which we live. In the cold frigid regions of the far north, fuel foods are required. Fruits, seeds and grains are very scarce in that region. The cold (Yin) temperatures require heavier and more Yang/Acid foods, such as cooked grains, legumes, miso, soups, stews etc. Generally, those living in a cold climate may consume a higher percentage of natural cooked starches and proteins and a small or moderate amount of raw foods and natural fats. On the other hand, as we travel south to the tropics, we need less fuel foods and more fresh fruits, vegetables and nuts. A high meat and fat diet, eaten in the south, would result in rapid decay and death. Hot weather is Yang and requires some summer grains and raw fruits and vegetables. A Yin fruit and vegetable diet in Alaska would cause a rapid loss of weight, extreme coldness to the bones and ultimate sickness.

The temperate zone produces a person with a well balanced spiritual, mental and physical nature. Here is where we find the greatest inventors and scientific advancement. Nature provides the greatest variety of foods in this region. While the south grows mostly Yin foods and citrus fruits, the temperate zone produces fruits and vegetables tending toward the Yang elements, for example, apples, peaches, beets and cherries. These Yang foods are higher in sodium, which is necessary for the temperate region. Tropical foods predominate in the element potassium, which is required to cool the body in the hot Yang climate.

There is little use in theorizing on the question of what we should eat. Nature simplifies the matter. For optimum health, consume foods grown within a 300 mile radius of where you live. Avoid foods shipped in from across the country or other countries. The red

pepper, (cayenne), which grows so profusely in southern latitudes, is strongly magnetic (Yin), and the lemons, limes, oranges and tropical fruits abound in citric acid, which are assimilated and utilized easily by southern inhabitants. In the temperate region, the woods are overflowing with luscious ripe red berries, seeds and nuts, cucumbers, and nature has produced just the right kind of food that the humans and animals inhabiting that region require. Refer to the chapter on Yin & Yang balance for proper selection of foods.

Those living in a temperate climate, with a change of seasons winter, spring, summer and fall and the weather changing from hot to cold throughout the year, the diet must be adjusted to meet the environmental conditions to maintain nutritional balance and optimum health.

For instance, during the northern winters of the temperate zone, you will require more Yang and heavier foods such as, grains, wheat and rye bread, beans, peas, steamed vegetables and apples. Temperate summers require more cooling foods as found in this zone such as, cherries, peaches, plums, grapes, berries, melons, etc. The spring and fall diets will vary between the winter and summer ones. This is where one must become the final judge in the choice of foods they eat. Listen to the inner voice or feelings as to what the body requires of certain foods on any given day. Age, physical activity and stress conditions must also be considered as variables in an optimum selection of natural foods.

An occasional orange, pineapple juice or other tropical fruit eaten in the northern zones will do you no harm. Be moderate and use supreme judgment. Do not become a food fanatic or diet crank. Acid and Yang meat eaters can benefit more by eating some vegetable and fruit foods to balance their Yang characters. Vegetarians, who are mostly Yin and alkaline, would do better to eat more of the Yang natural foods, such as seeds, peas, grains, beans, miso, cooked vegetables, etc.

Longevity Secrets of Centenarians

The longest lived and healthiest people in the world live chiefly on the natural whole foods grown in their own region and climate. For example, the Bulgarian diet consists largely of whole rye and barley bread, sunflower seeds, vegetable soups; fermented foods

such as, yogurt, sauerkraut, sourdough bread, soured milk, etc. They seldom eat meat. They consume goat or sheep milk and fresh raw honey. Bulgarians are mostly lacto-vegetarians. The Bulgarians boast of about 1,500 centenarians per million population, as contrasted to 100 or less persons over the century mark per million in the United States.

The Himalayan Hunzas consume a similar diet, with the addition of apricots, millet, buckwheat, mulberries, buttermilk, soups, fruits and vegetables. They work outside most of the day, getting sufficient exercise and oxygen to digest their food properly. They drink the highly mineralized water coming down from the majestic glaciers. They maintain a positive, happy attitude and youthful condition well into advanced age. Many Hunzas reach the age of one hundred years and beyond. The long lived Mexicans on the other hand, utilize the foods grown near them, such as: papayas, pineapple, corn, cornbread, beans, limes, lemons, oranges, red peppers, bananas, avocados, various vegetables and many herbs including damiana and sarsparilla. The Russians, living to a healthy advanced age, consume an abundance of garlic, onions, honey, pollen, buckwheat, sunflower seeds and oil, fermented lactic acid foods such as soured milks, sauerkraut, sourdough bread and pickles. Their foods are unprocessed. They eat very little meat and live an outdoor life.

Live to be a Hundred

1. Pure, whole, organic, natural foods.
2. Natural foods grown on rich humus black soil.
3. Clabbered goat milk products, fruits, vegetables, seeds, nuts and grains and very little or no meat.
4. Eating when hungry and only when hungry.
5. Eat and live in moderation.
6. Daily exercise outdoors; walking, running, gardening.
7. Centenarians always maintain a positive mental attitude.
8. A strong belief in a Supreme Guiding Force. They pray often, fast occasionally, live without fear and are serene and loving.
9. Most of these vibrant oldsters have developed and maintained perfect bodily postures, which is necessary for good circulation, nerve flow and superb health.
10. They live in an almost perfect environment with an altitude of about 4,000 feet, perfect for the heart, metabolism and thyroid. Sunshine and rain are abundant throughout the year

and food grows continuously. The atmosphere is brisk, bracing, energizing and pure. Never too cold or hot, but just right.

11. These healthy long lived people make their work their play and their play their work. They enjoy what they do and they love what they do.
12. They are never in a hurry or under stress, which is the greatest killer and life shortener of modern human.
13. Many of them avoid meat completely, do not smoke or drink alcohol.
14. They live by the cycles of the earth; early to bed when the sky darkens and up with the sun at the crack of dawn.
15. Most of them were married one or more times and have grandchildren and great grandchildren and enjoy being around young people.
16. Living at a 4,000 foot altitude, they have less gravitational pull on their bodies by climbing steep mountains. This insures good body circulation from the leg muscles to all parts of the body and brain.
17. They obtain an abundance of ultra-violet light from the sun daily. This light controls calcium, which are found in the long bones of the body that produce rich red new blood cells.
18. They drink the pure mountain glacier water and consume a variety of herb teas, such as, ginseng, peppermint, alfalfa, etc., and they drink only when thirsty.
19. The greatest secret of the centenarians is that they live a well-balanced life, mentally, physically, emotionally and spiritually.

Fig. 6.12.We squander health in search of wealth, we scheme and toil and save; then squander wealth in search of health. And all we get is a grave. We live and boast of what we own we die and only get a stone.

Vegetarianism vs Carnivorism

You may be surprised to learn that about one-half of the world's population is either totally Vegetarian or leaning in that direction. There are approximately eleven million Vegetarians in America today, and that number is growing fast. Many social and economic factors indicate that vegetable plant foods will account for as much as 90% of the United States food budget within ten years.

The current methods of food production, especially in the United States, is most uneconomical and wasteful. For example, eighteen million tons of vegetable protein are lost in feeding them to animals for the production of meat protein. If this vegetable plant food was fed directly to humans, it would meet 90% of the world's protein deficiency.

Nearly one-half of the United States harvested land is planted with crops to feed animals. The United States Department of Agriculture states that the billion people in developed countries use almost as much plant food as feed to produce animal protein as the two billion people in other countries use directly as food. Among other things, the meat industry may soon be using sterilized chicken manure as animal feed for the commercial market. In feeding vegetable foods to animals for meat, a 90% to 95% waste factor is involved. The cultivation of grains, vegetables, nuts and fruits can support a population eight times or more than that provided by the present wasteful system of feeding this food to animals first, then eating the animal.

We must not only provide superior nutrition for the people, but most importantly, save the land from exhaustion. Our cosmic spaceship (earth) is burning and smouldering with chemicals, inorganic fertilizers, fallout, industrial wastes and destructive poisons too numerous to mention. It is time for everyone to take some positive action and to demand that peace be given to our fields not only to save humans from malnutrition and disease, but consider a diet for the earth itself. Our world leaders are leading us like sheep, into mass suicide from the lack of true wisdom and deep insight. We must think of the generations and civilizations to come.

The Vegetarian philosophy is appealing to a growing number of people of all ages who desire a peaceful world now and for generations to come all over the globe. Youth is disillusioned with society. They have witnessed only war, insecurity, economic strife,

chaos and corruption in all levels of government. Many of our young people are seeking only good and constructive change. The non-violent plan of eating, if embraced by mankind, would lead to world peace, as there would be no more killing; but it must start with each person. The whole Vegetarian Ideal will not only improve the individual, (the microcosm) but humanity as a total unit, (the macrocosm) and the entire environment.

Scientific and Anatomical Basis of Vegetarianism

All modern physiologists admit that flesh is not an essential part of the dietary of human beings. A well-selected vegetable diet is capable of producing the highest physical development. Prof. E. V. McCollum of John Hopkins University contributed his opinion of diet in the early nineteen hundreds, thusly: “I have not the slightest hesitation in saying that a vegetarian diet, is the most satisfactory type of diet that humans can take.”

Nothing is more easily demonstrated than animal meat being positively injurious in the highest degree, and that many of the diseases of our civilization are derived exclusively from its use. We will dispose of the meat question with the following incontrovertible scientific facts, which should be sufficient evidence that the practice is an acquired habit and wholly unnatural.

First: It is a universal fact that all animals that are naturally carnivorous are more active at night than in the daytime, and are of a nature which makes them positive at night and negative during the day. Man is more active in the daytime than at night by nature, and if he is carnivorous he furnishes an exception to the universal rule. Persons who consume large quantities of meat are rendered sleepy and dull during the day and are sleepless and nervous at night. Heavy meat eating usually accompanies the drinking of alcohol, along with spicy, fattening and other devitalized foods during a period of time in which the body requires sleep and recuperation from the daily activities.

Second: All animals that are naturally carnivorous perspire through the tongue and not through the skin. All naturally vegetarian animals perspire through the skin, as man does. Meat eaters have a feverish and disagreeable condition of the tongue, causing an unnatural thirst, which vegetarians do not experience.

Third: Man's anatomical structure is not adapted to a meat diet. His teeth are not adapted to tearing flesh and he has no claws to kill and rend his prey. His tooth structure is designed for biting and chewing grains, legumes, fruits, vegetables, seeds, nuts and other natural foods, as opposed to the carnivore who kills the animal and eats mostly inner organs, blood, guts, bones and lastly flesh.
Fourth: The perspiration and other forms of excreta thrown off from the bodies of meat eaters is exceedingly offensive, while that from vegetarian eaters is agreeable and less in quantity. Flies and mosquitos torment meat eaters, while vegetarians are comparatively immune. Vegetarians are seldom constipated, while meat eaters are almost universally so. Man secretes alkaline saliva, the carnivore secrets acid saliva.
Fifth: The carnivore stomach is small and round, as opposed to an oblong stomach of man, which has convolutions needed for the breakdown of fruits, grains and sweet tender vegetable foods. Man has an alimentary canal twelve times the length of his body. The carnivore canal is only three times the length of his body. The carnivore colon is smooth and short, which is necessary for the quick evacation of the putrefying flesh fare. The colon of man is long and convoluted for a more thorough digestion of the food from the plant kingdom.
Sixth: The consumption of meat renders the individual more ferocious and disagreeable in manner, less considerate of others, and more inclined to acts of brutality and selfishness, than to acts of kindness. In many cases, it produces the effect of continued irritation, nervousness, and sometimes results directly in insanity.
Seventh: When man attempts to comsume meat he literally poisons himself. Flesh foods begin to putrefy about one-fourth of the way down the intestinal canal, causing uric acid poisoning, ptomaines, chemicals, deadly hormones and the waste products from the animal's metabolism at the time of slaughter. Meat products in the human system over-stimulate the heart, causing it to beat up to 50% higher than average, which leads to high blood pressure.
Eighth: Man takes his liquid through sucking. All carnivores lap liquids with their tongue. Carnivores have large livers to handle the heavy meat consumption. Man's liver is small and not developed to handle a flesh diet. Flesh eating animals secrete ten times the hydrochloric acid into their stomachs, as do the vegetarian eaters. They require it for the breakdown of meat, bone, organs, sinews,

feathers etc. Carnivorous animals eat mostly the inner organs of their prey in a raw state. The vultures, hyenias and other scavengers feast only on the left over muscle meat, after the tiger or lion has finished feasting on the best inner parts. Man falls into the scavenger category by consuming not raw muscle flesh, but aged, bacteria ridden and cooked flesh. Muscle meat is highly deficient in vitamins and minerals, and contains an excessive amount of phosphorus, which if eaten to excess throws off the calcium balance within the body. This phosphorus robs the bones and teeth of its valuable calcium and sets up uric acid crystals throughout the body joints, causing stiffness, pain and disease.

Ninth: Repeated experiments have proven that vegetarians excel over meat eaters in all tests of endurance and strength in both physical and mental labor and live longer lives. You do not need meat for heavy work. Prof. Voit of Munich discovered that, "heat and energy are almost exclusively created by carbohydrates." Always keep in mind, however, that we must obtain a daily balance of natural proteins, carbohydrates, fats, vitamins and liquids. The gorilla, elephant, oxen, horse are tremendously strong, with great endurance, subsisting solely on vegetarian fare.

Tenth: Fruits, vegetables, grains and seeds repair and replenish the cells and tissues, whereas meat overstimulates and tears them down. Flesh food often causes a ravenous appetite, which nothing but more flesh can satisfy. Meat, being an extreme Yang substance, causes an internal craving for extreme Yin substances, i.e., sugar, alcohol, drugs, sodas etc. Extremes in diet cause extreme conditions or chronic diseases, i.e., leukemia, cancer etc.

Eleventh: Meat contains a high proportion of cholesterol (an important causative factor in thrombosis, high blood pressure etc.) with no lecithin (nature's antidote) to balance it. (All vegetable proteins, on the other hand, contain lecithin to naturally counterbalance it).

Meat is an Unnatural Substitute Food

When thinking about vegetarianism especially the total kindmost people quite naturally ask what they can use in place of the various animal-source foods. It should be clearly understood that every one of these animal-source foods is already a substitute food: a perversion of the natural diet that is Ideally suited for the normal human body.

Vegans do, of course, advocate human milk given by a healthy mother direct to her own baby, as the ideal food in early infancy. Cow-milk formula is today finally being widely recognized as an inferior substitute for this. In cases where a mother has been unable to nurse her baby for whatever reason, or to supplement the mother's milk, various nuts, seed, and soya-based milks have been used with success. If we, as adults, bear in mind that milk, eggs, and meat are all in fact mere substitutes for our natural vegan foods, we will not be so concerned with searching for substitutes for substitutes items that look, smell, or taste like the barnyard/slaughterhouse products we are so used to.

There are, of course, many vegetable-source replacements for the various animal products. But these are more in the nature of a dietary crutch to help one through the transition period, rather than a nutritional necessity. We should really learn what our natural foods are, and go on to build our diet up from these. So you want to be a vegetarian? We will help you all we can. But in the final analysis, we can only help you to help yourself. We are not just interested in getting someone off the animal flesh and substituting some over-cooked canned soyabeans. Are you still stuffing up on the junky white flour products? Sugar? White rice, Soda pop and stimulating cola drinks? Coffee? Do you smoke? Drink? Why do you?

But you are convinced. Now you want to know how to go about eating both ethically and healthfully. Generally, the first thing to go is meat. Makes no difference whether it is from a steer or a sheep; that of a pig may be worse for you; that of a chicken or fish is not so harmful from a cholesterol standpoint but Is likely to be worse in the matter of pollution. Ethically speaking, all are slaughter products, though you would have to kill many little fish or birds to equal the amount of meat taken from one larger animal. In any event, out goes the flesh: all of it. Calcium, protein, vitamins, minerals? Well, where do you suppose those animals got theirs? How is it that man uses the great big strong vegetarian animals around the world, for beasts of burden, for meat and milk, yet he thinks he must eat these things from them to obtain protein or some other nutriment? "Consider Mr. Elephant, with huge tusks and teeth and bones: whence come his calcium? Or the ox or the bullock, or the camel: where do they get their protein, with which to build their powerful muscles? How is the horse able to be strong and energetic? They are all total vegetarians. The vegetable kingdom Is, in point of fact,

the only natural first hand source of all the protein on this planet. Not one animal creates protein but by eating proteinous foods; none can synthesize calcium or other elements within the body; every one depends on the vegetable kingdom for the raw materials to restructure into its own particular type of make-up. No two types of animals have the same general protein type. But all vegetarian creatures can obtain their essential ammo acids (the building blocks of all proteins) from the vegetable proteins that are so abundantly and widely distributed in the world of plants.

Even the fang-and-claw predators, such as the dog and cat families, must obtain their protein from plants ultimately, though they take it second hand by eating vegetarian animals; but they pay a price in parasitic diseases and other problems associated with flesh-eating, even as humans do it they become dietary copycats and try to eat like a tiger or jackal. Truly man is the king of beasts, for his brutality exceeds them. Leonardo da Vinci stated, "We live by the death of others. We are burial places. I have since an early age abjured the use of meat, and the time will come when men will look upon the murder of animals as they now look upon the murder of men."

Fig. 6.13. When feasts are spread the doctor rolls his pills.
In fifty dishes lie a hundred ills.

Meat Eating may be Hazardous to your Sex

The addition of chemicals and hormones to meat are causing sex gland problems. Experiments by Dr. F. Pottenger Jr. of Monrovia, California, have proven that the physical make up of men and women is changing. Men are looking and acting like women, and women are looking and acting like men. Hair is growing in abundance on the arms and legs of women. Men are becoming more feminine and weak physically, mentally and emotionally.

Another experiment was conducted in which a few chosen men and women were lined up facing a wall. Next, a number of doctors were invited to distinguish between the male and female from behind. These doctors had a great deal of trouble distinguishing the difference in gender. The men in this experiment had narrow shoulders and wide hips, which is a female characteristic, while the females had wide shoulders and narrow hips, which is a male characteristic. Have you ever seen synthetic female hormones at work? Did you know that a cow given a shot of DES (there are eight other lesser-known brand names) will abort her calf? A rancher years ago, found that he could chemically castrate young bulls with this small dosage. Any knowledgeable veterinarian will tell you that if a rooster is given DES daily eventually he will cease to crow and will begin to cluck like a hen when his tolerance level for female hormones has been breached. This last experiment could be viewed as unisex in the poultry yard as the rooster has been affected both mentally and physically. Roosters and, unfortunately, DES are both easily obtained. The French tests found that rats fed meat coming from steers fattened with the aid of DES were radically affected sexually impotence and sex reverses among male rats and cancer of the breasts and other female organs was produced in the female rats.

The Canadians banned DES as a result of the French tests, but no such luck for us. Is it simply because this nightmare was invented here that we must be the last to awaken from it? Why, after 20 years of flagrant use of synthetic female hormones in the cattle feeding industry do we find the chemical companies frantically pushing the new synthetic masculine hormones? Are the chemical companies (aided by an eye-closed attitude from the FDA) trying to cover up a tragic 20 year experiment with female hormones by forcing the American public to undergo mass hormonal therapy with the new masculine hormones? If so, how will

the new experiment turn out? Why cannot we merely shut off all of these hormones rather than face the long ghastly transition which seems to be in store for us? The excessive consumption of hormon eladen meat products, in addition to a large intake of white sugar products, is one of the main causes of reversed sex roles today. This is certainly something each individual must seriously think about; and evaluate the effect of their dietary life styles and the socioeconomic impact it entails.

Choosing Your Own Diet

The question of whether to eat flesh products or not is strictly an individual matter. It depends on how far one desires to progress on the path to health and well-being. It has been scientifically proven that an excessive consumption of meat can easily lead to arthritis, gout, stomach, colon and bone cancer. We contend that overeating of any food item, either natural or unnatural, can cause a host of physical and mental diseasesfrom colds to cancer.

Certainly, we are not claiming that if one consumes a very moderate and limited amount of meat per week or day, that they will immediately drop dead from doing so. Almost everyone has eaten their share of meat before becoming a vegetarian; and they could not be coerced into giving up meat against their will. Each individual must accomplish this transition when they are physically and mentally ready.

We have researched and observed individuals and cultures worldwide and have discovered many healthy 100 year old plus people in both meat-eating and vegetarian categories. In both cases moderation in diet and personal habits seemed to be the key to their perspective longevity. In presenting this material to the public we are not attempting to be moralistic or dogmatic. Our main purpose here is to present the facts and scientific data as it is revealed to us. We do not personally partake of meat products through our own choosing for the following reasons: health, economics, spiritual, moral, ethical, ecological, aesthetic, scientific and humanitarian. Likewise, this decision should be based upon one's own deep study, contemplation and overall commitment to higher ideals; physically, mentally and spiritually. The reader must make that choice for himself or herself, and be given the freedom and love to do so.

Alternative Vegetarian Protein Foods

The following vegetarian foods are all high in protein, Vitamin B-12, iron, phosphorus etc. They are more nutritionally balanced than meat products, and are a safe, wholesome and healthful alternative to flesh.

Grains	Raw Goat Milk	Peas	Soy milk
Yogurt	Nutritional Yeast	Miso	Buttermilk
Legumes	Seeds (Soaked)	Nuts (Soaked)	Tofu

Many delicious recipes can be made with these foods without worrying about protein deficiencies or meat hormones. Eggs should be used sparingly, or rarely if at all. Use fertile eggs if you must have them.

Vital Statistics on why the Vegetarian Diet is Superior

1. Vegetarian food can feed the world ten times over and be better fed.
2. It is free from all hormones, antibiotics, drugs, chemicals and cancer causing agents.
3. It is free from trichina worms, parasites, food poisoning bacteria and uric acid.
4. It is high in vitamins, minerals, enzymes and other fresh raw food factors.
5. It supplies adequate proteins with complete amino acids for growth and health.
6. It maintains the arteries, internal organs, heart and body in a youthful condition.
7. It does not require the killing of animals for food and is free from animal diseases.
8. It makes one more kind, peaceful, gentle and loving to both animals and humans.
9. It is more economical individually and on a worldwide basis.
10. It gives one more endurance, strength, health and longevity.

Famous Vegetarian Personalities

As you can see from the list below, the vegetarian philosophy and way of life is not a passing fad. Vegetarianism is normal. Meat-eating is abnormal. This was the verdict of these scholarly people. The following is a partial list of the great men and women of history who because of their reverence for life avoided the eating of meat in their diet:

George Bernard Shaw	Lucius Seneca	Count Tolstoy Plato
Mahatma Gandhi	Socrates	Albert Schweitzer
Nietzsche	Leonardo da Vinci	Aristotle
Albert Einstein	Prince Paul	Troubetskoy
Maurice Materlinck	Charles Darwin	Henry David Thoreau
Sir Isaac Newton	Percy Shelley	Horace Greeley
St. Francis of Assisi	William Blake	Ben Franklin
Edward Fitzgerald	Richard Wagner	Bram well Booth
Francois Voltaire	Edward Carpenter	Arthur Shopenhauer
Paganini	Jesus Christ	Krishna
Buddha	Mohammed	Emerson
Pythagoras	Origen	Diogenes
Cicero	Herodotus	Porphyry
Plutarch	Ovid	H. G. Wells
John Wesley	Scott Nearing	Dr. Ann Besant
Lord Montgomery	Lord Dowding	Lady Dowding
Louisa May Alcott	Vinoba Bhave	Sir Stafford Cripps

Nerve Force Principle

Are you nervous, irritable and fidgety? Do you easily lose your temper? Do you entertain thoughts of fear and suspicion? How often do you take headache relieving drugs and medicines? Do you suffer from nervous butterflies, and do you constantly pity yourself? Are you sleeping soundly? Did you know that these lowly moods are the results of a depleted, destroyed and malnourished nervous system? These damaged and half-starved nerves impair digestion, cause headaches, mental anguish, heart disease, impotance, mental illness, nerve disorders and bring on a host of other physical ills. Poor nerve health and constant nerve leakage can destroy friendships and put an end to your lovelife and marriage. No matter how wealthy, influential or successful you are, if your nerves are jangled, starved and weak, you cannot be happy in life.

Nerve Force Principle will help create and build a healthy, strong and powerful nervous system; nerves of steel responding to your every command. Our super fast style of living, constantly rushing and on the go from morning until night, tends to drain and weaken nerve force and nerve energy faster than it can be recharged and energized. Nerve Force can be drained away quickly by these following nerve habits:

1. ***Immoderation:*** Overworking, over eating & over doing anything.
2. ***Poor Posture:*** Slouched sitting posture & bent standing posture.
3. ***Malnutrition:*** These foods are irritants to the nerves: coffee, alcohol, drugs, dope, salt, smoking, white flour foods, white sugar and sugared foods.
4. ***Lack of Proper Exercise:*** No daily exercise program and not getting enough pure outdoor oxygen after meals and throughout the day, results in sluggish nerve flow and poor nerve nourishment due to lack of adequate circulation of the blood to all body parts.
5. ***Insufficient Rest & Sleep:*** Lack of sufficient rest and sleep can result in rapid nerve loss and nervous disorders. No known remedy can rejuvenate a sleep and rest starved body. Proper sleep and rest is one of the quickest ways to restore lost nerve power.
6. ***Lack of Mental Poise:*** This is the result of immoderation, poor nutrition, lack of exercise, rest, and sleep. Emotionally unpoised people have the least nerve power and lead miserable and unhappy lives.

Every act of living uses up or drains away a certain amount of Nerve Force daily. The more Nerve Force we can accumulate within the system, the healthier, stronger, and younger we will remain. People who are constantly ill possess very low nerve force, and they deplete it faster than it can be replenished. To attain Five Level Nerve Health, we must conserve our energy and learn how to accumulate, recharge and rebuild our internal batteries to acquire powerful nerve force vitality.

Take care of your health; you have not right to neglect it, and thus become a burden to yourself, and perhaps to others. Let your food be simple; never eat too much; take exercise enough; be systematic in all things; if unwell, starve yourself until you are well again, and you may throw care to the winds, and physic to the dogs.

Health Rating System

Level One

Degenerative Disease: Cancer, rheumatoid arthritis, parkinson's disease, heart disorders, tuberculosis, multiple sclerosis, musular dystrophy, diabetes, colitis, blood disorders, nephritis, extreme fatigue etc. The individuals in this category have lost their health and vitality, and have very low nerve force energy. They suffer from every known degenerative disease.

The age of a person does not determine a health rating, for an individual can be anywhere from 1 to 90 or more years old. The health rating of a person depends on his daily health habits; if the habits are poor, he will climb no higher than the first level. One can be old at the age of 20, or young and healthy at the age of 100. Time or calendar years is not a prime factor in developing degenerative disease or Super Health. The fact is, that you can develop a a Super Health rating at any age if you persistently follow the teachings in this book.

Many young children born today of unhealthy, alcoholic, drug addicted and junk food eating parents are coming into this world with First Level health or degenerative diseases. Many are lucky to have average health, and very few children or adults are fortunate to be blessed with good health. The Frist Level person, however, can build his health to the Three or Four Level category, but they will have to follow the Five Level Formula very strictly.

Level Two

Poor Health: Asthma, eczema, psoriasis, sciatica, back problems and nerve disorders, hypoglycemia, mental problems, sexual impotence, frigidity, chronic fatigue, chronic visual and hearing problems etc. Second Level people generally have poor health, are constantly fatigued and lack energy. They suffer with chronic conditions such as, kidney, liver and organic problems that have not yet reached the degenerative state. The majority of this group are past the age of fifty, however, an increasing number of younger people have been developing these same chronic disease symptoms and therefore, fall into the Level Two category of poor health. Hospitals report that there are more cases of heart disease below the age of ten than above. This proves the fact that diseases are the result of habits and not chronological age. A poor constitution

and poor health are either inherited from the parents or conditioned by poor eating and living habits early in life. They can, however be improved by following these formulas.

Level Three

Average Health: Poor eyesight and hearing; colds, flu, hay fever and sinus problems. Colds, flu, etc. are vital signs of internal elimination, which indicates that the body still has sufficient nerve force power to eliminate toxins and prevent degenerative conditions, such as arthritis, heart trouble, cancer etc. Suppressing acute (colds etc.) will eventually lead to chronic disease. This is the category of Average Health into which most Americans fall. Their nerve force energy runs from high to low on any given day. Many children are born today in the Third Level Health category, while many years ago they were born with Fifth Level Super Health because of better food and healthier environmental conditions.

Level Four

Good Health: People possess a great deal of energy and good health. They retire evenings only slightly fatigued and arise the following morning full of energy and nerve force, ready for a full day of activity and excitement. Fourth Level individuals possess normal sight, hearing, digestion, elimination and good organic health. Many people over the age of 20 do not possess a Level Four Rating. Their health begins to decline from age 20 to 30. Those possessing the Level Four Rating, over the age of 20, 30 or more are either living and eating properly, or were born of extremely healthy parents into a Fifth Level Health category.

Level Five

Super Health: It is the ultimate reward of those possessing a Fifth Level Rating. The individuals in this elite classification enjoy an abundance of vitality, nerve force and human energy mentally, physically, emotionally and spiritually and they know not what it is to be fatigued or worn out. This Super Health Level people are endowed with the following qualities: hair sheens, eyes sparkle, skin glows, teeth are glossy white, muscles are firm, the posture is perfect and they radiate a wealth of energy, confidence and happiness.

Level Five people retire evenings with a reserve of energy, and arise at the crack of dawn with a zest for living, ready to conquer the world. Their health is far above the norm, suffering neither digestive problems or organic disease, with excellent sight, hearing, sexual magnetism and clear voice. They are self-motivators, and great leaders in their perspective fields; setting high standards for the world to follow. To possess the Level Five Nerve Force Health Rating is a grand accomplishment in itself; and it is a very worthwhile goal for all to follow, for it would be the closest reality in developing Super Bionic men and women, endowed with superior spiritual, mental, emotional and physical health. This is indeed the goal of creation, for we are all born in the likeness and image of the Supreme Creator. It has been said that man was given the power to move mountains and to create miracles. That power is within you, controlled by the Tao within, to be used by you for good and constructive purposes. Like an old shoe that is worn down and needs new leather, so our brain and nerves need living natural food to restore their power.

Six Formulas to increase your Nerve Force

1. Moderation in all the Good Things of Life
2. Super Nutrition
3. Correct and Proper Posture
4. Adequate Daily Exercise
5. Sufficient Rest and Sleep
6. Mental and Emotional Poise

Moderation:

Moderation basically consists of this one key point: Expend no more energy beyond what has been accumulated each day. For example, by not going to extremes we will automatically maintain our reserve energy supply and enjoy excellent health. Overstepping our energy bounds can easily lead to nerve leaks, and consequent failing health. It is similar to saving money; if the bank account is overdrawn, there will be no funds in reserve to live on. Likewise with energy; the more energy one conserves, the more they will accumulate in the body, to be utilized for reserve and emergency purposes.

Powerful Nerve Force can never be built by going to extremes or immoderation in eating, working, studying, exercising, sleeping, reading, sexual indulgence, etc. Super Health will be an impossibility if one continually depletes, drains & destroys their nerve force.

Level One people possess very little Nerve Force, and if they are injured or wounded, they heal very slowly or not at all. Level Four or Five individuals possess an abundance of recuperative power and they heal very quickly. As you accumulate and hoard your energy. Nerve Force will eventually increase until the goal of Super Health is reached.

On the pathway to Super Health, one must learn how to regulate and conserve their own energy supply. You may accomplish this by adhering closely to the Law of Rhythm. The Law of Rhythm teaches one how to balance his life and practice moderation in all things. For example, when you've had enough to eat, your body rhythm alerts you by taking away hunger until more food is required; if we do not sleep or rest when tired or exhausted, we have ignored our body rhythm, and we may collapse from nerve exhaustion. Moderation is the key that unlocks the door to greater Nerve Force.

Super Nutrition:

To build powerful nerve force we need an abundance of essential nutrients in the form of vitamins, minerals, proteins, carbohydrates, trace minerals, enzymes and fats. However, the nerves must not only be fed, they must first be cleansed. A detoxification diet of three to five days or a short fast of a few days will help tremendously in cleansing the cells and tissues of the body for a more perfect and smooth nerve flow. Be sure to follow the cleansing period by eating highly nourishing foods. The following food minerals will rebuild, feed and protect the nerves. They are absolutely necessary in your quest for Super Health.

Calcium	Phosphorus	Manganese
Magnesium iron	Iodine	Sodium
Chlorine		

It must be understood that to build powerful nerve force, one needs not only an abundance of minerals, vitamins and enzymes, but also adequate supply of complete protein and a sufficient amount of carbohydrates and fats.

Correct Posture:

Correct posture is a vitally important factor in restoring our Nerve Force vigor. A slumped back and shoulder position, while sitting or standing is a sure way of cutting off nerve supply from the spinal cord to the entire body.

Fig. 6.14. Correct Posture

A bent over, stooped position broadcasts to the world that life is too difficult to cope with; it is the appearance of a coward and makes one actually feel like one. You will never see or hear stooped over individuals singing happy days are here again, because it is contrary to their nature. Improper posture develops spinal curves, the adam's apple; it weakens the internal organs and forces out the pelvic joints, which is a major cause of prolapsed fallen organs. Poor posture can lead to headaches, backaches, tiredness and fatigue. Incorrect posture hinders good breathing, affects the digestion and is a prime cause of constipation.

The road to a perfect posture lies in the daily practice of sitting and standing as upright as we possibly can. Always sit with hips and back well against the back of a chair. While writing in a sitting position, bend from the hips, but do not round the back while doing so; this maintains the lumbar and sacral vertebrae in perfect alignment. Here is an excellent exercise to assist in developing a straight standing posture:

Fig. 6.15. Correct Posture & Incorrect Posture

Lower Back Wall Exercise

Stand against a straight wall with the heels about two inches away from the base of the wall with the buttocks, shoulders and lower back all touching the wall. You should not be able to place a hand between the lower back and the wall. The idea of the exercise is to maintain an upright posture without the lower back curving inward and away from the wall. Move the lower hips inward and flatten them against the wall; this will remove the lower back curve and you should not be able to place your hand between it and the wall. It is this pocket between the wall and the lower back, that must be removed, that will ensure a straight posture.

Strive to relax in this exercise and remain free from strain and tension. The lower back should be flat and in line with the hips, and it should not curve inward in a sway back position. Practice this exercise for a few minutes two or three times a day and strive to maintain this correct posture daily. A perfect posture will allow the internal organs to remain in their proper place. Good posture enables the organs to function normally and the muscles to become firm and strong; you will be able to completely relax and become less fatigued while working. Here is another posture exercise that will help you to gain a perfect upright carriage.

Delsarte Hook

Imagine a fully expanded and suspended ballon. Think of the lungs as a large balloon and the chest as a collapsible aerodome, with the ribs as the rafters. The rafters must be lifted up completely away from the balloon. This is done by standing erect, then placing an imaginary hook where your breast bone is, and a pulley in the ceiling above you; then imagine yourself pulling the rope through the pulley, lifting up that portion of the anatomy (rib cage), which will leave the arms in a loose swing, shoulders relaxed back and down. The entire body will fall in proper alignment. In this correct posture you will be able to breathe easily and naturally. Always remember to keep the shoulders back and down and the chest out. Stand with the knees locked (abdomen and back flat). This is the correct standing posture. If you suffer from back problems consult a chiropractor and he will instruct you on the proper care and exercise of your spine and back.

A proper and correct posture will instill in you an attitude of courage and confidence that will be noticeable by all those around you. Proper posture insures excellent circulation throughout the body, which means greater nerve force, more energy and a higher health rating. An abundance of proper exercise tends towards the building up of an erect, well-propotioned body. The head, chest and shoulders should be held up. A flabby, clumsy, stooped body and a protruding abdomen detract greatly from the beauty and efficiency of the body.

Daily Exercise:

Proper daily exercise is as necessary to life as is food and nutrition. Exercise tones up the internal and external organs and muscles; it helps to circulate the nutrients to the nerves, muscles and vital organs. Exercises that leave one breathless are a great tonic to the body, inspiring us with courage, strength and confidence; it imparts a fresh feeling of energy and nerve power to every cell in our body. There is nothing like daily exercise to lift our spirits and set us on the path to Super Health. An adequate amount of daily exercise together with proper rest and sleep is vitally important in building powerful nerve force and energy. The best type of exercises are those that reach all the joints, spinal area and muscles of the body. The cells and tissues automatically go through a system of contraction and relaxing. When they contract they squeeze out their waste matter; when they relax they absorb their nutrients.

The Standing Spinal Twist and Stretch Stand with both feet on the floor, raise arms over head, lock fingers together, turn palms out, keep knees stiff and stretch forward as far as possible. After bending forward, return back to the erect position with the hands above the head; now bend backwards slowly and feel the muscles relaxing. Repeat the two movements five or six times. Next, with hands interlocked, stretch in a circular motion, bending in every direction from the hips; forward, backward and rotate all the vertebrae in their entire range of motion. Rotate six times each way. These exercises can be performed any time during the day when you need a quick energy boost, or if feeling sluggish.

Fig. 6.16. Standing Spinal Twist and Stretch Stand

Exercise #1: For waist reduction, stomach, liver and kidney stimulation. Swing the body in a complete circle 3 to 5 times in each direction. Inhale in upright position, and exhale slowly and com-pletely while making a wide circle as shown.

The cervical vertebrae is an area of much congestion and interference with blood flow and nerve energy to the eyes, ears and nasal cavities. This exercise will help to remove some of that congestion. Stretch head backward and forward as far as possible. Next, stretch it from side to side, attempting to lay it on each shoulder; then turn head from one side to the other, looking over each shoulder; next rotate the head in a circular motion, clockwise and counterwise six times. Stretch the muscles, then relax them. Repeat each exercise at least six times.

These joint type of exercises should be performed with other body parts as well; for example, one can twist, stretch, flex and rotate the shoulders, wrists, ankles, hips, knees, fingers, arms, etc. We can stimulate nerve and blood circulation to our face by squeezing, stretching and making face contortions; this will keep the face looking young and firm. The hands, feet and toes may be squeezed, rotated and stretched for better circulation. Stretching before arising in the morning is an excellent method of awakening our vital Nerve Force for the day ahead. All of these various circulation exercises are beneficial to all the organs, cells, blood and nerves of the body, building powerful nerve health.

Conserve Nerve Force Energy

Nerve energy and personal magnetism is conserved and accumulated within the body by the practice of controlling body movements and mo-tions. Constant fidgeting, excessive and nervous hand and leg motions while sitting, temper tantrums, constant talking and chattering and irritability must be controlled before we can attain the Level Five Rating.

All of these useless motions cause a serious, leakage of nerve energy away from the body. If this nerve energy were not squandered away in wasted motions and other immoderate habits, we could easily acquire a high degree of personal magnetism and health. It must be understood that our body may accumulate a certain amount of nerve energy daily and if we waste or deplete more than we receive, poor health will result. However, if we cease to squander our nerve energy away with useless and harmful motions, actions and immoderate habits, we will develop health, strength, energy and powerful nerve force.

While walking, relax and make all your movements smooth and easy; refrain from jerky motions and use only the muscles required for the task. It is best to sit down with both feet on the floor and in correct posture, relaxing without unnecessary motions. During the day, when time permits, lie down and relax in a dead still position for a few moments; it may be the refreshing lift you need. Here is an excellent nerve exercise that can help you gain self control and personal magnetism.

Dead Still Paper Exercise:

Take a standing position. Grasp a sheet of typing paper by the lower right hand corner between the thumb and first two fingers; hold it in front of your chest with the elbow away from the body. Next, locate a tiny spot or small point somewhere on a wall and hold the paper so that the upper opposite edge of the paper is in exact line with your eye and the spot on the wall. Control it in this position for fifteen seconds without any kind of shaking.

At first, the paper may uncontrollabley shake; but keep practicing it in spare moments and you will finally succeed in not moving in the slightest degree during the fifteen seconds. While performing this exercise do not cease breathing or eye blinking; just relax and be calm! This Dead Still Paper Exercise helps to control and stop nerve energy leakage and enables one to gain control of their body and mind. It forces the body and mind to concentrate and be still, while conserving and accumulating a supply of nerve force. It may take a few weeks to master this technique, but even-tually nervousness will vanish and relaxation and control follow. You will gain personal magnetism that will be noticed. If we constantly strived to be self-controlled, our vital nerve force energy and health can improve by leaps and bounds.

Sufficient Rest and Sleep:

Sleep and rest are vitally necessary to restore powerful nerve force in the body. It is during sleep that the body repairs itself; resting during the day recuperates the nerve energy lost during the daily activity. For sound sleep, your room should be well ventilated for the complete circulation of air. Fresh night vitalizes the body during sleep and prevents carbon monoxide poisoning from your own exhalation. However, the room temperature should be neither hot or cold.

For proper spinal nerve flow, the bed should be firm and not soft. Old worn out soft mattresses create spinal curvatures and impinge the nerves. Most people require from six to nine hours of sound sleep for the maintenance of health and repair of cells, tissues and nerves. Lack of sufficient rest and sleep is a prime cause of a drawn out haggard look, wrinkles, loss of vitality, poor memory, grouchiness and loss of beauty. Some people try to get by on only a few hours of sleep a night; others in their mad rush for wealth, fame and power, neglect proper rest and sleep. Nervous exhaustion is usually their reward.

It is generally believed that there is little harm in lying down or sleeping after meals, but this idea is entirely false. When you lie down or sleep after eating, the gastric juices do not flow readily. The main objective of sleep is to repair and replenish the nerves and tissues, but if we consume food directly before retiring at night, the body spends its energy on digestion instead of repair. The result will be a lack of vitality, health and strength. Because of poor elimination and repair, it can result in anemia. It is best to eat no later than three or four hours before going to sleep. If hungry at bedtime, a piece of fruit before retiring will do no harm as it is very quickly digested.

No-Exercise Super Beauty Treatment:

This Super Exercise is so simple that you expend absolutely no energy in performing it; all you do is lie down in bed and sleep! Sounds too easy does not it? Here is what you do before retiring to bed: Raise the foot end of your bed about two inches off the floor with a wooden block. Leave the bed in this raised position from now on. What does this simple exercise accomplish? It reverses the downward pull of gravity on facial muscles, skin and internal organs. When the lower part of the body is raised a few incher higher than the upper body while lying down, the blood stream gently courses down to the head stimulating the ductless glands to pour out their rejuvenating and beautifying juices to all parts of the face and body. This head lower sleeping position gives the vital organs an opportunity to fall back into their proper position, allowing them to function at peak effeciency to keep you young and vigorous.

The great eagle who lives to the age of two hundred and fifty years old usually flies with its head lower than its heart. In fact, all

animals, to a certain degree, maintain their head lower than the heart. The ancient wise men knew the secrets of youth and longevity; they practiced yoga exercises daily, and obtained proper nutrition, rest, sleep etc. They slept with the foot end of their bed raised a few inches. After a few days you will become accustomed to this head lower position and begin to see and feel the results in better muscle tone, brighter complexion, smoother internal functions and firmer facial skin. Try this no-exercise health and beauty treatment and see and feel the results for yourself.

Rest and Sleep:

When fatigued and sleepy stop all activity, i.e., reading, watching television, etc. Retire to bed. Relax your muscles starting from the toes and loosening all body parts up to your head, feeling each body part relaxing in turn as you free it from tension. Think of your body as an extremely heavy weight sinking deeper and deeper into the mattress while relinquishing from your mind all thoughts of worry, anxiety and tension. Now fill your mind with beautiful and serene thoughts of love, happiness and peace. Spend a few minutes mentally forgiving everyone, and send these love, happiness and peace thoughts to the far corners of the world. By mentally blessing and forgiving the world, you send out healing energy which re-turns its blessings in health, success and sound sleep. Also, mentally picture yourself attaining your heart's desires and success. These few sleeping secrets will help to give you a peaceful night's rest. The next morning you will feel fit and ready to face the world with courage, confidence and love.

Mental and Emotional Poise:

The wisdom of the ancient sages passed down through the centuries have taught humans that mental poise or peace of mind is one of the greatest assests a person may possess. Freedom from worry is a vitally important factor in cleansing the mind and attaining Mental Poise. Why are people troubled with worry, anxiety and tension? Are your prolems so important that you worry yourself sick over them? Do you worry about a certain problem and then discover that the problem was hardly a problem at all? It was just our own lower mind entertaining thoughts of fear, failure and trouble. The sages tell us not to worry about the future; not to overly concern ourselves about employment, marriage, possessions, or

losses. Do not trouble yourself about the future, but live the best you can in the present; this will insure our future success and happiness while giving us mental and emotional poise in life. Why does worry halt success and happiness? Worrying about the future or over trivial matters prevents us from accomplishing our best in the present; it stops us from doing the things we could and should do but fail to do, because of our incessant worry about the things we cannot do.

Dwelling on future desires will not bring happiness, but only anxiety and mental torment. Many people constantly dwell on some future desire, thinking that when they achieve their desires and goals, happiness will be guaranteed. This is generally not the case. For example, many people believe that they would be happy and contented as a president or executive of an organization. How many of these executives do you know are happy with their tremendous responsibilities? Happiness is a result of the right attitude of mind. If we have a negative attitude toward our present life and activities we will be unhappy; if we have a positive attitude toward life we will remain enthusiastic and enjoy our successes and achievements.

When we let go of the idea that we must have something to be happy, we automatically let go of envy, jealousy, revenge, hate, pride and in its place will appear true happiness and mental poise. We then become Master of our emotions. Perfect Mental Poise will open the inner door to our higher mind. This greater power will guide you to peace, health, harmony, happiness, success, a good marriage and true friends. The Supreme Architect knows your every need. To have faith is the highest high you may ever achieve. A mind brimming with faith and love is a tonic to the nerves and entire system. Perfect Mental Poise will regenerate your body which is a major step toward Super Health.

These Six Super Health Steps can lead you to happiness and success far beyond your highest expectations. As you gain in Super-Health and Nerve Force, you will become poised, emotionally balanced and in complete control of your life. You will have developed complete mastery in the drama and circumstances of your earthly existence.

Yin and Yang of Nutrition

It has long been understood that there is a link between the food that we eat and our health. The ancient Taoists developed a sophisticated understanding of health and wellness, including the use of herbs and food for rebalancing health.

These days we have a far more complex situation. This is due to several factors:

1. We have developed extremely sophisticated methods for the manufacture of food. There are huge numbers of highly processed and refined foods available to us that the ancient Taoists would never have dreamed of.
2. We travel more than our early ancestors. We expose ourselves to a wider variety of climates, seasons & food types.
3. Our farming systems have developed a huge range of chemicals, factory farming and modified food types that also affect our nutrition.
4. Our bodies are exposed to high levels of chemicals, pollutants, Pharmaceuticals and stress that our early ancestors would have had no experience of.

Thus we have to make adaptations in order to apply ancient principles to our modern situation. In the struggle to find the nutrition solution, the health world is not overwhelmed with theories and suggested diets. One year we are told to eat only raw food; the next year the high-protein diet is in. How on earth do we know which one to follow to restore our health to balance? What we need to look for is flexible Nutritional therapies that respond to each individual's needs.

Extremism versus Balance

In the modern world we have a habit of extremism. We are always trying to find the simple answer to solve all of our problems. The early Taoist models of thought show us that life does not operate in this way. Rather than trying to attain a single goal, life can be seen as a flow of energy. It is up to us to find harmony and balance within that flow.

For example, in modern thinking we may be tempted to try to aim to reach a perfect goal: perfect weight, perfect health, ideal levels of energy. However, if we stop and observe Nature we see that this is not reality, in reality, we flow between being tired to

sleeping to wakefulness to high energy every day cycle. We are in constant flux. The result of trying to force our bodies towards an unnatural goal is that we push ourselves farther away from balance and harmony, A lot of modern illnesses that we see are a result of this disharmony.

Thus to improve our health, we need to start listening to our bodies, seeing where the imbalances lie and finding the ways to restore our own bodies into balance. Rather than just applying the same dietary therapy to all people, we need to find ways of observing and measuring Yin and Yang imbalances and then use dietary therapy to restore health. A lot of the current nutritional theories are based upon a movement in a single direction towards one extreme. For example:

Alkaline Theory: suggests that we all need to eat more alkaline-forming foods.
Raw Food Theory: suggests that we all need to eat only raw uncooked foods.
High Protein Diet: suggests that we all need to eat a high-protein, low-carb diet.
Vegetarianism: suggests that we all need to eliminate animal products from the diet.

These examples all work extremely well for some people, and books will be full of personal case histories to support the theory. The problem is, there is also a portion of the population for whom the diet does not work at all, and may even cause further illness. For example, cold and thin people may become very weak from the raw food diet; others will put on weight from eating a high protein diet. Oriental Nutritional Theory emphasizes the importance of choosing the right treatment for the right person. A complex system of diagnostics was developed, and is still in use today by many practitioners of Chinese Medicine.

One of the gifts of modern medicine has been its sophisticated diagnostic procedures. Therefore, we can use either system to enable us to choose the correct dietary therapy for each individual. Either way, we must choose a treatment based upon each unique person. To choose a diet without first diagnosing the person would be like taking a medicine without seeing what the illness was.

Food Energetics

The ancient systems of nutritional healing regarded different foods as having different energetic qualities. They did not have access to reductionist science, and thus did not know about micro-nutrients (minerals, vitamins etc). However, they did observe the different qualities of foods and the effects that they have on the people eating them.

Fig. 6.5. Energetics of a Tree

Just as Yin and Yang can be observed in a person's energy, it can also be seen in a food, In food energetics, some foods are considered balancing: they do not have an extreme effect on energy, but maintain the center. Other foods have an expanding quality: they expand our Chi and make us feel lighter. Other foods have a contracting quality: they contract out Chi, making us feel more grounded. We can understand these qualities better by considering a tree. A tree has a stable centre: its trunk, it also has branches that reach upwards to Heaven and expand their energy out. In addition there are roots that sink deep into the Earth and contract the energy down.

We can use this model and apply it to different foods to understand their energetic qualities. If we look at food groups we find that the most expansive are the simple carbohydrates, which release their sugars very fast and thus rapidly lift our energy. Complex carbohydrates also give us energy, but released more slowly. Thus they are expansive, but less so. Fats and Proteins have a contractive effect. They build our body cells and have a grounding effect. Physiologically these food groups slow down the release of sugars in the diet, and thus help to regulate our blood-sugar levels. The denser the food, the more contractive it is. Thus meat is more contractive than beans and tofu.

Fig. 6.6. Tree Energetics of Simple Carbs Complex Carbs Fats Proteins

Some food are centering.those are the foods that are neither too sugary/refined nor too dense a protein/fat. These usually form the center of most ancient time-tested diets. Most diets from around the world will have both a protein and carbohydrate as the center. Commonly this will be a whole grain plus a bean.

Here are some examples:

County	***Protein***		***Carbohydrate***
India	Dahl	+	Rice
Mexico	Beans	+	Corn
Japan	Tofu	+	Rice
United Kingdom	Dairy	+	Potato
Europe	Cheese	+	Bread (wheat)
Middle East	Hummus	+	Bread

Centering foods are often a mixture of carbohydrates and proteins even within each food. For example, rice is thought of as a carbohydrate, but it does contain protein. Beans are often thought of as proteins, but they do contain carbohydrates. Such foods have a balancing and centering effect.

These foods create the core of the diet, and then other foods and flavours are used around these staples. Core foods help to maintain our sense of center. This is a very important principle in Taoism and Oriental Therapy.

Center

Our center is about staying balanced, if we only have extremes in our life, then we become pushed and pulled about by circumstances. For example, if we eat only expansive foods we may feel high, but ungrounded. The opposite is if we eat an excess of contractive foods then we may feel grounded, but depressed and heavy.

If we choose one extreme, we will soon crave the other. Thus we become a victim to our own feelings and cravings. We are constantly swinging from one extreme to the other, the energetic equivalent of manic-depressive. This is reflected in the habits of yo-yo dieting and detox-retox in which people swing from a diet or detox program into their old bad habits as a response.

In Oriental Therapy we seek to build a strong center. In Taoist Chi Kung (energy exercises) we put awareness to the Tan Tien area below the navel. This is the place where we try to store our Chi and build awareness. When we have more awareness in the center, then we are not so affected by outer circumstances. This gives us a gentle strength and stability. Building a strong center is an important aim. However, we also need to address any imbalances that occur and restore them, especially when we first start our practice.

Fig. 6.7. Center Force

Another time we may encounter strong imbalances is when we experience great change in our life, such as moving to a new country, travelling, changes in life circumstances and so on. The stronger our center is, the easier we will make such transitions. But we may also need to attend to adjusting our balance.

Balancing Yin and Yang

We have seen earlier how we can develop an overly Yin or Yang situation of imbalance. A simple way to apply Oriental Dietary therapy is to eat a little more of the foods that will rebalance us, until we feel harmonized again.

Overly Yin = Too Lethargic, Fatigued, Cold, Slow Pulse etc.

Overly Yang = Too Stressed, Busy, Hot, Fast Pulse etc.

Those who are too Yin can assist their body with the addition of a few more contractive foods. These will build strength and stamina. Thus a few more protein-rich foods and healthy fats (cold-pressed oils, nuts, seeds etc) can be added to the diet.

Those who are too Yang can assist their body by eating a few more expansive foods. Eating more vegetables will have a cooling and cleansing effect on the body, clearing excess heat. Whole grains will assist in the body's energy management.

If one becomes rebalanced from the diet, it may be wise to eat a more centering diet. We all have constitutional tendencies that mean that we will always benefit from eating more proteins or more carbohydrates (depending on our tendencies). Try to listen to your body as you adapt your diet to hear how it responds to different foods.

Situation	***Signs***	***Foods to Eat***
Overly Yin:	Cold, Weak, Tired, Too Moist	More Proteins/Fasts
Overly Yang:	Hot, Stressed, Hyper, Too Dry, Sleepless	More Carbs

This is about rebalancing: we do not want to move to another extreme. Therefore, just try gently altering your diet, rather than making sudden and dramatic changes. The body likes smoothness rather than suddenness.

Weight Problems

Weight problems are an increasing concern is modern healthcare. In 2005, the World Health Organization (WHO) estimated that 400 million adults were obese. In 1998 the US spent $78.5 billion on medical costs attributable to obesity. It appears that our modern consumerist society has a cost.

In Oriental Nutrition, not all overweight problems are seen as the same; and thus they are treated differently. Once again, we can use the Yin/Yang model to gain a clearer insight into differences. The overly Yang type of obesity is the result of a pattern of excess. Excess food, excess alcohol, rich and fatty foods all lead to an overweight pattern that is overly Yang. It can be identified by having characteristics such as: The body fat is solid and turgid; when pressed it has little give and feels full. There may be signs of heat. The person may be loud and impatient, or show other Yang characteristics.

On the other hand, the overly Yin type of obesity is the result of a pattern of deficiency. Deficiency of quality foods and nutrients, lack of exercise, yo-yo If these symptoms exist, then it can be wise to pay attention to the water content or moistness of the food that we eat. We can tell a lot about the moistening effects of a food juts by common sense and observation. If a food looks and tastes dry, then it usually is! if it appears moist, then it is.

Therefore foods that will dry up an overly Yin and excessively moist situation include lightly-cooked grains, foods without sauces, fish and meat. Foods that can moisturize an overly Yang and excessively dry situation include soups, sauces, fruits and water-rich vegetables.

Moistening	***Drying***
Soups, Sauces, Salads, Fruits	Dry Grains, Meat, Fish, Root Vegetables

Those who are excessively dry may choose to make a special moistening drink. Soaked psyllium husk or fiaxseeds (linseeds) soaked in water over night make a very moistening drink, or make a smoothie from yoghurt with seeds and fruit added.

Those with moistness and water retention may benefit from the addition of some diuretic herbal teas, such as roselle and nettle tea.

Flavors

In Oriental Therapy, different flavors have different energetic effects on the body. The sweet flavor has the most uplifting effect, whereas the salty flavor has a grounding effect. Blander-flavored foods have a more neutral effect.

Grounding	***Drying***
Salty	Sweet

Therefore, someone who has an overly Yin imbalance may want to reduce their intake of sweet foods. Someone with an overly Yang imbalance may want to reduce salty foods. The other flavors, bitter, sour and pungent, have varying effects on the body and are used to make fine tuned adjustments.

Colors

Color is energy; different colors are different wavelengths of energies. Thus the colors of our foods have an energetic effect on our being when we consume them. Brighter and lighter colors have an uplifting energetic effect. Darker and duller colors have a grounding effect. Therefore someone with an overly Yin imbalance may choose darker foods, such as meat, fish and beans. Someone with an overly Yang dieting and other inconsistent eating patterns all contribute to an overly Yin pattern, It may be accompanied by too much water in the body (water is Yin), leading to fluid retention and dampness, it can be identified by certain characteristics, including: The body fat is soft, flaccid and flabby; when pressed it gives way and feels empty. There may be signs of coldness. The person may be withdrawn and depressed, or shows other Yin characteristics.

Treatment

The overly Yang weight problem requires a treatment protocol that reduces excess Yang, and adds a little Yin. For example:

Fasting works well with this type of pattern as it quickly removes excess Yang.
The person can eat more cleansing and light foods: raw food, steamed vegetables, fruit and juices.
Protein and fat should be avoided.
Toxins must be eliminated: caffeine, tobacco, alcohol and drugs must be cut out, at least for the cleansing period.
Peace, quiet and tranquility need to be sought: this person will benefit enormously from walking alone in nature and taking up meditation. It is hard for them to lose weight without some level of relaxation.
Yang sports could be reduced, such as gym workouts. Yin exercise should be chosen such as yoga and Chi Kung.

Treatment for an overly Yin weight problem will be entirely different, as the whole situation is different. They need to make sure they are reducing excess Yin and adding a little Yang.

For example:

Sugars and fast-releasing carbohydrates should be eliminated, including fruit juices.
Fasting is unlikely to help with the weight problem, though it may reduce toxins and water. This type has to be careful because if they go without food this enhances the yo-yo dieting phenomenon, and their body's metabolism becomes even weaker.
Eating regularly is more important for these types. This helps to balance the blood sugar levels.
Increasing the levels of quality proteins and healthy fats can also help this type to lose weight. This means lean meats/fish and cold-pressed oils such as olive and flaxseed oil.
This person needs to add a little Yang exercise, such as running, dancing, jumping on a bouncer etc.
A little green tea can assist in stimulation of stagnant Chi and assist with weight loss.

These types are not gender dependent. However, a larger proportion of men will suffer from the overly Yang type of weight problem, whereas women are more prone to overly Yin weight problems. If you are trying to deal with a weight problem, try to assess where you are imbalanced in your life (e.g. not enough exercise, too much alcohol consumption) and seek balance.

Underweight

Being underweight is also an issue for some people. Even though our beauty magazines often exalt extreme thinness, it is often a sign of weakness and deficiency, and an underweight situation may not support vibrant health. Once again, we can distinguish between the overly Yang and Overly Yin underweight problems.

An overly Yang underweight problem would be a person who is overly active, nervous and jittery. They may be always moving or fidgeting and find it difficult to rest or be still. In order to gain weight, this type of person will need to eat more complex carbohydrates. They also have to rest and learn some form of relaxation. Deep breathing can be tremendously helpful. They need to avoid stimulants such as caffeine at all costs.

The overly Yin underweight situation is one in which a person is thin, quiet and fragile. They are likely to get cold to the core and feel as if they have weak bones. They may find it very difficult to socialize and to express themselves. To begin to gain weight and restore health, this person may need to eat quality proteins and fats (such as olive oil and flaxseed oil). It is important in the type of person that they eat very nourishing and high-quality foods, with an emphasis on warm and cooked foods.

It always takes longer to restore a deficiency pattern. An overly Yin underweight person is very deficient. Therefore, they will need to take a lot of time and dedication to rebalance their health.

Chapter 7

Effects of Yin/Yang with Acid/Alkaline

Acid and Alkaline pH

The principle of Yin and Yang is the basis of the entire universe. It is the principle of everything in creation. It brings about the transformation to parenthood, it is the root and source of life and death especially with acid and alkaline balance.

In order to grasp the significance of acid and alkaline, one must first understand the meaning of pH. pH is a measure of hydrogen ion concentration in blood, urine and liquids, and is used as as symbol to indicate acidity and alkalinity. A pH of 7 is considered neutral, the measure of pure water. pH 7 is .0000001 gram atom of hydrogen ion per litre. The acid end of the pH scale is from 1 to 7, and 7 to 14 is the alkaline end.

Normal healthy skin can have a pH reading of from 4.5 to 6, or acid. Blood pH is slightly alkaline, from 7.3 to 7.8 on the scale and strives to maintain that reading at all times. Urine should range from 6.5 to 7.0 on the over-all average to insure good health. Urine measurements can fluctuate depending on the type of foods eaten beforehand. However, the urine should be slightly acid or neutral. Saliva is slightly alkaline. The stomach must maintain between 4.0 to 5.0 acidity to digest and breakdown protein foods. If the stomach loses its acidity somewhat, and tends towards neutrality or alkalinity, protein and calcium digestion, assimilation and absorption are lowered or decreased, resulting in indigestion and poor health. Mouth saliva, in good health, should be 7.1 pH.

It is not necessary to continually check your urine pH. It is more important to heed your inner voice or feelings as to what natural foods your body requires at any given time. Balance will be maintained by applying the universal yin/yang and acid/alkaline principles; the body will balance itself, and the urine analysis will be normal. Your health will improve tremendously by eating mainly locally grown natural foods in season. The Acid/Alkaline balance affects every phase of life; from diet, to thought, to weather, to sleep, and physical activity. Everything we do in life either creates acidity or alkalinity. To attain good health it is necessary to thoroughly understand the causes of acidity and alkalinity and apply this knowledge to our life.

Fig. 7.1. Alkalinity of the Blood

Acid-Alkaline Balance

As the Alkalinity Scale shows, the normal condition of the blood must be maintained slightly alkaline, between 7.22 to 7.35. Neutral blood would result in immediate death. A slightly alkaline blood and lymph is a requirement for health and long life. An acid condition of the body and its organs does not mean that the blood has become acid. Acidosis is not acid blood. If the blood were actually acid the body would immediately die from positive acidosis. Cells cannot live in an acid medium.

The body always maintains an alkaline reserve in order to neutralize acid elements. These alkaline reserves are called buffer salts, which are sodium, potassium, calcium and magnesium. These buffer salts maintain a balance between the alkalinity and acidity of the blood, which is normally 80% alkali and 20% acid. An excess of either acid or alkaline in the body is quickly neutralized by the buffer salts. An exclusive acid forming hi-protein or junk food diet, plus a lack of fresh fruit and vegetables will cause a deficiency of these salts, causing a drain on the alkaline reserves and irritation in the cells and tissues of the body, resulting in disease.

Overeating of alkaline foods will also cause a drain on the buffer salts in the cells to neutralize the over-alkalinity. The body expends much energy in overcoming or neutralizing either an over-alkaline or over-acid dietary. The key is to consume both acid-forming and alkaline-forming foods in balance daily, adjusted to seasonal weather conditions. The solvent watery type foods are (alkaline). The heavier type foods are (acid). These are alkaline foods: all watery type fruits, juices, and vegetables (non-starchy). The acid type foods are: all proteins, starches, seeds, nuts, cheeses, fats.

Acid/Alkaline Body Fluids

Body Fluid	***pH of Fluid***
Gastric Juice	1.2 - 3.0
Vaginal Fluid	3.5 - 4.5
Urine	4.6 - 8.0
Saliva	6.35 - 6.85
Blood	7.35 - 7.45
Semen	7.2 - 7.6
Cerebrospinal Fluid	7.4
Pancreatic Juice	7.1 - 8.2
Bile	7.6 - 8.6

Yin/Yang vs Acid/Alkaline Foods

Yin and Yang is generally believed to be the same as Acid and Alkaline; in actual application it is not. From a broad universal perspective, Yin is Alkaline and Yang is Acid; from the food standpoint, acid-forming elements are made up of sulphur, phosphorus and chlorine; alkaline-forming elements are made up of sodium, potassium, calcium, magnesium and iron. The Yin and Yang scale is more variable than the Acid-Alkaline scale, i.e., potassium and sodium are alkaline forming elements, yet potassium is Yin and sodium is Yang. For example, meat, grains, nuts and sugars are all considered acid-forming, yet meat and grains fall into the Yang Acid category, while nuts and sugar are classified as Yin/Acid. Simply stated; Yin and Yang is on a deeper, more universal scale than Acid and Alkaline.

Yin foods are also high in fat, such as nuts, dairy foods and avocados. Yin/Acid forming foods, like milk, sugar, nuts are high in phosphorus and sulphur, but are low in sodium. Yang/Acid forming foods, for example, rice, rye, eggs, fish are all high in phosphorus, sulphur and sodium.

Yin/Alkaline forming foods, for example, oranges, pineapples, tomatoes, are high in potassium, calcium and iron, but are low in phosphorus and sulphur. Yang/Alkaline forming foods in the form of cherries, berries, garlic, burdock root, ginseng, are high in sodium, but low in phosphorus and sulphur. Acid and alkaline are subject more exclusively to chemistry and food. Yin and Yang encompass all phenomena physical (food, biochemistry, etc.), mental, emotional and spiritual.

Acid Forming Elements	***Alkaline Forming Elements***
Sulphur	Sodium
Phosphorus	Potassium
Chlorine	Calcium
Magnesium	Iron

Acid/Alkaline is also on a sliding relative scale, i.e.,meat is highly acid, but it contains some alkaline elements, while apples are mostly alkaline, but contain a small amount of acid elements. Meat is on the Yang end of the scale, and fruit is on the Yin side.

Pure sugar and fats are always Yin. Pure starch and protein are always Yang. Pure sugar, fat starch, and protein are always Acid. Dairy fat is Yin and Acid. Watery fruits and vegetables are always Yin and Alkaline. Raw unsalted seeds and nuts are always Yin and Acid. Cooked grains, beans, eggs, meat, fish and chicken are always Yang and Acid. Yin foods cause expansion of the organs. Yang foods cause contraction of the organs. Consume only the proper quantity of protein, starches, fats and natural sugars that the body requires daily; realize that an excess or a deficiency of these foods can cause disease. Consume mostly whole grains, seeds, and beans from the Yang protein & starch category.

Seasonal Eating Percentages

Season	**Alkaline Foods**	**Acid Foods**
Summer	65%	35%
Fall	50%	50%
Winter	25%	75%
Spring	50%	50%
Very Hot	80%	20%
Very Cold	20%	80%

Note: These are only general percentages. Learn to listen to your inner physiological needs; eventually you will know the right amount, or whether you are eating too much or too little of the Acid or Alkaline foods. Study and learn how to balance foods.

Alkaline Foods Above 7.5PH +

Alkaline Forming Elements: *Sodium, Potassium, Calcium, Magnesium, Iron*

Yang Fruit	***Yang Vegetables***
Apple, Apricot, Berries,Cherry, Grape, Melons, Nectarine, Peach, Pear, Pomegranate	Burdock, Garlic, Dandelion, Ginseng, Onion, Leek, Radish, Watercress, Parsley, Endive,Alfalfa/Kelp-Dulse

Yang Foods: High in Sodium, Low in Potassium.
Yang/Alkaline Foods: High in Sodium, Low in Phorphorus and Sulphur

Yang Fruit	***Yang Vegetables***
Citrus Fruit, Guava, Mango, Papaya, Persimmon, Pineapple,Tomato, Plum	Celery, Cucumber, Cabbage, Sprouts, Sweet Pepper, Green Vegetables Spinach, Asparagus, Lettuce

Yin Foods: High in Potassium; Low in Sodium.
Yin/Alkaline Foods: High in Potassium, Calcium; Low in Phosphorus/Sulphur

Acid Foods Below 7.0 PH +

Acid Forming Elements: *Sulphur, Phosphorus and Chlorine*

Yin Protein	***Yin Fat***	***Yin Starch***
Avocado	Dairy Cow (N)	Banana (Unripe), Carob,
Dairy Cow (N)	Butter (N)	Potato (N), Prunes,
Nuts	Fatty Meat*	Dates, Raisins (N)
Seeds	Avocado, Nuts	Figs, Honey

Regular cheese, milk, nuts and avocado contain both fats and proteins.

Yin Foods: High in Potassium; Low in Sodium.
Yin/Acid Foods: High in Phosphorus and Sulphur; Low in Sodium.

Yang Protein	***Yang Starch***
Tofu and Miso	Carrot (N)
Goat Cheese (N)	Beet (N)
Beans	Beet (N)
Corn Goat Milk (N)	Rice
Olives	Barley
Rye	Oats
Nutritional Yeast	Millet
Buckwheat	Pumpkin (N)
Eggs*, Fish*,	Wheat
Fowl*, Meat*	Peas

Yang Foods: High in Sodium; low in potassium.
Yang/Acid Foods: High in sodium, phosphorus and sulphur.
(N) Neutral or 7.0 PH
* If you can stop these foods, do so.
+ PH taken from urine analysis.

Fig. 7.2. Food Chart Classification with Yin/Yang Designation

Eat Foods in Season

In arranging daily menus seasonal weather changes must be taken into account, especially if one lives in the northern or seasonal climates. Why is this so important? Because, as we men-tioned, cold weather is alkaline upon the body fluids, therefore, the body requires more acid foods to balance itself correctly.

During cold winter months consume more protein, natural starches and fats, and less alkaline foods to maintain internal balance. Use more raw food in summer and more cooked food in winter. Fall and Spring require generally 50% alkaline foods and 50% acid foods. In tropical zones or during summer in the north, 65% alkaline foods can be consumed, while acid food requirements can be lowered to 35%. If the temperature soars over 90 degrees use more seasonal fruits and vegetables, and less grains, beans and cooked food. By eating in this manner heat and cold will be more comfortable, mentally and physically. Hot weather reacts acid upon the body fluids. Vacationers in Mexico and other tropical zones generally blame their diarrhea and stomach upsets on the water. Eating rich, spicy acid foods, cold drinks and ice cream, creates extreme acidosis, digestive disorders and loose bowels.

Consuming excessive alkaline foods in cold weather will cause over-alkalinity within the body; (cold hands and feet, low blood pressure, diarrhea etc.). Excessive acid foods in hot weather will cause over acidity. Living and eating according to the universal principles of Yin and Yang, and Acid and Alkaline should be an enjoyable pleasure and experience for your creative imagination. It is a living, dynamic philosophy a guide, lighting our way to superior health and a well-balanced life style. These life principles should never become a strict, inflexible and austere ideology ruining all joy, happiness and pleasure in life.

Meat eaters and exclusive grain and cooked food eaters have an acid/yang urine pH from 5.0 to 6.0, indicating that the internal organs are working hard to maintain slight alkalinity in the blood. To overcome low pH in the system, consume a little more raw food, (fruits and vegetables in season). Many raw fooders, fruitarians and vegetarians usually have a high (7.3 to 8.0) urine pH, which is considered alkaline and yin. This can result in poor protein/calcium absorption and indigestion. High alkalinity in the stomach reduces its hydrochloric acid content causing the above

problems. Balance must be maintained with additional cooked grains, legumes and vegetables. Purchase Nitrazine pH paper to check your urine and saliva readings occasionally.

Above 7.50 PH is an alkaline condition, which is taken from urine analysis. Below 6.5 are in an over-acid condition from urine analysis. Both of these conditions overtax the body causing it to become tired and weak. The body organs are always working to maintain the blood slightly alkaline, 7.22 to 7.35. Over acidity and over alkalinity will eventually break down the organs (disease) because of the immense strain upon them to maintain the blood in proper balance.

Yin/Yang and Acid/Alkaline Conditions

The type of food we eat places us in a definite category. These different categories are as follows: Yin/Alkaline, Yang/Acid, Yin/Acid, Acid/Alkaline balance in a Yin condition, Yin/Yang balance in an Acid condition, and lastly, Acid/Alkaline and Yin/Yang balance. Let us take a look at these different groups.

Yin/Alkaline Condition Above 7.5pH

A Yin-Alkaline condition of mind and body is caused by eating an excess of Yin/Alkaline foods, such as citrus fruits, tropical fruits, grapes, green vegetables, sprouts, onions, tomatoes and any other food that gives a pH reading of the urine more than 7.5. In the non-food category, all drugs, marijuana, alcohol, and soft drinks are Yin (expansive). If one consumes excessive amounts of Alkaline/Yin foods and not enough Acid/Yang foods, the urine pH will rise above 7.5 to 8.0 or more (Urine Scale Test). In this condition the system is deficient in protein, fats, sulfur, chlorine, grains and legumes.

Yin/Alkaline diets are excessively high in potassium. Potassium is an expansive (Yin) or centrifugal element. It expands cells, tissues and organs. If indulged in to excess, this diet can cause kidney expansion and weakness, resulting in over-urination and loss of sex and glandular hormones (testosterone). The kidneys are directly tied in with the entire glandular and reproductive systems. Weak kidneys and adrenals can diminish or stop the sex drive. In this condition the urine turns light in color, like water, with a 7.5 to 8.0 pH reading. The kidneys lose their contractile or yang power and become loose, unable to synthesize protein and filter out waste products.

Excessive consumption of raw vegetables, especially lettuce, carrots and carrot juice will cause liver congestion and yellow/orange or muddy colored skin, (caucasions only) so prevalent in many raw fooders or vegetarians. The liver eliminates bile through the bile ducts, through the intestines and out with the stools. If the liver is sluggish, from improper foods or constipation, the bile will stagnate and flow into the blood, into the system and out to the skin as a carrot complexion.

An overworked or diseased liver has long ago been associated with a mental condition called melancholia. Melan refers to the skin, and dark bile reaches the skin from biliousness, and causes mental depression & melancholy, or a negative mental condition.

As a result of a Yin/Alkaline condition a person tends to suffer with low blood pressure, (expanded arteries and blood vessels) poor circulation, cold hands and feet, anemia, low blood sugar, diarrhea, asthma, impotence, Yin arthritis, mental and physical laziness, nervousness, schizophrenia, poor memory and loss of concentration.

Mentally, this condition causes fear, worry, anxiety, self-pity, irritability, criticalness and self-righteousness. Yin/Alkaline people are sus-picious, with their nerves on edge, and are therefore easily intimidated on the defensive, mentally and verbally. They attempt to make others perfect, instead of extending freedom to all. Usually unhappy themselves, they force their ideas or advice on others. Remember: These are extreme nutritionally affected psychological behavior patterns. There are variations of this type.

Yin/Alkaline people lose the ability to center (contract-Yang) their mind to a specific goal. With brain cells Yin and expanded, (confused thinking) they are unable to go within (one pointedness) to find peace and contentment.

Dietary Recommendations: A Yin/Alkaline diet is deficient in sulphur, phosphorus, cholrine acid forming minerals; beans, protein, B-complex, whole grains, sea vegetables etc. This deficiency many times leads to cravings and binging on Yang/Acid forming junk food, such as pizza, flesh foods, restaurant food etc. Or due to lack of B-vitamins and protein, (which maintain normal blood sugar levels) an excess of ice cream, cheese and other sugared foods are eaten. Diet lacks grains, beans, miso, cooked vegetables, sea vegetables; too much raw food in winter; not enough grains, beans etc. Diet lacks the pungent and salty taste according to the Five Elements.

Yang/Acid Condition Below 6.5pH

A Yang/Acid condition of mind and body is caused by consuming an excess of Yang/Acid foods such as: all meats, eggs, salt, fish, grains, nuts, fats, cheese, etc., and all other foods that gives one a urine pH reading of 6.5 or less.

Yang/Acid diets are excessively high in sodium. Sodium is a contractive (Yang) element. It contracts or restricts organs, tissues and cells. This type of diet causes kidney contraction or restric-tion, resulting in scanty urination, dark yellow or brownish and foamy urine.

Healthy urine is straw colored or of a light beer consistency. Dark urine indicates over-worked kidneys. The kidneys eventually shut down operation and the end result is Bright's disease. Diseased kidneys are unable to synthesize protein and fail to filter out normal body wastes and environmental toxins.

A Yang toxic liver backs up bile into the blood, making it dark or black, causing biliousness, mental depression and melancholia.

A person in a Yang/Acid condition exhibits aggressive energy-force. They have high blood pressure, ulcers, heart disorders, kidney disease, gout, bone disease, cancer etc. In physical diagnosis, their face and ears are reddish, veins in nose and cheeks, yellow eye whites, hot moist hands and feet, excessive sweating, farsightedness etc. This is an extreme Yang/Acid condition.

If the urine pH drops to 5.5 and below, the kidneys, liver, bladder, lungs, skin and other organs must operate under a heavy load to attempt to expel the excess acid toxins from the system, and to preserve and maintain the blood in its normal 7.5 pH a slightly alkaline condition. When the internal organs malfunction from overwork (overeating, toxins) disease is inevitable; if the blood pH falls to positive acidity, even slightly, death is certain.

The Yang/Acid person exhibits the following physical and mental traits: excessive sexual desire (irritated sex glands), menstrual disorders, hot temper, impatience, arrogance, possessiveness, dominance, hold grudges, exclusiveness, demand immediate attention, and in the extreme, dictatorial.

Mentally, these people are self-centered, egotistical and overbearing in manner and attitude. Unlike the Yin spaced out person, the Yang person is more centered in his concentration and mental activity. Their brain cells are more con-tracted (Yang and centered thinking) to a specific goal. They are not generally fearful or worrisome, like their Yin counterpart.

Dietary Recommendations: This diet is deficient in alkaline minerals: potassium, calcium, magnesium and iron. Also lacks raw foods, fruits, vegetables, seeds, grains, legumes, sea vegetables etc. Yang/Acid people crave many foods and substances, such as beer, wine, alcohol, coffee, mari-juana, tropical foods, potatoes, juices and all sugared foods all Yin and Alkaline, except for potatoes and sugar, which are Yin and Acid. This diet lacks seasonal fruit and vegetables eaten daily in moderation; too much meat, cooked foods and fats, especially in summer. According to the Five Element Taste Theory, this diet is too high in the salty, pungent and sweet taste, and sometimes deficient in the bitter and sour taste. Bitter: almonds, raw vegetables. Sour: apples, plums, yogurt, etc.

Yin/Acid Condition Below 6.5pH

A Yin/Acid condition is caused by consuming chiefly Yin (expansive) and Acid forming foods. For example, milk, cheese and ice cream are Yin because of their high fat (expansive) content, and Acid due to their Acid forming qualities, lowering body and urine pH below 6.5. All sugared foods, such as pies, cakes, donuts, soft drinks, candy etc., are Yin/Acid due to their high sugar and white flour content. All sugar is Yin (expansive), and all white flour products are Acid forming.

People falling in this category usually consume an excessive amount of devitalized junk food. Their urine pH is well below 6.5, and the blood and body is generally deficient in vitamins, minerals, trace elements, enzymes and quality protein. Yin/Acid individuals suffer from every known disease: Arthritis, diabetes, hypoglycemia, gout, obesity, kidney and liver disorders, lung and blood diseases, skin and sexual diseases, fatigue and all types of cancer.

Mentally, this condition produces weak willed individuals, lack of concentration and drive, low self-esteem; usually followers, allowing others to use them; do not think clearly for themselves; do not stand up for their personal rights; allowing others to think for them; duped by commercials and slick advertising, believing without questioning, what product to purchase or what alleged pain killers to use.

Acid/Alkaline in Yin Condition Neutral 7.0 pH

A Yin condition while maintaining an Acid/ Alkaline balance results from consuming an excess of Yin foods in both the Acid/ Alkaline categories, while at the same time eating the correct balance of Acid and Alkaline.

For example, this individual generally eats a large amount of tropical fruit: tomatoes, sprouts, cucumbers, raw greens, fruit and vegetable juices, which are all Yin and Alkaline; all high fat cheeses, milk, avocados, seeds, nuts, oils high in fat (Yin) and Acid forming; bananas, dates, figs, raisins, all dried fruit high in sugar (Yin) and Acid forming; and potatoes, yams, eggplant (Yin) and also Acid forming.

These people generally suffer with cold hands and feet, falling hair, skin disorders, colds, flus, fatigue, nervousness, low blood sugar (hypoglycemia), sexual impotence or frigidity.

Mentally, they tend to be docile, fearful, lack success drive, and express little faith; usually peaceful, but lazy. Recommendations: Diet too high in Potassium (Yin) element; deficient in Sodium (Yang) element; excessive tropical fruits and juices. Balancing the diet: Consume fruit in season and climate only more raw fruit and vegetables in summer, less in winter. Use more cooked grains, legumes, miso, sea vegetables and soups. Lacks sour, salty and pungent taste.

Yin/Yang in Acid Urine pH 6.5 or Below

An Acid condition while in Yin/Yang balance is caused by eating an excess of acid foods, while eating the right balance of Yin and Yang foods. This person generally eats a large amount of the following foods: All grains (rice, wheat, oats, etc., millet, beans, fish, cooked vegetables and soups, burdock, ginseng and beans; little or no raw food).

These people generally suffer physically with lung problems, occasional fevers, yang liver congestion, anemia and some skin disorders; usually underweight and at the extreme, emaciated. Body becomes too Acid. Mentally, they are sometimes arrogant, generally desire leadership and are too demanding. Recommendations: This diet is usually deficient in alkaline elements, such as potassium, iron and calcium. This deficiency sometimes leads to a craving for beer, coffee etc. If the diet is too strict, there may be occasional hinging on extreme Yin/Alkaline fruits, ice cream or other

sweet foods or juices. This diet lacks seasonal fruit eaten daily in moderation; too little raw food, especially in summer. According to the Five Element Theory, this dietary condition lacks two of the five tastes sweet and sour. All five tastes must be balanced daily more or less according to the seasons, climate and region where one resides.

Yin/Yang-Acid/Alkaline Neutral Urine 7.0 pH

To acquire Yin/Yang and Acid-Alkaline balance, one should eat a sufficient amount of Acid and Alkaline foods, while balancing the Yin and Yang factors. In order to attain the correct balance, eat mostly the foods grown in your own climate.

In the south, some Yin fruits and vegetables can be eaten daily in moderation, balanced equally with natural Yang grains, legumes, sea vegetables, soups, land vegetables, etc. One who wishes to achieve balance in the North should not use tropical food to any great extent. In the main, their diet should consist of: grains, soups, legumes, seeds and nuts soaked or germinated, apples, pears, berries, burdock, low fat raw milk dairy (sparingly), miso, sea vegetables etc. Consume foods locally grown. Those who constantly have a neutral 6.5 to 7.2 pH urine reading are in Acid/Alkaline balance. A Yin/Yang balance is achieved by adhering closely to the above Yin and Yang balancing diet. This Yin/Yang diet will automatically place one in the proper Acid/Alkaline balance.

The healthiest and longest lived people throughout the world in Tibet, Russian mountains, China, Northern India, Iran, Turkey, etc. do not consume extreme Yin or Yang diets: neither all raw foods or all cooked foods. They eat a variety of natural foods (grains, legumes, vegetables, fruits, seeds, nuts, fermented and cultured dairy products, and meat very sparingly or not at all) grown in their own climate and environment eaten in season.

Those who attain this proper balance, obtain sufficient exercise and sleep, and live in accordance with the natural laws of life will achieve super health physically, mentally, emotionally and spiritually. These are the true compassionate teachers and leaders of the world; their judgment is always sound and useful.

True Teacher - The Tao

Humankind has always longed for a leader/teacher to ease his suffering. But what they really needs is enlightenment from within themselves. A healthy man or woman wants no followers and would never follow another person blindly. They are the true individualists, not carbon copies of another's mind. The true teachers of the world inspire others to great heights. Students learn to think for themselves under a true leader and teacher, and are taught to be responsible for their own actions. They inspire and always extend others the freedom to live their own life without interference. They are positive, happy, magnetic, calm, patient, understanding, loving, kind, and full of pep and energy, with a clear, sharp mind.

Balancing Body, Mind & Blood Chemistry

According to ancient Chinese Taoist health teachings written in "The Yellow Emperor's Classic of Internal Medicine" as the Five Elements and Transformation principle, there is no one perfect or ideal food to subsist on fruits and vegetables alone are too Yin/Alkaline; grains, beans and meat alone are too Yang/Acid. Extreme diets whether Yin or Yang are unbalanced diets, creating imbalances in mind and body chemistry.

A Yin/Alkaline diet can be used effectively as an eliminative or cleansing for a short period of time when necessary. All cleansing diets, fasting, juice diets, sprout/raw food diets can help tremendously to eliminate internal (Yang/Acid) toxins, poisons, overcome Yang constipation, Yang liver disorders, Yang kidney trouble etc., and balance body chemistry. They should be undertaken for this purpose only, and not as a regular dietary program.

The same dietary principal holds true for one who has become too Yin and Alkaline, from eating excessively of fruit, juices, sprouts, vegetables, liquids and all raw foods. One can create a balance in the system by discontinuing all raw foods for a few days or weeks, and consuming exclusively only grain-based products, legumes, cooked vegetables, miso, soups, sea vegetables, etc. These are natural Yang/Acid foods, which will help to bring an extreme Yin/Alkaline system back to balance. After internal balance has been achieved, one can then end this exclusive Yang/Acid diet and return to a properly balanced diet as stated in this chapter and in the following Food Chart.

Extreme Yin Foods:

High Sugar & Fat, White Sugar & Ice Cream, Fructose & Glucose, Margarine & Lard, Dope & Chemicals, Pop & Cold Drinks, Grapes, Cakes, Pies & Jams, Coffee & Alcohol, Baking Yeast & Spices, Chocolate & Candy

Natural Yin/Acid Foods:

Honey & Maple Syrup, Carob & Molasses, Dried Seeds & Nuts, Dried Fruit, Oils & Butter, Avocado & Mushrooms, Potatoes & Nut Butters, Milk & Cheese, Over-Eating

Yin/Alkaline Foods:

Tomatoes & Oranges, Grapefruit & Pineapple, Fresh Figs & Dates, All Juices, Tropical Fruits, Melons & Bananas, Eggplant

Balanced Food Category:

Yin/Alkaline Foods:

Fruits: Apples, Pears, Plums, All Berries, Cherries, Apricots, Pomegranate, Blueberry, Strawberry, Blackberry, Grapes.

Vegetables: Cabbage, Romain lettuce, Green pepper, Sprouts, Alfalfa, Squash, Carrot, Garlic, Onion, Celery, Leeks, Radishes, Sea Vegetables, Broccoli, Dandelion, Kale, Bib Lettuce,Artichokes, Brussels Sprouts, Cauliflower Okra, Swiss Chard, Cucumber, Endive Parsley, Endive Parsley, Mustard Greens, Watercress, Sorrel, Beet Tops, Turnip Greens, Turnip, Spinach, Tomatoes.

Yang/Acid Foods:

Seed/Nuts Soaked: Pumpkin, Sunflower, Sesame, Almonds, Walnuts, Pecans, Brazil.

Grains: Rice, Rye, Wheat, Corn, Buckwheat, Oats, Millet, Barley.

Beans & Peas: Lima, Pinto, Kidney, Aduki, Butter, Black & Tofu.

Dairy: Low Fat Yogurt, Buttermilk, Skim & Goat Milk (Sparingly).

Food Supplements:

Yin/Alkaline: Chlorophyll Liquid, Alfalfa Tablets, Spirulina, Garlic Pills.

Yang/Alkaline: Kelp, Dulse

Yin/Acid: Nutritional Yeast (Eat 90% or More of the Foods in this Balanced Food Section for Optimum Health)

Extreme Yang Foods (High Starch and Protein):

Yang/Acid: Meat, Fish, Fowl, Eggs, White Flour, Brunt Food, Skim Milk Cheese, High Salt Cheese and Cigarettes.

Yang/Alkaline*: Salt, Ginseng, Burdock, Miso and Tamari.

(*Note: Consume Yang/Alkaline foods in cold weather; and very sparingly in warm or hot climates).

Fig. 7.3. Yin/Yang and Acid/Alkaline Food Classification

Effects of Various Diets on Mind and Body

Grains, Legumes, Vegetables, Fruits, Sea Greens, Seeds, Nuts (Soaked) (More Raw Food in Hot Weather-More Cooked Food in Cold Weather): More healthful; physically and mentally balanced temperament. Generally free from illness and disease. Intuition, creativity nature well balanced and more developed.

Grains, Beans, Cooked Vegetables: Tendency to underweight or emaciation. This diet lacks raw food and sufficient potassium; may also lack protein and alkaline vitamins and minerals. Insufficient raw foods during hot weather may cause fevers, Yang temperaments and contracted organs; anemia present; arrogance.

Exclusive Raw Fruit, Vegetable, Juice and Nut Diet: Tendency toward possessiveness, nerve disorders, over sensitive, sentimental and emotional; critical temperament. Disease symptoms: Expanded (Yin) kidneys, intestines, bladder and colon; excessive urination, lung and respiratory weakness; weak digestion and sexual organs, glands and hormones.

Alcohol, Spices, Stimulants and Drugs: Emotional instability and insecurity; heart and blood pressure weakness; expanded kidneys and skin diseases. Disorders in the sex glands and hormones; excessive sexual desire; falling hair on front and sides of head. Poor creativity and confusion in the mental realm.

Meat, Fish, Salt and Eggs: Tendency to be more aggressive, stubborn and determined. More practical, mechanical and materially minded. Fast and sharp thinking mind and senses. Disease symptoms: Constricted (Yang) heart, high blood pressure, circulatory problems, Yang kidneys, liver and gastrointestinal tract (pain in these areas). Constricted constipation, cancerous growths and tumors; farsightedness; loss of hair on top and back of head.

Sugar Products, Honey, Dried Fruits, All Sweets: Mental instability and delusion, schizoid tendencies, nervous disposition, overweight, hypoglycemia, diabetes, skin disorders; expanded (Yin) digestive systems and disorders; weak kidneys and bladder; sexual weakness; liver and pancreatic disorders.

Dairy Foods (Cheese, Milk, Ice Cream): More docile, mentally dull and unresponsive; painful joints and lower back area. Disease symptoms: mucus condition, colds, flu, lung disorders, skin diseases, cysts, tumors, heart and circulation problems; liver, gallbladder, and spleen congestion and sexual difficulties; prone to cancer and growths. Anemia and fatigue are generally present.

A true, lasting and stable physical and mental healing, however must take place after the cleansing period on a well-balanced Yin/Yang and Acid/Alkaline diet. A well balanced diet is a definite requirement afterwards in order to strengthen and build cellular structures, increase normal hormone production, impart muscle tone, form and reconstruct blood and hemoglobin.

Exclusive fruitarian, juicearian or sproutarian diets, beyond a certain point of cleansing, generally fail to produce healthy results in balancing the body physically, chemically and mentally. Blood, bone and muscle are built by 16 mineral elements, several vitamin elements, plus the proper amount of protein, natural complex carbohydrates and fats. A balanced body chemistry is a prerequisite or necessary factor for internal healing and health maintenance.

Extreme Diets cause Imbalances

Raw fooders too often over-cleanse the body to a deficiency point, which leads directly to serious health disorders and emaciation. For example, an emaciated, bony physique is not Nature's plan for vibrant manhood and womanhood. Disorders of this type are contrary to natural law. Powerful magnetic nerve force and energy cannot be built on a diet of fruits, sprouts or cleansing diets alone. One has only to observe an emaciated, bony dog, cat or horse and see that it is not pleasant to look at; its grace, beauty and normal form is gone. The same principle holds true for men and women; they should possess a well proportioned physique, according to their height and bone structure with firm, well-formed and elastic muscles, which look pleasing to the eye.

An extreme raw food diet will create a hinging syndrome, which pulls one to consume large quantities of straight junk food or Yang or Acid victuals, such as grains, bread, potatoes, nuts, health food cakes and pies etc. In balance, these Yang/Acid foods are beneficial in moderation; however, the raw fooders believe that these natural Yang/Acid foods are poisons or mucous forming in the body, and therefore avoid them like the plague. They are constantly pulled towards these heavier Yang foods like a magnet to a bar of steel. Their conscious lower mind or will tells them to eat more and more Yin foods, while the subconscious mind constantly seeks equilibrium, and creates an insatiable craving to overeat Yang/Acid foods. Humans are an intimate part of nature's finer forces; it is the natural law or urge within humans that strives for eternal balance within the body; and it will not be denied by a scheming conscious lower mind.

This same principle of binging can be applied to any strict dieting program: for example, a strict grain and bean diet, which is too Yang and Acid will create an internal subconscious and physical craving (physiological need) or binging syndrome in which one consumes large quantities of Yin foods fruit, juices, vegetables, or Yin junk food, such as beer, coffee, ice cream or sweets.

Extreme Yin or Yang diets are much too rigid and create imbalances in body chemistry. Each causes its own kind of physical and mental disharmony. A person on a strict Yin diet almost always binges on Yang foods. A Yang (diet) person binges on Yin food. According to the cycles of Yin and Yang; Yin, in the extreme turns to Yang, and Yang in the extreme turns or transforms into Yin. If one denies Yin, they will crave Yin; if one denies Yang, they will crave Yang. We are pulled toward what we need, if we deny it in our diet or elsewhere. Raw fooders (Yin) become underweight or emaciated (contraction, Yang). Cooked grain, bean or meat eaters (Yang) are also (Yang, contracted).

A healthy and nutritionally balanced person has no need to fly from one extreme to another; they eat only according to their inner physiological needs and requirements, and select foods from a wide variety of nature's bounty. When out of physical and dietetic balance or half-starved, the lower conscious mind sends a message to the subconscious mind for a more adequate and balanced diet. Always remember: The inner physiological voice or subconscious mind can never be denied without ill-effects. The lower mind or will can make or break you; it can be used to help you develop superior health or turn you into a dietetic cripple, mental and physical wreck or health hypochrondriac. The choice is yours.

The body cell is bi-polar; it's nucleus is positive (Yang); the cytoplasm is negative (Yin). The cytoplasm is alkaline, which is surrounded by the nucleus, acid. For a proper balance the cells need an 80/20 ratio, that is, 80% alkaline and 20% acid. This is of vital importance and is essential for that spark of animation or electric potential between the nucleus and cytoplasm. If an excess of acid foods are eaten, the alkalinity of the cell is reduced. If an excess of alkaline foods are eaten the acidity (nucleus) of the cell is reduced. An excess or deficiency of either acid or alkaline elements in the diet will result in a loss of that vital spark which is so necessary to maintain vibrant health.

Although one can Imitate the diet by observing the techniques of others, this is not enough. There are many people who, even after several years of observing what they consider to be the (ultimate) diet, are still unable to make themselves healthy and happy. Because they have not yet understood the principle behind the diet, without comprehension of which the technique is dangerous. For example, if a person living in a hot climate were to maintain a diet consisting of about 75% grains, 15% cooked vegetables, 5% beans, seaweeds and pressed salad, that person would eventually become very sick (too yang). But such a diet would be a good approximation for the average person living in a cold climate (depending on such variables as age, activity, previous eating habits, and other variables). In short, the clearer one's understanding of the Unique Principle, the better able one is to follow the (correct) diet successfully.

The two most fundamental ways to establish health, freedom and happiness in our life are One: (Yin) by improvement of our thinking ability toward the highest judgment (awareness of Absolute Truth), and Two: (Yang) by dietary discipline in accord with the Unique Principle (Yin and Yang). But actually, these two ways are one, for without using our judgment, how can we eat correctly? And without eating correctly, how can we become aware of Truth? A clear mind cannot exist in a disturbed body.

Sodium and Potassium Balance

The Yin/Yang balance is achieved by regulating the Potassium and Sodium intake. Generally, the ratio is *2* ½ Potassium to 1 Sodium in the human organism. The formed elements of blood contain twenty times as much Potassium as Sodium. This is the main reason why strict grain eaters become underweight, lose muscle form and tone; they lack sufficient potassium, which fills out the muscle tissue and imparts beauty. A 7 to 1 Potassium to Sodium ratio, as advocated by some is much too low for health maintenance. A healthy person does not deny the body what it requires.

To achieve a proper Yin/Yang and Acid/Alkaline balance, it is best to consume food grown in one's own local environment, which includes a daily quota of raw fruits and vegatables, cooked grains, legumes etc. Then, listen to the inner physiological voice, whether to eat Yin or Yang. Our inner body intelligence knows what kind and how much food we require to maintain nutritional balance.

You are What You Eat

You are what you eat is an old axion as true today as it ever was. Food does make or break one's mind, health or character. If one is skeptical of this statement, they are urged to experiment on themselves by eating certain Yin or Yang foods exclusively for several weeks or months, and observe the change or reversal in their temperament, character, and overall health and well-being. Only then will they personally know that we are exactly what we eat, digest, assimilate, absorb, and nothing can change that fact. We can control our health and life by becoming master of our habits. It is an extraordinary blindness to live without investigating what we are. A sound brain is not found in an unsound body; nor do we find a sound body nourished by an impure blood stream.

Balancing the Life Cycle Triangle

Everything in life affects the Yin/Yang and Acid/Alkaline balance. Activity, such as exercise, work, study, etc., creates acidity (Yang), while rest, sleep, creates alkalinity (Yin) within the body. Cold weather is Yin/Alkaline upon the body, while hot weather is Yang/Acid upon the body. Anger, hate and jealousy create Yang and Acidity; peace, love, harmony in thoughts and actions and enthusiasm create a natural body balance. Positive thoughts are Yang; negative thoughts are Yin.

Exercise creates acidity within the body. Vigorous exercise, where there is a breakdown of muscular tissue, as in barbell training, distance running, swimming, etc., will cause much lactic acid to be generated in the system. In this case, the athlete will require more calories from complex carbohydrates (grains, legumes) to replace the broken down tissues. However, Yin/Alkaline foods must also be consumed to balance the acidity of the exercise and to replace and renew electrolytes within the cells and tissues. This is not to say that one must overeat; on the contrary, the demands made upon the athlete's body will automatically require that he eat enough to sustain his endurance, stamina, strength and health. A non-exerciser cannot possibly utilize his food as efficietly as an exerciser, due to slower blood circulation, poor stomach tone and weak assimilation of food.

Only you can judge how much activity or rest you require, and also how to balance your diet properly. You must listen to your inner conscience (voice) to know when, what and how much to eat, sleep, work, exercise, etc. Be moderate in all your activities.

The Life Cycle Triangle is the Law of Rhythm in dynamic action. By understanding the universal law of rhythm, one may achieve superior health and harmony.

Fig. 7.4. Life Cycle Triangle

Feminine and Masculine

Yin and Yang can also be viewed in terms of our feminine and masculine qualities. It is a common misconception that only women should have feminine qualities and only men should possess masculine qualities. Yin/Yang theory is a theory of relativities, not absolutes. All of us are whole as we are, and thus we have our Yin aspects and our Yang aspects. These aspects include the following:

Feminine	***Masculine***
Intuition	Logic
Receptive	Creative
Passive	Active
Internal	External
Subconscious	Personality

We all possess all abilities and are complete in our self. However, when we are with another person, we may be relatively feminine (Yin) or masculine (Yang) compared to them (regardless of gender). Often (but not always) a woman is relatively Yin compared to a man, but she still possess Yang qualities within herself.

These individual differences are what give us our individuality and do not need to be fixed or changed. It is only when the harmony within our self becomes unbalanced that we may need to take remedial action. For example, a person with a lot of feminine qualities may be always cooler than their more masculine and partner who has a warmer body temperature. This does not need to be viewed as a problem as it is simply individual differences.

However, if a person suddenly feels that they are much colder than they used to be, and begins to suffer discomfort from it, then there may have been a change in their own internal balance that needs to be addressed.

In terms of remedial action, we can see that proteins and fats enhance our masculine or Yang qualities; whereas carbohydrates enhance our feminine or Yin qualities. We often think of meat as being a masculine food, and we think of sweet foods as being a favourite of women. If the Yin/Yang imbalance starts to cause health and wellbeing imbalances, then we may need to use the opposite food to bring ourselves back into balance. Five Element Dietary Therapy is a delicate art of listening to the body & responding accordingly.

Yin and Yang Dietary Guidelines

The balance between Carbohydrates and Proteins/ Fats is the most broad way to balance Yin and Yang. However, there are many different aspects of diet that can assist in this, including:

Cooking Methods
Thermal Properties of Foods
Water Content of Foods
Flavors
Colors
Parts of Plants Eaten

In Five Element Dietary Therapy, these factors all have a subtle influence on the energetics of our food. Paying attention to them can enhance the effectiveness of our dietary therapy.

Cooking Methods:
Raw foods and lightly-cooked foods have a more cleansing and cooling effect on the body. Thus they can be used to treat an overly Yang situation, especially where there is heat and toxicity. The longer a food is cooked, the more warming and nourishing it becomes. Therefore, these cooking methods can be used to treat an overly Yin situation, especially where there is coldness and weakness.

Nourishing	***Cleansing***
Grilled	Raw
Baked	Steamed
Pressure Cooked	Stir-Fried

Thermal Properties of Foods:
The ancient Taoists discovered that each food has its own thermal property, regardless of its actual temperature. These can be chosen specifically to regulate internal temperature imbalances. Some examples include:

Warming	***Cooling***
Ginger, oats, chestnut, sesame seeds, sweet potato, garlic, kale, date, cinnamon.	Lettuce, cucumber, celery, cabbage, tofu, wheat, yoghurt, peppermint.

This can be taken as additional information and used if there is a specific temperature imbalance.

Water Content of Foods:
One of the features of overly Yin is to have an excess of water, such as fluid retention, dampness and phlegm. A feature of the overly Yang situation is to be too dry, such as dry skin, dry hair, dry nails and dry lungs imbalance may choose lighter foods such as fruits and salad vegetables.

Parts of Plants Eaten:
Yin and Yang are relative terms, and thus they can be applied to any whole unit. Therefore, we can find Yin and Yang aspects within one vegetable. Some parts of the plant will have a more expansive effect, others more contractive, and some centering.

Just as we saw with the tree example, the roots of a vegetable will have a more grounding and contracting effect. The shoots and stalks have a more neutral effect. Leaves and flowers have the most expansive and uplifting effect.

Expansive

Centering

Contractive

Fig. 7.5. Parts of Plant Eaten

Eating all parts of a vegetable will have a balanced and whole effect, or we can choose specific parts for their specific qualities.

Yin/Yang Guidelines:

Therefore there are many different aspects of the food we eat that we can attend to when we are trying to regain balance. The relative amounts of carbohydrates versus proteins and fats is the most powerful factor, but the others can be used to rebalance on a more subtle level.

To Treat Overly Yin		***To Treat Overly Yang***	
Quality	***Effect***	***Quality***	***Effect***
Protein/Fats	Slow-Release Energy	Carbohydrates	Fast-Release Energy
Long Cooking	Nourish	Light Cooking	Cleanse
Warming	Warms	Cooling	Cools
Low Water-Content	Dries	High Water-Conten	Moistens
Salty	Grounding	Sweet	Uplifting
Dark colour	Grounding	Light colour	Uplifting
Roots	Grounding	Leaves	Uplifting

No Extremes

Five Element Therapy always warns us about the dangers of extremes, if we choose an extreme diet we will always pull ourselves off-center, and building a strong center is so important for health and happiness. One of the rules of Yin/Yang theory is that an extreme will always turn into its opposite. Remember the example of the workaholic who suddenly collapses with exhaustion? This rule applies also to dietary therapy.

Thus the overly Yin person may benefit from the addition of a few extra proteins and quality fats. However, if they were to embrace a diet exclusively of these foods, they may in fact end up feeling too heavy and even more lethargic! Sometimes excessive consumption of meat is not calming and grounding, but actually creates aggression. This is an example of an extreme having the reverse effect.

Similarly the overly Yang person will benefit from a few more carbs in the diet. For example, a few salads and steamed veggies will cool and calm them immensely. However, if they were to go overboard on fruit juices and sweet foods their blood sugar would rise up excessively, causing too extreme an energy rise. It is thought wiser to take one's time and add a few foods into the diet for rebalancing. Once again the golden rule of the center appears: if we are eating some centering foods, plus the rebalancing items, then we will have a more successful result in the long-term.

We have become a very mind-dominated society in the modern world. This can lead to the situation in which we try to rule the body with the mind. However, a healthy relationship in one in which listening and acting are equal therefore we must listen to the body and then act. This will improve the relationship between mind and body. Controlling the body with the mind can lead to the development of an eating disorder and can bring us a long way from feeling whole.

Taoist practices always aim to harmonize the different aspects of the self, indeed, this is another way to balance Yin and Yang: the body is Yin relative to the mind (yin= material, Yang = immaterial), and so to harmonize the two is healing in itself.

Eating Habits versus Making Changes

Our eating behaviors are directly correlated with our psychological patterns. Eating is tremendously tied in with our emotional being; it is far more than meeting our physiological requirements. Humans are the only animal that has taken the act of eating beyond the practical level. Therefore, to look only at the micronutrients in our food is to overlook a major aspect.

Think about the emotional aspect of eating: we celebrate occasions with elaborate feasts, when we fall in love we exchange gifts of food (chocolates especially!) and we take our beloved out for dinner. As well as expressing joy with food, we can then use food to try to recreate that sense of happiness when are no longer feeling it; hence the concept of comfort eating (one extreme being bulimia nervosa). Think of the woman who has just ended her relationship munching her way through a big box of cookies.

Other people are used to receiving attention through pain, it is not uncommon for victims of abuse to develop eating behaviours through which they punish themselves with food. They may try to starve themselves (anorexia nervosa) or to eat very plain foods or extremely strict diets. This is a way of reinforcing the belief that they are guilty and must be punished.

This emotional link with food operates on even a more subtle level, and we receive comfort or pain on a highly subconscious level all of the time. It is easy for us to develop eating patterns and habits that reinforce our psychological blocks, and this will create cravings for foods that do not serve us.

Intuition vs. Addiction:

We often talk about the body's wisdom and natural intuitive ability. We may assume that our body's desires are always for what will heal us or for what we need. How do we know whether we are craving a food that we are addicted to, or that our body is asking for what it needs? We can see how cravings arise when we look at the more addictive foods. If we have been drinking coffee for many years then our body adapts its energy system, as it expects a cup of coffee every morning. This leads to a craving for coffee, which will maintain our current equilibrium, though it will not bring us into vibrant health. This is a craving for what our body expects rather than a desire for what our body needs.

When we develop an eating habit, for any food, then we may crave it as our body's way of maintaining routine. The further a food is from the center the more addictive it can become. Centering foods are the least addictive.

Fig. 7.6. Intuition vs. Addiction

Most addictive foods: drug-foods, including 1MSG and caffeine, alcohol, sugar. The more refined a food is, the more expansive and thus addictive. At the other end of the spectrum we have the most contractive foods, especially salt, but also an excess of meat and eggs. Dairy products may become addictive as they have the effect of protecting us from difficult emotions. More extreme foods are more addictive.

Balancing foods include vegetables, salads, whole grains, tofu, seeds, nuts and lentils. It is unlikely that we will develop an addiction for these foods, unless they have been refined or have additives. Therefore we have to be on alert for what is a true instinctive desire and what is a habitual craving, it is important to learn to distinguish between the two so that we can choose healing. If we wish to restore our health we may have to address our habitual patterns and release the underlying emotions.

How to Spot a Craving: The desire for a food tends to feel more urgent; our body may feel mildly panicky; sometimes there is a secretive aspect to the desire and we will consume the food where no one else can see us (we feel ashamed); or we may hang out with others who share our habit to justify ourselves; extreme contractive or expansive foods are the most addictive; it is a desire for the same substance over and over; we may want more and more an insatiable desire.

How to Know an Intuition: The desire Is deep, but not urgent; our body feels calm and relaxed; our desires change as they are responses to the changing environment; once we have taken the food, we are satisfied and the desire is gone.

There is no right or wrong in this, We all have a choice at every moment. If you feel ok in your current situation, then do not try to make changes. If you are motivated to make a shift, then change your diet and make space for transformation. Do not change your diet for no reason. Rather, learn to listen to your body and act (or not) accordingly.

Clearing Habits: Fasting and cleansing are great ways to clean the slate and start again. For example, just following a simple diet of organic centering foods, with no salt, sugar, caffeine or additives, can helps us to clear attachment to old patterns. Such procedures must be accompanied by consciousness: it is important to take time to look at what is going on so that we can really make the shift at a deeper level. Often when we remove our comfort foods, emotions will arise that we had been suppressing. This needs to be met with awareness, so that we can find ways to meet the underlying pain and thus heal it. It can be a wise idea to go to a Fasting Center, where you will receive guidance throughout your cleanse and emotional support will be offered. Meditation is a great accompaniment to any cleanse or fast, as it helps us to bring consciousness to our process.

Healthy Habit Formation: If you have a strong mind, be wary not to let your mind overtake your healing process. It may be that we feel great when we fist make a dietary change; for example, we add more protein to a protein-deficient diet. At first we feel fantastic at this change. But then the mind takes over, adding protein to every meal, if we do not listen to the body, then we may not hear a signal that our diet has been rebalanced and it is time to move back to a more balanced diet. In this way, what started as a healthy change soon becomes yet another mind-controlled habit. When the mind takes over our eating habits, it is possible to develop an obsessive disorder, it is even possible to become so obsessed with eating what the mind considers health foods that a disorder called Orthorexia Nervosa can develop.

In Five Element Dietary Therapy, the focus is only to correct an imbalance if one exists. Once everything is back into balance, the person is encouraged to eat a wide variety of foods and a balanced diet. Obsession with food is considered an imbalance of the Earth Element (of the Taoist Five Element Theory) and is a sign that the person has a weak center. It can be the result of consuming too many extreme foods and of partaking of too many extreme activities.

Maintaining Balance

There is a difference between using dietary therapy to correct an imbalance, and eating to maintain health. Often when people fist become interested in nutrition, it is because a health problem has motivated them to make change. However, once that problem has been healed, we then need to switch our diet towards one that simply maintains our good health.

Maintenance Diets need to have Several Qualities:

1. They must be stable, and not extreme, so that they are easy to follow continuously.
2. There is evidence that they have been in use for long periods of time.
3. They promote wellbeing and health.
4. They promote longevity.

Thus to find an ideal maintenance diet, it can be helpful to look into different cultured to find diets that have been in use for a long time and in which the members of that population enjoy good health and longevity.

It is important not to mistake rebalancing diets for maintenance diets. Rebalancing diets will involve going to the opposite extreme for a period until we come back to balance. However, once balance is achieved, it is important to switch to a maintenance diet, else we will swing the other way. For example, many people suffering from the results of an excessive lifestyle: too much fat, sugar, toxins and stress, will benefit from a cleansing diet such as raw food. However, after a period, one should return to a more balancing diet else eventually the body will weaken.

Different cultures can be observed to have very high levels of longevity and wellbeing. For example, the island of Okinawa in Japan is known for the outstanding longevity of its inhabitants. This population has been studied extensively to gain better understanding of their dietary habits. The average citizen of Okinawa will consume a diet made up of the following:

At least seven servings of vegetables daily, and an equal number of grains (in the form of noodles, bread, and ricemany of them whole grains).
Two to four servings of fruit.
Green tea (full of anti-oxidants).
Tofu and other forms of soy; various types of seaweed (soya and seaweed balance each other in terms of iodine)
Sweet potatoes, bean sprouts, onions, and green peppers are prominent in the diet.
Vegetables, grains, and fruits make up 72% of the diet by weight.
Soy and seaweed provide another 14%.
Meat, poultry, and eggs account for just 3% of the diet
Fish about 11%; fish rich in omega 3 is taken (about three times a week).
There is an emphasis on green vegetables rich in calcium.
Okinawans, like other Japanese, don't eat much dairy (calcium comes from the dark leafy greens).
Okinawans do drink alcohol, but women usually stick to one drink a day, while men average twice that. Moderation is key.

In terms of vegetables, there is a special emphasis on sweet potatoes, which play a central role in the diet. This food has a very different effect on health than the normal potato. For example, a baked potato releases blood sugar very fast, whereas a sweet potato Is slow-releasing. In Five Element Therapy, the sweet potato is known to improve digestive ability by enhancing the spleen-pancreas.

The diet of the Okinawans is in fact what Five Element Therapy would call a centering diet. It minimizes extreme foods and focuses on those that have a centering quality. According to Five Element Therapy, such a diet puts least stress on the body (extremes cause most stress) and help to maintain wellbeing.

Building a Strong Center

In Five Element Therapy, the strength of the center can be seen by the power of our digestive ability. The ideal situation is one in which we can eat anything without a problem. This is called having a good digestive fire; though even this does not want to be excessively strong. Digestive fire is a concept in many Asian nutritional systems; in Ayurveda it is called “agni”. In Five Element Nutrition they take the model of having a small fire burning in the belly. The stomach is like a cooking pot, and when we ingest food it enters the cooking pot and is broken down by the fire.

If our fire is not strong enough, we will struggle to digest the food that we eat. We may feel tired after eating, have constipation or lose stools, or even undigested matter in the stools. Feeling that we cannot absorb the food that we eat is frustrating to those who are trying hard to improve their health. There are several steps we can take to enhance our digestive ability, including:

1. ***Chew.*** This is the most simple and efficient way to boost digestive fire.
2. Taking root vegetables can be very helpful to nourish the digestive fire: pumpkin, sweet potatoes and carrots.
3. Adding a few digestive spices, such as cinnamon, cloves, nutmeg & garlic can assist. Avoid these if there are heat signs.
4. Avoid foods that are cold, sweet or mucus forming, as these will diminish the fire! Ice cream is a prime example, but also iced drinks, refined sweets and dairy.
5. Eat a good breakfast: this is the time that the Earth Element, which rules the digestion, is active. Therefore, a wholesome breakfast that is not too sweet can help our digestive ability.

Try not to get too scattered during the day: taking on too many tasks, seeing too many different people, being too long on the internet or having different communication sources all going off at once these will all scatter your Chi and diminish your center. The more we can build a sense of center, the better our digestion will become.

Chapter 8

Diet Fads, Junkfoodism to Extreme Yin and Yang

Confusion Reigns Supreme

Webster defines a fad as a pet idea, a passing fad or fashion. There are literally dozens of dietary fads in vogue today. It is the thing to do. Each fad has it's own set of prejudices, rules and regulations. Many people often experiment on themselves, changing from one dietary program to another without learning sound and scientific nutritional and health principles. In most cases, the fad diet does not meet their own individual and physiological requirements.

Confusion reigns supreme and many people give up in disgust and return to the realm of junk food. Thus ignorance, prejudices, fashion, gullibility due to fear tactics or false hope, and a relaxing sense of security which comes from allowing someone else to think for us, are all forces which make people susceptible to dietary fads. Some food fads are harmless, while others can be very dangerous to the body. An occasional exclusive fruit or eliminative cleansing diet when the physiological need arises is definitely bene-ficial and health building; but carried to extremes it can lead to malnourishment and ill-health. The same with an all grain diet; it is very cleansing and healthful for a specific period of days, but carried on exclusively or permanently, it can be damaging.

An exclusive fruit diet, vegetable diet or grain diet are referred to as mono-diets. Each diet itself is based on simplicity, which makes digestion much easier, to allow for healing, cleansing, rebalancing the internal organs, and rejuvenating the blood and lymph system. Thus, a mono-diet improves one's physical and physiological health. Complete rest, mental poise, sunshine, exercise, pleasant and healthful environmental conditions are all key factors along with a simple nourishing diet that produce favorable results in any dietary system or health program. Generally, if one's diet is well balanced in all food elements and if one exudes energy, glowing health, and vitality constantly, that person is cultivating good eating and living habits. This person is not a food faddist. He or she is balanced mentally, physically, spiritually and emotionally.

Fig. 8.1. Whatever you do, or dream you can do, begin it.
Boldness has genius, power and magic in it.
We can live in the Tao by just deciding to do it.

The fact that a cult or organization has a large following, or that its followers experience certain benefits, are not conclusive proof for or against the philosophy it teaches. People can be helped temporarily by almost any change in diet away from the conventional meat and potato, coffee and donut mode of existence. Dietary and reducing fads are more fashionable than sensible. Propaganda is the tool used to rake in enormous financial profits. People are commercially exploited by fast and slick salesmen who prey on the credulous and fearful public.

Many strict dieters limit themselves unnecessarily in their choice of foods, in the false belief that these foods are fattening, mucous forming or acid producing. Some people cannot tolerate fruit due to gas; others shun grains and beans; some are strict food combiners; and some cannot tolerate nuts or dairy products. These notions are generally not based on a solid foundation of facts. Such people make themselves miserable by attempting to live by a set strict standard of rules and regulations; of do nots and cannots. So, for the bewildered dieter, what is left to eat?

The longest lived and healthiest people throughout the world do not follow any dietary fads; they are usually much too busy working outdoors planting, gathering food, climbing mountains and working the fields. They achieve good health by living close to Mother Earth, making work their exercise and remaining physically fit well over the century mark: sunshine, fresh air and outdoor activity are part of their daily living habits. People who are bored with life nothing constructive to accomplish lacking exercise and physical fitness and seeking excitement and stimulation in artificial things, are the ones who run, like bees to a hive, to the first dietary fad that sounds plausible to them. If results are not forthcoming, they look to other dietary cults for further relief or guidance to their health phobias.

Raw Foods vs Cooked Foods

Most fruits and some vegetables should be eaten raw. Grains can be sprouted, cooked or made into bread and casseroles. Root vegetables, squashes, beans and peas are more easily digested and assimilated when well cooked, steamed or baked. The body requires some raw fruits and vegetables daily; they furnish vitamins, minerals, enzymes, especially vitamin C which is lost in cooking. There is no absolute necessity for anyone to consume all foods in the raw state.

In fact, there is no proof whatsoever of strict raw fooders living any longer, or being any healthier than a person on a well balanced moderate natural and mixed food diet. Many raw fooders have digestive problems because of sensitive and expanded (Yin) intestines and kidneys. Protein deficiencies are also common. A good natural food mixed diet, including raw and cooked foods, is better for most people.

Food Crank

We are living in an age of the food crank. Many theories are expounded concerning the natural food of humans, and how to prepare food. The theories and speculations are abundant. Listed below are just a few now in vogue. Cooking is evil and against nature, only raw foods should be eaten. Eat lots of meat, humans are carnivores. Eat only cooked grains and vegetables, raw food is for apes. Eat only raw fruits and nuts, humans are like apes. Drink only fruit juices, humans are fruitarians and was not originally meant to eat solid food. The body requires no protein, eat only sprouts and fruit. The high-protein diet is necessary for health and strength. Live on air alone, human are breatharians and should fast as much as possible, drinking only water. And on and on. If all of them are right, we should all, right now, stop eating and never leave our homes from all this confusion. However, all is not lost; there is bright hope for survival in this nutritional/dietary jungle; a healthy, vibrant life can be achieved by thinking, studying, contemplating and applying the secrets of the ancients as set forth in this book.

Overcoming the Junk Food Syndrome

Because of nationwide publicity, in recent years, on the subjects of natural living, health foods and vegetarianism, the public has become more consciously aware of their health and well being; taking positive responsibility for their actions. The term Junk Food Junkie was coined during the surge of health awareness in the 1960s, and refers to those people who take little or no responsibility for their own health usually consuming a great deal of processed, chemicalized, unhealthy junk food. This group generally refers to a health food conscious individual as a health food nut.

However, many health food nuts, if not balancing their diet carefully, can be easily caught in the Junk Food Syndrome. There is a

difference between a Junk Food Junkie, and one who is caught in the Junk Food Syndrome. The former consumes junk food at almost every meal; the latter eats healthy food most of the time, but all too often finds himself caught in the vicious circle of junk food eating the Junk Food Syndrome.

We will address those health fooders who would like to put an end, once and for all to their hinging, or Junk Food Syndrome. Fasting or cleansing programs: Many people fast or attempt a raw food cleansing diet indiscriminately, or when their body does not require one. They have usually been on a general health food diet for several years or have undergone several detoxification programs with some degree of success. However, this person may believe that a fast or raw food diet of long duration will cleanse the body permanently. They have experienced the Junk Food Syndrome for many years and believe that fasting or raw foods only will cure their cravings for junk food. All too often, this group will be found junking-up or pigging-out on their favorite morsel of junk food soon after a fast or raw food trip. (Pizza, ice cream etc.). Fasting is extremely alkaline on the body cells and fluids, which are necessary to cleanse and purify a toxic and diseased organism. A very sick and diseased conventional calamity food eater will benefit greatly by a long fast or an extended juice diet. Why? Because they are so acid, Yang and full of mucus, toxins and wastes, that fasting or raw juices will counteract, neutralize and allow the body to eliminate these diseased conditions toxemia. They need a fast to balance out their alkaline reserves and Yin/Yang polarities.

However, most vegetarians and health culturists do not need a fast, as they are quite alkaline, Yin and flushed out from all the alkaline and Yin foods they have been eating. What they need is proper and complete nutrition to put an end to the Junkyism Syndrome. An occasional short fast, fruit or juice diet for a few days should not cause any problems, provided a sound nutritional program is followed afterwards. Eating too much fruit or juices, especially in cold weather, (Yin) will cause a swing in body polarity to eating heavier and more Yang and Acid forming foods such as, starches of all kinds and heavy protein foods to excess.

The key to good health is to balance these two factors according to the weather, environment and physical requirements on any given day or hour. You must listen to your inner voice and body intelligence for its daily food needs.

Causes of Junkfoodism

Junkfoodism in health food (conscious) people, can better be defined as a syndrome or symptom brought on by poor dietary habits, bad digestion, poor assimilation and absorption and malnourishment. Although health fooders consume much more natural, pure and healthful foods than the conventional eater, they do, more often than they would like to admit, garbage-up or eat calamity junk foods such as, ding-dongs, cakes, pies, soft drinks, cookies, moon pies, candy, pizzas, twinkies, ice cream, fast food hamburgers and on and on. The reader can easily add to this list.

What causes Junkfoodism and the Junk Food Symdrome? How may one overcome the insidious and incessant cravings for junk food? Are you beginning to wonder if it is possible for anyone to live on a natural food diet without experiencing those hidden hunger pangs and the Junk Food Symdrome? Is there something wrong with you, or does everyone experience these health food growing pains?

We have all experienced the Junkyism Syndrome in our own personal way. Each of you can relate a case history of your trials and experiments on various diets and junk food trips. However, there is only one basic cause or reason for Junkyism, and it is this: The body is crying out for vital nourishment in every cell and tissue of its being. If your body could talk it would tell you that it needs an adequate supply of top quality protein, natural vitamins, minerals, trace elements, carbohydrates, fats and enzymes; to be eaten in such a manner that it can easily assimilate, absorb, digest and utilize the vital essences of those foods.

The diet and health suggestions as outlined in this book can help one overcome the Junk Food Syndrome and guide them to mastery of their eating habits. Junkfoodism can be overcome, and eventually one may look upon it as an experience or growing pains in their quest for super health. There are certain practices, misapplications, lack of thorough understanding of health principles and poor living habits that cause abnormal food cravings and malnourishment, that turn a person into a junkfooder or health hypochondriac. An excessive daily consumption of raw foods, raw greens, dried, unsoaked nuts and seeds, dried fruits, lack of oxygen after meals, lack of exercise, too much fruit or juices, fasting when not required, lack of sufficient sleep and lack of proper nourishing foods and food supplements are some of the reasons why health food people turn into junk food junkies.

Flowing with the Tao and Yin/Yang Forces

As we give up our junk food habits, such as coffee, alcohol, sugar, ice cream, milk, meat, pastries, etc., we begin to crave and desire these products as they are being eliminated from our system. An outright denial of these cravings can be disastrous to both mind and body. But the reason we desire these foods is because they cause an addiction and when they are eliminated too fast we experience withdrawal symptoms, the same as a drug addict. However, this is only temporary, until elimination of internal toxins is complete, and the body becomes balanced.

When we totally deny our addictions to junk food, with the attitude or affirmation of never eating them again for the rest of our lives, we become obsessed with denying that which our body craves for. If the mind denies junk food strongly enough, it will run to what it dwells upon, and cause one to junk up hi large quantities. A good method to overcome junk food addiction is to say to yourself, I will avoid junk food for as long as I can, then when I desire some junk food, I will eat it in small quantities only. This will satisfy the addiction or withdrawal symptoms, and your mind and body will be more at peace. As your body continues to cleanse and eliminate poisons slowly, over a period of weeks or months the junk food that once tempted you, will no longer do so. Your cravings will vanish like magic, and you will become the master instead of the slave of your dietary habits.

The reason this method works is because we are not negating or feeling guilty about eating a small amount of junk food occasionally. When we affirm to our mind that we may eat anything at any time, the struggle between our mind and body ceases. This no deny method removes the tension and stress which accompanies the attempt to live up to our perfect dietetic expectations or ideals. Tell yourself that you cannot have something, and you will want it even more. An extreme Yang action will change into an extreme Yin reaction.

When the mind/will/ego are used (in a Yang way) to overcome, control or deny physical or physiological cravings and addictions (Yin) which are still present in the system extreme junk food binging is generally the result. If the Yang mind strongly denies an inner craving, the craving usually wins out. If Yang will not bend, it will break. Yin and Yang must be balanced within the body for optimum health. This is the unique principle of physical life.

Deny something, and you will be pulled toward it. Place a wet paint sign next to a freshly painted fence, and people will touch it to see for themselves if it is wet or dry. Vow to become a celibate, and your sexual cravings will overwhelm you, unless your whole being body, mind and soul has overcome the desire without struggle. Denying or struggling against something takes us away from the flow of life from harmony with the Tao. Tell a child a fire will burn and hurt him, and in spite of the warning, he will play with fire and get burned. Deny him the real experience and he will be attracted to it unconsciously.

Eat too Yang, and you will crave extreme Yin, and vice-versa. The mind and body operates in unison; an unbalanced body creates an unbalanced mind, and an unbalanced mind further imbalances the body. The mind creates the body. A sound mind in a sound body is what we should strive to attain. In this physical three-dimensional world all is duality and change. Nothing here remains forever the same. All phenomena are constantly spiraling onward and upward evolving into higher and greater things. Change *is* the illusion of the physical world; the spiritual worlds never change they are absolute and non-dual; it is where the dual physical world is born. The One (Wu Chi) becomes the two (Yin and Yang), the two becomes the three (Trinity) and the three becomes 10,000 things.

Flexibility is the Key to Yin and Yang Balance

Second generation teachers like Michio Kushi, Michael Abehsera, and Herman Aihara modified these (Ohsawa's) practices and recommended a somewhat wider application of grains and vegetables. Michio Kushi's standard diet of fifty percent cereal grains, twenty-five percent cooked vegetables, and twenty-five percent supplementary foods such as miso-soup, beans, seaweeds, fruit, is an example. While this diet is generally sound for the temperate zones, it can still create complications if its practitioners do not understand how to apply the unifying principle of yin and yang. A principle without a practice is useless; a practice without a principle is dangerous. I have seen too many people become too yang that is, contracted, rigid in their thinking, subject to a variety of symptoms associated with over-stimulation of the parasympathetic nervous system, etc. Aside from the discomfort of being too yang, such people suffer an inability to discharge old,

poor-quality, stored yin such as cholesterol, crystals, stones, and cysts. The simple fact of the matter Is that the heart must expand as well as contract, we must breathe In as well as out, and so on. Yin Is necessary to life. In fact, as a general rule we need at least seven or eight times as much yin as yang In our diet, and the ratio can go much higher if, for example, we are very active (yang) in hot weather (yang). However, if we become too yang the body will necessarily retain its stored animal fats and yin toxins, particularly if we consume too much salt and other minerals such as those contained in seaweed. The farther we move toward yang and away from balance, the more desperately will the body hold on to yin.

The frequent practice of macrobiotics is to deny cravings until they build up to a point of IrreslstabIlity, at which time many people binge wildly, eating pints of ice cream, sugar-rich foods, meat, or even on occasion turning to drugs such as marijuana, LSD, or cocaine. The law of front and back Is undeniable. Balance will be made sooner or later. We must learn to change and be flexible in our diet and health program. What worked for you in the past may not work for you now. You are a different person every second, every minute, every hour, every month and year. Without constant change, growth and flexibility, we would die of stagnation. Accepting change and flexibility in this physical Yin and Yang world spirals us onward in our quest for perfection, toward the Universal Force.

Overcoming the Junk Food Syndrome

1. Consume a well balanced diet consisting of whole grains, beans, peas, sea vegetables, seeds, nuts, fruits and vegetables, miso, tofu.
2. All seeds and nuts should be soaked and germinated overnight for proper assimilation and protein absorption. These can be blended into a seed or nut shake the next day. Eat germinated seeds and nuts more in hot weather and sparingly in winter. Seeds/nuts can be roasted in winter.
3. Use whole food supplements daily: nutritional yeast, alfalfa seeds (powder or tablets), carrot calcium, kelp, dulce, nori etc., raw vegetable juice (more in summer), fresh raw wheat germ, miso, soybean powder, etc.
4. Beverages: cereal grain coffee, dandelion, bancha twig tea, Mu tea, jasmine tea, alfalfa tea.

5. Consume vegetable stock soups highly nourishing.
6. Eat more cooked grains, beans, vegetables and soups in winter according to inner bodily requirements; more raw food, in season, in summer. Use the various methods of cooking: sauteing, boiling, steaming and baking.
7. Consume some raw food daily, more in summer; less in winter. Best fruits: apples, peaches, all berries, cherries, pomegranates, apricots. Best vegetables raw: celery, green peppers, sprouts, cucumbers.
8. Avoid tropical foods as much as possible, unless living in the tropics, including, tomatoes, oranges, avocado, eggplant, potatoes, yams, pineapple, etc.
9. Avoid all animal fats, eggs, high fat dairy, fried foods in grease, meat, soft drinks, sugars, white flour, white vinegar, hot spices, MSG, saccharine, coffee, commercial tea. Sweeteners such as: honey, maple syrup, barley malt, rice bran syrup can be used sparingly. Avoid canned, packaged and most restaurant foods.
10. Go outside after meals for proper digestion & assimilation. Oxygen is necessary for proper metabolism & absorption.
11. Daily Exercise: yoga, running, swimming, cycling, body building, breathing/stretching exercises & Chi Kung exercises.
12. These natural low fat dairy products can be used occasionally: Yogurt, buttermilk, cottage cheese (raw milk). Tofu can be used to supplement dairy products. Yang people should not use eggs and all others should use them sparingly.

The foods listed here, plus the health suggestions will nourish and vitalize your body. They will halt all cravings for junk food. A poorly nourished body is in a half-starved condition and needs many vital food elements: a half-starved body will cause deficiency diseases and result in the ubiquitous Junk Food Syndrome. May you eat in peace. We are creatures of habit. We succeed or we fail as we acquire good habits or bad ones; and we acquire good habits as easily as bad ones. Most people do not believe this. Only those who find out succeed in life.

Fig. 8.2. If you smile, it smiles with you in return. If you frown, you will be frowned at. If you sing, you will be invited in joyous company. If you love the world you will be surrounded by loving friends, and nature will pour the treasures of the Tao.

Extreme Yin and Yang Foods and Poisons

Did you know that the average American diet is costing this nation over 30 billion dollars yearly in doctor bills? Americans are consuming 102 lbs. of refined white sugar, 53 lbs. of processed oils and fats, 100 lbs. of white flour, 7 lbs. of white rice, many gallons of alcohol & thousands of cigarettes per person annually.

Disease is on the rise. Hospitals are filled to capacity. Jails and mental institutions are over crowded. One of the main causes of these confusing problems can be attributed to very poor living and eating habits over decades, such as the consumption of processed and demineralized foods and poisonous substances (drugs, marijuana, coffee, sugar, alcohol).

List of Extreme Yin and Yang Foods and Poisons:

1. Meat, Fish and Fowl
2. Pasteurized Milk and its Products
3. White Flour and its Products
4. White Sugar and its Derivatives
5. Vegetable Oils, Animal Fat and Derivatives
6. Tobacco, Alcohol, Vinegar, Tea, Coffee, Sodas, & Cocoa
7. Processed Peanut Butter, Nut Butters, Ungerminated Seeds and Nuts, and Dried Fruit
8. Salt and Condiments
9. Marijuana
10. Commerical Eggs

Meat, Fish and Fowl (Extreme Yang Food):

Flesh foods affect the body. Meat contains urea (uric acid or the urine of the animal), creatinine, creatine and phenolic acids. They may contains synthetic female sex growth hormones (des); other chemicals pcb, mga, antibiotics, drugs, nitrates, nitrates and red dye coloring to preserve and make the otherwise cadaver grey flesh more pleasing to the eye at the bucher's counter. These are all cancer causing agents. It is loaded with trichina worms, parasites and putrefactive bacteria. Pork contains 31,080, 000,000 putrefactive bacteria per ounce; steak and beef, 24,500,000,000; hamburger, 21,000, 000,000; sausage; 20,000,000,000 per ounce. Excessive flesh eating produces toxic metabolic wastes in the system causing toxemia, malnutrition, high-acidity, purine bodies, intestinal putrefaction, and contributes to the diseases of meat-eaters, such as cancer, kidney and liver disorders, arthritis, hard-

ened arteries, mental disorders, bone and blood diseases and many others. Meat eaters generally age faster, have less endurance, develop more diseases, and have a lower life expectancy than vegetarians. The flesh of an animal is not food; it is the result of food plant life. All animal and human life is dependent upon the plant kingdom for its sustenance. Meat eating animals are not the strongest and longest lived animals in nature the elephant, rhino and gorilla (vegetarians) are the true kings of the jungle. Several years ago the government placed a ban on the use of growth hormone drug (des) fed to cattle to stimulate weight and growth. Some cattle owners have been taken to court for continuing to use the hormones. The cattle were losing too much weight and this became unprofitable to cattle owners. Growth drugs have been used for over 20 years as a cattle feed additive or injection to increase growth quickly, without using extra feed. There is a close link between these growth drugs to human cancer and other diseases. Over 300 cattlemen throughout the United States are still using growth hormones in their livestock. If they get caught and convicted, they could get a 3 year sentence and a $10,000 fine. The ban on growth hormones and the penalty if caught using them seem to have no effect on the law breakers. Profit is clearly more important than health or honesty. This is just another very good example and reason for you to consider alternative sources of nutriment, relatively free of hormones and poisonous substances, such as found in plant food.

Pasteurized Milk & Products (Extreme Yin or Yang/Acid Food): Drinking milk may be hazardous to your health. This statement appeared in the National Enquirer a few years ago, along with an excellent article explaining the menace of pasteurized milk. Some milk supplies have been found contaminated with penicillin and chloramphenicol, two antibiotics, which are supposed to be forbid-den by law. Among the ailments attributed to milk are: Pesticide poisoning, adverse drug reactions, drug resistance, salmonella, and staphylococcus poisoning, anemia, hypercalcemia (excess calcium in the blood), diarrhea, asthma and liver damage, plus insecticides, lethal drugs and radioactive material. If you are eating pasteurized cheeses, ice cream, sour cream, powdered milk, cottage cheese, cream cheese and anything made from the pasteurized milk, you are getting a dose of the above poisons.

Think about that the next time you go shopping in your local market Dr. Pottenger conducted another experiment on cats. He fed them pasteurized milk and in three generations they displayed homosexual tendencies and were unable to produce offspring. They developed brittle bones and lung diseases. Pasteurized milk and its products lack the necessary enzymes, vitamins and minerals so necessary to maintain health. Milk drinkers are always full of mucous, coughs, headaches, colds and flus. Pasteurization is for the purpose of keeping bad milk in a saleable condition and for no other purpose. Pasteurized cow milk products are primary factors in causing body cramps, allergies, arthritis, fatigue, indigestion, gas and diarrhea due to fat and lactose intolerance. Lower back pains can also be attributed to milk consumption. Most humans do not produce enough of the enzyme lactase, after the weaning period, which digests the milk-sugar, lactose which causes trouble. Cheeses and cow milk are extremely high in lactose and fat, both extreme yin elements and contributing factors in heart disease, high cholesterol, diabetes, colds, skin diseases and cancer. Cheese is so concentrated that it takes 5 quarts of milk to make one pound of cheese. There is more fat in regular cheese than in most meats. Scientists have discovered that pasteurized cow milk products remain unmetabolized in many adults because it lowers hydrochloric acid in the stomach, which is required for protein and mineral assimilation. Milk the intestines to generate excessive amounts of lubricating substance called mucous, to help keep foods moving through the system. This material has the ability to harden and forms a coating on the inner lining of the intestines that makes it almost impossible for nutrients to pass through into the blood stream, which of course means poor absorption. Poor absorption leads to chronic fatigue. An excessive build up of mucous travels up to the lungs, bronchial tubes, nasal cavity and head causing colds, flu, headaches, pneumonia and asthma. Cow's milk contains hormones which are secreted by the cow for the purpose of stimulating growth in a calf, to move its weight from about 80 pounds at birth to 1,000 pounds two years later you probably weighed about 7 pounds at birth and it took you a full 21 years to reach your present weight. Milk is an excellent source of calcium but many people just don't seem to be able to metabolize It properly. It may be because the pasteurization of milk destroys enzymes in milk, or the heat of pasteurization distorts the calcium. No one really knows, but laboratory animals raised on pas-

teurized milk exhibited all the symptoms of arthritis. Anyone who depends upon milk for his calcium is making a mistake. Low calcium intake can cause muscle cramps. Non-dairy sources of good quality calcium can be found in sesame seeds, cabbage, okra, parsley, watercress, wheat, kale, cauliflower, lemons, straw-berries and collards. Pasteurization totally changes protein molecules in milk making it difficult to digest and assimilate. The body cannot utilize 42% of the protein contained in pasteurized milk according to Dr. S. C. Deal in his book "New Life Through Nutrition," 1974). High fat dairy foods, i.e., butter, processed cheeses, sour cream, cream cheese, and regular raw and pasteurized cheeses (cheddar, muenster, edam) are all extremely Yin, and should be eaten very sparingly. Low fat yogurt, buttermilk, and skim milk are more Yin and Yang balanced, and can be consumed in moderation. Low fat skim milk cheese, swiss cheese, low fat cottage cheese, and highly salted cheeses are extremely Yang due to their fat-free concentrated protein and high salt (Yang) content, and should be eaten very sparingly. Goat milk, goat cheese or feta cheese are Yang.

White Flour and Products (Yang/Acid Poison):
White flour and its derivatives affect the body. White flour products, such as white bread, noodles, pizza, etc., are considered Yang and are the main cause of Yang of constrictive constipation. The stools are dry, small and hard and bowel elimination is difficult. It contains a calcium sulfate, a chemical name for Plaster of Paris it will plaster-up, clog and close-up the eliminative channels of the body if continually indulged in. Intestinal statis or constipation causes anemia and pasty complexion, which can be attributed to white flour products. It is totally lacking in the entire vitamin B-complex family. It also depletes these vitamins from the body if eaten exclusively. It contains zero roughage or bulk, which is necessary for healthy digestion and proper intestinal and bowel action. They add empty calories and unhealthy weight to the body. White flour products maintain long shelf life, due to their lack of whole food value. Whole grain flour products cannot keep long because of their freshness and high nutrition. Bugs and insects will not eat white flour due to its lack of nutritional qualities. The wheat bran and wheat germ are fed to livestock for health and prize-winning reasons, while the farmers poison themselves unwittingly. These show animals are healthier than most humans.

The bread millers remove all of the vitamins, minerals, protein, bulk elements out of the wheat and enrich it with a tiny amount of synthetic vitamins and minerals, which cannot be absorbed by the body. This goes for all supermarket products, such as macaroni, gravies, spaghetti, etc. Twenty-six natural elements are removed from the flour, and a fraction of a penny's worth of inorganic vitamin/mineral elements are added back. White rice has the bran removed, which contains the valuable B-complex vitamins. It is constipating and does not promote health. It contains some or all of the following inorganic chemicals and unwholesome substances: plaster of Paris, polysorbate 60, calcium bromate, azodicarbonamide, sodium stearoyl-2-lactylate, amomonium phosphate, carrageenin, propylene glycol, diacetyl tartaric acid, monoglycerides and diglycerides and synthetic vitamins. Propyleneglycol is used in antifreeze; carragennin is a possible cancer causing agent; be suspicious of the other chemicals also.

All soft, fluffy supermarket bread is puffed with air in big vats, to blow it up for shelf life. If bread can be squeezed like an accordian it is not fit for human consumption. Supermarket cereals are made from white flour, with added, salt, sugar, BHA, BHT, artificial additives, pyridoxine hydrochloride, colorings, cotton seed oil, hydrogenated oils and preservatives. Cheap cereals contain as much as 70% to 85% refined sugar and white flour starch. Cheap hydrogenated coconut oils and salt come next as chief ingredients in cereals; artificial colorings are also high on the list. Cereal was named after the Roman goddess of grains, Ceres. The real cereals are whole grains: rye, rice, wheat, corn, barley, buckwheat, oats, millet etc. Whole grains are not fattening; legumes are not fattening; fruit, vegetables and low fat dairy are not fattening. Whole fiber foods cause one to eat less and to move the stomach and bowel contents along, thus aiding weight loss. White flour is devoid of nourishing elements, fiber bulk which will make you fat. You can make your own whole grain flour products and avoid obesity, disease and a thin wallet. White flour products do not fill you up, therefore you can keep on eating them, while chalking up the calories and fat. Over $2 billion dollars are poured, yearly, into advertising white flour products by large companies. Avoid all products containing white flour, sugar, additives etc. Use only 100% whole grain products. Avoid canned, bottled or frozen food and drinks (the sugared or salted variety), such as salad dressings, ketchup, tomato and other sauces, crackers, chips etc.

Consume foods made from whole grains, fresh vegetables, fruits, seeds, nuts, rice, melons, pure unsweetened fruit or vegetable juice, popcorn, grain cookies, honey oatmeal cookies. Make your own pasta and noodles with a pasta machine. Make your own tofu or yogurt salad dressing. In the long run, whole foods natural cooking can save you loads of money, prevent disease, increase your health force and most importantly, save your life.

White Sugar and Derivatives (Yin/Acid Poison):
Sugar, its derivatives and other unnatural sweeteners and food additives affect the body. It is an extreme-Yin substance, and psychologically and physically addicting. It contains zero minerals, vitamins, enzymes, protein, natural fiber, trace minerals and other food value. It contains empty calories, and can make one obese and lethargic. It uses up insulin and causes diabetes, obesity, heart disease, poor eyesight, skin diseases, bad memory, cancer, kidney and liver disorders. It places a drain on the alkaline buffer salts and causes calcium to be depleted from bones, teeth, hair, nails, eyes, causing tooth decay, soft nails, blindness, bone disease and hair loss. It robs the body of iron, the major blood-building mineral. Sugar is a main ingredient in most processed foods: ice cream, 30%-50%; white bread, 10%; commercial cereals, 40%-50%; peanut butter, mayonnaise, salad dressing, ketchup, 20%-30%, non-dairy coffee creamer, 30%-40%; imitation fruit juice, 98%; gelatin desserts, 85%; cigarettes, 50%; cigars, 20%;, pipe tobacco, 40%, canned fruits, 20%-35%; candy, 30%-50%; baby food and infant formulas, 20%-30%; spaghetti sauce, 10-20%; colas and soft drink sodas, 40-60%; hot dogs, 10%; cookies, cakes, pies, donuts, etc., 30%-50%. Sugar in any form is harmful. Read labels. Any of the following is just another name for sugar: sucrose, fructose, glucose, maltose, lactose, galactose, cane syrup, corn syrup, corn sugar, invert sugar, dextrose, saccharin (coal tar product), cyclamates etc. Most fast-foods contain high percentages of both sugar (Yin) and salt (Yang). Sugar is sold to the tune of 32 billion pounds and $6.4 billion per year. Dental bills cost Americans $6 billion a year. Isolated societies and rural cultures worldwide, who do not consume sugar and its derivatives are free from tooth decay. Excess sugar in the blood can result in brain damage, schizophrenic tendencies, depression and extreme mood changes. Sugar consumption is now up to approximately 200 pounds per person per year.

The death rate from diabetes has also increased 52% in 70 years. As sugar intake increases, degenerative diseases also increase. Refined sugar, fats and empty calorie carbohydrates exhaust the pancreas, which results in diabetes. Diabetes, hypoglycemia, skin diseases etc., are all unknown in societies who do not consume sugar and refined foods. Diabetes and hypoglycemia can be controlled and prevented on a sugar-free and junk food-free diet. The diet must contain whole grains, legumes, vegetables, fruits, seeds, nuts, low-fat dairy. Brown sugar is white sugar colored with molasses, and it reacts exactly the same in the body. Honey, rice bran syrup, molasses, barley malt syrup, dried powdered dates, carob powder, malt powder, etc., are all natural sweeteners and substitutes for all forms of white sugar and its derivatives. However, these substitutes should be used very sparingly and in small quantities in cooking or flavoring food. All sweet foods and substances are extremely Yin (expansive to mind and body) and can cause disease if used indiscriminately). Intestinal mucous is usually simply an extension of mucous of the stomach, and is always aggravated and instigated by the use of white sugar and other similar irritants. Chronic diarrhea is often the result of the free use of sugar in its various forms, causing intestinal (Yin) expansion and loose stools. Dilation or distention of the stomach, with enormous quantities of gas and fermentation can be attributed to sweets and sugar. Gastric ulcers can be caused and greatly aggravated by sugar products. The stomach requires a good calcium supply to function properly; sugar causes rapid calcium loss. Gout, chronic rheumatism, nervous headache, neurasthenia, eczema, apoplexy, leukemia, ms, tb, md, and other chronic diseases require entire abstinence from white sugar and its derivatives, if there is any chance or hope of a healthy recovery. White sugar is not digested in the mouth or stomach, but only in the small intestine, where it comes in contact with the intestinal juice. Several hours pass after eating a meal before the intestinal fluid is able to digest white sugar and prepare it for absorption. This is not true, however, of fruit or other natural sugars. It is evident that cane sugar is a crude vegetable product not well adapted to human nutrition. Stomach acidity, catarrh, indigestion, gas, ulcers and hyperacidity in many cases are due to this cause. The extensive use of candies, preserves, sodas, sweets of various kinds, as well as the free use of white sugar, corn syrup, etc., with cereals, pancakes, in coffee, tea, and in other ways, may be directly held

responsible as the one cause of indigestion and chronic disease which prevails throughout the civilized world. Millions of men, women and children are suffering from disordered conditions of the body due to the excessive use of white sugar without being aware of the real cause of their distresses. Not a few intelligent, observing people have discovered that sugar is productive of sour stomach and various other gastric disturbances. It is evident, then, that white sugar and its derivatives are totally devoid of properties which are found in wholesome natural foodstuffs. No healthy human being can suffer physical ills from consuming whole grains, legumes, fruit, seeds, yogurt or vegetables because these foods are natural to the human digestive process. Up to 90 percent of our supermarket food is loaded with chemicals, dyes, sugars, salt, colorings, additives, and preservatives. Their sole purpose is to give taste, prevent spoilage and impart bright colors for eye appeal and saleability. Most packaged supermarket goods fall into the category of yin substances (expansive qualities) which tend to produce specific and systemic biochemical and hormonal imbalances. Sugar and salt are sold to the tune of 15 million pounds each per year; corn syrup, 6V& billion pounds; sodium bicarbonate, 60 million pounds; monosodium glutamate, 30 million pounds and monosodium diglycerides, 90 million pounds. There is now about 2000 different chemicals used in foods for various reasons. It is amazing that the human being can survive at all.

They strongly urge and recommend that people drastically reduce their salt intake for young and old alike. Americans, they say, should eat less meat, whole milk products and eggs which are rich in cholesterol. The study states that people get 24% of their daily calories from refined sugar and 40% from fats. This is extremely high and the committee recommends that people eat less of these high calorie foods and more of the complex carbohydrates, that are the natural ingredients of fruits, vegetables and whole grains. In fact, as much as 45% of what people eat should be starch, and the fats they eat should be primarily unsatured (of vegetable origin), the study says. Although the report urges people to substitute more fish and poultry for meat, we recommend that seeds, nuts, raw goat milk products, soya protein, grains, beans and nutritional yeast can completely take the place of all meat; including fish and poultry.

With the adoption of proper nutrition and eating habits, the study estimates that most major diseases could be reduced up to 50%, including overweight problems. Our research reveals that the healthy, vibrant and disease-free centenarians from around the world prove that disease can be nonexistent.

Vegetable Oils, Animal Fat & Derivatives (Extreme Yin/Acid): Vegetable oils, animal fats and their derivatives affect the body. Fats are used as fuel in the body. The amount of fat required daily is quite small. The body's preference is to store up fat for use in emer-gency. It is deposited under the skin between the layers of muscles and serves as a padding around the internal vital organs; it is used to nourish the nerves also. Fats are converted into soap in the intestines by the action of the digestive fluids. Soap is soluble in water and in this form the fat is absorbed after the soap is de-composed and the original fat is reconstructed. Kidney and gall stones are nothing more than hard round soap balls, developed in the system from an excessive consumption of fatty foods and oils. The less oils and fats in your diet, the healthier you will be there is no secret about this. Bottled oils Even vegetable oils will cause liver and bladder trouble if eaten to excess. Why is this so? Be-cause all oils, from either vegetable or animal sources, are super concentrated food derivatives of which the human body was never designed to handle. For example, several pounds of nuts are re-quired to manufacture one small bottle of nut oil it is the same with all other oils the whole food factor has been removed from the original product, (fractionated) and we are left with a highly con-centrated food substance, which the human chemistry system and internal organs are burdened beyond their capacity to deal with. Result: malnutrition, indigestion, chronic fatigue, liver and bladder disease, anemia, falling hair, malabsorption of food, poor eyesight, and ultimately, cancer. The body was designed to handle foods in their whole form, with oils intact, such as found in all seeds, nuts, legumes, beans, grains, olives, cultured dairy products etc. In this manner, we can be assured of obtaining the whole food factor in the right combination and proper proportion. Remember: no more than one to two tablespoons of free oils or other fats daily. One famous health writer and researcher has discovered that any consumption of free-fats as found in vegetable oils or other animal fats, which have been fractionated and placed in bottles, is delete-rious to one's health. So again, heed the warning: The less free-

oils in your diet, the healthier and longer you will live. Animals in nature do not consume such things it is common sense that we should follow that line of logic also. Cold pressed vegetable oils should be used mostly in cold weather (winter), and very sparingly in summer. The body requires a very small percentage of fats in the daily diet these can be acquired mostly from whole natural foods, without injuring one's health. Most Americans consume from 50% to 60% fat daily, which is why we have the highest death rate from heart disease in the world. With the excessive consumption of animal protein, sugar, salt and fat, it is easy to see why the United States is one of the most chronically diseased countries on earth. Most people consume over 2000 calories in fat per day. Overconsuming fatty foods and oils does not give the body an opportunity to manufacture its own fat as is the case when only small quantities are eaten. The human body is an amazing work of art, and it can do many things on its own if we feed and take care of it properly.

One ounce of fat contains 240 calories more calories than the same amount of carbohydrates or protein. The excessive use of oils or fats creates chronic digestive disorders, takes several hours to digest, and leads to a multitude of illnesses. Left to its own, the body will form its required fat from natural complex carbohydrate foods, i.e., whole grains, legumes, seeds, nuts, fruits, and vegetables. The fat formed in this way is different from other fats because it contains the special characteristics of human fat, which was specifically designed by nature for the human body. Expensive margarines are an extremely Yin and inferior product. Margarines made from soybean or other oils are all hydrogenated and artificially flavored and colored. For example, soybean oil is heated to high temperatures, and hydrogen gas is bubbled through it, which causes the liquid oil/fat to become solid and made into bars of commercial brightly packed margarine. This hydrogenation process does two things to the unsaturated oil: 1) it makes it hard; 2} it changes polyunsaturated fats into saturated fats, which are more chloresterol forming than butter or eggs. Avoid all margarines, including corn, safflower, soybean and any other ones made from cheap oils. Use yogurt, tofu, natural cooking herbs, miso, etc., to make your own fresh toppings and salad dressings. They are all fast, easy to make, inexpensive, and will save you doctor bills.

Metallic nickel is also used in the process of turning unsaturated liquid vegetable oils into a hard stick of phoney imitation butter. Free nickel in the system can cause ill-health. Imitation margarines will raise your cholesterol, not lower it it will clog-up your organs and arteries, not clear them out. Coconut oil, animal fats, lard and butter are all highly saturated fats 100% fat. Coconut oil is the most saturated of all fats butter, lard, and animal fat comes next. Coconut oil is added to almost all processed foods, including imitation baby milk it is also used to make soap. Cottonseed oil is another highly processed, non-nutritive product used in many commercial foods, including potato chips, candy, pastries, ice cream, etc. This harmful oil has been reported to lower the sperm count in the testicles of male animals. In simple terms: cottonseed oil will lower your sex drive, reproductive powers and cause impotence. Palm oil is usually found in the same products as cottonseed oil. Read labels, even the ones in health food stores, and avoid these disease producing poisons.

The best polyunsaturated vegetable oils, if one must use them are: cold-pressed virgin safflower oil, dark sesame oil and olive oil. Safflower oil contains the highest amount of linoleic acid (75%) which is the most polyunsaturated oil of all. The lower the linoleic acid content, the more saturated a fat or oil is. Deep fried foods in oils, especially rancid, cheap commercial oils can cause severe organic health disorders. Vegetables sauteed in a small amount of pure dark sesame oil or safflower oil is permissible during the cold winter months. Use less oil in summer.

Tobacco/Alcohol/Vinegar, Tea/Coffee/Sodas (Yin/Acid Poisons): These poisons affect the body. Tobacco dulls the finer senses and severely weakens the pineal and pituitary glands, the very receptors of higher values and intuition. There are 19 poisons in cigarettes, i.e., nicotine, arsenic, methene, etc. Smokers are known to take on Buerger's disease which lowers skin temperature and causes gangrene. Smoking pregnant women can easily pass on the habit to their offspring. In many cases, the children of smoking mothers are sick from birth. Smoking is a contributing factor in all cases of heart disease and circulatory disorders. It lowers the red blood count and causes anemia. Heavy smokers do not generally have a taste for natural foods everything they eat is heavily sugared, salted or spiced, which further imbalances the system. Stomach ulcers are greater in smokers than non-smokers.

Smokers generally appear 10 to 15 years older than their actual age. The heavy tar substances in cigars or cigarettes adhere to the lung walls, coating them thick and black, and obstructing the oxygen and blood exchange within the lungs. It cripples the brain cells, causing them to harden, thicken and finally lose their finer nerve tissue. Brain cells do not regenerate or grow back when destroyed through smoking or other nerve poisons.

Normal Brain Cell **Tobacco-Crippled Brain Cell**

Fig. 8.3. Tobacco affects the Brain.

The nausea and sickness following the first attempt to use tobacco is definite evidence of the poisonous character of this drug. Vertigo, pallor, high pulse rate, pounding heart beat, breathing difficulty, vomiting, and in extreme cases unconsciousness are produced by a very small quantity of tobacco smoke in persons not accustomed to its use. Almost no one dies of nicotine poisoning when first smoking, because the human system possesses great powers of accommodation to circumstances. In this way tne worst poisons may by degrees be tolerated until enormous doses can be taken without immediate fatal results. However, the system is still slowly poisoned, and remains in a lowered state of health, until the smoker suffers and dies 10 to 20 years or more before his natural life span. A single cigar or several cigarettes will, in thirty minutes, produce a rise of blood-pressure amounting to twenty points. One pound of tobacco contains 350 grains of nicotine. One-thirtieth of a grain causes toxic symptoms in man. One drop kills a dog. Nine-tenths of a grain will kill a man. One pound of tobacco, then, contains more than enough to kill three hundred people.

When smoking is stopped, it takes about a month to get the nicotine out of the body. It takes several months to a few years to completely clean out the lungs and internal systems, provided a wholesome dietary and exercise program is adopted.

Alcohol and Vinegar:

These products are proroplasmic poisons. Vinegar is extremely acid and harmful to the stomach, kidneys and liver. They destroy red blood cells and lessen the functioning power of the brain. Alcohol over stimulates the brain and body, leaving the drinker fatigued and washed out after its effects have worn off. It eats away the stomach lining, leading to ulcers and cancer. It expands the liver and kidneys, causing chronic disease symptoms. Alcohol is a narcotic, which impairs one's intelligence, weakens the memory, judgment and the reasoning faculty. It lessens endurance and the power to resist disease. Healthy blood corpuscles help to prevent disease; a pint of alcohol puts 20% of our blood cells out of commission. The craving for alcohol, in many cases, can be traced to poor nutritional habits and deficiencies, lack of exercise and fresh air and stress. Alcohol is extremely Yin, and heavy drinkers generally crave much meat (Yang). Any extreme always creates a craving for its opposite. A healthy, well functioning liver will feel the effect of even one drink. Heavy drinkers do not feel the effects after a few drinks because their liver has become diseased and unable to react to any further poisoning. It produces a profuse flow of mucous in the stomach, the purpose of which is to protect the mucous membrane from the irritating effects of the alcohol. It hinders the formation and accumulation of glycogen in the liver, thus lessening resistance to infection. Alcohol diminishes muscular vigor, nerve sensibility, vital endurance, and has a retarding effect upon digestion. It causes depression and mental degeneracy. It hinders the formation and the action of the gastric ferments, in as little as one part to 250 of water, ½ of 1 %.

Alcohol always diminishes, never increases the energy of the heart, and is detrimental rather than beneficial in cases of shock, collapse, fainting, etc. It increases the liability to infectious disease, and prevents the development of immunity. It diminishes the alkalinity of the blood, and so diminishes vital resistance and increases susceptibility to disease.

Tea, Coffee, Sodas and Cocoa:
Coffee and commercial tea are artificial mild narcotic stimulants, and are definitely addicting and habit forming when continually used. They are extremely Yin and Acid-forming in the body, containing poisonous substances that narcotize the brain, nerves and blood. They excite the nervous system temporarily, followed by physical and mental let-down, fatigue and depression. Strong cravings for these substances are definite indications that they contain mild narcotic poison-stimulants, which create a dependency-addiction syndrome, and withdrawal symptoms when they are abruptly taken away from the user. They cause transitory stimulation, followed by marked increase of fatigue. Commercial tea contains tannic acid; it inter-feres with gastric juice in the stomach. All of these Yin poisons expand and weaken the kidneys, bladder, liver and intestines, etc., causing their acids to flow into the blood, poisoning the system. Many tea and coffee drinkers develop discoloration of their teeth and skin. Coffee contains pyramidine, a smoke poison produced by the roasting process. Caffein's effects on the nerves cause wakefulness, nervousness, excitability, insomnia and muscle twitching. It raises the blood pressure. Eight ounces of coffee contains 85 to 90 mg. of caffeine; colas about 75 mg. of caffeine.

Colas and soft drinks contain 7 to 8 teaspoons of white sugar per bottle (about an ounce). Other orange or lemon flavored imitation drinks contain brominated vegetable oil, corn and cottonseed oil, and the poisonous chemical bromine. All colas and soft drinks eat away at the vital organs, including the reproductive glands. Colas were also known to contain small amounts of cocaine. Cocoa contains a mild narcotic called theobromin, equal chemically and pharmacologically to caffein in tea and coffee and its effects on the body are the same. It should not be difficult in the light of these facts, for any intelligent person to reach the conclusion that these poisonous stimulants do not build health or instill vitality within the body they only waste vital energy, exhaust the body's reserve force, and lower immunity and resistance to disease. Rest and sleep are the only natural and healthful remedies for fatigue. Addiction to these dele-terious substances confuses and dulls the body's natural signals for rest and sleep, thereby re-sulting in nerve exhaustion, nervous disorders and mental confusion. If you value your personal well-being, and are interested in building your vital health force, avoid these artificial stimulant/ poisons like you would arsenic capsules.

Processed Nut Butter & Ungerminated Seeds/Nuts (Extreme Yin/Acid Food):

Nut butters and dried seeds and nuts affect the body. Commercial peanut butter contains, salt, sugar, cheap hydrogenated oils, about 80% fat, and nickel which can cause lung infections. All nut butters and nuts are extreme Yin due to their high fat content. These products should be used sparingly. Excessive fats expand the liver and decrease normal bile functioning. A diseased liver causes poor eyesight, jaundiced eyes, dandruff and falling hair, skin diseases and other maladies. Unsoaked or ungerminated seeds and nuts are only about 10 to 20 percent digestible and assimilable, due to the fact that their life force is lying dormant the life force becomes active only when moisture (liquid) is added to them. They then become active and start growing or germinating: only then will they become almost 100% digestible and assimilable in the human system. Dried seeds and nuts can cause severe digestive disorders. The following seeds and nuts can be soaked overnight in water: sunflower seeds, pumpkin seeds, sesame seeds, pumpkin, almonds, walnuts, pecans, etc. After soaking, they can be placed in a blender with some added apple or pineapple juice and you can enjoy a zesty seed or nut milk. Soaked cashews also make a delicious cashew milk, creamy and good tasting. Soaking and blending seeds and nuts makes their protein value more easily digestible. Two to three ounces of a single seed or nut, or in any combination will add variety to the seed milk. You may also soak a couple dried figs or apricots with the seeds, and blend them together; add one-half teaspoon of licorice powder to moving blender for pleasant taste. Use this seed/nut blended mixture more during hot weather, two or three times per week.

Dried Fruit:

These include dried apricots, raisins, apples, pineapples, figs, peaches etc. All dried fruit should be soaked at least 10 to 12 hours before eating. It takes about 9 or 10 hours to properly digest dried fruit. They will cause intestinal gas before being acted upon by the digestive juices. The natural fruit liquid has been removed from dried fruit, which turns them into a very concentrated sugar. They almost always cause skin eruptions when eaten dried, or if eaten excessively, soaked. You may eat them mostly during cold weather when fresh fruit is not available, and very sparingly no more than 1 or 2 apricots or figs, or a teaspoon of raisins per day maximum.

Being difficult to digest and assimilate in dried form, they pass out of the body before being properly and adequately absorbed. All dried fruit is extremely Yin and Acid, and is the cause of much distress and ill-health among dieters today, who use them excessively. Dried fruit should not be used as staples in the diet, but only occasionally, and mostly in cold weather as a supplement to the diet. Dried fruit may also be boiled in water for a few minutes, and let stand overnight. Soaked dried fruit can be used in bread and other baked dishes.

Soaking dried fruit and seed and nut germination has been one of the most important health secrets that we have investigated and researched in the health field. When on a vegetarian or health diet, do not become a health-nut and attempt to live on dried nuts and fruit, as some have attempted to do with disastrous results in poor health. The practice of seed and nut germination has been a regular practice of the ancient Yogis, Chinese Taoists, and other long lived people throughout the world for centuries. Make it your practice too, and experience the vibrant health force that you are capable of attaining.

Salt and Condiments (Yang/Alkaline, Poison in Extreme):
Salt and condiments affect the body. Salt is composed of the caustic alkali, sodium, and a poisonous gas, chlorine. Common table salt is an inorganic compound which cannot be assimilated by the system. It has no nutritional value because it cannot be dissolved and utilized by the cells and tissues. We need about 200 milligrams per day for optimum health from sea salt or kelp. The average person who eats processed commercial food, consumes more than 2000 milligrams of cheap salt. Excessive consumption of salt will cause high blood pressure, hypertension, kidney disease (Yang) hardened arteries, eye disorders, unbalanced chemistry etc. It also depletes calcium from bones and teeth, and irritates the mucous lining of the stomach and intestinal tract; it affects the nervous system causing nerve disorders and irritability. Today, our lands are demineralized and chemically fertilized, plus the top soil is very poor due to bad agriculture methods, thus washing away of the more soluble sodium salts, leaving it high in potassium. The result of this sodium loss led to the use of a deadly substitute sodium chloride, or common table salt. Biologists have shown that a half ounce of salt absorbs and holds four pounds of water in the body, thus leading to edema and obesity. It draws the vital flu-

ids from cells, tissues, glands and organs causing them to atrophy or dry up. It degenerates the lymphatic and endocrine systems. The thymus is known to be very sensitive to salt rapid aging accompanies the deterioration of the thymus gland.

In China, salt in a saturated solution has been used as a means of suicide. Poor capillary circulation, hot or cold hands and feet, anemia, dizziness, headaches, nose bleeds and sexual hyperesthesia are all symptoms of excessive salt in the system. The only salt that the body can actually use is the organic salts formed from air, water, soil, and solar energy into plant life. From the plant, man can digest, assimilate and fully utilize the organic salts. Inorganic table salt destroys the electrochemical balance between the natural combination of organic salts in the body the sixteen mineral elements. We require more than just one mineral salt we need all of them in the right combinations potassium, silicon, calcium, iron, lime, chlorine, etc. Common salt is not an organic salt, and therefore, causes an imbalance of the sodium/potassium elements that make up cell life. Sodium is found in the fluids of the body, and potassium exists mainly within the cell. Salt, including all restaurant and most processed foods, smothers or crowds potassium out of the cell, where it rightly belongs, and the inorganic table salt overloads the cell, causing local irritation, Yang inflammations, hypertension etc. African natives do not use salt, and the Eskimos, not only do not use salt, but abhor its taste. Animals will eat salt only when there is no fresh green grass and herbs to eat. They shun the salt-lick during summer months. Salt eating is a habit, just like tobacco, alcohol, coffee or drugs. It hinders the digestion of albumen, by interfering with the secretion of gastric juice. Gout is aggravated by the use of salt, and attacks of gouty pain subside when salt is stopped. Eczema, skin diseases and dropsy, along with swellings, are directly attributed to salt eating.

Overeating has become a universal habit. The use of salt and salted foods, plus the use of other table condiments, such as monosodium glutamate (MSG) and black pepper, are largely responsible for the desire to overeat, especially of devitalized foods. Salt deadens the sensitive tastebuds on the tongue. Regular salt eaters generally have no desire to eat fresh raw foods because they have lost the finer sensitive nerves of taste on the tongue. The more salt one eats, the more he will crave junk food, and the less he will desire fresh wholesome poison-free food.

Salt removes water from blood and lymph which is needed for its excretion by the kidneys. This causes abnormal thirst, only satisfied by copious drinking of water, alcohol, sodas etc. Heavy salt eaters are generally also heavy meat eaters and drinkers. This person requires plenty of liquids to quench his thirst and to dilute the poisonous salt. In the long run, the internal organs become diseased and malfunction at an early age. Salt is also used in meat products to preserve and mask the taste and appearance of the dead, decaying and decomposing flesh. Ancient civilizations used salt to preserve and embalm the mummified bodies of their dead royalty. It is ironic, and rather sad that today, we are preserving and mummifying living bodies in early preparation for burial.

Here is a list of foods that are commonly eaten by millions of people, containing large quantities of salt and other unmentionables: All cheeses, except the low-sodium variety; commercial bread; processed boxed cereals; ketchup, sauces, and spreads; frozen dinners; salad dressings; cottage cheese; margarine and butter, except unsalted butter; cakes, cookies, pies, candy; dried soups in envelopes, canned soups, vegetable, beans etc.; The list goes on and on. Read labels and buy only salt free food.

Commercial salt contains the following chemicals: silicon dioxide (common sand), aluminum calcium silicate, tricalcium silicate, sodium calcium aluminosilicate, sodium aluminosilicate, calcium silicate, magnesium silicate, yellow prussiate of soda and sodium ferrocyanide. Do you agree that commercial salt should be labeled with skull and cross bones.

For your improved health use the following salt substitutes: Powdered kelp, Dr. Bronner's Balanced-Mineral Salt, Vegetable (dried powder) seasonings, miso (from soybean), soy sauce (from health store), sea salt etc. Awareness is the key; be aware of what you buy from food stores. Read labels. Ask questions. Think. Think. Think. It requires little effort to cease the consumption of junk food when a sound nutritional program is adopted. Cravings for unwholesome foods and poisons are always a sign of malnutrition, poor eating habits, bad digestion and assimilation which are the effects of lack of knowledge and misapplication of universal and natural health laws.

Marijuana (Extreme Yin Poison-20 times more Yin than Sugar): You can only shake your head in wonder every time an educated person says marijuana is harmless, or repeats the comment that there is no scientific evidence that marijuana is dangerous. In the 13th century All al-Hariri reported the dangers of marijuana smoking. Warnings kept cropping up over the next 600 years and in 1893 the Indian Hemp Drugs Commission urged great caution. In 1924, the League of Nations unanimously classed marijuana as a dangerous drug. And it remained a dangerous drug until the early 1960's when 'due to a lack of solid evidence' researchers decided that marijuana was harmless. The evidence was there, it was just being ignored. A few tried to get their anti-marijuana views before the public and were hooted down. Others conducted research and published the results in obscure medical journals rather than face the public ridicule that an anti-marijuana stance brought. Finally, in 1974, the Senate Judiciary Committee conducted hearings on the marijuana epidemic and anti-marijuana research was made public. The collective testimony of 20 of the world's leading medical researchers unquestionably revealed that:

1. THC (intoxicating chemical in marijuana) tends to accumulate in the brain, glands, and fatty tissues.
2. Marijuana causes massive damage to entire cellular process.
3. Smoking marijuana causes irreversible brain damage.
4. There is danger of genetic damage from marijuana use.
5. Chronic smoking (three joints or pipeful per week) produces lung damage in six months that would take 20 years of heavy smoking of normal cigarettes to equal.
6. Marijuana and tobacco smoke are far more damaging to lung tissue than either by itself.
7. Prolonged use results in emotional problems.

These opinions were not the result of a single, isolated study as the nation's media reported and implied. Instead they were compiled after the study of many, many research projects. Nor were the studies conducted by unknowns trying to make a name for themselves. Dr. Julius Axelrod, a Nobel prize winner for his study of drugs and the brain said, marijuana causes an irreversible damage to the brain. Dr. Phillip Ze in ben berg, senior research psychiatrist at New York State Psychiatric Institute, said, chronic marijuana smoking causes bronchitis, diminished lung capacity and changes in lung tissue. He went on to say that it was very much more dangerous than first expected.

Dr. Harvey Powelson, a research psychiatrist at the University of California, Berkeley, was highly praised for his pro-marijuana stand in 1964. He was attacked in the press and in person when he changed his views. Opposition to the decriminalization of marijuana laws was unanimous. The committee was opposed and the witnesses were opposed. Facts supported their decision and logic refuted every pro-marijuana argument. The main reason was the conclusion that marijuana can cause death. This view may *be* shocking but scientific evidence proves that the dangers of death are great because marijuana increases:

1. The heart beat and blood pressure, enhancing the danger of a stroke.
2. Blood pressure and fainting, which could come while working or driving a car there is no advance warning,
3. The potency of barbituates, thus a non-lethal dose could be turned Into a lethal dose without the know-ledge of the barbituate user.

Those are the hard facts. Medical evidence also revealed dangers of chromosome damage, sexual impotence, and emotional changes, all of which the marijuana user may not be aware of until it is too late. Dr. Powelson's views changed as his psychiatric study deepened. He found that marijuana disrupts the thinking process and that memory and time become distorted. Brain damage to chronic users is permanent said Dr. Powelson. He said that three years of chronic smoking left one with a brain damage equal to 10 years of heavy drinking.

The effect of cannabis (marijuana): It is subtle and insidious, but harmful reactions in the heart and circula-tory system are suspected, and there are indications of adverse reaction in the body's anti-infection chemistry, said Dr. Henry Brill, regional director of the New York State Department of Mental Hygiene. While no one suggested that all marijuana users will move on to heroin, it was brought out, and unchallenged by the pro-marijuana groups, that 'the greater use of pot, the greater use of other drugs and that marijuana is the universal threshold drug through which young people make their entry Into the drug culture. But the biggest reason for opposing marijuana, both the use and sale, was brough out by Dr. Hardirt B. Jones, perhaps the world's most respected authority on drugs and drug abuse. Dr. Jones is professor of medical physics, professor of physiology, and assistant director of the

Donner Labora-tory at the University of California at Berekeley. He has taught drug abuse courses and interviewed over 1,600 drug users. Jones' findings, after many years of research, show that marijuana use kills cells in the area of the brain necessary for the awareness of pleasure the very part of the brain that allows the full awareness of the joys of being alive. There is perhaps no greater hell, said Dr. Jones, even with pain, than not to be able to feel alive. Those who are not able to feel alive will ever seek pain to get relief from their remorse. And that is the hell that is projected for those who use cannabis. The medical evidence filled 400 pages in the record of the hearings. This summarizes only a tiny bit. Marijuana also decreases the sperm count and volume in males, from ages 18 to 28; blood plasma is reduced 50% below normal.

Commerical Eggs:

Eggs may be used by those on transition diets stemming from the use of flesh foods, or by extrememly rundown and protein deficient individuals. Eggs contain complete proteins of high biological value, but the white of an egg, when taken to excess, is capable of producing intestinal putrefaction to a great degree. Non-fertile, unhygenic commercial eggs, increase stomach putrefaction to an ever greater degree. Many people are very sensitive to egg albumen and suffer symptoms of toxic poisoning, causing nausea, vomiting and diarrhea. The free use of eggs, especially of the white of egg, is found to be injurious in many cases of Bright's disease. Eggs encourage the growth in the colon of germs of putrefaction, which have been proved to be the cause of membranous colitis and of appendicitis. The regular and excessive intake of eggs, overworks the liver, causes gas, constipation and an over supply of albuminous matter in the body.

It can be seen then, that eggs, as a class of food, cannot be recommended without qualification. Infants, young children and invalids should use them very sparingly, or not at all. This class of people can better utilize raw goat milk products, as it contains high quality proteins with less danger of toxic residues. Cooked eggs are harder to digest than raw ones. Raw eggs are practically liquid. All foods must be turned to liquid before the body can digest it. The longer an egg is cooked the more difficult it will be to assimilate. Cook eggs as little as possible, never allowing the white to set. Coddled, soft boiled or poached eggs are the easiest to digest.

One egg contains 6 grams of protein, which is utilized about 94% by the body. Egg yolks are rich in all the elements necessary for complete nutrition, including iron, minerals, Vitamin B Complex and fats. Powdered egg shells are very high in calcium. Eggs are one of the few foods high in Vitamin D and A. The best eggs from the health standpoint are the ones bought locally from a farmer who allows a rooster to roam freely in the chicken coop, which produces fertile eggs. The chickens should also be allowed the freedom to soak up the outdoor fresh air and sunshine and be fed pure whole grains and food substances. Eggs being an extreme Yang food, should not be eaten in warm weather; they can be digested and utilized easier in cold (Yin) weather. People with Yang livers, kidneys, heart, colon and intestines should avoid the Yangizing affect of eggs. Meat, fish and eggs are not absolutely necessary to reach and maintain the highest level of optimum health, nutrition and longevity. If at first you succeed try to hide your astonishment.

Fig. 8.4. You have neither friends or enemies, only teachers. Learn from the Tao and you will have Internal Peace.

Chapter 9

Tao Garden's Healing Meals

As knowledge with regard to the effects of food upon humans increases, it is more than conceivable that the races that first avail themselves of the new values of nutrition may decrease the handicaps of disease, lengthen their lives, and so become the leaders of the future. Regimen is better than physic. Everyone should be his own physician. We ought to assist, and not to force nature. Eat with moderation what agrees with your constitution. Nothing is good for the body but what we can digest. What medicine can procure digestion? Exercise. What will recruit strength? Sleep. What will alleviate incurable evils? Patience.

The consensus of worldwide research and observation idicates that the ideal diet for mankind should consist of foods that are high in natural carbohydrates and low in animal protein, especially meat. This diet consists of the following foods and nutritional elements: Seeds, nuts and grains, which contain high quality B-Complex vitamin factors, Vitamin E, natural fatty acids, lecithin, phosphorus, iron, magnesium, zinc, proteins, fat lowering and energy building elements; fresh fruits and vegetables, especially berries, sub-acid and sweet fruit, fresh squeezed vegetable and fruit juices. These foods contain a super abundance of essential organic vitalizing vitamins, minerals, trace minerals, enzymes, alkaline cleansing, purifying and blood enriching elements.

This Ultimate Super Diet may be supplemented with yogurt, buttermilk, whey, nutritional yeast, kefir, sea kelp, alfalfa liquid, brown rice polishings and soybean powder with enzymes. These are natural protective foods. Use moderately.

Golden Nuggets of Nutrition

Seeds	***Nuts***	***Grains***	***Legumes***
Sunflower	Almonds	Buckwheat	Peanuts
Sesame	Walnuts	Rice, Corn	Soybeans, Peas
Pumpkin	Pecans	Millet, Oats	Aduki, Carbanzo
Alfalfa	Fillberts	Wheat	Black Beans
Chia	Cashew	Barley	Lima Beans
Flaxseed	Pine Nuts	Rye	Pinto Beans

Fig. 9.1. It is better to light one candle (Light of the Sun), than to curse the darkness. There is not enough darkness in the world to put out the light of one candle; nor is there enough ignorance or wrongdoing on earth to submerge what is corrected (The Way of the Tao).

Grains are Nourishing and Strengthening

All grains can be sprouted or used in making bread. Cooked grains are best in cold weather. In combination with legumes and vegetables, grains form nutritionally complete proteins. Grains are high in sodium, a Yang element. Grains are also high in phosphorus, an important mineral for proper brain functioning. Natural whole grains are excellent sources of B vitamins and contain six of eight

essential amino acids. The other two amino acids can be supplied by adding seeds, nuts, vegetables or legumes to grain meals.

Grains are heat producers and impart sustaining energy. For example, two slices of whole grain bread well-chewed, will impart more energy and working power to the body than two pounds of steak. The European centenarians are known to work all day in the fields on a bowl of vegetable soup, raw fruit and a few slices of dark whole grain bread. The hard working, enduring Chinese consume whole rice and seaweeds as their energy and strength sustaining foods. The Turkish people are extremely hardy and robust and eat grains, sesame seeds, dates, and raw camel or goat milk. The strong Russians use buckwheat and millet. The Mexicans use corn and beans. The Bulgarians are a lactovegetarian culture. They are a very hard working and strong people. The Bulgarian diet consists of whole grains, mainly barley, sunflower seeds, honey, sauerkraut, fresh fruits and vegetables.

Buckwheat is the most Yang grain, high in vitamin E and protein. Rice is more balanced and easy to digest. Rye and wheat are good muscle builders and give great endurance to the body. Barley is also very easy to digest. It can be mixed with vegetables, used for bread making and excellent for soups. Oats, flaked or rolled are good in cereals, soups and cookies. They are high in fat and aid people with slow working thyroid glands. Corn is an excellent summer food; corn meal and flour make delicious corn bread. Corn builds the blood and imparts high energy; it is high in calcium and natural complex carbohydrates. Millet is a yang grain, but not as acid forming as other grains. Its nut-like flavor makes a delicious and nutritious meal on cold winter days.

Grains are high in natural carbohydrates and should be used mostly during the cold winter months for heat and body energy. They should be used in smaller quantities in warm weather. Warm weather is Yang, and the body needs more fresh fruits and vegetables to maintain its fluids in proper Yin/Yang balance.

Whole Grains

Rice:

There are two types of brown rice long grain and short grain. Long grain rice is a summer food; short grain rice is more Yang and imparts more heat energy for the cold weather. Brown rice is an easily digestible starch, good for weak constitutions and for build-

ing overall good health. Rice, and all other grains should be chewed very well, from 30 to 50 times each mouthful; this will insure perfect digestion and assimilation. Rice can correct conditions of diarrhea and constipation, due to its balanced qualities. A regular diet of rice can lower blood pressure and help arteriosclerosis. Due to its high B-complex, rice calms the nerves and brain; it helps to overcome allergies. Brown rice contains phytin acid, which eliminates toxins and poisons from the body.

Oats:

Oats are valuable in cases of underactive thyroid and overweight conditions. Oat meal or steel cut oats are best eaten in the winter and late fall. It has been used with success to combat sterility and sexual impotence. Oats are high in silicon, a mineral element which gives one a healthy complexion, shiny hair, strong nails and sparkling eyes. Diabetics can become stronger and healthier with the regular use of oats in the diet. Oats help to eliminate stored protein and toxic wastes from the body. Oats are excellent in cooking breads, cookies and soups. Lungs and large intestines are most benefited by oats and rice.

Millet:

Millet is rich in phosphorus, magnesium, iron, silicon, fluorine, manganese, vitamin A and B-complex. Yellow millet aids digestive problems and can help repair the gastro-intestinal system. With its high B-complex, magnesium and manganese, it is excellent for all nervous conditions and mental fatigue. Millet has been used to help prevent miscarriages and correct deficiencies in pregnant women. Yellow millet should be used mostly in the fall, or Indian Summer. Red Millet is more Yin, and is a summer grain. Millet is the most alkaline of all grains, therefore it aids conditions of toxemia and acidosis. It is a good source of protein. The spleen is the organ most benefited by millet, as is the stomach.

Rye:

Rye helps improve the circulation and clean the blood vessels, therefore helping artereosclerosis. Rye helps strengthen and tones muscles and imparts high energy and endurance. It is very low in gluten. Rye is a spring food. Rye strengthens and purifies the liver and gall bladder. Rye is a hardy grain used by many European cultures. Rye is used to make bread, or as a cooked cereal.

Buckwheat:

Buckwheat has the highest amount of protein of all grains. It is also rich in minerals and vita-mins. In analysis, buckwheat contains 12% to 16% protein. The amino acid lysine is very high in buckwheat, therefore it has the same high biological value and nutritive quality as the protein found in animal food. The darker the buckwheat, the more protein it contains. Buckwheat contains a large amount of manganese, a mineral generally deficient in many people. Manganese strengthens the nerves, muscles and helps build good posture and courage to carry on the responsibilities of life. The manganese in buckwheat is necessary for muscle control, growth, metabolism and the reproductive system. Buckwheat is rich in rutin, one of the bioflavonoids, which is vital in reducing capillary fragility and maintaining sound blood vessels. Buckwheat helps to overcome environmental radiation poisoning and fallout. Its magnesium helps to calm, relax, cleanse and balance the nutrients in the blood.

Buckwheat is rich in Vitamin C. It should be used mostly in winter, as it imparts high energy and heat. The kidneys and bladder are most benefited by buckwheat. The very hardy Russians and other European countries thrive on this most versatile grain. It can be used in noodles, cereals, casseroles, loafs, and takes the place of meat products. Buckwheat is also a good blood builder and helps to overcome anemia.

Corn:

Corn is very rich in calcium, Vitamins B, C, A and F. It is a summer grain. Corn aids conditions of underweight and overactive thyroid; it slows down the metabolism. It is beneficial for the heart and small intestines. Corn builds strong bones, teeth and muscles. Our ancestors thrived and survived on corn. The early Native Americans and Mayans cultivated corn for centuries. They built great civilizations, and their people were robust and long lived. Corn can be eaten on the cob, made into corn bread and soups. It is the most Yin grain and should be used mostly in summer. It imparts good vitality, aids digestion, and builds rich red blood. Corn is the sweetest of all grains, and is converted into sugar within the system very quickly, giving quick energy and endurance. Corn oil contains vitamins F and E. Corn meal is highly nourishing and contains vitamin A.

Barley:

Barley is a fall food. It is beneficial for the lungs and large intestines. Barley is very easy to digest and is good for those with weak digestive systems. It can be used in soups and bread; it is used in making barley miso, which is not as Yang as soybean miso. Barley is used by many cultures around the world. It imparts much heat and energy and gives one strength and endurance. Valuable in conditions of underweight, stomach ulcers, diarrhea. Contains vitamins B-l and B-2. Also as poultice for skin diseases and burns.

Wheat:

Wheat contains the highest vitamin and mineral content of all grains. The bran in wheat imparts good digestion and elimination. The germ in wheat contains a rich source of vitamin E, which builds a strong reproductive system, improves endurance and aids the heart function. Wheat is beneficial to the liver and gall bladder.

The gluten in wheat will not cause allergies if the liver, kidneys, and eliminative channels are kept clean and free of toxic wastes. Many times allergies are caused, not by wheat alone, but by a system filled with milk, cheese, fats and sugars. The gluten may react allergically in a body that is weakened by high fat and sugar foods. Experiment on yourself; discontinue all fatty, oily and sugared products, including dried fruit and tropical fruit for several weeks. Then eat whole wheat for a few days, and observe the reaction in your body. Poorly masticated wheat can cause indigestion, mucous, allergies and poor health. Chew and salivate all grains very well, and watch your health improve, and allergies vanish like magic.

Wheat is used in bread making, cereals, sprouting, noodles, pancakes, bulghur and couscous. Wheat is high in protein and gluten. Wheat has been used by all great civilizations and cultures throughout history. Allergies are unknown in wheat eating cultures where there is no milk, sugar and fatty food.

Beans and Legumes

Legumes take in the whole bean family, including peanuts, peas, split peas and lentils. Legumes consist of both protein and starch they are considered complex carbohydrates and are rich in vitamins and minerals, especially the B-complex vitamins. All legumes should be eaten moderately more in winter than summer.

Aduki Beans: Used successfully in kidney disorders, and is a good bean for general use. When cooking all beans, use about 3 cups of water to one cup of beans.
Black Beans: Aid kidney functioning and sexual disorders, such as menstrual difficulties, frigidity, barrenness, low sex drive. Black bean juice the liquid left over after cooking the beans, (use 1 or 2 extra cups of water when making any bean juice) can be used for throat disorders, such as laryngitis and hoarseness. Black turtle beans are excellent in soups and combined with rice or buckwheat.
String Beans: More like vegetables, and contain more protein than vegetables. They should be eaten in warm summer months, in season when available. They are good for constipation, rheumatism, acidosis, bladder and kidney disorders. They are low in protein and rich in vitamin A, B-1, C and B-2.
Soybeans: Not generally recommended to be eaten regularly, as they contain difficult to assimilate substances that adversely affect the thyroid gland. Tofu, a soybean cheese can be used occasionally. Miso and tamari sauce are made from soybeans and can be used more often during winter months for body warmth. These products are high in vitamin B-12 and iron. They also help the body fight off the harmful effects of environmental radiation and fallout. They are beneficial to the thyroid gland. Soybean products are also high in protein.
Green Peas: Good for the stomach and lungs. They contain many valuable vitamins and minerals. Green peas are highly nourishing and strengthening. They aid conditions of anemia, emaciation and low blood pressure. Contain vitamins A, B-1, B-2, B-6 and nicotinic acid. Good with most grain dishes and salads. Yellow split peas are excellent for all digestive disorders, and are very easy to assimilate. They can be used at all times of the year for warmth and energy. Lentils contain similar properties of split peas and cook the same way. They are all good sources of protein. Dried peas can be cooked without soaking overnight, in 60 to 90 minutes on the stove. Pressure cooking takes about 30 minutes.
White Beans: Aid in discharging excess toxicity from the heart. They are a good all around bean to eat with grains and vegetables.
Garbanzo Beans: They are also called Chickpeas. Good source of protein. Used in many cultures around the world, including Greece, the Near East and in most American restaurant salad bars. Chickpeas can be eaten in soups, salads, loafs, sauces and dressings. They have a rich flavorful taste and are highly nourishing.

Pinto Beans: Contain the highest RNA and DNA factors of almost all foods, except sardines. They have been used in the south and Mexico for many years, and are usually combined with corn bread and other corn recipes. Pinto beans are also high in protein, vitamins and minerals.

Kidney Beans: Shaped like the human kidney and are said to strengthen the kidneys. They are rich in protein, and are very warming and nourishing to the body. They can be used in salads, casseroles and other grain dishes.

Lima and Butter Beans: Good sources of iron and are easily digested and assimilated. Good for anemic people and weak digestive systems. These beans are very strengthening and building and can help to overcome emaciation and malnutrition. They contain vitamins B-6, B-1 and B-2. Good protein source. Good in casseroles, grain and cooked vegetable dishes. Lima beans aid the discharge of toxins from the liver, and build strength in that organ.

Germinated Seed and Nuts

The king of all nuts is the almond. The sunflower and sesame seeds are the queens of all seeds. Germinated seeds and nuts are alive with life; they have the power to grow and to create new life. They can create a new rebirth in your own body if used regularly. The world renowned health authority and longevity researcher, Seeds have been found in Tutankaman's tomb three thousand years old they have been put in the soil and have grown. Sunflower seeds have been found in the old missions that are two hundred years old and, when planted, have grown. The seed is the element that contains the birth of a tree, the birth of a plant, the birth of vegetables. In the seed of the tree we have the pattern for the bark, the sap, the flowers, the fruit everything that had to be put into that seed to begin with. All the life giving elements are contained in seeds, carefully locked in. They are there for our good. Seeds contain nearly every single food element that has been discovered, and doubtless all the additional factors not yet identified. No other one food is so rich in nutrients, the seed containing as it does, the life forces needed to build the new generation. Seeds have highly potent therapeutic values. They are prime sources of most of the nutrients and one of the most potent sources of unsaturated fatty acids needed to maintain youthful and elastic arterial conditions.

Seeds and nuts are high in calcium, Vitamin E, phosphorus, niacin, lecithin, fatty acids, iron, natural oils and a good high quality protein. Pumpkin seeds contain zinc, a hard to get mineral necessary for proper prostate functioning. Seeds are rich in Vitamin A, B-Complex and magnesium. Germinated seed and nut milks are an excellent substitute for regular milk, and contain complete proteins of a superior biological value, capable of sustaining life in perfect health indefinitely.

Miracle of Seed and Nut Germination

Seeds and nuts are essential nutrients for the body. Mention seeds or nuts to someone and this is what you hear. They make me constipated. They cause skin problems. They are indigestible. Yes, when seeds and nuts are eaten in the conventional way they can cause these problems.

Seeds and nuts are loaded with vitamins, minerals, fats and proteins of a high biological value. But if they are eaten after a heavy meal, snacked on between meals, poorly chewed, ungerminated, salted, oiled and preserved with chemicals, they can cause much harm to the liver and intestines. Seeds and nuts are very concentrated, so they must be eaten in small quantities.

Since seeds and nuts are quite difficult to digest for most people, passing through the body unassimilated, it is important that they be soaked or germinated, at least overnight in water or juice. The longer you sprout a seed or nut, the more alkaline it becomes, and the less acid reacting qualities it will have. So, we recommend soaking the seeds or nuts overnight to maintain the protein elements that are needed for the daily acid/alkaline balance. Three to seven day old sprouts are excellent alkaline foods, but they should be balanced with 1 day old seeds or nuts, soaked.

Soaking seed and nuts, and the sprouting process make them very easy to digest and assimilate. This method also converts them into complete protein, allowing the body to utilize up to 100% nutrition as a result. Unsoaked or ungerminated seeds and nuts contain only 20 to 30% nutrition: the rest being waste products, causing indigestion and cravings for junk food. Humans cannot derive complete nutrition from dried fruits and dried seeds and nuts. Undigested protein from these foods creates toxemia, which can cause the following conditions in time: falling hair, poor eyesight, anemia, diabetes and weakness.

Dried fruits, nuts and seeds, unless soaked overnight, are extremely constipating and toxic. They can become as disease producing as devitalized foods, due to their indigestibility and poor assimilation. Dried apricots, figs, dates and raisins should be soaked in water or juice from 4 to 8 hours. Use dried fruits in moderation and mostly during the winter months. The Taoist of China and India, who maintain vibrant health and youth far into advanced ages, from 120 to 200 years old or more, advocate and practice the eating of soaked and germinated seeds, grains and some nuts.

Germinating Seeds and Nuts

If we could pick nuts and seeds right from the tree and eat them on the spot, there would be no need to soak them because the necessary moisture and life force would still be intact. In the dried state the life force is lying dormant, therefore, these foods require soaking to wake up the Life Force within them. This is the same principle used in sprouting wheat grass, lentils, mung beans or alfalfa seeds. The life force within the seed or nut is tremenously increased.

Since we are living in an unnatural society and environment, we have to resort to these methods, which are in no way contrary to Natural Law. In fact, it is natural to germinate all seeds and nuts. Also as these foods were already tampered with through the process of early picking and storing; we are merely replacing the natural moisture that was taken out. Another important benefit from soaking seeds and nuts, is that their protein quality is enhanced, along with a higher quality natural taste. We are simply bringing out their finer qualities, and not detracting one iota from the health value. The same method is true of soaked, dried fruits. Their vitamin, mineral and iron content, and assimilability greatly increases. For more variety, use different seeds or nuts. Try sunflower, pumpkin and sesame seeds, almonds, filberts, pine nuts, walnuts and pecans. Make sure that you hull these seeds and nuts before soaking them. The seeds need only be soaked overnight. The heavier nuts can be soaked up to 24 hours for better assimilation and nutrition. If you are planning to sprout seeds and nuts for a longer time, use a sprouting dish, or a jar with a screen on the lid. Wash them with water 2 or 3 times a day; let the water drain over the sink, and in 3 to 6 days you will have some nutritious and delicious

green sprouts. The last day of sprouting, place the sprouts on the window ledge and the sprouts will turn green. You can sprout anything that will grow from a seed. Sprouts and all seeds and nuts contain Vitamin E. They also build up the glandular system of the body.

The maximum benefit is received from dried fruits if they are soaked first, as unsoaked dried fruits almost always cause gas before the digestive juices can get to them. The normal digestive process for dried fruits lasts about ten hours, and before the unsoaked dried fruits are adequately soaked up by the digestive juices, the body is ready to expel them. Thus, we do not get the good out of them unless they have been pre-soaked. There is an art to soaking the dried fruits properly. Wash, add cold water to cover, and bring slowly to a boil. Remove from heat and allow them to stand all night. The boiled wated kills all insects and parasities that might otherwise cause trouble. Remember to start with cold water, so that the increasing heat will penetrate into the inside of the fruit. They also may be soaked overnight and liquified with juice in a blender.

Enzyme Inhibitors in Unsoaked Seeds/Nuts

According to Dr. Edward Howell, research biochemist in the field of nutrition and enzymes states that any ungerminated raw seeds or nuts contain enzyme inhibitors. These inhibitors are necessary for the protection of the seed, to keep it from germinating prematurely and die. Raw seeds and nuts actually neutralize some of the enzymes our body produces. In fact, Howell states, eating foods with enzyme inhibitors causes a swelling of the pancreas. Raw peanuts and egg whites contain the most enzyme inhibitors. Most fruits and vegetables do not contain enzyme inhibitors; they are rich sources of living enzymes.

Sprouting and germinating seeds and nuts destroys the enzyme inhibitors and also increases the enzyme content from a factor of 3 to 6. Peanut butter and other nut butters, because of their lack of enzymes and high fat content, are very indigestible and should not be eaten often; use sparingly. The same goes for all seeds and nuts, unsoaked or unsprouted.

Germinated and Blended Seed/Nut Milk

When soaking seeds and nuts overnight they become much easier to digest and assimilate in combination with sub-acid fruits. No more than 2 or 3 ounces should be eaten. Soak seeds or nuts overnight in fruit juice or water, and the next morning or afternoon make a blended nut milk. Add berries and juice along with 1 teaspoon of vegetarian protein powder; blend together and you will have a meal of total and complete nutrition. After a few weeks on these super nutritious foods, your complexion will glow and your blood count will rise. As health culturists, let us look the part, so that we may be an inspiration to everyone we meet. Remember, the proof is in the doing.

Sprouts: Wonder Food

Sprouts are truly a miracle food. They are an excellent source of vitamin A, B-Complex, C, D, E, G, K, and U. Dr. Pauline Berry Mack, at the University of Pennsylvania, found that soybean sprouts of 72 hours contain more Vitamin C than 6 glasses of orange juice. Sprouts also contain all eight of the amino acids which make up protein. It only takes about a tablespoon of alfalfa seeds and two to three times that much to plant 25-30 square inches. Soak the seeds overnight in a warm dark place in about three times as much water as you have seeds. The water should be warm (70-80 degrees) and free of chlorine and flourine, which can sterilize the tender embryo.

Pour the water off and rinse them well to prevent mold. This water is excellent for juices and stock. Place seeds in a warm, moist, dark container. Flush every 4 to 6 hours with water to clean them and assure adequate growth. Be certain the seeds drain well because they will sour and rot if you do not. In 3 to 6 days, depending on the temperature (80 to 90 is best) and seed variety, your seeds will have doubled or tripled and be ready for consumption. Sprouts reach their highest vitamin peak 60 to 80 hours after germinating.

If you expose your sprouts to indirect sunlight during the final several hours of growth, they will develop chlorophyll. The chlorophyll molecule is very similar to the hemoglobin, the only difference being that chlorophyll has magnesium at the center, while hemoglobin has iron, and consequently, acts as a blood booster.

Probably the simplest container is the mason jar, substituting a wire mesh for the lid. A large bowl makes an excellent container for the jar since it should be at a 45 degree angle to assure proper drainage.

Fig. 9.2. Sprout Seeds

1. Individual portion, put a ¼ inch layer of seeds in a water glass.
2. Fill glass about ¾ full of distilled water. (Do not use tap water). Let this soaking take at least six hours, or if done just before going to bed, let stand overnight.
3. Pour contents of glass into a small flower pot that has small holes on the bottom. If it is a pot with one large hole, put cheese cloth or wire mesh over the hole.
4. Bring flower pot under water faucet and allow water to thoroughly rinse over seeds.
5. Cover seeds with wet cheesecloth, or turkish toweling. Repeat rinsing of seeds three times a day (as in No. 4), replacing moist cloth over seeds.
6. Sprouts should look like this on the third day ready to eat.

Fruits for Beauty, Health and Longevity

The bioelectric forces of the earth in its mysterious way, combined with the biomagnetic forces of the sun and atmosphere, produce fresh, ripe blood building fruit. Fresh wholesome fruit, taken in season, and in moderation, release upon the forces of the body vital alkaline vitamins and mineralsthe living building blocks so necessary for healthful robust living.

The living fruit, kissed by the basking rays of the energizing solar sun, absorbing draughts of magnetized air, attracting to itself all the vital elements necessary for its perfection, is a cosmic miraclean electrochemical laboratory of Nature (the Tao). Scientists can remove all the chemicals of an apple out of a chemist's dish, but he cannot construct an apple. They may probe and analyze all the elements of a cherry, but they is dumbfounded to know what makes them red. They may take apart and attempt to reconstruct a plum, and they will find that the plum will help support life, but the broken down chemicals do not. Fruit contains essential bioelectric principles Yin and alkaline elements which, when eaten in additon to a well-rounded, balanced diet, will give the electric spark of life and vital health force.

Who has not had his mouth water on seeing a luscious peach, cherry or melon before him when hungry. The sight, aroma and taste of fruit, bring on an abundant secretion of digestive juices; they are very digestible on an empty stomach. A total fruit or eliminative diet can be used as a remedy to balance Yang kidneys, liver, colon and intestines, for a short period of time. Otherwise, use fruit in season and grown locally. Eat more fresh raw fruit in hot summer months when they are abundant; less in cold weather when they are not in season and less abundant. Apples or pears can be baked or steamed in the winter for warmth and variety.

Berries	***Melons***	***Seasonal Fruits***	***Tropical Fruits***
Blueberries	Watermelon	Cherries	Oranges
Blackberries	Cantaloupe	Grapes	Grapefruit
Strawberries	Honeydew	Apples, Figs	Tangerine
Raspberries	Casaba	Pears, Raisins	Pineapple
Huckleberries	Persian	Peaches	Mango
Gooseberries	Cranshaw	Apricots	Papaya
Elderberries		Plums	Lemons
Loganberries		Nectarines	Limes, Avocado
Boysenberries		Persimmons	Banana, Dates

Fig. 9.3. Seasonal Fruits

Fresh berries head the list as being the best of all blood builders, containing a rich source of iron and vitamin B-12. Ripe fruit, in moderation, does not cause acid or toxic conditions in the body, nor do they cause diabetes or other diseases when used judiciously. Sub-acid or acid fruits may aggravate a system that is already highly toxic or acidic: they will stir-up the internal acids and cause pain or discomfort. Acid and Yang conditions can benefit from the use of non-acid fruit, such as all melons, and neutral vegetables and their juices.

In healthy people, fruits are alkaline in reaction in both urine and ash lung tests. Fruits are easy to assimilate, and if eaten moderately, do not overwork the pancreas, as does pastries, fats and sugar products. However, be advised that an excess of fruit will over-alkalize the body and blood, and cause Yin diseases, such as, hypoglycemia and diarrhea. Melons are a rich source of minerals and vitamins, however, they should be eaten only in small quantities, especially if one has expanded (Yin) kidneys.

The longest lived and healthiest people on earth consume some fruit everyday rounding out their daily diet with grains, seeds, nuts, vegetables and some raw milk yogurt or buttermilk. Chlorophyll is not only found in the green element of vegetables, but also in all fruits kissed by the sun. Fruit is also more likely to be free from strontium 90 radiation fallout than other food grown close to the ground. Fruits are manufactured from cosmic sun rays, the oxygen absorbed through the leaves, and the water filtered by the roots in the soil. A large fruit orchard will produce over 100 times more pounds of fruit than meat in the same acreage.

Fruits are very abundant in organic vitamins, mineral salts, purified distilled water, and refreshing and healthful. They are high in natural sugars and fruit acids. Most fresh fruits contain about 90% water, 10% carbohydrates and not more than 1 ½ % protein. Fruits are cooling and refreshing to the body because of their high water and organic acid content. All ripe fruits are alkaline reacting within the system. These alkalies neutralize the acid poisons, uric acid and acidosis, usually coming from a high protein meat diet. Overeating of fruit, especially the citrus variety will saturate the body with citric acid, which can cause serious calcium loss, mineral depletion and an unbalanced blood chemistry resulting in Yin arthritis, stiff joints, tooth decay, nervousness, nerve diseases and toxic acidity.

All fresh berries and especially strawberries, excel almost all other foods in easy to assimilate iron and organic bases to neutralize acid wates. Fruits contain citric acid, malic acid and tartaric acid. Citric acid is found in all citrus fruits and in other fruits such as, cherries, currants, berries, pomegranates and tomatoes. Malic acid is found mostly in pears, plums, apples, pineapples and cherries. Grapes contain tartaric acid. Oxalic acid is found in small amounts in most fruits, but cranberries, spinach and most greens are high in it.

Fig. 9.4. Seasonal Melons

Sweet fruits are especially valuable for their delightful sugars, so easily digested (sometimes almost predigested), which sustain the body with so little energy expenditure for digestion.

Fruits can help you overcome Yang constipation, especially cherries, grapes, prunes, figs, berries and lemons. The acids of fruits increase the secretions of the intestines, move the bowels and increase their peristaltic action. Fruit meets the bodily need for natural bulk and intestinal health.

Most fruits contain phosphates and alkalies, together with acids, which increase the solubility of the blood, causing it to flow through the system more readily. Since fruits are Yin, overeating them can easily cause Yin constipation (expanded colon and intestines). In this condition, eat less fruit, and increase consumption of cooked grains, vegetables, miso and tamari, for a natural balance and healthy colon.

A balanced diet, including fruit, purifies the blood, that even the cravings for alcoholic drinks have been known to disappear. When the blood is purified and its pure nutrient stream bathes the cells and tissues, it will remove wastes, impurities and dead cells, and leave behind strong healthy tissues. In time, the alcoholic will be completely purified and cleansed, and in his right mind. Alcohol will then be repugnant after the cleansing period.

Eat Fruit Alone

Fruits should be eaten on an empty stomach, and not as a dessert, after the appetite is satisfied and the digestion is already sufficiently taxed. Fruit taken in the morning, before the fast of the night has been broken, is very refreshing, and in addition to its nutritive qualities, serves as a stimulus to the digestive organs. Berries, cherries, melons, tropical fruits, apples or pears are all excellent at this time. Eat ½ hour before protein or starch meals.

Fruit to be most valuable as an article of diet, should be ripe, sound, fresh, and in every way of superb quality, and be eaten raw or baked. If you live in the sub-tropics, you can pick and enjoy fruit directly from the trees almost all year long. Northerners will find apples, pears, peaches and plums most enjoyable during the summer and winter months.

Many people believe that fruit does not agree with them. In such cases, the trouble may be traced to the abuse and misuse of the fruit, or because of digestive weakness due to wrong eating habits previously. Fruits combined properly will not cause problems. Fruits eaten with starch or other junk foods will cause fermentation. Fruits eaten moderately and by themselves are easily digested.

Fig. 9.5. Seasonal Vegetables

Vegetables: Rich in Chlorphyll

Vegetables, especially the non-starchy greens, contain the greatest amount of blood building chlorophyll. Chlorophyll, as found in fruits and greens, is necessary for the health and well-being of all living creatures on this planet. The strongest and longest lived animals in the world are vegetarians and consume rich green chlorophyll in the form of plant food, which is adapted to their complex digestive system.

Chlorophyll is composed of a combination of tiny molecules of a substance called pyrrole. These pyrroles are the building blocks of the animal blood pigment, hematin or hemoglobin. The pyrroles in plant chlorophyll are tied together by an atom of magnesium, whereas in human blood, the mineral bond of these pyrroles is iron. The human system requires green chlorophyll for proper blood formation, which builds healthy cells and tissues. The color green, according to the ancient art of color therapy is a healing agent and bone mender. Green vegetables are excellent sources of Vitamins A, B-l, B-2, C, K and Vitamin E as well as an abundance of organic mineral salts, alkaline elements, trace minerals and enzymes. Vegetables rank high as health builders, and are superior blood and bowel regulators.

The best raw vegetables for salad making are: alfalfa and mung sprouts, cucumbers, green and sweet red peppers, onions, radishes, celery, romaine, bib and Boston lettuce. Coarse, tough vegetables should not be used instead use the tender juicy variety. Root vegetables, cabbage, beans, peas, squash should all be cooked for proper assimilation. Hardly a person exists that can properly digest and assimilate these foods without the aid of fire to soften the cellulose and tough fibers, a substance that is indigestible for humans, and which is not acted upon by the digestive fluids, unless it is softened by heat.

All raw vegetable greens can be easily utilized and assimilated by the system when they are juiced and consumed immediately. The rich green chlorophyll in vegetable juices is easily absorbed into the system within a matter of minutes. Use juices moderately at all times. Use small raw salads in warm weather, and cooked vegetables in cold weather. A word of caution: Consuming large salads daily will overwork the liver and stomach causing digestive disorders. Too much raw vegetables cause expansion (Yin) conditions within the body. Man does not possess several stomachs as a cow does, to assimilate and digest hugh amounts of raw vegetables. About 20% to 30% of the daily diet should consist of raw and cooked vegetables.

Besides drinking vegetable juices, you can make delicious vegetable broth soups, steam a variety of starchy and mildly starchy vegetables such as potatoes, pumpkin, beets, carrots, broccoli, celery and cabbage, or cook grains such as brown rice, buckwheat, millet or oats. Steam and cook your vegetables and grains in a stainless steel pressure cooker, steamer, or waterless cooker over a very low flame. This will insure that the goodness and freshness of the cooked food remains intact when you serve it at the table.

Cultured Dairy Products

The long lived Russians, Europeans and Bulgarians, believe strongly in the use of cultured dairy foods. Scientists have found that cultured dairy products help to increase the beneficial and friendly bacterial flora in the intestines, maintaining its cleanliness and health. Soured acidophilus milk rejuvenates the intestinal tract, improves digestive problems and relieves constipation.

Those who want to use dairy food, without the harmful effects of high fat milk and cheese, can consume the following low fat dairy products in moderation: buttermilk, low fat yogurt, cottage cheese and skim milk. These products are not extreme Yin or Yang, but are more neutral except for low fat cottage cheese which is more Yang. Cultured dairy food should be used very sparingly in cold weather, and moderately in warm weather. Yogurt began its rise to fame many years ago in the European countries, and suddenly it has become a super food of the world. Yogurt contains high quality and easily digestible proteins, vitamins, minerals, enzymes, including Vitamin D and B-12. Because it flourishes with friendly bacteria it is almost a predigested food, quickly absorbed and assimilated into the blood stream. The sparing use of low fat dairy products can add variety and nourishment to your natural food diet. However, that milk was originally intended for infants only. Use wise judgment in the dietary use of this food.

The kind of food you eat is even more important to your existence than the kind of air you breathe. More good healthor ill healthcan be traced directly to food than to any other of the outside factors surrounding your existence.

Fig. 9.6. Seasonal Foods

General Dietary Principles

The daily menu plans should be flexible and adaptable to meet individual needs and requirements. It is very difficult to set down a specific dietary eating program for all persons under varying conditions on a daily basis. Each person must use supreme judgment in choosing foods, recipes and menus to fit their own personal and environmental needs. One has to devise their own pattern of how to eat, when to eat, where to eat and what to eat. For example, people working physically hard outdoors all day long may require a more substantial breakfast to meet their energy demands. People not working as hard will require less food and calories.

The main point to remember is to eat only when hungry in the morning and/or throughout the day. Keep in mind, however, that the body is not fully awake and ready to absorb and assimilate a heavy meal soon after waking. The ancient Taoist recommend that we may eat more food at breakfast in cold winter weather and less food in the evening during warm summer months. Many people consume far too much food and exercise very little, whereas, if they would exercise moderately everyday, they would utilize their food more efficiently and not require as much volume. Or, many people consume too much fruit and not enough vegetables, or too much meat and dairy, and not enough of grains and legumes.

The key to good health is to balance our eating habits with our daily work, exercise and living habits, and thus maintain the body in a constant youthful condition. We learn a thing by constantly doing itif we constantly cultivate healthy habits, we will reap or create healthy bodies and freedom form disease. The ultimate choice is yours; you can be master of your destiny if you truly understand that your health can be no better than what you eat, assimilate, absorb and digestand the effort, discipline and value you place on internal and external physical fitness.

By daily cultivating these dietary and health principles for the rest of your long life, you will not worry about vitamin or mineral deficiencies, malnourishment, calories or ill-health. The suggested menus should not be a strict cut and dried calculation. Use them as approximations of what to eat according to climate, locality and daily body requirements. Study the diets of various countries around the world. Many nationality dishes are vegetarian or can be easily converted. Many nations with a history of longevity and good health have a national staple based on legume and grain combinations which are easily included in a vegetarian or transition diet.

Food Cooking

To cook or not to cook, that is the question that has been hotly debated by healthfooders for many years. It is true that some articles of food can be eaten without preparation or cooking with full benefits of health and nourishment, i.e., most fruits and some vegetables, such as cucumbers, all germinated seeds and nuts, green peppers, celery and other tender juicy greens. Much of the food consumed by the long lived people of the earth has been raw, i.e., yogurt, seeds, grapes, pears, berries and celery. However, during cold winter months these robust people consume cooked grains, vegetables, legumes and soups. Since cold weather is extremely Yin upon the body, properly cooked natural foods are a physiological necessity to keep the body warm and in Yin and Yang balance. We need more Yang cooked food in winter, and much less in summer; eat more raw food in summer. This is the law of nature. If we try to deny our physiological requirements, i.e., consuming raw food exclusively or cooked food only, the body will not function efficiently and in good health.

It has been argued that all wild animals take their food raw. This is true. However, they have a digestive system adapted to digest tough raw vegetables. Their system consists of several stomachs, larger livers and kidneys, very powerful enzymic and digestive secretions and acids. Fire is one of the five elements of nature. Fire is what separates humans from beast. Without fire, civilizations would not advance; we would still be like the animals in a wild or primitive stateno advancement, no civilization, no evolution, no great intelligence, no art, no culture, no mental and spiritual upward movement. Humankind was given the knowledge of the use of fire to advance themselves; to populate the globe, including the cold northern regions. To accomplish this task, heat and fire was a necessity to keep warm, survive and grow; heat energizes food. A total raw food diet would not meet this requirement. Constant change and advancement is the law of the universe. Without change, there is decay. Without change, there is no advancement. When we learn to flow with the change, we can become healthy, and advance successfully. The human system cannot possibly assimilate and digest raw legumes, grains and root vegetables the starch molecule must be broken down or dextrinized by the use of fire to absorb the food value. Raw starch is indigestible. Sprouted grains and seeds are also Yin and can be used in salads, along with cooked legumes and grains.

Fruits can be eaten raw in season, and can be absorbed and digested easily, however, they cannot sustain the body in superior health exclusively. It is true that cooking has been abused in modern times, but this does not mean that proper cooking is bad; it is good. Because water drowns people is no reason to stop drinking it; because fire can burn and destroy life and property is no reason to not use it to heat the house or cook the food. In general, foods that are palatable raw, should be eaten in that form. Other foods not suitable to the human stomach raw, are better cooked, in which state they are more readily acted upon by the digestive juices of the stomach.

Fig. 9.7. Code of Eating Natural Foods

Vital Keys to increase your Life Force

1. Refrain from overeating at any one meal. Leave the table one-half to three-quarters full. This will allow proper assimilation and digestion. Overeating overworks the liver, kidneys and internal secretions and can take 30 to 40 years off of your life and cause many illnesses.
2. Always go outside after a meal. Because the body requires plenty of oxygen to properly oxidize and assimilate food, especially protein or starch foods. Take a slow outdoor walk for one-half to one hour after meals and gaze into the distance; this relaxes the digestive and nervous systems, allowing smooth and easy digestion.
3. Never eat according to the clock. Eat only when there is a very strong desire for wholesome foods. Hunger is a watery

mouth and throat sensation. Nausea, headaches, addictive cravings, or stomach pangs are a sign of stomach trouble. When not hungry, fast until it returns in full force.

4. Always chew or masticate your food to a liquid state before swallowing it. The stomach has no teeth. The more you chew, the better your digestion will be. Starch foods, i.e.,grains, legumes, root vegetables especially require ptyalin, an internal chemical secretion in saliva which starts the process of digestion of starches. If you have trouble chewing food, eat a bite of celery with every bite of starch; you will chew longer.
5. Do not eat when in pain, worry, emotional upset or when sick; food cannot digest in these states.
6. It is best to eat the evening meal no later than sundown, when the earth's energy and magnetic forces are still present. Allow 3 to 4 hours from the evening meal to bedtime.
7. Keep meals simple for easiest digestion and most efficient utilization of nutrients.
8. Use only soaked or germinated seeds and nuts. Roasted seeds and nuts are more Yang and can be used more in winter. Roasting lessens the fat content.
9. Always soak dried fruits over night. Use more in winter.
10. Use kelp, powdered vegetables seasonings, miso, tamari on foods for taste.
11. Use pure vegetable oil in cooking or salads; no more than 3 teaspoons/day. Make dressings with yogurt or seed sauces.
12. Eat foods mostly grown in the region you live; eat seasonally, i.e., foods grown in your area at each season. Eat more raw food in summer; more cooked food in winter.
13. Use mostly neutral herb teas for daily consumption: Mu tea, bancha, jasmine and dandelion are good.
14. If possible, eat food organically grown without pesticides.
15. Plan meals not only for nutritional content, but also aesthetic interest. Blend and harmonize colors, textures and flavors.
16. Cut vegetables in small pieces; they will cook quicker.
17. In food combining use nuts and seeds or milk products with acid or sub-acid fruit or non-starchy vegetables; use grains and vegetables together; do not use fruits and starches together and do not use sweet fruits and protein together. Sweet fruits are best eaten alone.
18. Be cheerfulness at mealtimes to aid digestion.

By making these General Dietary Principles a daily habit, you can attain excellent health and long life. However, everyone is different, and they must vary these dietary suggestion to fit their own individuality. Changes can also be made for people on special diets or severe digestive disorders, such as blending salads or pureed fruits and nut and seed milks. Weak digestive systems need much help, and they can greatly benefit from the use of blenders, juicers, mixers etc.these are life saving dietary measures to be used when necessary.

Fig. 9.7. Five Element Food Tastes in the Creation Cycle at Tao Garden

Five Elements and Food

Balancing the Five Elements can become extremely complex. However, there is a lot you can do with careful choice of food to rebalance your own organs and health. Firstly, we look at the different internal and external climates and foods to help them:

Condition:	***Symptoms***	***Foods***
Too Windy:	Moving Pains, Wind, Spasms, Dizziness, Spring Season	Oats & Pine Nuts; Chamomile Tea, Ginger and Fennel. Fresh Greens and Salads bring a Spring Cleanse.
Too Hot:	Feeling Hot, Flushed Skin, Summer Season	Raw Foods, Fruit, Cooling Herbs (Mint). Light Eating.
Too Dry:	Dry Skin, Thirst, Constipation, Autumn Season	Soya Products, Nuts, Seeds, Dairy. Psyllium, Malva Nuts, Flaxseed Tea.
Too Cold:	Feeling Colder than people around you, Winter Season	Soups, Casseroles, Warming Spices, Ginger. Warmth-Building Foods.
Too Damp:	Having too much Mucus or Phlegm, Rainy Season/ Seasonal Changes	Avoid Dairy. Avoid Cold Foods. Mung Beans, Aduki Beans, Garlic and Pumpkin Reduce Damp.

Different flavors are used in Five Element nutrition to balance each element. Different flavors have different energetic effects:

Sweet: This is actually the central flavor of the diet. Thus, the basis of our diet is full sweet foods such as wholegrains, beans and root vegetables. The empty sweet flavour of sugars, honey and fruit should be used more cautiously.

Pungent: This flavor helps expel fluids and pathogens from the body. Thus, it is a flavor we use when we are getting a cold or flu, and also to clear mucus and heat. Warming pungents are ginger, cayenne and pepper. Cooling pungents include peppermint and radish.

Salty: The salty flavor is grounding. It can be used when one feels high or scattered, such as over-excited or having difficulty concentrating. Salty foods include sea salt, miso and seaweed.

Sour: Sour draws energy inwards and so can be used wherever there is abnormal fluid leakage or prolapsed organs. Sour food includes lemons, limes and pickles.

Bitter: This is the most cooling flavor and is excellent when there is body-heat or fever. Many herbs used for fevers are extremely bitter indeed. Bitter foods include endive lettuce, alfalfa, bitter melon and rye.

Tao Garden's Organic Gardens

These principles of Five Element nutrition have been incorporated into Tao Garden's kitchen. We grow as much food as possible on site in our organic gardens. In this way, we can preserve the Chi of the food. Much Chi is lost through storage and transportation of foods over long distances.

Fig. 9.8. Tao Garden's Organic Gardens

In addition, many fruits are picked before they have been ripened by the sun, so that they do not rot before they reach the supermarket shelves. At Tao Garden we allow the fruit to ripen naturally in the sun and it is harvested only when it is ready for eating. Some of the food you will eat at Tao Garden will have been picked only hours previously. This is called living food as its life-force energy is flourishing.

Fig. 9.9. Tao Garden's Kwan Yin Dining Hall

Breakfast

Before Breakfast: Upon arising, drink two ounces of any one of the following juices: apple, grape, cherry fig, prune; mixed with four ounces of pure water. Or, you may drink your favorite herb tea. Follow this with a light internal exercise program, deep breathing and a short morning meditation.

Breakfast: If not truly hungry for a protein or grain breakfast, eat a piece of fruit, such as apples, pears, peaches, berries, grapes. Eat melons alone. Breakfast of Brunch Suggested Choices:

1. Seed or nut milk (germinated/soaked overnight), with berries, apples, peaches etc. Best in summer.
2. Whole grain cereal with slice of rye or wheat wheat bread, and four ounces of cereal grain beverage. Best in cool or moderate weather.
3. Low fat cottage cheese, yogurt, buttermilk, with sub-acid fruit. Best in summer.
4. Oatmeal cooked with a few raisins (soaked overnight), and a slice of corn bread. Best in cool weather.
5. Whole grain granola cereal. Pour warm water over cereal, add ¼ teaspoon licorice powder, lecithin granules, fresh wheat germ flakes; mix contents; cover bowl and let stand 10 minutes. Eat and enjoy. Best in cool to moderate weather.

At Tao Garden we strive to make breakfast the best start to the day. From 7 a.m. to 9 a.m. the stomach is active, and from 9 a.m. to 11 a.m. the Spleen-Pancreas. These are the main organs involved in digestion and in balancing blood sugar. If the wrong food is taken at this time, digestion become sluggish and blood-sugar levels may begin to rise and fall too fast, leading to energy levels crashing.

Breakfast Bad Habits: Minimize hidden sugars: check your cereal, bread and spread ingredient lists. Minimize other sugars: if your blood-sugar levels tend to crash, watch out not to eat too much fruit and fruit juice for breakfast. Minimize heavy oils: cooked foods can be cooked in broth or grilled rather than fried in a lot of oil. If you eat bread, choose an unrefined variety, preferably without yeast.

Breakfast Guidelines: If your digestion is weak, choose warm foods for breakfast. If you are cleansing, choose fruit. Use only sugar-free jams and spreads. Make or buy breads with wholegrain flours. Goat's dairy is easier to digest than cow's dairy. If you choose cow dairy, opt for organic varieties.

Lunch or Dinner Menu

Vegetable salad (raw, best in warm weather), natural complex carbohydrate (grains and legumes) as specified and your favorite health drink.

Salad Suggestions (Raw): Sweet Red Peppers, Green Peppers, Celery, Cucumber, Tomatoes (Sparingly), Onions and Garlic. Romaine, Bib or Boston Lettuce, Alfalfa, Mung or other Sprouts Steamed Beets, Avocado (Sparingly) Wheat Grass.

Complex Carbohydrates:
Grains: Rice, Barley, Buckwheat, Rye, Wheat, Millet, Oats, Corn.
Legumes: Lima, Soybeans, Aduki, Navy, Pinto, Kidney Beans, Split Peas, Lentils, Chick Peas, etc.
Whole Grain Breads: Wheat, Rye, Corn, Bran Muffins, Rye Crisp.
Sandwich Spreads: Tofu, Sesame, Tahini, Humus.
Soups: Vegetable Broth, Miso Soup, Bean Soup, Pea or Lentil Soup, Barley Soup, Mushroom Soup, etc.
Health Beverages: Fresh Raw Vegetable Juice, Grain Beverages, Herbal Teas. Beverages should be salivated thoroughly before swallowing; two to 4 ounces after meals is sufficient. Lunch can be interchanged with dinner meal; be flexible.

Mid-Afternoon Snack (If Hungry Only)

Any health beverage of your choice, fresh carrot or celery juice, or any fruit in season.

Dinner (For Noon or Evening)

Raw vegetable salad (in warm weather), one or two steamed vegetables. Vegetable juice one-half hour before dinner, legume or vegetable soup, grains and beans.

Steamed or Baked Vegetables: Corn, String Beans, Sauerkraut Cauliflower, Asparagus, Beets & Greens, Endive, Zucchini, Squash, Onions, Broccoli, Carrots, Turnips, Peas, Brussels Sprouts, Yam, Artichokes, Kale, Swiss Chard, Summer Squash, Dandelion Greens, Mushrooms (Sparingly), Celery, Okra, Potato (Sparingly).

Protein and Carbohydrate: If you are on a transition diet away from meat products, use only lean meats two or three times per week, such as: white fish, halibut, trout, chicken. Avoid pork, beef or any other high fat meats. Eggs: two to three times per week.
Lacto-Vegetarians: Buttermilk, Goat Milk, Skim Milk, Cheese, (Vegetable Rennet), Yogurt, Kefir, Clabbered Milk, Cottage Cheese.
Use High Fat Dairy Sparingly: Cheddar, Muenster, Edam and Swiss. If you can maintain good health without these foods, do so.
Complete Vegetarians/Vegans (Vegetable Proteins): All Legumes, Beans, Soybeans, Tofu, Miso, Sunflower, Sesame, Pumpkin Seeds, Almonds and other Nuts (Germinated), Wheatgrass, sprouts, Peanuts, Buckwheat, Alfalfa, Spirulina, Seaweed Products.

Legume & Grain Combinations for Complete Proteins Meals

1. Split Pea or Lentil Soup with Whole Grain Bread
2. Beans and Corn Bread
3. Chickpea Felafel with Whole Grain Pita Bread
4. Beans and Rice
5. Whole Grain Spaghetti with Chickpea Balls
6. Pea Soup with Corn Bread
7. Buckwheat and Lima Beans
8. Tempheh (Soy) and Millet
9. Tofu Spread and Rye Bread

Hot Weather Grains: Corn, Red Millet, Long Grain Brown Rice
Cold Weather Grains: Buckwheat, Oatmeal, Short Grain Brown Rice, Barley
Temperate Weather Grains: Wheat, Rye, and Yellow Millet

Cold Weather Menu Samples

Mornings: Cooked Cereals, Cream of Wheat, Rye, Millet, Rice; Oatmeal; 7 Grain Cereal, Whole Wheat or Buckwheat Pancakes/ Waffles; Brown Rice, Bread Ohsawa Loaf, Drop Biscuits, Muffins.

Scrambled Tofu or Tempeh; Tofu Bread Pudding; Marinated Fried Tofu; Baked Stuffed Apple, Baked Potato with Gamasio; Beans.
Mid-Day: Soups, Vegetarian Barley; Miso; Beans; Brown Rice; Leek; Chowder. Sandwiches Spreads: Humus; Tofu; Kidney Bean; Bulghur; Pita Bread Stuffings: Spreads & Sprouts; Cooked Grains with Beans and Veggy Burgers. All leftovers for quick & easy lunch.
Evening: Soups, Vegetables Stir Fried, Sauteed, Steamed, Curried; Arame/Carrot; Sesamed Scallion; Stuffed Squash; Baked Squash; Tempura. Casseroles, Baked Cheese Spaghetti; Chili; Rice Curry; Pasta with Sauce. Soy Dishes, Tofu Quiche; Tofu Lasagne; Stroganoff; Baked Tempeh with Nutritional Yeast; Tofu Enchilladas. Grains & Beans; Nut Loaves; Whole Wheat Pizza.

Warm Weather Menu Samples

Mornings: Fruit or Fresh Fruit Compote; Vegetable Juice; Smoothie; Kelloggs Nutri Grain Cereal; Granola; Seed or Nut Milk (With Fruit, Cereal or Alone); Rice or Bread Pudding; Applesauce.
Mid-Day: Soups, Burgers, Stuffed Tomatoes, Felafel. Salads: Carrot-Raisin; Cucumber Onion; Tabbouli; 3 Bean Dish; Macaroni or Potato; Fresh Fruit Compote; Raw Vegetables with Sprouts. Cold Soups: Gazpacho; Vichyssoise; Fruit Soup.
Evening: Soups, Salads, Grains, Beans and Vegetables. Emphasize Salads and Raw Vegetables.

Fig. 9.8. Recipes for Healing Meals

Cooking Tips

1. Cooking with a loving heart (Cooking Attitudes).
2. Digestion: Fruits 2 hrs; Grains 2-4 hrs; Animal Products 4-8 hrs.
3. Cutting Vegetables determines how they are cooked (Sideways).
4. Combining certain foods while cooking brings out food flavors.
5. Olive oil is too heavy for cooking but is good for salads.
6. Use corn, safflower, or soy oils for cooking; they are lighter.
7. Cooking Heat: Charcoal-Juicy Food; Gas-Neutral; Electric-Dry Food.
8. Cook to the smell for correct timing and adding foods.
9. For steaming food chop food in bigger pieces & thinner in stir fry.

Eating Habit Tips

We all eat too fast. Slowly enjoy your meal. Emotional state is important. Eat with joy and happiness in a good environment. Chew slowly tasting each of the Five Elements activating each organ. Breakfast eat like a King (9:00am-10:00am) (1st meal should be easy to digest); lunch eat like a Prince (1:00pm-2:00pm) (4hrs inbetween each meal); dinner eat like a Pauper (5:00pm-6:00pm). Morning meal should be hot food; body is slow to start; it needs to warm up with grain soup or cereal. Eating fried foods hurts.

Overeating: Eat 1/2 stomach level and double your life. It takes too much energy to digest the food. Eat normally not too much just enough. No liquids with food with exception of thick soups. Drink no iced or cold drinks; drink only herbal tea or hot water. You need warmth to digest the food. Rice (only) soup stops diarrhea. Chinese tea draws out oils, fats and mucus of the body, but it can hurt the heart. Oranges activate lungs.

If your waistband gets tighter with every holiday party, give yourself a ticket for speed eating. It is tempting to blame your aunt's triple chocolate rum balls and that box of sugar cookies in the office coffee room, but a compelling new study suggests that how fast you eat may be as important as what you put on your plate. Researchers already know that speedeaters are twice as likely to be overweight as those who munch in a leisurely fashion. Scarfing down food reduces the release of appetite regulating hormones into your bloodstream. These chemicals normally tell your brain to get your hand off of those sugar cookies. A new Athens University study had volunteers wolfed down two-and-a-half scoops of ice cream in five minutes; on another, they made the treat last for 30

minutes. The scientists measured blood levels of two types of appetite lowering hormones PYY and GLP-1 before and after, and discovered that when people savored their ice cream slowly, the levels of appetite regulating hormones were 25 to 30 percent higher. PYY and GLP-1 are two of more than a dozen hormones responsible for making you feeling full and satisfied. Other mechanisms, such as stretch receptors in the lining of your stomach, play important roles, too.

Fortunately, we know more than ever about how these checks and balances work and how modern food choices and eating habits can short circuit them. There is no better time to help your body's natural appetite control system. Spoil your dinner with a handful of nuts. Begin with a crunch. Your stomach can stretch only so far take advantage. Filling it with raw veggies activates stretch receptors that signal your brain that you are full. Studies have found that people who start meals with a large, low-cal salad eat 12 percent fewer calories during the meal than those who do not.

Dine in the slow lane. Take small bites, chew thoroughly and put utensils down between bites. Fill your senses and notice the colors, aromas, flavors, textures and temperatures of foods before and while you eat them. Fill your tank only to 80 percent. When you eat till you burst, your stomach feels fuller and fuller for nearly an hour afterward. That is a delayed reaction. Harness your meal when you are just 80 percent full. Wait 20 minutes and you will feel fully satisfied. In Japan, they call this trick ham hachi bu and consider it a key to longevity.

Prayer: Chi Charging your Food

By connecting to heaven and earth you will maximise the wholistic healing potential to your physical and subtle bodies. We recommend that you spend a few minutes placing your hands over your food and sending Chi into it connecting with your Ten Tien with the Universal Forces. Sending good Chi into the foods helps your digestion. Always perform this Sacred Chi Food practice before each meal and thanks after. If there is no energy in your Tan Tien, then there will be no energy to work with. Tan Tien and the Universe means connect your center to the infinite source of the universe, the Tao. When you make the connection you access this power. When you are aware of your Chi, you can direct heavenly light straight into your food and energize your body.

Tao Garden's Healing Recipes

The Professor's Ambrosia - Food of the Gods *(Morning Cereal)*

Ingredients:

Rolled Oats, Millet, Rye or Barley.
Raisins, Apricots, Dates or Pineapple.
Almond, Pumpkin or Sunflower Seeds
Cinnamon
Chopped Apples or Pears.

Recipe:

1. Soak 2-3 Dried Fruits and Seeds or Nuts in a pot of water over night.
2. In the morning boil the mixture with two or three pieces of diced Fresh Fruit and a Seasoning.
3. After the mixture has boiled pull off of the fire and let it sit.
4. Boil 3 cups of water to 1 cup of Whole Grain and add Whole Grain after the water boils and let it sit so the Whole Grain can absorb the hot water or for Rolled Grains soak in water.
5. After Whole or Rolled Grain has absorb the water mix the Fruit Compote together with the soaked Grain; and let it sit to marinate for an hour; and serve with honey if needed.

Tao Garden Cashew Nut Butter:

Ingredients:	Cashew Nuts	200G
	Honey	2 Tsp

Recipe:

1. Dry-Fry the cashew nuts in a wok, continuously moving them around to prevent sticking.
2. Blend together in a coffee grinder.
3. Add a little honey and blend in a normal blender.

Tao Garden Sesame Seed Butter:

Ingredients:	White Sesame Seeds	200G
	Sesame Oil	3 Tsp

Recipe:

1. Dry fry the seeds in a wok, moving around to prevent sticking. Watch as they change colour and take on a golden hue. Remove from the heat before they burn.
2. After they have cooled down a little, blend the seeds in a coffee grinder.
3. Add a little sesame oil and blend in a normal blender.

Tao Garden Fruit Compote: *(Builds Digestive Fire)*

Ingredients:

Apple*	1
Orange*	1
Banana*	1
Raisins	½ Cup
Prunes(chopped)	½ Cup
Chinese red date	½ Cup
Cinnamon	1 Tbsp
Water to cover	

*You may use local seasonal fruit to make your compote.

Recipe:

1. Put everything in a sauce pan over medium flame.
2. Stew together for 20 minutes until it all becomes very soft.
3. Serve warm as an accompaniment to another dish.

Tao Garden Vegetable Broth: *(Mineralizing and Alkalizing)*

Ingredients:

Celery/Coriander Roots	50 G
White/Red Radish	300 G
Pumpkin	300 G
Ginger Root	100 G
Green Papaya	500 G
Onion	1
Pandanus Leaf	50 G
Black Pepper (Dried)	30 G
Soy Bean (Rinsed)	50 G
Radish Pickle	30 G
Water	5 Litres

Recipe:

1. Rinse everything well and cut into big pieces (you can leave seeds and peelings on the vegetables). Bring water to a boil on maximum heat. Add all the vegetables, ground black pepper seed, soy bean, and coriander root to the water.
2. When it is boiling again, reduce heat and simmer for three to four hours with a lid on the pot. Skim the froth off the surface of the liquid from time to time using a strainer. Strain off the liquid to use as broth.

Tao Garden Brown Rice Soup: *(Kao Tom Tan Ya Peut)*

Ingredients:

Cooked Brown Rice	1½ Cups
Vegetable Stock	1 Liter
Sunflower Seeds	1 Tbsp
Pumpkin Seeds	1 Tbsp
Roasted White Sesame	1 Tbsp
Minced Spring Onion	1 Tbsp
Minced Coriander	1 Tbsp
Celery (Fine Chopped)	1 Tbsp
Boiled Corn Kernels	½ Cup
Fried Garlic	1 Tbsp
Soya Sauce/Tamari	4 Tbsp

Recipe:

1. Heat the vegetable stock until it comes to a boil. Add the cooked brown rice, reduce the heat & cook for about 20 min.
2. Add the sunflower seeds, pumpkin seeds, sweet corn kernels, and white sesame and stir in well. Season according to taste with the soya sauce. Add the celery, spring onion, coriander and garlic to the soup and turn off the heat.

Tao Garden Goat's Milk Yoghurt: *(Cooling and Probiotic)*

Ingredients: Goat's Milk
Vita-Ferment Yoghurt
(Yoghurt Starter)

Recipe:

1. Bring goat's milk close to boiling point, 85-95 degrees.
2. Let the milk cool down to 42-45 degrees. Mix in 1 pouch of Vita-Ferment yoghurt bacteria until the ferment is dissolved. Pour into a sterilized container.
3. Close lid and place cultured milk into a 42-45 degree warm place for 6-8 hours.
4. During this time don't move or shake the fermented goat milk.
5. After fermentation period place yoghurt in refrigerator for 12 hours.

Tao Garden Broccoli Soup: *(Calming and Moves Stagnant Chi)*

Ingredients:

Vegetable Broth	2½ Cups
Broccoli	3 Cups
Himalayan Rock Salt	1 Tsp
Ground Pepper	½ Tsp
Onion	1
Butter	1 Tbsp

Recipe:

1. Cook the chopped onion in the butter over a high heat.
2. Add the broccoli cut into small pieces.
3. Add the vegetable broth, salt and pepper.
4. Cook until the vegetables are soft.
5. Blend to a smooth consistency.

Tao Garden Tom Yam Soup: *(Stimulates Stagnant Chi)*

Ingredients:

Vegetable Broth	6 Cups
Coriander Root	6 Pieces
Shallots	8 Bulbs
Lemongrass	2 Sticks
Mushrooms (3)	2 Cups
Kaffir Lime Leaf	2 Leaves
Small Red Chili	4
Coriander Leaf	1 Sprig
Soya Sauce	2 Tbsp
Lime Juice	2 Tbsp

Recipe:

1. Put the vegetable broth over a medium flame until it begins to boil.
2. Add the soya sauce and lime juice to taste.
3. Add the coriander root, shallots, lemongrass, kaffir lime and chili. Add the three types of mushrooms.
4. Cook together and serve with a sprig of coriander placed on top.

Tao Garden Pumpkin Soup: *(Builds Digestive Fire)*

Ingredients:

Pumpkin	500 G
Onion	100 G
Butter	2 Tbsp
Vegetable Stock	1½ Liters
Light Soy Sauce	To Taste

Recipe:

1. Clean the pumpkin and chop into pieces.
2. Stir-fry the onion in the butter (those on an oil-free diet can soften the onion by cooking it in a little water).
3. Add the vegetable stock and pumpkin.
4. Boil until the pumpkin is soft. Add soya sauce to taste.
5. Allow to cool slightly and then process in a blender until smooth. Heat until hot and serve.

Tao Garden Green Papaya Salad: *(Anti-Parasite Remedy)*

Ingredients:

Unripe Papaya,	250G
Carrot	30G
Tomato	50G
Garlic	2
Chili	2
Peanuts (Optional)	50G
Lime	2 Tbsp
Soybean Sauce	2 Tbsp
Tamarind Sauce	1 Tbsp
Palm Sugar	½ Tbsp
String Beans	3

Recipe:

1. Peel and shred fresh green papaya. Slice tomatoes thinly.
2. In a clay mortar, pound the fresh chilies (whole), yard-long beans, and garlic. Add string beans, sliced tomato, and roasted peanuts, and pound lightly (do not over-crush).
3. Add soy sauce, tamarind, palm sugar and lime juice.
4. Add these items spoon-by-spoon, and taste as you go. Lightly pound (optional). Add shredded papaya and carrot and pound together until mixed well. Serve on a dish with fresh cabbage and string beans on the side.

Tao Garden Stir-Fried Mixed Vegetables: *(Easily Digestible)*

Ingredients:

Mixed Vegetables	3 Cups
Coconut/Sesame Oil	2 Tbsp
Vegetable Stock	2 Tbsp
Kikkoman Soya Sauce	To Taste
Fresh Cane Juice	To Taste
Garlic (Optional)	½ Tsp
Cashew Nuts	½ Cup

Recipe:

1. Wash and prepare your vegetables. There are many different ways to cut your vegetables, each giving different energetic properties. Cutting vegetables energizes them (as you add some of your Chi as you cut them). Smaller pieces have more energy, making grated vegetables highly energizing. Whole vegetables retain their wholeness and complete energy, and will take longer to cook.
2. Pour a little oil & vegetable broth into a wok over a high heat.
3. When the mixture is hot, add the vegetables and condiments, and stir with a wooden spatula. Keep the vegetables moving so that they do not stick. Cook for a few minutes and serve whilst the vegetables are still warm.

Tao Garden Rice: *(Balancing)*

Ingredients:

Rice* (Rinsed)	1 Cup
Cold Water	2 Cups
Himalayan Rock Salt	¼ Tsp
Mixed Seeds (Optional)	½ Cup

*(Brown, Jasmine, Gac or White)

Recipe:

1. It is preferable to soak the rice (or any grain) in water for 8-12 hours before cooking. This breaks down the enzyme-inhibitors and makes the grain more alkalizing. Place the rice, water and salt into a pan. Cover with a tight-fitting lid and bring to a boil over full heat.
2. Turn heat to low and simmer until the water has been absorbed (roughly 12 minutes for white; 20 minutes for brown)
3. Stir in the mixed seeds if desired and serve hot.

Tao Garden Baked Fish (Turmeric): *(Anti-Inflammatory)*

Ingredients:

Fresh Filleted Fish	1 Medium
Turmeric	1 Tsp
Galangal	1 Tsp
Garlic	1 Clove
Sweet Chili	2
Lemon Grass	1 Tsp
Soya Sauce	1 Tbsp

Recipe:

1. Preheat the oven to 220°F.
2. Blend the turmeric, galangal, garlic, lemongrass and one of the sweet chilies in the soya sauce. Cut three long diagonal lines along the length of the fish, on both sides.
3. Pour all of the sauce over the fish and put into a preheated oven in a baking tray (lined aluminum foil). Bake for one hour.
4. Slice the remaining sweet chili and add over the top of the fish and serve.

Tao Garden Curried Chicken (String Beans): *(Warming)*

Ingredients:

Chicken (Breast, No Skin)	300	G
Curry Paste	1½	Tbsp
Sugar Cane	½	Tbsp
Soya Sauce	½	Tbsp
Chicken Stock Water	½	Cup
String Beans	200	G
Vegetable Oil (Optional)	2	Tbsp
Kaffir Leaves	3	
Red Pepper (Sliced)	1	

Recipe:

1. Heat the oil OR a small amount of the chicken stock (for an oil-free version). Add curry paste, sugar cane, and soy sauce.
2. Heat at low temperature.
3. Add chicken and (the rest of) the stock water.
4. Increase to medium temperature and cook until the water has evaporated. Add string bean, kaffir leaf, and red pepper.
5. Continue to cook until beans begin to get a little soft (not too long). Serve with rice.

Tao Garden Fried Eggelant (Tofu): *(Moves Stagnant Blood)*

Ingredients:

Firm Tofu	250	G
Green Eggplants	2	Large
Miso Paste	2	Tbsp
Unrefined Brown Sugar	½	Tbsp
Freshly Ground Pepper	½	Tsp
Vegetable Stock	3	Tbsp
Chilies (Cut Diagonally)	5	Piece
Fresh Sweet Basil Leaves	10	
Soya Sauce		To Tas
Cooking Oil	1	Tbsp

Recipe:

1. Cut the eggplants into long strips and cover in salt. Leave for 20 minutes and then rinse the salt off.
2. Grill the eggplant (both sides) until it is soft. Set to one side.
3. Cut the tofu into 2.5 cm cubes and steam until cooked. Stir-fry the miso paste in hot oil until fragrant. Add soya sauce, pepper, vegetable stock, steamed tofu and eggplant.
4. Add chilies and basil, stir and serve.

Tao Garden Fried Noodles (Pad Thai): *(Cell Builder)*

Ingredients:

Rice Noodles	50	G
Tofu, Shrimp or Egg	100	G
Garlic (Minced)	1	Tsp
Shallot (Minced)	1	Tbsp
Sesame Oil	3	Tbsp
Tamarind Juice	3	Tbsp
Crushed Peanuts	1	Tbsp
Chinese Green Chives	1	Tbsp
Ground Chili Pepper	½	Tbsp
Chicken/Vegetable Broth	2	Tbsp

Recipe:

1. Soak dry noodles (15 min.). Chop tofu, chives. Rinse the bean sprouts; mince shallots and garlic together.
2. Fry the shallots, garlic, tofu and stir them until they start to brown. Add broth, tamarind juice & chili pepper. Stir. Crack the egg onto the wok & scramble. Fold egg into the noodles.
3. Stir adding bean sprouts, chives a few more times.
4. Pour onto a serving plate and sprinkle with crushed peanuts.

Tao Garden Salad Dressings: (*Moistens and Enhances Flavor)*

Ingredients:

Tamarind Sauce

Tamarind Paste
Coconut Milk
Miso Paste

Ginger Sauce

Minced Ginger
Sesame Oil
Onion
Kikkoman Sauce
Soya Bean Paste

Mango Sauce

Mango (Ripe)
Chili Sauce
Raw Cane Juice/Maple Syrup
Himalayan Rock Salt
Lemon Juice

Passion Fruit Sauce

Passion Fruit Juice (Juice only; not the Seeds)
Chili Sauce
Raw Cane Juice/Maple Syrup
Himalayan Rock Salt
Lemon Juice

Sesame Sauce

Sesame Spread
Water
Himalayan Rock Salt
Lemon Juice

The Professor's Confection Sauce

1 Bunch of Green Onions-Chopped in Food Processor
1 Cup of Water
1 Cup of Tamari
1 Cup of Safflower Oil
3 Tablespoons of Tahini
Juice of 1 Lemon
Few Dashes of Cayenne
2 Tablespoons of Honey
Blend All Ingredients in Food Processor and Chill

Tao Garden Salad Toppings: *(To your Own Taste)*

Ingredients:

Pumpkin Seeds *(Soaked for 4 Hours-Drained)*
Rich in zinc and thus helpful for impotency, prostate swelling, bladder problems, parasites.

Sunflower Seeds*(Soaked for 4 Hours-Drained)*
Chi energy tonic, lubricates intestines and clears constipation.

Garlic
Expels worms and parasites, reduces candida clears colds and other infections, detoxifies body. Use cautiously can cause over heating.

Ginger
Aids digestion by boosting the digestive fire (Kidney Yang) and for any cold condition. Use cautiously can cause over heating.

Turmeric Root
Anti-inflammatory and anti-oxidant qualities, protects liver from toxins, helps break down tumors. Good for gallbladder cleanse.

Dried Seaweed and Sesame
Provides a very mineral-rich alternative to salt. Sesame seeds are extremely rich in calcium providing non-dairy source of minerals. Increases alkalinity of body, assists in elimination of toxins.

Limes/Lemons
Highly alkaline forming once digested for balancing body pH & removing toxins. Good for liver and gallbladder cleansing and move stagnant liver Chi.

Note: Experiment with local nuts, seeds, herbs and roots to add to your salads.

The Professor's Penetrating Split Pea Soup:

Ingredients:

Green/Yellow Split Peas	2	Cups
Water	4	Cups
Onion, Sliced	1	Med.
Carrots, Diced	2	Med.
Celery	2	Stalks
Water	1	Cup
other Vegetables as Desired		

Recipe:

1. Cook peas and onion in 4 cups of water until soft (about 35 minutes). Separately, cook together carrots, celery and other vegetables in 1 cup of water. (20 minutes)
2. Puree peas and combine with cooked vegetables. Serve garnished with chopped parsley.

The Professor's Enervatizing Gazpacho:

Ingredients:

Carrot	1	
Safflower Or Olive Oil	½	Cup
Celery	2	Stalks
Vinegar (Apple Cider)	2	Tbsp
Garlic, Minced	2	Cloves
Whole Cumin	½	Tbsp
Fresh Tomato	2	Cup
Tamari	1	Tbsp
Parsley	2	Springs
Tofu, Cubed	1½	
Pepper, To Taste		

Recipe:

1. At high speed, blend the carrot, celery, garlic, 1 cup tomato and parsley. Pour into bowl. Next, blend lemon juice, oil, vinegar, pepper, cumin, tamari & 1 cup tomato; add to first mixture.
2. Add some sliced zucchini & red pepper, along with the tofu cubes. Refrigerate. Garnish with finely sliced green onions.

The Professor's Vitalizing Humus Spread:

Ingredients:

Raw Chickpeas	1½	Cup
Tahini	1/8	Cup
Garlic, Minced	3	Cloves
Parsley Flakes (½ C Fresh)	3	Tbsp
Salt	1½	Tbsp
Chives Or Basil	2	Tbsp
Tamari	½	Tbsp
Cayenne	1/8	Tbsp
Lemon	2	
Scallions, Minced	¼	Cup

Recipe:

1. Soak chickpeas overnight; boil until soft (45 min.).
2. Cool the beans, then mash to a thick paste.
3. Combine everything and chill.

The Professor's Confection Whole Wheat Pizza:

Ingredients:

Dry Yeast	1	Pkg.
Unbleached Flour	1¼	Cup
Whole Wheat Flour	¾	Cup
Sesame Seeds	¼	Cup
Soy Flour Sift Together	¼	Cup

Recipe:

1. Combine: 1/3 Cup warm water, 2 Tbsp oil, ¼ Cup tofu.
2. Knead; roll out. Add your favorite spaghetti sauce with extra tomato paste to thicken.
3. Garnish with sauteed mushrooms, garlic, onions, peppers, tofu and sun cheese.
4. Bake at 400 ° for 20 minutes.

The Professor's Clarification Lemonade:

Ingredients:

Lemon	1	
Organic Maple Syrup	1	Tbsp
Cayenne	1/8	Tbsp
Pure Water	1	Glass

Recipe:

1. Squeeze Lemon into glass of pure water with Syrup and Cayenne.

The Professor's Liberation Lima Bean Soup:

Ingredients:

Lima Beans	1	Cup
Garlic, Minced	3	Cloves
Scallions, Minced	1	Cup
Pure Water	3	Cups

Recipe:

1. Soak Lima Beans over night and boil with chopped Garlic and Scallions. Let simmer and cool then eat.

The Professor's Perfection Thai Coconut Ice Cream:

Ingredients:

Fresh Coconut Milk	1	Cup
Fresh Coconut Meat	80	G
Sugar Cane	½	Cup
Salt	¼	Tbsp
Pure Water	¼	Cup

Recipe:

1. Mix all Ingredients together and Freeze.

The Professor's Titillation Dip and Hordorves:

Ingredients:

Dip:

Organic Almond Butter	1	Bowl
Lemon (Squeeze)	1	
Dr. Bragg's Amino Acids	¼	Cup

Hordorves:

Dried Smoked Salmon	½	Cup
Pickle Cucumbers	½	Cup
Daicon (Chopped)	½	Cup
Green Onions	½	Cup
Radishes	½	Cup
Boiled Scrimp	½	Cup
Celery	6	Stocks
Carrots	6	Sticks

Recipe:

1. Mix all ingredients for dip and dip with vegetables and fish.

Tao Garden Mung Beans: *(Thua Khiaw Tom Nam Taan)*

Ingredients:

Mung Beans	1	Cup
Unrefined Brown Sugar	¼	Cup
Ginger Root (Chopped)	2	Tbsp
Water	2	Cups

Recipe:

1. Soak the mung beans over night.
2. Add the beans to water and bring to the boil until the beans are soft.
3. Add the sugar and ginger and continue to stir.
4. Serve warm.

Tao Garden Rice Ball in Coconut Milk: *(Bualoi)*

Ingredients:

Glutinous Rice Flour	350	G
Flour	2	Tbsp
Water	100	G
Coconut Cream	300	G
Palm Sugar	300	G
Pumpkin (Pureed)	200	G
Taro (Steamed/Pureed)	200	G
Coconut Milk	750	G
Himalayan Rock Salt	¼	Tsp

Recipe:

1. Mix the rice flour with enough water to make a firm paste.
2. Mix some rice paste with pumpkin puree, and then mix the rest of the rice paste with the taro puree. Knead well and then form pea-sized balls.
3. Bring a large pot of water to a boil, toss in the balls and remove when they float to the surface. Drain.
4. Bring the coconut cream to a boil, add palm sugar and salt.
5. Stir constantly to prevent it from separating.
6. Add the flour balls.
7. When the mixture returns to a boil, remove from heat.
8. Serve as a dessert in small bowls.

Tao Garden's Condiments

Fresh Ground Green/Red Chili (Rice Vinegar): Dissolves mucous, warm stomach, and increase blood flow to the face and brain.
Red Chili Sauce: Helps digestion, restores alkaline condition to blood, prevents & cures cancer, provides boosts immune system.
Dry Papaya Seed: Ground seaweed and sesame seed with a little sea salt Good for the brain. Contains iodine (Thyroid/Metabolism).
White Sesame Seeds: High in Calcium and Fatty acids. Contains very similar amounts of essential amino acids to red meat.
Black Sesame Seeds: Strengthens Kidneys, Liver and Brain food.
Wheat Germ: High Protein, High Fiber and contains Vitamin E.
Dry Banana Powder: Nice energy booster and natural sweetener.
Dry Papaya Powder: Aids body to remove undigested proteins and putrefactive materials.
Stevia Leaf: Sweetener that helps the body regulate blood sugar, correcting both high and low blood sugar. It appears to lower blood pressure, without affecting normal blood pressure. It inhibits growth and reproduction of harmful bacteria and infectious organisms, and those causing gum disease and tooth decay. It can also be used in concentrate to help heal skin problems including acne, seborrhea, dermatitis, psoriasis, burns cuts and eczema without scarring.
Pandanus Leaf: Helps to expel urine, nourishes the heart with a cooling effect. Good remedy for diabetes used with cooking & tea.
Olive Oil: Best used raw or lightly heated assists in gall bladder Cleansing (Lime Juice) and heart disease with essential fatty acids.
Coconut Oil: Enables rapid breakdown in digestion. Helpful in thyroid disorders, candida and digestive disorders because of its stable nature can be used at high temperatures.
Sesame Oil: Stable oil can be cooked at higher temperatures without risk of becoming rancid.
Nut Butters: Freshly and powerfully ground each day.

Tao Garden's Organic Fresh Sprouts

Adzuki: 25% Protein, High in Calcium, Niacin, Iron & Amino Acids.
Alfalfa: 35% Protein, Chlorophyll, Vitamins A, B, C, D, E, F, K, U.
Buckwheat: 12% Protein, High in Lecithin, Rutin and Minerals.
Fenugreek: Blood Liver and Kidney Cleanser. Mucus Remover.
Garbanzo: 20% Protein. High in Iron, Calcium, Vitamins A and B.
Lentil: 25% Protein, Vitamin E, Iron Phosphorus, C & B.
Peas: 22% Protein, Magnesium, Chlorophyll and Amino Acids.
Pumpkin: 30% Protein, High in B Vitamins Phosphorus, Iron, Zinc.

Radish: Contains Vitamin C, Calcium and Potassium.
Sesame: 18% Protein (1125 mg's) Vitamin E, B1, Niacin.
Sunflower: Vitamin B Complex, D, E, and all Minerals & Zinc.

Tao Garden's Organic Herbal/Flower Teas and Juices

Safflower (Stevia Leaf): Cleans the Blood, Dilutes it, and lowers cholesterol and high blood pressure. Makes a dark orange tea.
Lemon Grass (Stevia/Pandanus Leaf): Activate the thymus, improving the immune system, and helps ward off mosquitoes and insects. Mildly Green tea.
Ginger (Stevia/Pandanus Leaf): Warms the stomach (aiding digestion) and helps blood flow.
Lingzhi (Stevia Leaf): Lingzhi is a kind of mushroom, said to strengthen the heart.
Chrysanthemum (Buddha Fruit): Helps the throat, clears mucous, & cools the system.
Bael Fruit: Common Thai Herb, which the locals say improves your sex appeal when consumed after dark.
Green Jasmine: Has some caffeine. They will wake you up a bit. It is best not to drink them in the evening.
Mint Leaf: Served with lime.
Ginkgo Biloba: Improves circulation to the brain.
Mulberry (Stevia/Pandanus Leaf): Harmonizes construction, assisting the Middle Burner.
Roselle: When made into a tea is a cooling blood purifier.
Ginger/Ginseng: Freshly prepared daily. Stimulates, Warms and Energizes for fighting off Colds and Influenza Viruses.
Senna: Mild laxative and cleansing drink with one part Senna with three parts of your favourite Fresh Tea to aid Bowel Contractions.
Japliang: Ancient blend of Chinese herbs to assist in Cooling Body.
Soymilk (Pandanus Leaves): Breaks down of Proteins with no additives becomes a digestive delight, refreshing wholesome drink.
Yogurt: Made from Thai Goat's Milk effective in sweetening the levels of beneficial bacteria within the large intestine.
Green Vegetable Juice: Chinese Cabbage, Scallion, Panadus Leaf, Pennywort, Parsley, Lettuce, Sprouts, Lime & Cane Sugar juice for sweetening with Natural Enzymes, Chlorophyll and Vitamins that alkalinizes blood and cleanse system of putrefactive debris.
Rice Milk: Contains the Building Blocks for DNA production. 4-7 Grains are used to produce this Milk, fresh every evening.
Dragon-Eye (Longan): Thai Traditional Way to Sweeten Food. Contains Fruit Sugar and so Blood Sugar is Balanced.

Fig. 9.9. Happiness is like a butterfly. The more you chase it, the more it eludes you. But if you turn your attention to other things, it comes and softly sits on your shoulders. This is the Way of the Tao.

Solar Light, Fresh Oxygen and Pure Water

Ancient cultures worshipped the sun as a manifestation of the All Powerful Creator. They derived great benefit from its healing power. The Greeks and Romans built solariums where the sick came to fast and bask in the relaxing and healing ultraviolet rays of old sol. Ancient physicians were well versed in the knowledge of solar light therapy, in conjunction with fasting, herbs, natural foods, and physical exercise therapy. Pastries, sugar, white flour, and other junk foods were non-existent, therefore healing and rejuvenation through the use of heliotherapy (sun-therapy), herbs, hydrotherapy (water-therapy), and fasting was rapid and effective.

The bright solar orb (Sun) is the most powerful source of energy and light on this planet. It sustains all vegetation food for man and animal life through the process of photosynthesis. It provides us directly with Vitamin D, but it must shine on our bare skin to receive its benefits. Sunlight directly affects the retina of the eye and the hypothalamus which is a control center in the body. The hypothalamus coordinates the nervous system and the pituitary gland, which is known as the master gland because of its influence on the endocrine system. Hormones from these glands directly influence metabolism, growth, sexual activity, and the overall health and vitality of the body. Poor inside lighting is responsible for many physical and mental defects, from nervous conditions to cancer.

Fig. 9.10. Solar Light

Man needs the full spectrum of the sun, not artificial lights. To stay in good health, we must enjoy the outdoors as much as possible. In the wintertime keep your rooms well ventilated to let in as much light and fresh air as possible. Sunglasses are harmful to the eyes, causing fatigue and tension. Pinhole sunglasses are the best as they admit the entire spectrum of sunlight & reduce glare.

Fresh air and sunshine increase the quality and quantity of the blood by 25% within four hours time. Our blood has more hemoglobin in Summer than Winter. Sunlight makes better use of calcium and phosphorus for bone strength and development. Vitamin D from the Sun helps the body's absorption of carbohydrates and the control of body weight. It acts on the pineal gland and in turn on the sex glands releasing nerve hormones which build up the sex glands.

The rays of the sun help us to utilize our vitamins, minerals and proteins and fats. It helps to overcome insomnia. Sunshine assists in overcoming colds, flus, gland infections, TB, anemia, etc. It distributes calcium in the body and it tones up the muscles. Sunlight helps more ailments than all the drugs in the world.

Blondes require less sun than brunettes. Too much sunlight for the blonde people is very exhausting to their nerves and body. The extra pigment in the brunette gives them more protection from the sunlight. Sun dried fruits and vegetables are excellent sun charged foods loaded with nourishment. The sun vitalizes the waters of the sea and the soil of the earth. The ancient Greeks and Romans and the races ages before them used sunlight for healing the sick and diseased, and for preventing ailments. The powerful rays of the sun help to overcome infections, acting as a disinfectant. Fruit trees take in the most sunlight of all food grown, because it is under the sun's rays throughout the year. Sun and air baths help the body to eliminate its waste material daily. Fresh mountain or ocean air is the best tonic known for poor health.

A few weeks in the mountains or on the ocean beach, with the sun shining on the bare skin, is the best known physical and mental rejuvenator of all. Instead of lying in a head shrinker's office, stretch out your nervewracked body on your favorite beach or mountain resort and let nature restore your health.

Fig. 9.11. Breathing and good blood circulation are inseparable. Pure blood built from wholesome food, fresh outdoor oxygen, sunshine and physical exercises that enhance free blood and nerve circulation create superior health and freedom from disease and microbes.

Solar Time Clock

It is well known that sunshine and solar energy are necessary for health and life on earth, but it is not generally recognized that there is quite a difference between morning and afternoon sunshine energy. At 4 p.m., on a clear day, one feels the heat of the sun more than at 8 a.m., although the sun is in the same position or height in the sky. The morning sun is tempered by the earth's atmosphere travelling in the opposite direction. Plants utilize morning sunshine better than that of the afternoon.

From dawn to noon the sun and earth forces are in opposition; the sun is radiating towards the West while the earth is revolving towards the East. All life depends on the opposition of these cosmic forces. From dawn until noon the eliminative powers are at their peak; toxins are neutralized or discarded, putrefaction and fermentation is inhibited, and infections are eliminated. During the pre-dawn hours the cosmic energy is at its lowest and more people die at this time than at any other period of the day, especially sick people and hospital patients.

The solar forces in the afternoon operate in the same direction as the rotating earth, East, and have a constructive and recharging influence; the food eaten at this time is thoroughly assimilated and absorbed into every cell of the body for constructive purposes. Therefore, the logical conclusion is that from morning until noon physical and mental activity should be at its height, and the afternoon and evening hours for comparative rest and relaxation. To do otherwise is to work in opposition to the Law of Rhythm and Universal Yin/Yang Balance. Early daylight hours are Yang; full of energy, activities and heat, while early evening hours are Yin, passive, restful, cool and calm. This is the Law of Nature, and is designed for our health and benefit.

Vibratory Light Waves

One of the greatest scientific achievements of this century has been the discovery of the indispensable health benefits that are locked up in sunlight. Although sunlight seems to us to be merely brilliant white light, actually a single beam of sunlight runs the gamut of all colors. If a ray of light is divided by a prism into its different wave lengths, the prism separates what the human eye recognizes as the seven colors of the scale of Light (Red, Orange, Yellow, Green, Blue, Indigo and Violet).

Fig. 9.12. ***Solar Spectrum:*** *7-Color Scale of life and birth. Rays just beyond the violet have the greatest effect in building vitality and health. Rays beyond red are very useful in reducing congested, inflamed tissues.*

Healing Ultra-Violet

When we speak of healing by sunlight, we mean, principally, the healing partly produced by the violet rays of the invisible band of sunlight, together with the ultra-violet rays of invisible light. We are healed, so to speak, by rays of light too short for the human eye to see. Some of the therapeutic properties of sunlight, it is true, are found in the infrared rays. In rheumatism or arthritis, bathing in sunshine has the effect of breaking up the uric/acid crystals into disposable by-products. The uric/acid from the harmful and tissue-stiffening uric/acid crystals is thrown off through the skin and kidneys and some iron, curiously, is released from the crystals for constructive work in the bloodstream.

This property of the infrared rays (invisible long rays of sunlight) in assisting the assimilation of iron by the system, proves to be valuable in certain cases of anemia. The action of the infra-red rays enables the iron (thus released into the bloodstream) to combine with oxygen in the formation of red blood corpuscles.

Sun Bathing

Wait at least two hours after eating your main meal before taking a sun bath. Use pinhole sunglasses to protect the eyes from glare. Winter sun is just as good, or even better than summer sun. Never sunbathe between the hours of 11 a.m. to 2 p.m., especially during the summer months. Nine to 11 a.m. and 2 p.m. to 5 p.m. are the best periods to expose the entire body to the sun. Make every effort to get out into the sun, bathe in it, walk in it, work in it, learn to love it.

Overexposure to the sun where one becomes red or burned causes a negative reaction in the immune system. Gradual and slow tanning in 5 or 10 minute increments benefits and enhances the body's immune system. The healing power of the sun's ultraviolet light is strongest at midday. One can burn very easy on cloudy days due to ultraviolet rays penetrating the clouds, so be cautious.

Scientific Solar Research

Millions of Americans eat diets heavy in refined and animal fatsthese are the diets loaded with fried food, rich pastries and fatty beef. These people should not be getting a lot of sunlight.

Medical science has determined that one of the causative factors of skin, bowel and breast cancer as well as aging of the skin is a high fat diet. The National Cancer Institute has recommended that Americans cut down on total fat in their diets. Experiments have shown that animals fed a high-fat diet and exposed to intense sunlight suffer considerable cancer whereas it is hard to induce cancer in animals getting the same amount of sunlight but eating a low fat diet.

The sunlight acts as an accelerator of cancer, but not as a cause, when there are a lot of fatty substances in the tissues. Wrinkling works the same way. It is the bad diet that has a lot to do with aging of the skin. (Excessive salt is the biggest culprit.) For extra protection, people should eat diets that are rich in vitamin C, E and carotene, a form of vitamin A. These nutrients help prevent harmful chemical reactions in the skin.

In addition, a diet rich in natural complex carbohydrates, grains, legumes, fresh fruits and vegetables, germinated seeds, nuts and sprouts eaten in season, will maintain the body in optimum health and superior protection from cosmic solar rays. When we learn how to live in har-mony with the laws of nature, we are protected and nourished by all of her elements fire, air, water and earth.

Summary Benefits of Sunlight

1. Lowers high blood pressure and cholesterol levels.
2. Strengthens bones, teeth, hair, nails, lessens cavities by increasing absorption of vitamin D and calcium.
3. Decreases susceptibility to bacteria, germs and virus.
4. Improves the immune system by increasing the amount and activity of anti-bodies and white blood cells; these cells manufacture interferon, an internal substance, which aids in healing diseased conditionsinternal and external.
5. Helps to overcome mental and emotional disturbances.
6. Helps to overcome hypoglycemia by lowering blood sugar.
7. Lessens frequency of colds, flus and tuberculosis.
8. Aids in atherosclerosis, angina, cancer and arthritis cases.
9. Decreases the need for insulin in some diabetics, in conjunction with proper exercise, herbs and diets, etc.
10. Improves over-all health, well-being and physical appearance.

Fresh Outdoor Oxygen

Man can live for weeks without food, a few days without water, but only a few minutes without air. Yet modern man stays cooped up in his home or office practically all day with the windows shut. He breathes in impure, stagnant air and wonders why he feels dopey and sluggish all day long. Have you ever noticed stale air in a room with closed windows after one has slept in it? The air is literally charged with autogenerated body poisons! Many heart attacks could be prevented by sleeping in a room with good oxygen ventilation.

Breathing oxygen sustains our life on earth; when oxygen is withdrawn, existence ceases. The most mentally and physically active people are the ones who breathe deeply and use their lungs to the fullest capacity; they are full of energy, vitality, health and youthfulness at any age! The joy of living glows on their face: their cells, tissues and blood is pumped and energized with life giving oxygen. They enjoy life to the utmost, and people are attracted to their magnetic charm and vitality. Diseased, pale-faced, and anemic people are full of uneliminated toxins and poisons in every cell and organ; they do not obtain sufficient vital oxygen to burn up the wastes; they are weak breathers, with poor health force; they are wasting away in their own waste and do not know it; their thinking is poor due to oxygen starvation and poor circulation. The power-charged vital oxygen breather and exerciser functions on 220 volts with energy to spare. Fresh oxygen, sunshine, wholesome food, and exercise are key factors in building super health force.

When the body possesses a high health force rating, four star and above, one is obtaining plenty of oxygen. There is a joy of living; we are happy to be alive; we bounce out of bed mornings with a song in our heart; depression, envy, hate, jealousy, worries, anxieties flee like phantoms in the night; we enjoy our work, and our creativity is enhanced; we are inspired to master life, and accomplish great deeds without struggle. A person who practices scientific breathing does not shun responsibility; they approach it head on with courage, fortitude and determination; they create and invent, but do not follow fleeting fads. The weak shallow breather, on the other hand, is an escapist, turning to drugs, alcohol, morbidness, perversion, fantasy, self-delusion, fads and the make believe tinsel worldmaterial illusion.

Health Benefits of Deep Oxygen Breathing

1. Deep breathing builds a state of high-level health force.
2. Oxygen burns up and eliminates poisons in the lungs and blood stream.
3. Deep breathing builds rich red blood cells.
4. Oxygen breathing helps to overcome the craving of artificial stimulants.
5. The body heals faster when sufficient oxygen is present.
6. It improves the memory and thinking ability and it cleans away the cob webs from the gray matter.
7. It creates healthy circulation to all parts of the body.
8. Helps to overcome anemia and nervous diseases.
9. Deep oxygen breathing improves muscle tone, lung capacity, complexion, flattens the abdomen, reduces wrinkles.
10. Diaphragm deep breathing aids digestion, assimilation and utilization of food.
11. Fresh outdoor oxygen after meals helps us to digest our food efficiently.
12. Deep breathing improves the singing voice and makes the speaking voice beautiful and harmonious.

Fig. 9.13. Living and Breathing the Tao

Oxygen: Blood, Flexibility and Longevity

Why is deep oxygen breathing so necessary to health? Because our very life blood depends upon it. Oxygen is a food for the body and it is absolutely vital in purifying the blood. All the blood in the body passes through the lungs every three-quarters of a minute and then purified and enriched by the oxygen we breathe.

While I was in North Africa I was amazed at the beauty, strength and endurance of their native dancers. One of the tricks which cause wonderful beauty of North African girls is the development of their breathing musclethe diaphragm. Through its action in drawing in large quantities of fresh air and throwing out waste material, these girls have a delicious and fascinating complexion and skin, eyes of desire and the grace and suppleness of a fawn. The blood-making spleen sends out that rich material which causes your cheeks to be red and ruddy; the other blood making cells in the marrow of the bones voraciously grab the oxygen the diaphragm draws in. This is the whole secret for all these exercises. They make you breathe right and all the internal organs get the benefit of this right way of breathing.

They do not get this benefit by the ordinary way of breathing, and this is why so many men and women, when they have lived thirty, forty or more years have stiffened intestines, cemented joints, hardening of the liver, inelastic arteries and veins, cold feet and hands, indigestion and nervous dispositionsin fact, why so many indi-viduals commence to deteriorate at a period in life when they should be in the best of physical and mental state.

The human is an oxygen creature and cannot live without air. We should be outdoors for several hours each day, even in cold weather; dress accordingly. A short walk should be taken in the open air after meals. Perfect digestion and assimi-lation requires lots of oxygen. During sleep there should be maximum ventilation, while making sure you are sufficiently warm.

An abundance of fresh oxygen will make a great difference in the way you feel and think. Get your share! Large cities have a great deal of pollution, but outside air is still better than inside air. Go to the country, or near the lake or ocean whenever possible to obtain clean fresh oxygen.

Training yourself to get More Oxygen

People with plenty of oxygen are the happiest, most influential people of all. They make promoters, master salesmen, orators and organizers of note. There is a trick way of causing your lungs to change their position, to enlarge, and to assimilate more oxygen. This is done, in conjunction with proper deep breathing techniques, by the simple trick of flattening the small of the back. After a few attempts you will see that more air is taken into your lungsthat you walk with the stride of youth.

Stand straight up with your back flat against the wall. Leave no room between your back at any part, and the wall. It requires a little practice, but this brings all internal organs into their correct working position. Learning to walk with the back flat is the trick. Stand, walk, he, and sit with the small of the back flat, and the head held erect, and then oxygen will take care of itself in the body. This carriage throws the hips forward and upward and practice gives grace and greater height to the figure.

Water: Liquid of Life

The finest of all water is that found in fresh fruit, vegetables and juices; it is organic water of the highest quality. Pure rain water sent from the heavens is the cleanest liquid substance that nature has to offer. Rain water is naturally distilled by the clouds and gently sent down in little organic droplets for the benefit of mankind. Cloud distilled rain water is vitalized, energized and aerated by the atmosphere on its journey to earth; it is full of life electricity and magnetism.

Rain water may be caught directly from the clouds and stored in a clean, dry and cool place. The easiest way to collect rain is during the whiter when nature pours her white snow flakes to earth in great quantities. The purest rain or snow is found in the country, ocean or mountains where air pollution is at a minimum.

Pure rain or distilled (aerated) water acts as a solvent and dissolves uric acid, old age salts, mineral deposits and toxic wastes within the body that makes one grow older years too soon. Pure vitalized water is a blood-builder because it picks up the internal filth and cleanses the entire system.

Fig. 9.14. Living in the Tao's Liquid of Light

Distilled and Mineral Water

Factory distilled water is pure lifeless liquid and it lacks the electricity of vitalized rain water. The cosmic rays of the sum and atmosphere are the life-giving principle ingredients that make rain water a superior liquid. However, man-made distilled water may be vitalized and solar-aerated by pouring it from one container to another in the morning sunlight and outdoor atmosphere, thus imparting to it a degree of solar energized electricity. Still waters grown stagnant and lifeless; while moving and churning waters attract to itself more sunlight, oxygen and atmospheric life force. This is the reason that you should aerate your distilled water. You may also store the aerated water in colored glass containers and let it stand in the direct sunlight, covered until ready to use.

The centenarians of high mountain regions utilize pure glacier waters that have been energized by the unpolluted atmosphere; this water is very fast moving and it remains in a constant aerated state for daily use. Mountain or spring water does pick up some inorganic material, but these have always been a part of man's natural environment and are not known to be harmful to the body.

Inorganic mineral water does not cause hard-ened arteries as some people believe. Hardened arteries, and other civilized diseases are the result of a high animal food intake, calamity junk food, stress conditions and lack of pure wholesome natural foods. Cholesterol deposits from wrong foods is the cause of hardened blood vessels and other old age symptoms.

Do not be afraid of a few inorganic mineral sub-stances or a couple of harmless microbes, but on the other hand, be intelligent enough not to use contaminated sewers, stagnant lakes or ponds, or the chemically treated, chlorinated and fluoridated city tap waters. Water which flows in a living stream or which comes to you fresh from the clouds, charged with solar energy and laden with cosmic electricity, is Nature's sweet gift and you cannot improve on it in any way.

Deep mineral waters as a rule are not as good as those which are clear, aerated and fresh. It is a general rule, however, that young and growing persons need to drink water which contains lime, as it builds and hardens the bones and teeth; this is called hard water. It is probable that after a person reaches fifty years of age they will be benefited by drinking soft water, distilled (aerated) or rain water which prevents the rapid solidifying, hardening and aging of the body. Seventy five percent of the human body is composed of water. Water flushes out internal wastes and purifies the cells, tissues and organs.

Drink Only When Thirsty

Liquids should be taken only when thirst is present. Over-consumption of liquids causes polyuria (excessive passage of fluids or frequent urination). It also causes expanded kidneys and intestines, a yin condition. Overconsuming fluids causes the kidneys to excrete urine instead of cleansing the blood and ridding the body of uric acid and metabolic toxins.

Ancient and Modern

There are many modern systems in use, and systems are constantly evolving. Modern research uses experimentations and science as its tools, rather than the observation of Nature, energy and spirit. However, despite such different methodologies, very often the modern systems replicate the findings of the ancient ones.

By understanding the parallels we give ourselves more options, such as new ways of considering old theories. We also open up the opportunity to use modern medical testing procedures to assist us in making accurate diagnosis. We do not need to throw out the old to make way for the new, but can integrate them to bring an even more comprehensive system of Five Element Nutritional Therapy. We will examine several different modern nutritional theories that support the ancient Yin and Yang theory of health.

Metabolic Typing

One sophisticated system of diagnosis and treatment is that of Metabolic Typing. Harold J. Krista and James M. Haig are two of the leading pioneers of this technique. They have proposed a system in which individual differences in metabolism are measured and different dietary therapy is applied to each group.

Tenets of Yin-Yang Metabolics:

1. One man's medicine is another man's poison.
2. Our internal metabolic systems can operate in different ways.
3. Some foods are not healing, no matter what type you are: these are those that are far from being whole: refined and processed foods.
4. When we come more into harmony, we become less of a type and more balanced. Symptoms are reduced, and we become harder to diagnose because there is nothing wrong.

This is a close reflection of the Yin and Yang theory, in which we can look at people along a sliding scale from one extreme to the other. Rather than using the ancient diagnostic techniques. Metabolic Typing uses a series of sophisticated medical tests. These look at various aspects of metabolism.

Just as in Oriental Therapy, there are two main groups that can be distinguished. Another similarity with Oriental Therapy is that these two groups can be further subdivided into an underlying four groups. Balance is also sought as a health ideal in Metabolic Type Five Element Nutrition. To an Five Element Therapy practitioner, balance is the absence of disease plus vibrant health and wellbeing. Kristal and Haig suggest that when such a condition exists, the underlying metabolic state is one in which there is a blood pH of 7.46; slightly alkaline. However, because our metabolic systems operate in different ways, the diet that we have to follow to reach this pH differs from one type to the next. This is because the way that we receive energy from our food can take very different forms.

Metabolic Types

The Metabolic Type method aims to create a slightly alkaline pH (7.46) of the blood for health. This in itself is not a new theory, and there are many advocates of alkalizing. However, what Kristal and Haig discovered is that foods and nutrients that alkalize one group of people actually have the opposite effect on others. They also found that some people have blood that is slightly too acidic, but in others it is too alkaline. It all depends on how people source and metabolize their energy.

Oxidative Types: One group of people, the Oxidative types, gain most of their energy from the metabolism of glucose. There is a system within the body's cells called the Krebs cycle. In this cycle glucose is converted into a useable energy form called ATP. This may be balanced, but in some people this process happens too fast and they process glucose very rapidly. They are called fast-oxidizers, and their blood tends to be too acidic. Others do not process glucose fast enough, and they require more glucose to be fed into the Krebs cycle to produce energy efficiently. These people are called slow-oxidizers and their blood tends to be too alkaline.

Autonomic Types: All humans process energy through the Krebs cycle. However, there are some people who are more affected by the activity of their autonomic nervous system (ANS) than by their oxidative system. This is the part of the nervous system that regulates involuntary metabolic processes.

There are two different divisions of the ANS: the sympathetic and the parasympathetic. The sympathetic nervous system puts us into fight or flight mode, making our body ready to respond hastily to a threat. Some types, called Sympathetic Types, utilize this state as their main form of energy and they have a blood pH that is slightly too acidic. The parasympathetic nervous system puts our body into a state of relaxed and rested. In such a state our body would not be ready to respond to an emergency, but is calm and using very little energy. Some people are governed most by this branch of the ANS, and are called Parasympathetic Types. They have a blood pH that is slightly too alkaline.

Oxidative Systems Two Groups:

Fast-Oxidizers
Slow-Oxidizers

Autonomic Nervous Systems Two Groups:

Sympathetics
Parasympathetics

These are underlying metabolic processes. However, we can also look at health as measured by blood pH.
There are two groups that tend towards having a blood pH that is too acidic:

Fast Oxidisers
Sympathetics

There are two groups that tend towards having a blood pH that is too alkaline:

Slow Oxidizers
Parasympathetics

The aim of Metabolic rebalancing is always the same: to restore blood pH to 7.46. The method however will vary depending on the underlying metabolic system.

Acid and Alkaline Balance

Many nutritionists have realized that blood needs to be slightly alkaline, at 7.46, for health. However, so-called alkalizing diets only seem to work for some people. The Metabolic Type theory states that this is because: The pH effect of a given food is a result of the interaction between the inherent qualities of the food itself and the metabolism of the person eating it. The Oxidative and Autonomic types have different responses to foods, as shown in the table below:

Type	***Food Eaten***	***Response of Blood pH***
Oxidizers	Protein/fat	More acidic
	Carbs	More alkaline
Autonomies	Protein/fat	More alkaline
	Carbs	More acidic

Notice that the two food groups, proteins/fats and carbohydrates are the same two food groups used to rebalance Yin and Yang imbalances in Five Element Dietary Therapy.

Creating Balance

So we can see that the food groups have the same effect on both types of Oxidizer, and the opposite effect on the Autonomic Groups. However, we have also seen that the sub-groups within each type have different pH imbalances: Fast Oxidizers and Sympathetic are too acidic, whereas Slow Oxidizers and Parasympathetics are too alkaline. From this we can work out which food groups will rebalance which types:

- Fast Oxidizers need to become more alkaline, and thus they need to eat more proteins/fats.
- Slow Oxidizers need to become more acidic, and thus they need to eat more carbs.
- Sympathetics need to become more alkaline, and thus they need to eat more protein/fat.
- Parasympathetics need to become more acidic, and thus they need to eat more carbs.

So we can see that both Fast Oxidizers and Sympathetics need more protein/fat; whereas Slow Oxidizers and Parasympathetics need more carbs.

Metabolic Groups

To make this simpler to use, Kristal and Haig grouped together the sub-groups that require the same diet to bring them into re-balance. Thus they placed Fast Oxidizers and Sympathetics into Group I, and Slow Oxidizers and Parasympathetics into Group II.

	Group I	***Group II***
Oxidative Types	Fast Oxidizers	Slow Oxidizers
Autonomic Types	Sympathetics	Parasympathetics

Though the underlying situation is vastly different in each of the four subgroups, the treatment applied is according to the Group. This is similar to Yin and Yang therapy, in which we have two treatment protocols, but four underlying situations.

Dietary Recommendations

The broad outline is that Group I can eat more complex carbohydrates to restore balance. Group II require more quality proteins and fats for their balance.

Complex carbohydrates includes whole grains, vegetables and fruit. However, it does not imply that we should eat the sugars and refined foods that fill our supermarket shelves.

Proteins and Fats includes high quality meats and fish, especially oily fish, Fats must be of high quality, such as fish oils and cold-pressed oils. It does not include poor-quality and rancid oils or deep-fried food.

In addition to these guidelines, there are some specific foods found to have differing effects on blood pH. George Watson, and later Rudolf Wiley, tested many foods and their effects on blood pH. Thus they have created a detailed list of foods for each Group.

Group I Foods *(Slow Oxidizers & Sympathetics)*						
Proteins			***Carbohydrates***			***Fats***
Meat	***Seafood***	***Dairy +***	***Grains***	***Veggies***	***Fruit***	***Oils - Nuts***
Eat Lighter Meats	***Eat White Fish***	***Low Fat Cow/Goat***	***All Whole Grains***	***Emphasize these Foods***	***OK***	***Sparingly***
Buffalo	Catfish	Cheese	Amaranth	Beet	Apples	Almonds
Chicken	Cod	Cottage	Barley	Broccoli	Banana	Cashews
Breast	Flounder	Cheese	Rice	Brussels	Berries	Almond
Ostrich	Haddock	Milk	Buckwheat	Sprouts	Cherries	Butter
Pork	Perch	Yogurt	Com	Cabbage	Citrus	Tahini
Turkey	Scrod	(Plain)	Millet	Chard	Grapes	Olive Oil
Breast	Sole		Quinoa	Cucumber	Melons	
	Trout		Rye	Eggplant	Peaches	***Moderately***
Minimize	Tuna (Lite)	Eggs	Wheat	Garlic	Pineapple	Coconut Oil
Salty Foods	Shrimp		(Very Best)	Kale	Plum	Sesame Oil
Organ Meats	Crab			Greens		Other Nuts
Red Meats	Crayfish		***Minimize***	Lettuce	***Minimize***	Seeds
	Lobster		Oats	Onions	Avocado	
			Beans	Peppers	Artichoke	
			Lentils	Potatoes	Asparagus	***Minimize***
	Minimize			Sprouts	Carrots	Butter
	Oily Fish			Squash	Cauliflower	Fatty Foods
				Tomatoes	Olives	
				Turnip	Peas	
				Yam	Spinach	
				Zucchini		

Eat 3 regular meals per day; eat protein foods at least twice a day; do not eat the same foods every day.

Avoid processed and fast food, and refined or partially hydrogenated vegetable oils; use unrefined oils only.

Eat organic meat, eggs and produce whenever possible; emphasize a variety of vegetables and leafy greens.

Bake, broil, grill, poach or stew animal foods; do not overcook or blacken.

Drink 2 cups of filtered water on arising; drink a total of 6-8 glasses per day.

Minimize alcohol (especially hard liquor) and coffee; completely avoid all sodas (regular or diet).

Avoid all sugar and artificial sweeteners (NutraSweet®, etc.); use stevia, xylitol or lo han instead.

Restrict salt intake; use unrefined sea salts, such as Celtic, Eden, Mediterranean or Real Salt.

Group II Foods ***(Fast Oxidizers & Parasympathetics)***						
Proteins			***Carbohydrates***			***Fats***
Meat	***Seafood***	***Dairy +***	***Grains***	***Veggies***	***Fruit***	***Oils - Nuts***
Eat Darker Meats	***All OK Oily Fish***	***All OK Cow/Goat***	***OK in Moderation***	***Emphasize these Foods***	***OK in Moderation***	***OK***
Beef	Anchovies	Cheese	Amaranth	Artichoke	Apples (Tart)	Butter
Buffalo	Caviar/Roe	Cottage	Barley	Asparagus	Granny	Nut Butters
Lamb	Herring	Cheese	Buckwheat	Avocado	Smith	Tahini
Liver	Mackerel	Cream	Corn	Carrots	Pippins	
Kidneys	Salmon	(Full)	Kamut	Cauliflower	Banana	***Oils:***
Ostrich	Sardines	Milk	Millet	Celery	(Firm)	Coconut
Poultry	Tuna (Dark)	Ricotta	Oats	Green Beans	Blueberries	Olive
(Dark)	Crab	Yogurt	Quinoa	Mushrooms	Pears (Firm)	Sesame
Red Meat	Lobster	(Plain)	Rice (Brown)	Olives		
	Shrimp		Rye	Peas		
Minimize	Oyster	***Misc.***	Spelt	Spinach	***Moderately***	***Nuts/Seeds:***
Broccoli	Shellfish	Eggs		Winter	Apricots	Almonds
Potatoes		Beans	***Minimize***	Squash	Berries	Brazils
Mustard		(Dried)	Wheat & All		Plums	Cashews
Greens		Lentils	By-Products	***Moderately***		Pecans
Soft		Tempeh	White Rice	Chard	***Minimize***	Pumpkin
Squashes		Tofu		Green Salads	Citrus Fruits	Sunflower
Tomatoes				Kale	Grapes	Walnuts
Zucchini					Fruit Juice	
Vinegar						

Chapter 10

Three Treasures of the Tao

Psychological Aspects of Yin and Yang

Just as physical objects, food and climate are classified into Yin and Yang, there are also psychological aspects, mental characteristics, societal conditions and individual tendencies of Yin and Yang. Yin and Yang is the Law of Polarity or the Law of Opposites. Nothing can exist except in relation to its opposite. Without mountains there can be no valleys. Without shadows there can be no perception of light. If masculinity only existed we would have no perception of feminine beauty. There would be no such thing as evil unless we were able to compare it with good. Without wisdom, there can be no ignorance. Without age there can be no such thing as youth.

The enlightened (Yin/Yang balanced) person is a realist. He or she knows how to use Yin and Yang to improve their life. He knows there are basically two types of people in this world; the leaders and the followers. If people refuse to become the leader of their own life and circumstances, they become followers. If they will not become masters of their own life and health, then they become slaves to their uncontrolled desires.

By studying the Yin and Yang principles in all its aspects, you will be able to think and see clearly, thereby developing better judgment and supreme wisdom. Of course, if you do not want to think or see clearly, that is your own funeral. If you let others do your thinking for you, do not feel depressed or offended when their thinking turns out to be for their own advantage and to your disadvantage. The shepherd exists solely to fleece his sheep, and all his loving kindness and solicitude for their welfare is necessary to his fattening them for the slaughter.

Balancing your Yin and Yang Forces

A person who is balanced and controlled in all of their Yin and Yang aspects of egoistic, intellectual, motive, emotive, moral and spiritual can write their way to success and happiness. The Extreme/Deficient/Yin and the Extreme/Excessive/Yang person are not in conscious control of their physical and psychological forces.

They are tossed about by outer circumstances because they have unbalanced their physical and mental Yin and Yang polarities. The Yin and Yang balanced individual consciously maintains and flows harmonously with the natural forces of life as daily situations arise. He is poised in every undertaking, whether it be working in a factory or selling insurance. Nothing disturbs his center of balance or his energy. He does not use the forces of nature or his own power to gain an advantage over another person. He knows that any coersion or force will bring dire consequences upon himself and misery for others. The Extreme/Yang person, on the other hand, consciously uses Yin passive people for his own ends, and he creates a Hell on Earth for himself and others.

By doing this, he sets the wheels of cause and effect in motion and eventually reaps what he sows pain, grief and suffering. Taoist wisdom teaches that: The wise man seeks everything in himself; the ignorant man tries to get everything from somebody else. The essential difference between the Controlled/Balanced/Yin and Yang person and the Extreme/Yin and Yang ones is in the degree of conscious awareness. The former consciously balances his inner mind and soul with his outer physical body, while the later is unbalanced and totally controlled by his desires, habits and physical environment. If we enter into a relationship with a controlled attitude, without attachment or possession, we are considered balanced we must also maintain a kind and loving nature. A person is considered Extreme/Yin in a relationship if he possesses, holds, or becomes emotionally crippled with uncontrolled attachment and desire. In most modern day relationships there is the lover (Yin) and the beloved (Yang). The lover pursues and attempts to possess the beloved, who in many cases is indifferent or unattached to the lover. A true relationship is based on mutual love and respect, where both people have totally balanced natures. Emotionalism is a Yin condition not based on true love. An unbalanced relationship is generally emotional, possessive, which develops into jealousy, self-pity and loss of self-confidence.

Yin Temperament

Need someone or something excessively and you will become Extreme/Yin. Let it affect you mentally, physically, emotionally and spiritually and you will become useless to everyone, including yourself. Excessive and uncontrolled desires are the cause of much

pain and heartbreak. We fail to see life as it is seeing with tunnel vision to escape universal truths and realities of life. To supress a truth is to give it force beyond endurance. It is easier to realize truth than to supress it in the long run. Essentially we live on a material plane, or in a Yin-type world. There is no such thing as a totally Yang person. Since we live in the Yin world of matter, we have a certain amount of Yin within us merely to keep us alive to adapt to the needs of existence. Thus, right from birth we are trained to be Yin, to be materialists enough to support ourselves. We are trained by society to react Yin to outward circumstances. And since Yin is decay and death, we are schooled more in the art of dependence and confusion (Yin), than in the art of healthful living and clear thinking (Yin-Yang Balance) for ourselves.

Yin reacts uncontrollably to outward conditions. Yin needs. Yin is also dominated. That is the whole mystery of it in a nutshell. Yin is dependent. Crave something uncontrollably, and you are its slave. Psychologists say that you are on your way toward becoming an alcoholic as soon as you tell yourself, I need a drink. Alcohol itself is an extremely Yin substance and it tends to expand or Yinnize the body and brain. Respond to something and you are in sympathy with it; you are a part of it. Respond to worry (Yin) and you will have more worries.

Put yourself in the position of craving, lusting and excessively worrying about money, and you will never get enough of it because you are not ruling money, you are letting money rule you. If you are ruled by money, you are Yin. Excessive miserly greed is extreme Yang. Neither condition is healthy. Money in itself is neither Yang nor Yin it is just a manifestation. It is when you let yourself react to it that it becomes Yin. The right attitude about money is to agree to its worth, but do not crave it excessively and let the world see that you do not lust after it and you will get all you need.
It works 100% if you give it a try.

Creditors are Yang. They have control over your money if you allow it. You are Yin and have created a need for something beyond your immediate capacity to buy. Someone once stated that if you want peace of mind, owe no debts. Balancing your Yin and Yang nature in all of its aspects will automatically lead you to peace of mind. The Way of the Tao is this: to take from those who have more than enough and give to those who do not have enough. Man's way is to take from those who do not have enough, to give to those who already have too much.

Yin and Yang manipulate each Other

When you ask for sympathy, you are becoming more Yin; you are putting yourself into the power of another. Like attracts like. Feel sorry for yourself (Yin reaction to circumstances) and the only person who will sympathize with you is somebody else who is feeling sorry for himself (Yin). Do not expect a disappointed lover to sympathize with your money troubles, unless he has lost sums of money in his pursuit of love. Few things are sweeter than money love and money. But fortunate is the healthy lover who has money. This explains why those who have suffered much, understand others who are still suffering. The less someone has, the more (in proportion he is likely to give you. The millionaire who is never known suffering or poverty, wil not understand your need for money. Since we exist within material bodies on a material plane we cannot totally escape its manifestation. We affirm a thing by denying it, just as much as we do by accepting it.

Success comes from creating a need in others. For instance, advertising is the biggest business in the world. It depends on its success by making others need (Yin) things, (a lot of which they do not really need). In a business sense advertising is Yang. People who believe the propaganda are Yin. A person in Yin and Yang Balance always uses good judgment in all of his purchases and never gets duped against his will by false advertising. A salesman can sell things to people that they do not really need. In that case, he is Extreme/Yang and you are Extreme/Yin. Allow financial worries to take you over and you cannot possibly lick them. You have become a slave to the dollar. If you worry about security, you will never attain it. There is no such thing as absolute security in this finite ever changing material world. Nothing ever remains the same.

The only true security in this world is to live in harmony with the Tao or the natural laws of life. Everything in life constantly changes; it is dynamic, not static, and the wise person flows smoothly with these changes.

Overcoming Temptations

Consider the temptations of a mystic, sage, monk or holy man. Since the majority of the human race has been trained to be Yin, and is Yin whole-heartedly, there are very few people who can bring themselves to believe that there is, indeed, enlightened and

self-realized sages, saints and holy men and women now living on this planet. The world has its own vices (Yin enslavements, Yin needs, Yin habits) and is convinced that the holy person must have his own vices also. Maybe he conceals them, they think, but he still has them. So what do they do? They try to tempt him.

Fig. 10.1. Conserve your powers. Be like the expansive ocean, which quietly absorbs the rivers of the senses. Cravings deplete your inner peace; through them, vital waters are wasted in the barren soil of material things. Wrong desire is the greatest enemy of happiness.

He does not like rich food. Just give me the simple things of life, he informs them. They will tempt him with goodies and try to force him into a craving (Yin) for them. As long as he can honestly reject them, he is safe. No one is forcing the slave to remain the slave. If he's going to retain his vices, if he insists on being dominated by his desires and those of society, there is no hope to help him unless he is willing to be helped. Heaven helps those who help themselves.

Master the Yin and Yang World

If you are a writer, you will have difficulty getting an agent until such time as you no longer need one. An agent will not start handling you for free until you have proved your ability (on your own) to sell scripts. Then he will agree to handle you for a commission, or what he can get out of you and because then he needs (Yin) you.

Take a look at all the slaves of fashion (who try to get you to have your hair clipped off in the latest style) and the slaves of decoration (who try to persuade and seduce you into stocking your house with all sorts of dust-catching objects). It is the women who are independent of fashion who set the fashion and become leaders of fashion. All the latest fashion designers achieved success and reputation by being innovative, creative and unique and not following the trend.

Why do we revere Lincoln, Washington, Einstein, Edison, Shakespeare, etc? Because they dared to be different; to be individualists and being first in their field. They were in complete harmony with their Yin and Yang natures. Set a price on yourself (whether for your services or your integrity) and nobody will want you. Refuse to set a price on yourself and people will swarm on their knees to you because they will know you can be trusted. An Extreme/Yin or Yang person cannot always be trusted. If you are Yin and Yang balanced and demonstrate that you can do without anything, you will have it thrust upon you. Especially demonstrate that you disdain something that the masses lustfully crave, and you will be totally overwhelmed by it, because you will be a challenge to the whole materialistic (Yin) world.

Give someone a gift everyday, and very soon it will lose its meaning. Give it when its least expected and the person will react favorably. Many parents complain, I gave my child everything his little heart desired, and what did I get in return? A child does not necessarily want material things he really wants love, approval and firm, but gentle guidance. Bribe him with gifts and he will despise you forever. Give him love and he will love you forever.

Show a manufacturer that you need his product and he will raise its price. Walk away from his product, be indifferent to it, and he will come running after you. If we continue to allow the oil companies to sell us gas at exorbitant prices, that we need, the price will continue to rise. If everyone in the world stopped using their cars and machines for a week or two, the oil barons would come running after us to buy their oil, dirt cheap. Have you ever found yourself at a table with others who loved to eat rich foods and lived to eat? They will tell you to forget your silly health diet and eat up, you can start back on your diet tomorrow. They are the slave (Yin) to food and want to make sure that you are as much enslaved as they are. Slaves do not want other people to be free. When in Rome, do as the Romans do. If you are surrounded by Yin food

gluttons, they will ostracise and deride you if you do not eat and act like them. Yin people dislike others who think for themselves in a controlled Yin and Yang manner. Since they are not free of their rebellious habits, they despise others who are free. A vain nature invites diverting pleasures and must suffer accordingly. If a person is unstable within, he indulges indiscriminately in the pleasures of the world, and thus they have an influence so powerful that he is swept along by them. In this case, it is no longer a question of danger, of good fortune or misfortune. He has given up direction of his own life; what becomes of him depends on chance.

Attitude changes with your Circumstances

The best method of all is to stop needing so much. Stop letting yourself be dominated by outward circumstances. So you have to live without certain modern conveniences for awhile. You will not die. Our ancestors lived on earth for eons of time and they managed to survive nicely, and to healthy and advanced ages also. A philosopher once said that contentment consists not in great wealth, but in few wants. If you develop a little guts and gumption by being more independent of such things, you can easily master this life in due time. He who knows that enough is enough will always have enough.

Strikes succeed because they are controlled by Extreme/Yang forces (the ability to walk away from something) and the manufacturers have to give in (Yin) to the demands (Extreme/Yang) of labor because they need (Yin) the workers to produce their products. As long as your employer needs you, your job is safe. Demand and complain (Extreme/Yin) that you need a raise, and he will pretend that he did not hear you. Demonstrate to him that you are wanted by another company for a higher salary, and he will probably give in to your demands. It seems a general rule that we always get a thing when we no longer want it, when our attitude is indifferent toward it. It is wise to never take anything for granted, because to take a thing for granted is to rely on it and not on the natural forces within yourself therefore to be subject to its domination. You may ask, Why do millionaires continue to make money, if they are not dominated by money and therefore Extreme/Yin. That question answers itself. Most millionaires manage investments and big business deals not because of lack. They made their money to assert their egos, to prove their ideas to themselves first, and to

others secondly. They do not worry about making big deals or losing a few thousand dollars here and there. It is all a discussion of theory and inventive reasoning, of out smarting the competitor or getting him to react, meaning forcing him into the position of Extreme/Yin. The money is merely incidental. It's the excitement and adventure of pulling a fast one that motivates him, not security.

To receive relief from the wrong way of living, one must follow the way of the Tao, or lose the chance to gain enlightenment.
A long life is only the blink of an eye. If you seek only material things and earthly pleasures, the mirror will reflect your own pale face and the degeneration of your body. Material things may fill the valley, but possessions cannot last and do not help acquire the things which do not come back.

Becoming a Free Individual

The universal laws of life are exact in their operation. As you sow, so shall you reap. For every action, there is an opposite and equal reaction. It is the law of cause and effect on the physical plane. Plant a rose and you will not get rice. Sow Yin, harvest Yin. Sow hate, harvest hate. Sow friendship, harvest friendship. Sow love, harvest love. Like begets like. Sow war, harvest war. Sow politics, and all you get is more politics. A good man (woman) contributes toward a good family, a good family contributes toward a good nation, good nations contribute toward a good world.

We all have a tendency to let ourselves become slaves; the herd instinct. We all want to follow some sort of leader or authority without question, allowing somebody else to do our thinking for us, and take over our personal responsibilities. We want a certain thing because we've acquired the habit (Yin) of it and we lack discipline and courage to break the habit, whatever it is. Buddha knew the secrets of life when he said desire is the source of all pain.

What the world calls repose, the sage does not. His repose derives from his mental attitude. It becomes the mirror of the universe. Nothing disturbs his tranquility. Hence his repose.

A too strong Extreme/Yang attitude is likely to bring an overwhelming Extreme/Yin reaction in others, perhaps even hatred or destruction. Extremes are to be avoided at all times. The key is to balance your Yin and Yang polarities through proper diet, sufficient exercise, attention to the needs of others, kindness, and spiritual development. Extremes in any endeavor only creates pain, suffer-

ing, disease and trouble. The idea is to never need anything so badly that you cannot do without it.

The sage cares not for himself but responds to the needs of others. Be good to people who are good. To those who are not good be also good. Thus goodness is achieved. Be sincere to those who are sincere. To people who are not sincere, be also sincere. Thus all shall be sincere and this is the Way of the Tao.

Harmonize your Life with the Tao

Our goal in life is to develop all of our forces mental, physical and spiritual. This will lead us to a true understanding of creation, peace of mind, the sense of beauty and the appreciation of our real inner self. By blending these forces into one we perfect, harmonize and realize the completion of our being. One quality is almost useless without another. Intelligence can be of no real value unless it has physical strength back of it to carry out its ideas. Moral power can be totally ineffective if it lacks the physical strength to carry out its ideals. Inversely, health alone is valueless unless it is accompanied by mental and spiritual development. A criminal may be intelligent, but he is not well-balanced. He lacks the moral and esthetic sense, and he very often is poor in health. Complete wholeness and harmony are necessary for the perfect life.

It takes wisdom and intelligence to follow the path of Yin and Yang. The more these fundamental laws are followed, the more one will be guided in life by the Supreme Force or Creator. The code to this unifying principle is very simple: Moderation and Balance. Following the middle path of life activity and diet and avoiding extremes will automatically create a Yin and Yang balance, leading to harmony in body, happiness in mind and soul and success in life.

Marriage of Truth & Love (Yin & Yang)

In the Divine Mind, Truth and Love are indissolubly wedded. All human undertakings which count for anything exemplify this union, for it is according to the pattern showed to thee in the mount. The forces of evil try to divorce truth and love in the consciousness of men, and to make them believe that truth can be advanced through war and strife, carried on with motives of anger, hatred, revenge, self-interest, or self-justification.

Ever and anon, problems of importance must be discussed and settled in our families, in our business relations, and in the larger negotiations of politics, law, diplomacy, government and religion. In these discussions, let us defeat the one evil through understanding and bearing in mind that, by no amount of argument, however valid, and by no amount of force of any kind, can we successfully promulgate truth and permanently bring to pass the real issue, unless, during our efforts, we purposely and habitually exercise the spirit of good will, right feeling and right purpose.

In dealing with others, reasoning and goodwill are as the wings of a bird. If a bird tries to fly with only one wing, he whirls round and round, to his own confusion, making no headway; but using both wings, he will make much progress in his flight. Only as the male principle, truth, and the female principle, love, are wedded in our consciousness, can we obey the spiritual command: Be fruitful (of righteous thoughts and deeds), and multiply (them), and replenish the earth (with them), and subdue it. Truth will go no further and no faster than love leads as a companion.

Balancing Yin and Yang Qualities

To balance the elements in one individual, it is well to understand that there is no mental characteristic found in men which is wholly absent from women. There is no mental quality found in women which is not possessed in some measure by men. This is on the human plane. On the spiritual plane there is no sex distinction. Spiritual person possesses both the masculine and feminine qualities in balance.

In music, certain notes, when struck separately, make discord. The same notes, when struck together, make harmony. The same law applied to the characteristics here given will bring about like results. In electrophysics and practice the negative and positive currents produce the circuit. The feminine elements above named and the masculine elements, balancing each other, make for harmony, and complete the circuit of life on the human plane. To bring this balance or harmony about, one must get the idea in mind of the two elements under the heading of feminine and masculine, converging into each other. This attitude must be held, and Its opposite denied, until the fusion is complete in consciousness and demonstrated in life and power.

Yin Feminine Qualities	**Yang Masculine Qualities**

Feeling	is balanced by	Intellect
Love	"	Wisdom
Meekness	"	Self-Value
Caution	"	Courage
Freedom	"	Responsibility
Patience	"	Aggressiveness
Tenderness	"	Stability
Joy	"	Moderation
Faith	"	Understanding
Gentleness	"	Strength
Intuition	"	Logical Reasoning
Generosity	"	Economy
Repose	"	Energy
Zeal	"	Reflection
Ambition	"	Unselfishness
Charity	"	Justice
Candor	"	Tactfulness
Aspiration	"	Judgment
Benevolence	"	Discrimination
Liberty	"	Obedience to Law

Success and health is the perfectly natural culmination of harmonious development. It means a fulfillment of our desires, whether they be in the material or the spiritual world. We know that we cannot fail; if we have completed our development. No earthly force can stop us. If we want health, success and peace, we are certain of achievement, for no one with complete harmony of being can fail It is as impossible to visualize failure as it is to imagine the failure of the sun to appear in the heavens. Let us be thankful and joyful that we have the opportunity to achieve all that we have yearned for during a lifetime. 'A high purpose is magnetic and attracts rich resources.

Fig. 10.2. The Yin and Yang Within.

Majesty of Inward Calmness

Are you discouraged with life? Do you worry over trifles? Are you full of fear and doubt? Do you make mountains out of molehills? Do you get angry over nothing? Are you nervous and irritable? Are you constantly grumbling, criticizing and complaining? Are you envious of the success of others? Are you plagued by the green-eyed monster jealousy? Do you carry grudges, trying to get even with other people? If you are a slave to any of the above habits, you can never have mental peace and Inward Calm. You must realize that confusion in the mental kingdom disorganizes the body and poisons the blood. The person who cultivates Inward Calm will always possess self-control and be moderate in all phases of living. A well-functioning body imparts vibrant health and Inward Calm. Worry, fear, hate and all negative thoughts lead to enervation and finally to disease. Very few individuals in this world possess that great treasure: Peace of Mind. Would you like to be at peace with yourself and the world over-flowing with joy and happiness? Of course you would. To be poised in both mind and body is the greatest thing in the world. You will be looked up to as a leader and teacher.

Cleansing Power of Forgiveness

Spend a few minutes each night in forgiving everyone who might have committed a transgression against you. Let go of your hates, anxieties, problems, then ask God to lead you in your life. You will find a change in your life for the better. Real calmness will set in. Just as it is necessary to cleanse the physical body through fasting to attain a state of good health, so is it necessary to cleanse the heart. Forgiveness is the best means of cleansing the mind. You will never have perfect health or peace of mind while holding a grudge or seeking revenge. Thoughts are things and they will come back to you just as sure as the sun rises in the East. When you forgive, you release a tremendous amount of tension. As you mentally bless and forgive others, yourself included, a heavy weight will be released from your mental shoulders. As you cleanse your mind of hate, vengence, envy, jealousy, peace and love will flow right in. You will experience a peaceful bliss and feel uplifted. Send out thoughts of love to everyone. Do not go to bed any night feeling that you have an enemy in the world. Forgiveness is the great

mental nerve tonic, and is unparalleled in bringing about a state of Inward Calm. No matter how badly anyone has treated you, you must forgive him. If you do not, you are the only one who suffers. This is why the ancient sages and saints have all taught to love one another. Forgiveness cleanses and renews.

Fig. 10.3. Peace and Harmony of the Tao

Peace through Individual Freedom

Each and every day we must extend total freedom to every person in the universe, including our families and close friends. Let them live then own lives. Stop trying to change the world and other people's habits against their will. Let every person make his own decisions, good or bad. No one wants to be fenced in, we all want to be free. The Tao forces no one, for love cannot compel, therefore it is a thing of perfect freedom. Realize that you cannot improve another. He of himself must do the work; all we can do is inspire. This is where the old saying of an example is worth more than a thousand sermons, holds true. The natural way of spreading ideas calls for more than ridding ourselves of name calling, propagandizing, telling others what to think or how to act, and other such actions. It suggests that the soul be cleansed of any such notion, for it is clear that we can no more improve another person than we can alter the heavens above. Quit trying to make carbon copies of others, give them, rather, something to copy.

When you give up the ill-habit of dictating another's life, you open up the channel of love between individuals. Peace will then be yours. You will attract more friends, and your acquaintances and family will find boundless joy and happiness in your presence.

Be Grateful: Live a Life of Cheerfulness

Stop grumbling and complaining. Stop feeling sorry for yourself! Let go of that gloomy attitude. No one likes to be around such a person. Self-pity destroys health and happiness. Instead of complaining about your life and environment, be thankful for what you already possess in life. There are people in far worse circumstances than you! Seek beauty in everyone and everything wherever you may be. The loving, cheerful person beams with vibrant health and happiness. Those who grumble, complain, whine, murmur, criticize and constantly find fault with life, will never have life smile upon them. They are repulsive people and drive from them all the wonderful and beautiful things of life. Conversely, the happy cheerful individual attracts all the grand and lovely things of life. Always remain cheerful. All that we are is the result of what we have thought. It is founded on our thoughts; it is made up of our thoughts. If a man speaks or acts with an evil thought, pain follows him, as a wheel follows the foot of the ox that draws the carriage.

Positive Mental Attitude

Discouragement is a disease. It leads to failure, narcotics, prostitution, gambling and anger; it destroys confidence and faith in oneself. To feel inferior, and to think that you are a nobody, is to be your own worst enemy. Negative thoughts must be overcome if you are seeking a Positive Mental Attitude and an Inward Calm. Keep in mind that you are a child of the Tao. You are the light of the world, a great being. Why not act like one. Perhaps up until now you have failed, or experienced many reverses in your life and you think that you cannot succeed. You can turn things around right now! Failure is no reason to give up. Use failure as a stepping stone to a higher and better achievement. Start again. Never give up. You cannot be defeated unless you allow failure to defeat you. No matter how dark the clouds in your life may be, or how many obstacles may stand in your way, do not give up. Keep on with persistence and determination, and you will succeed beyond your

fondest dreams. Stop making excuses. Quit feeling sorry for yourself! Instead, believe that you can and will be a success. Feel deep down in your heart that you are already a complete success! Believe, know and have faith that your dreams will come true. Cultivate a taste for the beautiful classical music. Visit places of culture and refinement and beauty. Make your life beautiful. Spread hope, kindness and sunshine everywhere. If you are discouraged and depressed, give yourself thoughts of confidence, courage and love. Believe in your heart that these wonderful attributes are yours. Make a list of positive inspiring words or phrases; then read them outloud to yourself, especially when feeling discouraged, distressed or blue. Repeat these words with as much feeling and power as you possibly can. The habit of reading outloud to yourself will give you courage, confidence and faith; it will help you to overcome shyness and timidity.

Fig. 10.4. As a wheel follows the foot of the ox that draws the carriage.

Positive, inspiring affirmations implant into your subconscious mind the qualities you require for a successful, harmonious life. Repeat these inspiring affirmations until the subconscious mind picks them up and you actually begin to feel more positive and happy. Then and only then should you discontinue the affirmations for the time being. At first this may take you up to an hour before you feel relaxed and at peace. And afterwards repeat the affirmations

only when the inner need arises. This follows the natural rhythm cycle; there is no need to affirm confidence or peace when you are already in those states of consciousness. When you are already in a positive frame of mind, and you continue to affirm more positive thoughts, it causes mental and physical exhaustion. If we affirm positive (Yang), thoughts and actions in the extreme, it always reverts to the other extreme (Yin) tiredness, depression and unhappihess.

The true positive attitude is to be content and balanced, with calm self-controlled emotions neither extremely happy or sad. When reading these positive affirmations do not become over-emotional or over-joyous to the point of losing self-control. Positive thoughts have ten times the power when we have a controlled mental and emotional poise. Be still for a few minutes each day, and feel the presence of the Tao; this will help you to be in control, physically, mentally, emotionally and spiritually, with very little effort. Here is a list of positive words, character building qualities, and affirmations. Repeat them with deep sincerity from your heart and mentally visualize yourself as you wish to be.

1. I am master of my surroundings nothing disturbs me adversely I am Master of my situations.
2. I am well poised, calm and self-controlled always.
3. I surround myself with an atmosphere of shining success, happiness and love.
4. I have perfect mastery over my temper, emotions & passions.
5. I am pure in thought and deed and no evil shall befall me as the Divine is in my body and watches over me.
6. I ask for strength, guidance and to be surrounded by the white light of Divine protection.
7. With the Creator's help, I am master of my destiny.

We build our future, thought by thought, for good or ill and know it not. Yet so the universe is wrought thought is another name for fate, choose then thy destiny and wait, for love brings love, and hate brings hate.

Words and Qualities that stimulate Positive Thought:
Thankful, Courage, Love, Peace, Strength, Encouragement, Consideration, Tact, Dignity, Politeness, Beauty, Compassion, Joy, Poise, Relax, Cheer, Patience, Honesty, Happiness, Sympathy, Optimistic, Relaxation, Charm, Humility, Health, Virility, Decisiveness, Harmony, Unselfish, Hope, Enthusiasm, Kindness, Tolerance, Forgiveness, Trust, Humor, Understanding, Energy, Gentleness, Bravery, Freedom, Self-Control, Gladness, Dynamic, Power Dependable, Loyalty, Confidence, Mercy, Success, Ease, Sincerity, Alert, Determination, Affection, Faith, Magnetism and Vitality.

These positive traits make it easier on the body to eliminate its toxins, as it relaxes the system, mentally and physically.

Discontinue these Negative Faults and Thoughts:
Hate, Vengence, Fault Finding, Discouragement, Selfishness, Needless Talking, Grumbling, Sorry, Dominating, Gloominess, Anger, Nagging, Inferiority, Self-Pity, Fear, Pessimism, Shouting, Bully, Doubt, Superiority, Grief, Complaining, Jealousy and Greed.

Be courageous. See no evil in another. See only the good and beautiful. Do not even hint at the bad. Charge the atmosphere with sunshine, cheerfulness and loving kindness. You will be rewarded well. Positive traits build the magnetic personality. Negative traits prevent the body from eliminating the toxins properly.

Easy Way to Overcome Worry

Do you constantly worry? Do the smallest problems get you down? Does life seem hopeless? You cannot sleep nights because of your problems, so you worry not only about the problem, but because you cannot sleep. We all know that worry is a great destroyer of health and happiness. But, how many of us can stop worrying about our problems and the problems of the world? If you are a victim of fears and worries, say this to yourself; So what, and your troubles will dwindle in size. Stop tormenting yourself with useless questionings and imaginary doubts. You cannot carry the whole world on your back. Do the best you can with what you have as working tools. Get in harmony with the Laws of life. Love your neighbor and forget about the troubles of the world today. Simply say, So what and fall off to sleep. When morning arrives you will

be refreshed and filled with zest for living. Then, your problems can be easily solved, and the imaginary ones will fade out of existence. Give up self-assertion and relax. Let go! Give up all efforts to be important or superior to your fellowman. You will be more in harmony with life if you do. This is a sign of a magnetic personality. No matter what happens to you in life, always be poised and calm; this is the quality of a great person.

A worrier is not a realist; his perceptions are very narrow; he does not have a universal view of life. He or she is dwelling on their own small individual problems, without seeing the whole picture of existence. Those who think broadly are philosophers; they relinquish their small ego to the larger Spiritual Force (the Tao), who creates and sustains the limitless universe.

Fig. 10.5. Winds of Freedom in the Tao

Littleness of Humanity

There are many billions of suns in the sky. Each sun is called a star. Each star is the center of a system that contains many worlds known as planets. Each such world contains millions or billions of people. Our sun is a small star. This earth is a small planet. As compared with the million, billions, trillions of others worlds in the sky, this earth is like a grain of sand on an endless shore. How much more tiny are we in comparison. We worry over small trifles, yet the Great Universe operates in perfect order.

Littleness of Time

That greater vision has seen the earth pass from a state of rock to a state of fertile soil as in the twinkling of an eye; yet it revolved on its axis billions of times, and circled the sun a hundred million years; but this vast lapse seemed as nothing. A century is reeled off so quickly that it is too small a trifle to arrest the attention; yet a woman giving birth to a child looks upon the hours of suffering as an age of duration. But millions are born year in and year out, new beings are opening their eyes to the wonders of earth, they grow, they build, they accomplish gigantic tasks, and they pass on.

His coming is so slight an event in the succession of a thousand generations that there is no way of permanently recording his achievements. The remotest event of history is not six thousand years old; and the earth is more than a hundred million years of age. Cities that contain massive structures will some day be rolled under the crust of this earth, and not one trace of them will be found by the peoples who shall come here six thousand years hence. To the greater eye this world is rushing on with whirling speed; weeks, months, and years are too slight to be counted; nothing but aeons are worthy of attention; and yet an aeon witnesses the rise of races the writing of a few thousand years of history, then the wiping of the slate to erase everything. Seventy years on this planet is in fact no more than the span of life of the germ that is born, grown, aged and dead, all in ten minutes.

Unconcer of the Future

One hundred years from now you will be wholly forgotten. Every year many millions like you pass to their sleep in earth. They have been going and coming for aeons. They will keep coming and going for aeons yet. If your greatest achievements were to over-topple the tasks of the past, they and you would disappear and be wholly lost in the melting changes of time and nature. What is the use of worrying when there is nothing at stake for you? You think and fear that this trifle is fearfully and terribly wrong. The spot on your clothing, the loss of a dollar, the breaking of the glass, the ill remark of an acquaintance, this, that, or something else, racks your rnind and depresses your buoyancy. The rich man who loses all his wealth is to be pitied. The calamity that has overtaken you

may be worse. But what does it matter? Humanity are but insects, ants that swarm to and fro about the surface of the world. The span of the longest life is but a second of time on the clock of the universe. In a century it will not matter what you win or tose, what you accomplish or suffer. Look upward and outward; now downward and inward. Then you will worry no more. Toothaches, earthquakes, disasters, holocausts are seemingly great evils, but what difference will it make when the surface of the earth is rolled up as a scroll, and a new aeon shall be under way? His (Chuang Tzu's) view is that the real source of worry and confusion is the apparently real world, with all its pressures and entanglements. The truly wise person, realizing that these may well be an illusion, does not take them too seriously. Thus he is free to achieve harmony with nature however it may be. He does not need to worry about obtaining true knowledge about the state of the world. To nourish the mind there is nothing better than to make the desires few.

Hurry, the Scourge of Humanity

The universe never hurries. Nature plans her activities slowly and patiently, without hurry. Hurry always shows a lack of proper planning and method, confusion and anxiety in the mental realm. Hurried and arrogant ambition can ruin the best of projects. The intelligent person never hurries, but is always thoughtful and calm before undertaking the task at hand. Failures usually run full steam into projects, and soon give up in despair; they lack thought and planning. Hurry creates distress, disease, tension and a multitude of physical and mental ills. A hurried, worried and anxious attitude will never give one good health, long life and peace of mind.

A hurried, diseased person relies on pills and drugs to get him well; but this method never gives one good health. Health improvement and main-tenance requires patience, deep thought, study and proper application over a period of time. The ill demand quick release from suffering, and it never comes, because nature works ever so slowly and surely in returning us to health. The hurried person does not care about his health; does not plan his life according to the laws of health, and therefore does not achieve it.

People hurry for wealth, not caring about their health. They seek to attain some ambition to satisfy their ego at the expense of truth and spiritual attainment. Hurry takes us away from the flow of Tao in our lives; it is the opposite of a calm, dignified and poised attitude. Hurried eating causes indiges-tion; and we hurriedly reach for a bottle of pills to cure us.

All great projects in life are the result of slow growth; patient and careful planning; correct and proper action at the right time. The oak takes years to reach maturity, but it lives for decades; weeds sprout and die quickly. We cannot cause the sun to set or rise ahead of its time; it moves in exact cycles. If we desire success we must accept slow growth, and realize that we will reach our goal in due time, after we have paid our dues in proper study and work and patience. We should do the best we can at the moment, and let the future take care of itself. If we fail, we must not "quit", but keep plodding on until we reach the final pinnacle of success. You cannot fail if you do not give up the ship. Approach the goal slowly, inch by inch, and you will always succeed. Since it is impossible to please men in all things, our only care should be to satisfy our own consciences.

Self-Reliance: Key To Success

One can be very self-confident, and yet lack self-reliance. Self-confidence sees the possibilities and opportunities for a person; self-reliance puts them into action or reality. Every soul must work out their own salvation; financially, emotionally, morally, mentally, socially, physically and spiritually. We are judged according to our own acts and accomplishments. We make or break our own selves; no one is out to get us. We can be our own best friend, or our own worst enemy.

All books, all words, all religious teachings, all health teachings are but guides, tools, and theo-ries. The self-reliant individual functions beyond the letter of the word, and he or she relies on the still small voice within. He listens to the advice and teachings of others, but does not follow others blindly, or worship graven imagesmortals, books, statues, organizations, etc. We must learn to save ourselves from our arrogance and ignorance.

Self-reliance seeks to follow no one; and it does not seek a following. He is friendly, compassionate and kind to all. He does not have an axe to grind. The self-reliant one is beyond argument, anger and self-righteousness; he relies on his inner truth to carry him along through life. If we do not rely on ourselves, we drift through life without direction, waiting for someone else to give us a push.

Fig. 10.6. Self-Reliance in the Tao

Opportunities are Self-Made

Opportunities are there for the asking; we must be ready and prepared for them at the right time, and then take the proper action. We must develop our own talents, and rise to meet the challenge or opportunity that presents itself. No one can give us good health, but ourselves; no one can eat for us, exercise for us, breathe for us, or study for us. The self-reliant ones know that attaining good health requires knowledge, time and personal application; no institution or professional can do it for him.

The weak dependent individual blames others for his failures. He doubts and fears that he will fail, because no one cares about him, and he lacks good judgment. He thinks society is against him, and no one will listen, appreciate or recognize him. He thinks no one has suffered failure and poverty as much as he.

The self-reliant person seeks only to discover and conquer his own shortcomings, failures and weaknesses that keep him from success and happiness. He goes within, to the power source to find reliance to overcome the influences around him. All the greatest men and women in history never had it easy; they all had to overcome obstacles and pitfalls along the way to success. The self-reliant ones realize that there is light at the end of the tunnel; that sunshine always conies out of darkness; that storms are only temporary; that cold winter blasts give way to warm summer sunshine. One's freedom and independence is in proportion to one's self-reliance, and the power to sustain himself from within. He draws from his inner strength to overcome the trials and tribulations of life; he needs no one to hold him up; it is accomplished from within the temple of the inner soul. When storms are brewing, the self-reliant are calm and peaceful, and sail unharmed to the quiet waters beyond the storm. No external advantages can supply the place of self-reliance. The force of one's being, if it has any force, must come from within. No one can safely imitate another; nor by following in the footsteps of another can he ever gain distinction or enjoy prosperity. The spirit of self-help is the root of all genuine growth in the individual; and, exhibited in the lives of many, it constitutes the true source of national vigor and strength. Help from without is often enfeebling in its effects, but help from within invariably invigorates.

Rely on Yourself

Man and woman to be successful in all areas of life must be self-reliant. He does not have to know all things, but he must be self-reliant in his own profession. He is not conceited or aloof; he dares to stand apart from the crowd and think and speak his mind. He or she is an oak, not a weed. He offers others support and inspiration, but does not crave or desire it for himself. He is independent, not dependent.

We are all in life alone, and we must make deci-sions and reach our goals alone. Humanity does not care whether you fail or succeed it pays little heed to the individual. However, it acknowledges and recognizes the self-reliant and successful. If you desire success, strength, ability to perform, do not envy others, or wish you had their abilityemulate the process of success in others, train for it, rely on yourself, and you may develop equal power.

Look upon yourself as a deep well of infinite possibilities and opportunities, and develop and cultivate them to their fullest; dig deep and bring up from within your depths your hidden talents and powers. Surpass yourself, not others. Progressing in an upward spiral brings harmonious growth to mind, body and soul. If we do not grow in wisdom, expand our consciousness, we stagnate, decay and die before our death. Grow from within, outward. Create your own life and circumstances. Do not follow in the foot steps or greatness of another; think for yourself; act for yourself and depend on yourself. Be a strength to others by living the example of self-reliance. As you become stronger, you will be able to help others in their crisis of weakness.

Fig. 10.7. Happiness comes from Within

Happiness comes from Within

Happiness grows from within. It does not come from possessions, people or money. It consists not of getting something, but of being, enjoying the moment; total contentment and peace within the heart, regardless of outward conditions. We create our own happiness and misery. If we attempt to find happiness in material things, disappointment will follow. Happiness is an intangible, spiritual possession.

True happiness of the soul allows us to overcome obstables and trials with a calm joyous heart. Excessive cravings and desires are the root of all unhappiness and discontent. We are satisfied and content when we are thankful and grateful for the things we have. False appetites and illusory desires destroy our poise and inner peace. We may possess a million dollars, yet still be unhappy. Happiness is soul-satisfaction, not the stimulation and satisfaction of the mind and body. Be content with what you have, but always grow and expand your present consciousness.

A happy person does not struggle or worry. He does not seek happiness in pleasures; but seeks to place the happiness of others above his own. True happiness is egoless; it is optismistic, faithful, loving, honest and simple. No one who criticizes, complains or hates can ever attain inner happiness. The cynic looks for the evil in others, because it is in his own heart.

Unselfish Service: Key to Happiness

Unselfishness, service to others, or a high ideal is the key to happiness. Forget yourself and help those around youit is the key to the gates of heaven. Accomplish good because it is the correct thing to do. You do not have to tell anyone of your good deeds; we are judged for our good or bad deeds whether others see us or not. The Creator or Tao of the Universe sees to it that we get back exactly what we give out. If we are discontent, unhappy or dissatisfied, we can blame no one but ourselves. We cannot put happiness into someone else's head; our mate, parents, children cannot infer it upon us. We can cultivate happiness by patience, self-reliance, honesty, good deeds, and unselfishness. When we follow these higher ideals, we do not have to search for happiness at the end of the rainbow; it will be with us forever.

Honesty is the Best Policy

Can I always be depended upon to do what I say I shall do? Honesty and dependability are two of the greatest character traits one could possibly possess. To give your word and not keep it, is to lose self-respect and your influence over others. You will never be truly respected. The person who keeps his word is always admired and respected. When a person is honest and dependable his voice is always full of love and sincerity. He is sympathetic to

all people. Oh, what a tangled web we weave, when at first we practice to deceive. The dishonest person might seem successful at first, but in the long run the honest person will acquire peace, happiness and success. He will then display a clear conscience for all the world to see. Make it your policy to be honest.

Right Action leads to Harmony

A decisive positive attitude leads to health and happiness. A negative confused attitude creates disease and unhappiness. You must choose your own life style. You have been given free choice to chart a destiny during this life. No one else can alter or chart a course for you. No one can live your life for you. There are no magic pills, no potions, no masters, no gurus, no books that can take action for you. Only you can make this decision and take the necessary action that will eventually bring forth the blessings of Health, Happiness and Success to your life. By cleansing your blood and body of impurities, eating wholesome natural foods, purifying your mind and thinking positive optimistic thoughts, you will lose the eight basic fears which plague humanity:

Fig. 10.8. Right Action leads to Harmony in the Tao

It is More Blessed to Give

The average person always thinks in terms of getting or what can I get out of so and so. Try living the opposite way of the world; instead of clinging and holding on to what is yours, learn to give. This will enable you to relax and let go of tensions, thereby letting the universal Divine Supply flow into your life. Too many people believe that getting is what brings happiness; but giving is the true answer that leads to joy, happiness and life without strain. If you hold and cling onto what you have, you will find yourself in difficult situations. You may at times feel that the world is against you; this is the time to stop want-ing your own way and reverse your objective. Go out of your way to help someone in need. Be of service to humanity. Give of yourself for a change. Give your best to the world and the world will give its best back to you. Do a good deed without seeking a reward. Give of yourself unselfishly and you will attain physical, emotional, mental and spiritual happiness.

Taoist Secrets of Personal Magnetism and Peace in Life:

1. Seek beauty in everyone and everything.
2. Love unselfishly.
3. Speak in a positive manner, if not be silent.
4. Maintain calmness and poise at all times.
5. Do unto others as you would have them do unto you.
6. Cultivate a charming, pleasing disposition.
7. Develop a personality that wins, holds and attracts others.
8. Improve your life by learning something new each day.
9. Get interested in people, life or a hobby.
10. Cultivate a pleasing, magnetic voice; cultured and flexible.
11. Always lend a helping hand to those in need.
12. Be clean and neat in your dress and appearance.
13. Always be polite and courteous to everyone.
14. Avoid affectation and veneer. Be your natural self.
15. Be thoughtful and considerate of others.
16. Never gossip, criticize, nag or scold others.
17. Past forgotten, do not worry about the future; live in the now.
18. Praise and flatter others with sincerity and with good taste.
19. Avoid arguments, physical violence and hostility.
20. Assert yourself positively, but graciously.
21. Eliminate self-pity, fear, anxiety, nervousness and doubt.
22. Be dignified and poised, without stiffness.

23. Acquire a flexible, healthy, attractive body.
24. Develop a wholesome, positive, active mind.
25. Be a gentleman or lady at all times.
26. Cultivate mastery over your mind and emotions.
27. Think clearly before you act and speak.
28. Have a daily objective and a goal for life.
29. Improve yourself in small ways waiting for big opportunity.
30. Never let a day go by without doing something constructive.
31. Take prompt right action when the opportunity presents itself.
32. Express yourself in a poised, confident manner.
33. Eat foods that agree with your body and nerves.
34. Maintain order in your home and belongings.
35. Develop self-confidence. Affirm outloud to yourself daily that you are now healthy, happy and successful.
36. Enjoy every task you perform and complete each one before going on to the next one.
37. Practice moderation in all activities. Stop before your limit. All things are accomplished by following the middle path.
38. Forgive everyone who has done wrong to you. Never hold a grudge. If you forgive, you will be forgiven. Release all those who have wronged you, and peace will flow into your life. Love all.
39. Allow others to live their own lives expect nothing from others and you will never be disappointed. Do not try to change people against their will, as you would not like to be changed against your will. Enjoy people for their company and friendship. Avoid fault-finding or critizing, and you will always have dedicated and true friends.
40. Meditate daily until you feel the peace and presence of the Creative Force of the Universe flowing through the Tao.

Golden Stairs in the Tao

A clean life, an open mind, a pure heart, an eager in-tellect, an unveiled spiritual perception, a brotherliness for all, a readiness to give and receive advice and instruction, a courageous endurance of personal injus-tice, a brave declaration of principles, a valiant defense of those who are unjustly attacked, and a constant eye to the ideal of human progression and perfection which the sacred science depictsthese are the golden stairs up the steps of which the learner may climb to the Temple of Divine Wisdom.

Fig. 10.9. Personal Magnetism in the Tao

Law of Personal Magnetism and Attraction

Magnetism is attraction, repulsion of the opposite. Hypotism is an evil use of the power of influence. As magnetism is not understood it is useless to elaborate on the magnetic laws that govern affinity. Each type of person has his or her own power of attraction and each individual has a magnetism or influence of his own, either pleasing or displeasing, uplifting or depressing. Magnetism used for evil purposes is hypnotic. A rattlesnake or a blood-thirsty tiger is hypnotic. A soulless, heartless, evil and power-hungry person is hypnotic, whereas a saint is magnetic. That special kind of magnetism in a woman or in a man that exalts your power, mind and soul, is to you the right kind of affinity magnetism, but if you feel humble, insignificant, stupid, strange, inferior, mean, nervous, angry, etc., in the presence of a man or woman, he or she is not the one for you. Affinity magnetism and magnetic love exalt, broaden, and enlarge all your powers, otherwise it is not magnetic love, nor affinity magnetism. If you become lustful and familiar in the presence of your chosen one, you are not the one or him or her. That which you then mistake for love is nothing but stormy amatory infatuation very dangerous to your future happiness.

Three Treasures of Tao

Kind Gentle Nature

Being kind, one can be brave; being moderate, one gains ability, not venturing to go ahead, one becomes great. The universe is a great whispering gallery; it whispers back to us the echos of our thoughts and deeds. It is like a mirror; when we frown, it frowns back; when we smile, it smiles back. When we hold negative, cruel or hateful thoughts and wish them upon others they come back to us like a boomerang and deprive us of happiness and a joyful life. This is the universal law of cause and effect; whatever we sow, so shall we reap. Forceful, critical and aggressive people, by their very attitude, create for themselves much trouble, suffering and unhappiness. A gentle natured person is well mannered, tolerant, kind and relaxed a true gentleman or lady. Whatever troubles come to you in life, if you react to them with a kind gentle nature, they will be much easier to master. Calmness is the key to success, happiness and love in life. If we are calm and gentle, we likewise attract to us other people of the same spiritual quality. If our nature is harsh, irritable or unfriendly, we not only repel those around us, but we also cause suffering to ourselves and others.

If we use our clever intellect to outwit or cheat someone, in like proportion we attract to ourselves people of the same cleverness who will try to outwit or cheat us. It is that simple. What we give out comes back to us tenfold, good or bad. If we use physical or mental force to dominate others and get our way, we will meet with a similar force in return. Although, even if we always get our way, we are still the loser, because people are generally repelled by and dis-like forceful and dominant characters. On the other hand, if we are fair, considerate and well mannered, others will likewise be fair, kind and honest with us.

Understand: We are all sons and daughters of the Tao; a king and queen in the physical realm. The ancients teach that we are one with the Tao. A kind gentle nature brings us closer to our Divine Creator. When we see the good in another, they will see the good in you. A kind and gentle nature requires one to be totally relaxed in mind and body. We cannot be kind or gentle when we are tensed or stressed. The key to relaxation is to totally let go of mental and physical problems. Feel your muscles relax; relax your forehead, neck, abdomen, pelvis, legs and feet. Allow yourself a

few minutes a day for meditation to throw your cares to the wind and let the Universal Force, or the Tao guide your life. Dwelling on the past or worrying about the future takes us away from doing our best in the present.

Fig. 10.10. Developing a Kind Gentle Nature in the Tao

Be Still and Listen

Cultivate quiet moments throughout the day; still your thoughts and body movements; feel the presence of the Tao within your consciousness and in the universe. The Tao is everywhere as close as our breath, and to the end of the galaxies.

The human body and mind are finite; a manifestation of the Tao (Infinity). The limited finite conscious mind often attempts to solve the difficult problems of life. If we learn to let go and relax, the Tao will show us the correct answers that we seek. Trust in the Universal Force and It will never fail you. Ask, and you shall receive; seek, and you will find; knock, and the doors (of wisdom) shall be opened onto you. When the lower mind and fleeting passions and desires are transcended, the Tao operates through us for the good of all. When we let go of our problems, then the mind becomes open to the inner voice, or the Tao within, which guides us in the right direction. Be still, and know that I am, applies to stilling the mind and listening for inner guidance. A heavy mind

bogged down with worries, problems, uncontrolled desires and emotions slams the door in the face of the Tao and shuts us off from true guidance answers to our problems. A mind that is light, relaxed and at peace is always open for correct Divine guidance. Such a mind overcomes worries and problems by not thinking about them, or struggling with the lower mind to solve them. We can accomplish much by performing right action at the right time according to our guidance from within.

Struggling, overworking and becoming heavy in mind and body does not create high level health mentally, physically and spiritually. When we learn to relax and be gentle, we create a heaven right here on earth. Thy will be done on earth as it is in heaven. Realize that a dictator creates tension and fear; the gentle, kind person allows life to flow with the Tao, and he/she radiates peace and love wherever they go.

Love vs Power

A wise, loving person in a leadership position commands without exercising any authority or egotistic force. He or she has mastered himself and has harmonized his consciousness with the Creative Force. The Tao is love; this is the ultimate reality in the universe; therefore, the wise person is kind, gentle and tender. He gives love without seeking it in return, because he knows that everyone needs to be understood and loved. The Power of Love overcomes all harshness, fear and weakness. If you would be perfect in knowledge, wisdom and principles, be perfect in Love, compassionate in heart, and calm in mind. Only then will you banish sorrow, suffering and grief.

Men engage in heated controversies, and foolishly imagine they are defending the Truth, when in reality they are merely defending their own petty interest and perishable opinions. The follower of self takes up arms against others. The follower of truth takes up arms against himself. Truth, being unchangeable and eternal, is independent of your opinion and of mine. We may enter into it, or we may stay outside, but both our defense and our attack are superflous, and are hurled back upon ourselves.

Men and women enslaved by self, passionate, proud, and condemnatory, believe their particular creed or religion to be the Truth, and all other religions to be error; and they proselytize with passionate ardor. There is but one religion, the religion of Truth. There

is but one error, the error of self. Truth is not a formal belief; it is an unselfish, holy, and aspiring heart, and he who has Truth is at peace with all, and cherishes all with thoughts of love.

Fig. 10.11. Seek the Truth and the Truth shall make you free - free from suffering, sickness, limitation and distress.

Moderation and a Simple Life

Moderation and simplicity in living has been taught by all of the great sages, saints, mystics and religions throughout history. A moderate simple life is one of balance and equanimity. An immoderate person lives life in extremes over-working, too much talking and useless chatter, excess and/or lack of exercise, reading and studying to the point of mental and physical exhaustion; extremes in dieteating to repletion or fasting excessively, and becoming nutritionally deficient or anorexic.

The little mind clamors after selfish desires and ego aggrandizement. It seeks excitement in sophisticated immoderate pleasures, such as drinking, smoking, mind expanding drugs, laziness etc. The greater mind seeks only to maintain balance and simplicity. Many modern diseases have developed due to our unnatural and immod-erate habits of living, thinking and eating. Extremes in living lead to nerve exhaustion; fatigue and exhaustion cause mental depression, in which we selfishly and constantly dwell upon our problems, making them larger and more complicated than they really are resulting in failure, suffering and unhappiness.

Some millionaires who attain great power and notoriety through long and hard work become weak, ill and exhausted in the prune of their life. They are, in many cases, unable to truly enjoy their wealth and die an untimely death.

Life is Simple

Life and being are simple. The universe is simple. The laws of life are simlple. Man only complicates the original simplicity with his secret vices, lusts, desires, passions and opinions about this or that; he remains ignorant in the university of wisdom, though he attain many college degrees. The simple and moderate life is where true joy resides.

When we learn to listen to our inner voice, and are guided by it in all of our life's activities of eating, sleeping, playing, meditating, exercising, singing and working only then can we become master of this life. By cultivating moderation and simplicity, we will be at one with the Tao, and enjoy a peaceful and happy life without strain. With a tranquil mind I abandon the written and spoken word and find deep contentment in the joy of illumination.

Thankful Humble Attitude

When you do not venture to go ahead, one becomes great. Western religion says, He who exalts himself, shall be humbled. He who humbles himself, shall be exalted. Eastern and Taoist religions over 5,000 years ago said, He who is first is last. He who is last is first. The philosophy is identical. When we strive to be self-assertive and act important, we become exalted and our ego puffs up; this is not humbleness or humility. An overblown ego can be easily deflated or humbled. A humble person does not over or under estimate himself. He does not brag, show-off, complain, criticize or suffer a deflated ego. His attitude is humble and thankful. He or she is free from envy, jealousy, greed, self pity, and self conceit. He does not seek ego gradification, nor does he desire to be the first in the eyes of others, or to exalt his talents to prove himself. If he is wise and talented, people will find out through his every deed, action and word.

If we are unhappy because others possess the wealth we do not have, we are stricken with the problem of envy. If we are to be happy and dispel envy, we should feel joy and goodness for the success of others. This thankful humble attitude places us in har-

mony with life and the Tao. By this attitude, we flow with the grain of life, and not against it; and the good that we send out will come back to us. If we pity ourselves because we do not have the right partner or a true friend, jealousy is the problem. Likewise, be happy when you see a married couple in love; this attitude of mind places us in the right and proper vibration, which will eventually attract our true love to us.

If we continually strive after wealthscheming, toiling and savingdwelling on our own life and problems, we create a self-made prison for ourself. Greed, selfishness, unthankfulness, and pride all lead to a life of loneliness and misery. The selfless humble person who lives a life of giving and sharing, and is kind and encouraging to all, will have peace of mind and a life of happiness.

Dwelling on our past actions and feeling sorry for ourselves because we are not yet successful, happy or healthy, causes us more suffering and trouble. Graditude and thankfulness can lead us out of this self-pitying attitude. Thankfulness and humbleness is true prayer. If we are thankful two percent of the time, we will be happy only two percent of the time. If we are thankful one hundred percent of the time, we will always be happy. The universe pays us back exactly what we give out. In fact, the more we grumble and complain, the tougher and more difficult will our life become. Nations begin to fall when the people constantly complain & criticize.

Be Thankful

Be thankful for the home you live in, the friends you have, the food you eat and all the good things of life. Realize that no matter how much we own, how highly degreed we are, or how much discipline we have applied in our religious beliefs, we are not better or higher in the eyes of the Tao. To think otherwise is to miss the mark. When pride comes, a fall comes. No matter how much intellectual understanding of the Tao we may have, how beautiful a temple we pray in, or what religion we are in, we are all on equal grounds with the person who prays and meditates with sincerity and thankfulness in a humble ghetto shack or a barren desert. The Kingdom of Heaven is within us. We need not go anywhere to pray. Just simply bow our heads and ask the Creative Force for guidance (It speaks to us non-verally - it is a feeling) and with that attitude we can live a heavenly joyous life, even during difficult and troubled times.

Your good is here. Accept it. Your joy is near. Embrace it. Your power is within. Harness it. Your victory is now. Claim it. Your freedom is real. Declare it. Your abundance is overflowing. Share it. Your prosperity is good. Receive it. Your problem is purposeful. Bless it. Your spirit is divine. Free it. Your love is great. Give it. Your faith is mighty. Use it. Your song is beautiful. Sing it.

Fig. 10.12. Lao-Tse, Taoist sage, author of the Tao-Teh-Ching

Know Thyself First

The easiest thing in the world is to give advice; the most difficult is to know thyself. Advice is like salt; it should be given only when asked, and only in small doses. When we attempt to change others against their own will, we stifle the Tao within them. We stop their personal growth and experiences. Realize, that the same Tao that is guiding your life is the same One guiding another's life. Many people have lost touch with their inner voice, or the Tao within, and they consequently live against the grain of their own being, experiencing much suffering as a result.

The enslaved and tyrannical individual, not free himself, attempts to dominate others or force them into his way of living and thanking in order to justify his own enslaving habits. He does not allow the free soul to live out the experiences he really needs in life.

Parents attempt to mold their children into their own image; marriage partners try to make each other perfect; friends tend to criticize each other's faults; congressmen attempt to legislate morality. This cannot be done. These enslaving efforts only stifle and suppress the freedom and Divine power in others.

The ancient sage Lao Tse said that there is nothing worse than the desire to change others against their will. When Confucious came to Lao Tse and announced that the leaders of the world would not listen to him on how to make the world peaceful, even though he gave them the greatest wisdom and advice, Lao Tzu answered, that is good, because your advice would have stirred up more suffering and trouble for the nation. He added that the more laws you make, the further you take the nation's people away from the Tao within. You remove the last speck of individual creativity from their soul. Leave them alone do not interfere with their life force. If you stir muddy water, it becomes muddier. When the water is still, the mud will fall to the bottom the water will clear of itself. Be thankful and humble, and your mind will be clear and sharp. You will then know the joy of creativity, happiness, success and harmony in life. You will attract to you all that is necessary for your health and well being.

Sympathy and Compassion Unlocks Hearts

Sympathy is the key that unlocks the door to every heart. To develope sympathy and compassion for others practice listening sympathically and with attention to others; speak softly this helps the other person to relax and listen; try to understand the ideas and thoughts of others. Never argue, but agree on common ideas; look with understanding eyes; people can see your sympathy in your eyes. We are all alike in that we all want to be loved, appreciated, caressed and understood. With this spiritual attitude self-righteousness cannot be present, because you will become at one or in harmony with those around you.

Without compassion you cannot be happy; give it to others and you will receive it in return. The person of humility does not attempt to reform others or to make them good, but always loves and makes them happy, for in so doing, they become good.

Fig. 10.14. Sympathy and Compassion Unlocks Hearts

Life is a Stage

Life is a stage and we are all acting out a part. The stage is set. You have been given a role to play. It is now your time or cue to go into action and to utilize the parts, props and scenes that the Creator has so generously given you to perform with natural foods, air, water, sunshine, exercise and breathing, and a brain to think with. These are the fundamental Taoist Secrets that no man or woman can ever do without. They are part and parcel of life itself. Our function is to learn how to play our role in life superbly well, and become the star attraction we were all designed to be.

Through the understanding and application of natural law physical, mental and spiritualwe become an acting part of the Creative Force that has brought us to this earth stage. We urge you to seek this path to health, beauty and spiritual evolvement; sincerely believe in it and inspire others to follow your message and example.

We trust that we have shed some light on the subjects of health, happiness, fitness and longevity. May this book wing its way across the earth to those in need of help, inspiration and hope. Our sincere intention is to help others, so that they may help themselves. May you live in love and peace, and may the Tao be with you always. Life is just a manifestation of energy. If you have complete energy, you have a fuller life. If your energy is incomplete, you only enjoy part of life. It does not matter whether you are rich or poor, noble or ignoble. What matters is the good virtue found inside of you, such as honesty, sincerity, patience, and courage. It is particularly important to cultivate these basic virtues with a positive attitude. The more you worry, the more you darken your soul and weaken your power. The virtue of life is by no means external or artifically contrived. It is deeply rooted within your being.

Remember the way you look and feel tommorrow depends on what you do today. We come from nothingness, we belong to nothingness and we are destined for nothingess (the Tao). For things to get better you have to get better. For things to change you have to change. We are all the controller of our own destiny because we are all Divine with our understanding of the Tao and after a combined over hundred years of reseach and experiences on health and longevity we will leave you with one final thought, “It takes a lean horse for a long race” and whatever means you use to become lean will give you your health and longevity. Good luck.

Fig. 10.14. We are destined for nothingess (the Tao).

Taoist Master's School

Universal Healing Tao Center, Tao Yoga at Tao Garden Health Spa & Resort

The first & best East-West holistic resort & health spa in a beautiful and healthy environment

Tao Garden Training Center in northern Thailand is the home of Master Chia and serves as the worldwide headquarters for Universal Tao activities. This integrated wellness, holistic health, and training center is situated on eighty acres surrounded by the beautiful Himalayan foothills near the historic walled city of Chiang Mai. The serene setting includes flower and herb gardens ideal for meditation, open-air pavilions for practicing Chi Kung, a health and fitness spa.

The Center offers classes year-round, as well as summer and winter retreats. It can accommodate two hundred students, and group leasing can be other resources.

Tao Garden Health Spa & Resort is the perfect place to get away from the city and other modern annoyances. It is a place where guests can pick and choose from a wide selection of disciplines ranging from detoxification and parasite cleansing program such as skin detox (Thai herbal oxygen and ozone steam), foot detox, Chi Nei Tsang (abdominal detox massage) and Karsai Nei Tsang (genital detox massage). Loosing weight program such as slimming massage and herbal steam bath. Ancient holistic treatments such as ayuvedic body care, traditional Chinese medicine, chi kung, meditation and yoga.

Cosmic Nutrition

Taoist Understanding, Lifestyle & Longevity

Mantak Chia

W. U. Wei

Cosmic Nutrition

In Cosmic Nutrition the student will discover the Cosmic Dust Particulars that gives life to all living beings every morning at sunrise and evening at dusk (sunset). This star dust is the Life Force of the universe discovered by Antonie Bechamp (French Chemist) in 1866 as microznias (living ferments) which further confirms the Taoist's understandings for the last five thousand years through the Creative and Controlling Cycles.

Taoist Lifestyle for Longevity

In Cosmic Nutrition Master Mantak Chia and William Wei share their Taoist's understandings with the student of Yin/Yang Principles, Self Diagnosis, Physician Within, Acid/Alkaline Balance, Nature's Element and Five Elements Nutrition for health and longevity based their fifty years of research, experience and joy of dining.

Four Bodies into One

The student will learn how to heal and balance the physical body and emotional, mental and spiritual bodies at the same time through Medicine Meals prepared & developed from Tao Garden's organic fruit and vegetable gardens & Five Elements kitchen at Kuan Yin Dining Hall.

Dark Room Enlightenment

All spiritual traditions have used Dark Room techniques in the pursuit of enlightenment. In Europe, the dark room often appeared in underground form as a network of tunnels, in Egypt as the Pyramids, in Rome as the catacombs, and by the Essenes, near the Dead Sea in Israel, as caves. In the Taoist tradition caves have been used throughout the ages for higher level practices. In the Tao, the cave, the Immortal Mountain, the Wu San, represents the Perfect Inner Alchemy Chamber. Meditating and fasting in the cave is the final journey of spiritual work. The caves are the Earth Mother and its energy lines. Like the hollowing bones, caves contain the earliest information of life stored inside the Earth. Caves contain the vital essence of the Earth Power. The Tao says: 'When you go into the dark and this becomes total, the darkness soon turns into light.'

In the Dark Room, our mind and soul begin to wander freely in the vast realms of psychic and spiritual experience. When you enter this primordial state or force you are reunited with the true self and divinity within. You literally 'conduct' the universal energy. You may see into the past and future, understand the true meaning of existence, and begin to understand the order of things. You return to the womb, the cocoon of our material structure and Nature's original Dark Room.

Complete darkness profoundly changes the sensory sensibilities of the body/brain. We are deprived of all visual reference. Sounds begin to fall away as we lose contact with the external world and turn the senses inward. The effect of darkness is to shut down major cortical centers in the brain, depressing mental and cognitive functions in the higher brain centers. Emotional and feeling states are enhanced, especially the sense of smell and the finer senses of psychic perception. Dreams become more lucid, and the dream state manifests in our conscious awareness. Eventually, we awaken within ourselves the awareness of the Source, the spirit, the soul. We descend into the void, into the darkness of deep, inner space.

Darkness activates the deepest centers within the brain, the glands of the Crystal Palace, establishing a connection with the Original Source, the Wu Chi (**Fig. 1**). The pineal gland connects us to the Universal Energy. From the hypothalamus gland, we project our soul or spirit upwards, and receive the descending Universal Energy. The pituitary gland receives the Cosmic Force, used to launch the spirit bodies into the earthly or human plane for traveling.

***Fig. 1**.Glands of the Crystal Palace are buried deep within the brain. They include the pineal, hypothalamus, thalamus, and pituitary glands.*

The darkness actualizes successively higher states of divine consciousness, correlating with the synthesis and accumulation of psychedelic chemicals in the brain. Melatonin, a regulatory hormone, quiets the body and mind in preparation for the finer and subtler realities of higher consciousness (Days 1 to 3). Pinoline, affecting the neuro-transmitters of the brain, permits visions and dream-states to emerge in our conscious awareness (Days 3 to 5). Eventually, the brain synthesizes the "spirit molecules" 5-methoxy-dimethyltryptamine (5-MeO-DMT) and dimethyltryptamine (DMT), facilitating the transcendental experiences of universal love and compassion (Days 6 to 12) (**Fig. 2**).

***Fig. 2**. Tryptamine synthesis, simplified: The amino acid tryptophan is the precursor for seratonin, melatonin, pinoline, 5-MeO-DMT, and DMT molecules.*

Universal Tao Dark Room

Starting many years ago, Master Chia went in search of natural caves suitable for meditation in absolute darkness, but none were found. Master Chia and Juan Li spent one day in Wu San, the Taoist Immortal Mountain, the most sacred of the Taoist power centers. The cave was not, however, suitable for dark room retreat. Tourists were ever-present, and the stench of human urine and feces was overpowering. They failed to find the true teaching. Other natural caves were explored, but all suffered some deficiency. The cave environments were dirty and damp, and the air quality poor (dust, fungi, bacteria, insects, snakes …). The caves were dumping grounds, repositories for human waste and garbage. The pristine silence of the darkness was not to be found. Perhaps the perfect cave is still hidden in some deep, high mountain.

Master Chia researched modern Dark Room technologies for many years. A pyramid at Tao Garden, northern Thailand, provided the ground for early experiments in dark room retreat. He made visits to dark room retreats in other countries, to gain insights on the best designs for meditation and for comfort. Eventually, the Universal Tao Dark Room was constructed, based on all available information and latest technologies. The facility is the perfect Inner Alchemy Chamber, conducive to meditation and providing comforts and necessities for up to 60 people. A large central meeting room is surrounded by two tiers of living quarters. The light and sound proof outer sheath is constructed of bricks made from the red earth of Thailand, preserving the earth elements of the original cave. The Mother Earth power is retained in the modern structure.

The Tao Garden Dark Room is enclosed and encased in a light- and sound-proof sheath. The building is constructed of bricks made from the red earth of Thailand, containing all of the properties of natural rock in a cave. The earth was mined and hydraulically pressed into bricks, thus preserving the constituent elements and minerals of the parent materials. The Mother Earth power is retained in the modern structure.

The facility consists of a large, central meeting room for meditation and for dining. Two tiers of bedrooms surround the central area, each with private bath. The entire facility is ventilated with fresh air intakes and air conditioning systems. Food is specially prepared to meet the particular requirements of the body, mind, and spirit in attaining the goals of dark room enlightenment. Fresh juices and soups are served for "breakfast" and a light organic meal are served in the "afternoon". (**See: Dark Room Nutrition**). Participants are trained and prepared for life in the dark (see **See: Dark Room Preparations**).

The Universal Tao Dark Room is currently the largest and most advanced Dark Room meditation facility in the world. Aspiring to the Tao, participants remain in utter and complete darkness for one, two, or three weeks, a perfect laboratory for Inner Alchemy. The spiritual knowledge gained by Taoist masters over the ages merges and blends with the insights of 21st century science and technology.

As Above, So Below

There is one point in the sky around which all other constellations revolve, the North Star point. The North Star is fixed, stationary, motionless. Taoists regard it as the Center, the source of the Universe, the Nothingness, or Wu Chi. The North Star is the Gateway to Heaven. In the Tao, the body is a microcosm of the Universe. "As above, so below." Whatever happens "up there" happens "down here." Hence, the physical body is marked with gridlines of energy and meridians of light around a Center. The Center is called the "Tan Tien", or "field of energy" (**Fig. 3**).

The idea of a Central Axis – the Pole Star in the firmament and a Cauldron in the body – is a central tenet in Taoist philosophy and alchemical practice. To get to the Center of the body, open the Tan Tien; to get to the Center of the Heavens, enter through the North Star. Both are doorways to the heart of the true Tao, the Wu Chi, from which both Heaven and Earth are born. The Inner Alchemy practice of the Universal Tao fuses the body's energies to give birth to a spiritual embryo capable of maturing into a deathless existence and of flight inward, beyond time and space, to the Source.

The Dark Room meditation releases us from the bonds of the Earth. No longer controlled by the rotating power of the Earth, the Sun and the Moon, the organs vibrate in unison with the spiritual stars, the Gates of Heaven. The North Star, unmoving and unwavering in space, is the center, the Wu Chi, emanating violet rays throughout the galaxy, affecting every living cell of nature on our planet. The Big Dipper gathers all the violet light from the universe, and emanates the light as infra-red radiant energy. The emanation of infra-red light of the Big Dipper, combined with the violet rays of the North Star, has a positive, nurturing effect upon the bodies and minds of those who know how to access it. Taoists believe that the Violet Stars, the Big Dipper, and other constellations form the "Gates of Heaven." All living things must pass through these gates to return to their source of origin, the Wu Chi, which is the state of oneness with the Tao.

The dark room environment activates the glouds of the Crystal Palace, actualizing their higher powers and providing a "way back" to the Original Source (**Fig. 1**). When the Crystal Palace is open, it becomes illuminated like millions of shining crystals. It can give and receive light and awaken our inner knowledge and deepest potentials. It receives light and knowledge from the universe and reflects it to the various organs and glands to enhance them.

Fig. 3. *Universal connections: We are connected to Mother Earth below, and to the Heavens above. Big Dipper and the North Star are the gateways to immortal life.*

The pineal gland helps us to overcome death by taking in external forces and combining them with sexual energy and the Original Force to form an "Immortal Body." With this body we can leave the physical body before the final transition (death) occurs. By focusing on the tip of the Crystal Palace, the pineal gland, and the back of the crown, we can project ourselves to the North Pole or North Star as we attract its violet emanations (**Fig. 4**).

Fig. 4. *Pineal gland has a close connection to the North Star, receiving its violet emanations.*

The pineal, as yang, is balanced by the yin of the hypothalamus gland. Taoists regard this point as the main switch for the Universal Force. When the spirit awakens, it resides in the hypothalamus. When the pineal and hypothalamus are connected, they give out a powerful, balanced force. By focusing on this center and picturing the seven stars of the Big Dipper, you can access the constellation's energy, which emanates from the crown as a ray of red light. (**Fig. 5**).

Fig. 5. *Hypothalamus and pineal glands, when connected, allow access to the infra-red emanations of the Big Dipper.*

In the Tao, the sources of longevity and immortality are within the body, not as a physical womb but a spiritual one. Taoists call this spiritual womb the "cauldron". The right method to "cook the cauldron" is not to search outwardly for love from others, but to search within the naked and abandoned self. Self-love, or self-intercourse is the way to give birth to the Immortal Self. The Dark Room manifests the bodily processes of "Healing Love."

The human states of true compassion and sexual arousal create a new chemistry and a new vibration within the body. This 'special' vibration occurs at a frequency of 8Hz. 'As in the macrocosm, so it is in the microcosm'; hence if we make love, then all the cells and DNA actually make love as well. The DNA crosses over, like two serpents intertwined in an erotic embrace. You need the orgasmic vibration to arouse this crossover process which leads to the 'two giving birth to three'; the conception of new cells. The two vital states are compassion and arousal leading to orgasm. Both are inextricably linked to love.

When the 'love-vibration' reaches the pineal gland a new hormone is produced, which in turn creates whole body conductivity (**Fig. 6**). Only when you feel the waves of orgasmic vibration and unconditional love for the self and others can the process be activated and the essence of the darkroom is magnified.

The essence of the Dark Room Practice is giving birth to the soul and spirit. The coupling of Yin and Yang energies of the body in the Kan and Li meditations is aimed at overcoming death. It is the method of going back to the state in which we are all orphans, in the very depth of our body/minds.

Fig. 6. *Pineal gland connects with the sexual center in the medtation of self-intercourse.*

Fig. 6. *Pineal gland connects with the sexual center in the medtation of self-intercourse.*

Consciousness and the Neuro-endocrine System

The dark room environment dramatically alters the chemistry of the brain, manifesting especially in neuro-endocrine systems, which govern consciousness and regulate body functions. An important neurotransmitter involved in waking consciousness (seratonin) converts into a regulatory hormone (melatonin) that shuts down the organ systems, quieting the body in preparation for the finer and subtler realities of higher consciousness. The pineal gland initiates a cascade of inhibitory reactions, permitting visions and dream-states to emerge in our conscious awareness. Eventually, the brain synthesizes the “spirit molecules” 5-methoxy-dimethyltryptamine (5-MeO-DMT) and dimethyltryptamine (DMT), facilitating the transcendental experiences of universal love and compassion.

Autonomic Functions

The body responds automatically and unconsciously to maintain the integrity and vital functions of the organism. The hypothalamus, located deep within the brain, is the major regulatory gland controlling homeostasis, or body maintenance. Factors such as blood pressure, body temperature, fluid and electrolyte balance, and body weight are maintained in dynamic equilibrium, shifting with the needs of the body. To achieve this task, the hypothalamus receives inputs about the state of the body, and initiates compensatory changes if anything drifts out of whack.

The hypothalamus directs body functions though two main pathways. First, the hypothalamus connects to the brainstem, located at the top of the spinal cord, providing a link to the Autonomic Nervous System, the ANS The ANS. has two parts; the sympathetic nervous system activates the “fight or flight” response; the parasympathetic nervous system activates “rest and digest” activities of the body. The brainstem, though the ANS, controls the essential functions of pulse, respiration, body temperature, water balance, swallowing, coughing, as well as our stereotyped reactions and movements.

Fig. 7. *Brain Organs*

A second pathway is from the hypothalamus to the pituitary gland, the master endocrine gland in the brain. The pituitary gland secretes hormones, which activate major organ systems in the body, for example the adrenal and sexual centers.

The hypothalamus is of particular importance in the Dark Room because of its affect on circadian (day-night) rhythms in the body. The suprachiasmatic nucleus of the hypothalamus is one of the body's major biological clocks (**Fig. 8**). It not only regulates hormones related to the day/night cycle, but it orchestrates the activities of many other internal clocks. In numerous experiments, it has been shown that when the SCN is not innervated, the human body clocks run free; they set their own time[1].

Fig. 8. *Detail of the hypothalamic nuclei. Suprachiasmatic nucleus (SCN) regulates circadian (diurnal) rhythms and activates the pineal gland though sympathetic neurons originating in the brainstem (see Fig. 12)*[2]

Waking Consciousness

An “alarm system” is built into the brainstem, to wake us up and bring us to waking consciousness, called the reticular activating system (RAS) (**Fig. 9**). Sight and hearing are two major pathways of incoming sensory information, providing cues which maintain our state of alertful wakefulness. The optic and auditory nerves stimulate brainstem centers, which, in turn, activate higher cortical centers in the brain though the RAS.

Fig. 9. *Reticular Activating System (RAS): Fibers that project from the reticular formation through the thalamus to the cerebral cortex are responsible for maintaining consciousness, muscle tone, and awakening from sleep, with stimuli from the ears, eyes, and skin, but not the olfactory system, which explains why people die in house fires[3].*

Many of the functions of waking consciousness are maintained by the neurotransmitter seratonin. Seratonin is a chemical messenger, traversing the synapse, or the gap, between two nerve cells (**Fig. 10**). Some of the important nerve pathways assisted by seratonin begin in a region of the brainstem called the raphe nuclei and extend upwards into the cerebrum (**Fig. 11**). Seratonin plays an important role in maintaining cortical arousal, concentration, and suppressing distracting stimuli, as well as a role in sleep.

Seratonin is implicated in a wide variety of psychological phenomena, including depression, anxiety, obesity, and LSD hallucinations. The anti-depressant Prozac, for example, elevates seratonin levels in the synaptic cleft by blocking re-uptake of seratonin into pre-synaptic neurons. (Seratonin levels cannot be raised by ingestion, because the molecule is too polar to pass through the “blood-brain barrier.) As another example, LSD mimics the shape of the seratonin molecule and redirects nerve impulses down unfamiliar and unstructured neural pathways, giving rise to hallucinatory perceptions and experiences. In short, seratonin is the most important neurotransmitter governing states of waking consciousness.

Fig. 10. *Synapse: Neurotransmitter seratonin bridges the gap between nerve cells. After completing its "mission", the seratonin is reabsorbed into the nerve cell and decomposed by MAO into inactive by-products[4].*

Fig. 11. *Seratonin Pathways. Many of the important nerve pathways assisted by the neurotransmitter seratonin begin in the brainstem and extend upwards into the cerebrum[5] .*

Sleep and Dream

Each night, our waking consciousness is subdued by chemical messengers that inhibit the activities of the brain. Melatonin, the "sleep molecule", is one of these messengers. Melatonin is produced in the pineal gland, in response to the darkness of night, and to the circadian rhythms of light and dark that are programmed into the hypothalamus, an endocrine gland located deep within the brain (**Fig. 12**). Melatonin affects major organ systems, quieting the sympathetic nervous system and allowing daily rejuvenation of mind and body. (also see Appendix: Inner Alchemy, A physical Explanation).

Fig. 12. *Pineal activation: Secretion of melatonin by the pineal gland is stimulated by sympathetic nerve axons originating in the superior cervical ganglion of the brainstem. Activity of these neurons is regulated by the activity of the suprachiasmatic nucleus of the hypothalamus (SCN), which sets a circadian rhythm. This rhythm is entrained to light/dark cycles by neurons in the retina[6].*

The primary function of sleep is to rest and restore not the body, but the mind. Depriving a person of deep, dreamless sleep (delta stage) results in the seepage of hallucinatory phenomena into the waking state. Sleep deprivation causes severe mental disturbance, attention deficits, visual complaints, hallucinations, and time distortion, and, after a number of days a person may go insane.

In the Dark Room, melatonin gradually accumulates in the brain, and we begin to experience the revelations of sleep in our waking consciousness. Sleep and dream states manifest in our awareness, and aspects of our true nature begin to reveal themselves. Sleep consciousness is a profound state of rejuvenation and reconnection to our divine source. It has been said that

> "…the soul temporarily disengages during sleep to 'visit' other dimensions and have experiences, which are remembered during the waking consciousness as dreams. Each and every soul leaves the body as it rests in sleep. The idea that some aspect of the self dissociates during sleep and transits between dimensions (e.g., astral travel) is a common theme in the traditions of many cultures. Sleep is viewed as an opportunity for the mental being to review previous experiences and plan future actions accordingly, hence the retrospective and precognitive function of dreams."

> "During sleep, connection of the physical, mental and spiritual bodies is maintained by a 'silver cord' … similar to the 'thread' or 'cord' of the pineal system. Death involves the severance of this cord whereas sleep may be viewed as merely a temporary 'stretching' of it. The 'projection' of consciousness out of the body during sleep may be related to the … "kundalini" experience and psychic awakening. "[7]

Extended dark room retreats alter sleep cycles somewhat. Initially, people usually sleep more since most people are busy and often sleep-deprived. After two to three days, however, the need for sleep is diminished and a more restful state of being becomes a pervasive aspect of every day. We have observed that when people are quiet and less active during the beginning of a retreat, the elements settle into their own nature more quickly, and a state of alert relaxation arises. After a couple of weeks, one may need only a few hours of sleep each night, and that sleep is often in continuous consciousness.

Descent into Darkness

In the Dark Room, our mind and soul begin to wander freely in the vast realms of psychic and spiritual experience. First, sensory receptors that are controlled by the thalamus gland, with the exception of the olfactory, consciously withdraw (**Fig. 7**). Thus, breathing activity substitutes for the restfulness of visual and auditory function. By keeping the adrenal hormones at their lowest levels the inner peace remains undisturbed. In complete darkness, the visual and auditory abilities become ever more sensitive. The olfactory (smell) and tactile (feeling and touch) organs become the chief senses to supply the little needed energy to the body/mind. Thus the thalamus glands are slowly shut down. The pituitary gland, the master gland for bodily hormones, becomes distilled by the exchange of energy in the body/mind needed for spiritual awakening power.

The hypothalamus gland is in perfect balance and alternates peacefully between wakefulness and sleep. The pineal gland, secreting melatonin to control the subtle bodily rhythms, is sensitized to the vibrations of earth and the scanning light, no longer being driven by the instinctive drive from adrenal power and the waking consciousness of the thalamus glands and the reticular activating system. In this state, wakefulness is a dreaming state and dreaming consciousness is awakening consciousness. They become the functions of spiritual stars and planet earth, rather than the rotating power of the Earth, the Sun and the Moon. This state is the final stage of the returning process on earth.

Limbic System

The primary organ for the emotional activities is coordinated through the function of the amygdala, taken from the Greek word for "almond" because of its fanciful resemblance to almonds. In Taoist tradition, this is the crowning center where both the light and visual frames register, such as the image of sun or of a snake (**Fig. 13**). As the sexual power engages with the light above the brain to form sweet dew, the light in the pituitary becomes gray-white. When it radiates, the two amygdala glands are activated, allowing the Chi to circulate within the temporal lobes on either side of the head, above the ears and around the temples. As the light moves forward, the Third Eye, the essential tool for healing diagnosis, is opened.

The temporal lobes govern all auditory, somatic, and motor sensitivities. The breath coming through the nostrils, as well as the light shining upon the amygdala, charges these sensory activities. The adrenal glands, responsible for releasing norepinephrine and epinephrine, become the seat for true inner stillness (**Fig. 14**). In this state, everything is transformed into the harmless and loving present. By drawing the unconscious light from the adrenal glands, themselves charged by the primordial sexual energy, the mind sees the light and the inner ear hears the cosmic vibration within both the body/mind and the Mother Earth. Mysteriously, the cave of the earth, the cave of the brain (Crystal Palace), and the hollowness within the bones echo with each other, making the cosmic vibration visibly meaningful through the conscious eye.

The meditations of the Inner Smile, Six Healing Sounds, and Fusion Practice are important for quieting and transforming the negative emotions.

Fig. 13. *Limbic System: The limbic system encircles the top of the brain stem and forms a border (the meaning of "limbic") linking cortical and midbrain areas with lower centers that control automatic, internal body functions.*[8]

Fig. 14. *Adrenal Glands*

Pineal Gland

The pineal gland is the connection point for the Spirit or Soul. It is the physical center for, and transmitter of, psychic phenomena such as telepathy, clairvoyance in time and space, and the actual influence of thoughts on the physical surroundings[9]. (**Fig. 16**)

"When activated, the pineal gland becomes the line of communication with the higher planes. The crown chakra reaches down until its vortex touches the pineal gland (**Fig. 15**). Prana, or pure energy, is received through this energy center in the head. With practice the vibration level of the astral body is raised, allowing it to separate from the physical. …To activate the 'third eye' and perceive higher dimensions, the pineal gland and the pituitary body must vibrate in unison, which is achieved through meditation and/or relaxation. When a correct relationship is established between personality, operating through the pituitary body, and the soul, operating through the pineal gland, a magnetic field is created. The negative and positive forces interact and become strong enough to create the 'light in the head.' With this 'light in the head' activated, astral projectors can withdraw themselves from the body, carrying the light with them.[10]

Fig. 15. *Crown Vortex*

Fig. 16. *Third Eye*[11]

"The pineal works primarily by converting the higher dimensional Light, that is constantly streaming into your reality, into usable information for your pituitary. As it gradually activates, the pineal permits the body to move its vibrational patterns into higher and higher levels. This process also allows your Light Body to attach itself even deeper into your physical instrument (**Fig. 17**). Our process is to reset the focus in the pineal. This chemical 'lens' largely disappears as you grow older. The decrease in its efficacy is one of the major reasons for your body aging as quickly as it does. When the pituitary begins to receive the consciousness energy packets from the Well of Dreams through its interaction with the pineal, it secretes enzymes that permit the chemical 'lens' in the pineal to reappear. As this 'lens' strengthens, it allows the RNA/DNA protein strings in your cells to activate your 'third strand'."[12]

Fig. 17. *Heavenly Mirror*

The pineal gland is located in one of the oldest anatomical regions of the brain. If you draw an imaginary line from the center of your forehead, crossed by a line through the head at the ears, you have its general location. The pineal is cone-shaped, about 8 mm (1/3 inch) in diameter, weighing from 50 to 150 mg. The gland is most active during childhood, and begins to regress at about age 7, becoming a calcified tissue strand in the adult (**Fig. 18**).

Fig. 18. *Pineal Gland*[13] *.*

There are numerous anatomical and physiological idiosyncrasies associated with the pineal. It is one of the few solitary organs (most organs in the brain are paired, left and right). While small, the blood flow to the gland is quite large. The pineal has been considered as a homologue of the reptilian 'third eye'. Its photosensitivity derives from neural connections with the retina (**Figs. 12**).

The Taoist practice of Orgasmic Upward Draw is very important to help stimulate the pineal gland. Taoists regard the pineal as the second sexual gland(**Fig. 19**). In the Kan and Li practice, the steaming process helps to clean out all of the organs and reactivate the thymus and pineal glands.

Fig. 19. *Pineal as Second Sexual Center.*

Fall from Grace

Nothing could be more natural than the state of Wu Chi, nothingness, or divine grace. And yet, the realization of Wu Chi is clouded by obscurations and confusions. Consciousness streams into every body, but only a few can see the light. Why is this so?

An essential function of the "upper brain", the Upper Tan Tien, is to manifest the esoteric and divine realizations of consciousness into our humanly bodies. Chi spirals through the Crown and the Third Eye into the pineal and pituitary glands, sustaining existence and nourishing the spirit. Infants and children bask in the glow and the power of the Chi Field streaming into, and interacting with, their bodies. The psyche is vibrant and alive and the energy bodies communicate in non-physical dimensions.

As we grow older, however, the internal realities begin to fade and the external world begins to predominate our existence. By puberty, the pineal gland has ossified into a calcified strand of tissue. Our minds project outwardly, and the demands of existence (work, family, daily living, etc.) preoccupy our awareness. Our emotions (fears, angers, resentments and all kinds of distractions to make ends meet) reflect this outward movement of the psyche.

Fear is the oldest negative emotion. It is felt by all animals, and is even stronger among humans since they have so little power to protect themselves, especially the newborn. The longer history required for organic development makes fear the basis of the entire civilization process: to protect ourselves and achieve our highest potential. Fear is closely connected to the kidney Chi (via the adrenal glands), and when the kidney Chi is diminished, the brain slowly begins to pull back and disengage from the fantastic worlds of the Divine. The upper brain becomes the observing brain, dedicated to the worldly tasks of sending, receiving and processing sensory signals related to daily living.

Inhibiting the Divine

The transition from an internally focused awareness of the Divine, the natural state of infancy, to an externally focused awareness of the adult World, requires significant shifts in the chemistry of the brain. The tissues and molecules which normally manifest the consciousness of Wu Chi must be "turned off" or **inhibited**. Chemically, the inhibitors are enzymes such as MAO (monoamine oxidase) which rapidly convert seratonin into inactive by-products, thus disabling the synthesis of the spirit molecules. The enzyme MAO breaks down seratonin before it can be converted into melatonin, 5-MeO-DMT and DMT (**Fig. 20**).

Fig. 20. *Seratonin Deactivaton.*

Our usual perception of the world in waking consciousness is, in fact, a state of waking ignorance. The brain must inhibit our true nature and divine connections to survive in the physical world. In everyday life, we see everything back to front, as it were. We perceive the primary actions of the brain as providing us with sensibility and cognitive awareness. In fact, the brain's mechanism is to filter and shut off the flow of divine consciousness, making possible survival on Earth, but obscuring all transcendental realities. Dark Room meditations remove the obscurations. The inhibitory functions of the brain are lifted, and we revel in the experience of Oneness, Wu Chi, the Original Source.

Reawakening – Spirit Molecules

Waking consciousness satisfies the demands of physical existence, but severs the connection from the Divine. Thus, each night we must disconnect from the outer world and reconnect with our divine source, thereby sustaining life and nourishing the soul. In adult life, the experience of Wu Chi is relegated to the unconscious domains of deep sleep and the supernatural worlds of dream. In Taoist Inner Alchemy, we reawaken the soul to the Immortal Tao, the Wu Chi, the Original Source, and bring back the Divine into our conscious awareness.

Chemically, the reconnection to the Divine occurs by **inhibiting** the enzymatic actions of MAO and INMT, so that seratonin can convert into melatonin and melatonin into the spirit molecules 5-MeO-DMT (5-methoxy-dimethyltryptamine) and DMT (dimethyltryptamine) (**Fig. 21**). The enzymes are inhibited by substances secreted in the pineal gland, such as harmaline and pinoline. The "spirit molecules" allow us to reconnect to divine consciousness. They cause "color imagery, out of body experiences, lucid dreams, visions of beings and/or animals, mystical states, subjective "other realities" and experiences of "being somewhere else." These states are the language of dream.

Fig. 21. *Tryptamine Synthesis*[14].

In the Dark Room experience, the "spirit molecules" pinoline, 5-MeO-DMT and DMT alter the receiving qualities of the brain. The brain "tunes in" to invisible worlds and parallel universes, like a television tuning in to different channels. Mystical and near-death, out-of-body experiences reflect dynamic equilibria between "channels" in which we experience the essential energy that courses through the receiver[15].

When you reach the 'DMT state' you begin to function consciously from the various psychic centers or chakras. The bodily processes of 'Healing Love' combine the human states of true compassion and sexual arousal to create a new chemistry and a new vibration within the body. This 'special' vibration occurs at a frequency of 8Hz. 'As in the macrocosm, so it is in the microcosm'; hence if we make love, then all the cells and DNA actually make love as well. The DNA crosses over, like two serpents intertwined in an erotic embrace. You need the orgasmic vibration to arouse this crossover process which leads to the 'two giving birth to three'; the conception of new cells. The two vital states are compassion and arousal leading to orgasm. Both are inextricably linked to love.

Immortal Body

Rick Strassman, based on several years of intensive medical research, proposes that the release of DMT from the pineal gland at 49 days after conception marks the entrance of the spirit into the fetus. This 49-day prenatal period corresponds to the first signs of fetal pineal tissue, the differentiation of the gonads into male and female, and the time between the death of an individual and its soul's next rebirth according to the Tibetan Buddhist tradition. He suggests that the individual's life-force enters the body through the pineal gland and leaves it through the pineal gland at death (see "DMT, The Spirit Molecule", by Strassman, and[16]. The infant's brain is flooded with 5-MeO-DMT, secreted from the pineal gland and the brain is 40% more active and open[17].

Chemistry of Consciousness

The chemistry of consciousness is, at first glance, complex. The infant basks in the divine glow of consciousness, manifested in the body/brain by the spirit molecules, 5-MeO-DMT and DMT. However, during development, the brain inhibits the flow of consciousness, utilizing enzymes to deactivate the synthesis of the spirit molecules. Then, to re-realize the divine source, the brain must inhibit the inhibiting enzymes! The chemistry is explained in more detail below.

Seratonin (5-hydroxytryptamine), the neurotransmitter implicated in many of the functions of consciousness, is synthesized in the brain from the amino acid tryptophan, a basic building block of proteins (**Fig. 22**). After fulfilling its role in the synaptic cleft (the space between nerve cells), the seratonin molecule is decomposed into inactive by-products (5-hydroxyindole acetaldehyde) by the enzyme MAO (monoamine oxidase). The seratonin molecule differs from the tryptophan molecule only by the addition of a hydroxyl group (OH) and removal of a carboxyl group (COO).

Melatonin (N-acetylseratonin), the neurohormone implicated in sleep, is synthesized directly from seratonin, by deactivating MAO and inhibiting the destruction of the seratonin molecule (**Fig. 23**). MAO (monoamine oxidase) is deactivated (inhibited) by the beta-carbolene enzymes secreted in the pineal gland: harmine, harmaline, and pinoline. As melatonin levels rise in the brain, the melatonin converts to pinoline (**Fig. 23**). There is some confusion in the literature regarding pinoline synthesis, perhaps because it has multiple synthesis pathways, as well as close affinities to a variety of related compounds (**Fig. 24**).

Fig. 22. *Seratonin Synthesis*[18].

Fig. 24. *"Harm'" Compounds. Pinoline also goes by the names 6-Methoxytetrahydro beta carboline, and 6MeOTHBC[20].*

The inhibition of MAO (monoamine oxidase) also allows for the synthesis of the "spirit molecules", 5-MeO-DMT (5-methoxy-dimethyltryptamine) and DMT (dimethyltryptamine) (**Fig. 25**). In a two-step process, 5-MeO-DMT is synthesized from melatonin with the assistance of the O-methylating enzyme HIOMT (hydroxyindole-O-methyltransferase) and the enzyme INMT. Inhibition of INMT results in the formation of DMT.

Fig. 25. *5-MeO-DMT Synthesis[21].*

The structures of 5-MeO-DMT and DMT are very similar, differing only by the presence/absence of a CH_3 group (**Fig. 26**).

It should be noted that the tryptamine derivatives are often unstable, volatile substances, and molecules with nearly identical structures may have significantly different functions and effects (**Fig. 27**). DMT, for example, is metabolized by the brain in a matter of 10's of seconds. The tryptamine molecules may rapidly destabilize and transform into sister compounds, and multiple pathways may exist for the formation of a given tryptamine structure. This probably accounts for some of the considerable confusion in the literature regarding the origin of the various "spirit molecules". Pinoline synthesis, as a prime example, has been variously attributed to both melatonin and 5-MeO-DMT parent compounds. The suggestion that pinoline is a pineal secretion ignores the actual molecular pathways that lead to its synthesis.

Fig. 26. *Comparison of the DMT and 5-MeO-DMT molecules. They differ by the presence/absence of a CH_3 group*[22].

Stages of Dark Room Enlightenment

Benefits of Dark Room Experience

The Dark Room meditations will influence each person uniquely, depending on their maturity and stage of spiritual development. However, most people, even beginners, will receive great benefits, which may include:

1. Relaxation. This is one of the foundations for all other work. During the first days of the retreat, catching up on sleep, allowing the eyes to recuperate from the over-stimulation of our visual world, releasing the grip of mental concerns, plans, and a agendas and simply letting the energies settle creates the best vacation you may ever have.
2. Once relaxed and feeling at home in the dark, the Inner Lights may appear as well as possible images of space teachers, deities, colors, and shapes. Imbalances in one's energies can manifest as dull colors.
3. Over time, as one becomes more open, balanced and awake, images clear as day may appear, not inside the mind's eye but outside in the space of the retreat.
4. Advanced practitioners may experience some of the following: Dreams and sleep become more lucid. A state of continuous consciousness arises in which there is no break in conscious awareness; meditation can continue during sleeping and non-sleeping hours.
5. The Taoist Secret of Love and the Healing Love become very active, so that working with sexual energies and engaging in creative work become easier and more powerful.
6. Dreams will often take the form of teachings or participation in great mythological stories.

The Dark Room enables the body and mind to undergo a series of profound transformations. The 'states of consciousness' appear correlated with the organic synthesis and accumulation of psychedelic chemicals in the brain, especially melatonin (Days 1 to 3), pinoline (Days 3 to 5), 5-MeO-DMT (Days 6 to 8), and DMT (Days 9 to 12). The pharmacology of these states is as follows.

'Melatonin Stage' (Day 1 to 3)

Complete isolation from external light causes the pineal gland to flood the brain with the neurotransmitter melatonin (average 2 to 5 mg/day), manifesting initially as the need for sleep and rest. The eyes recuperate from the over-stimulation of the visual world, releasing the grip of mental concerns, plans agendas, and letting the energies settle. Melatonin is essential for maintaining the hibernation state, which facilitates the emergence of spiritual consciousness. The person retains a child-like biological condition where melatonin is conserved and recycled, not wasted in biological continuation. When this substance works together with the yellow marrow in the bone, the reddish firing reaction will activate a gentle interaction between the sacred water and the light. The sacred waters are the inner fluids that are responsible for producing bone marrow and other bodily fluids. The waters run not only in the in the center of the bones, but also in the spinal connections between the Crown and Perineum Points.

'Pinoline Stage' (Day 3 to 5)

After about three days, when melatonin concentrations reaches sufficient levels (15 to 20 mg) the body then begins to produce the superconductor pinoline, whereby a greater fluidity of thought and healing of the body starts to occur. Pinoline induces cell replication (mitosis) and intercalates with DNA molecules. The 'pinoline stage' is normally activated only in the womb, in lucid dreaming, or in near death experiences. Within this state we can metaprogram the brain to the Unity of Self, heightening awareness of the pathways with which we filter reality. At this stage, the nervous system becomes aware of itself. We become aware of the hologram of the external world that we create constantly in our head[24].

When the pinoline is triggered you activate your clairsentient and clairaudient powers. You may see light and visions, hear music, and gain phenomenal insight. A decoding of the DNA then begins to take place. Cosmic particles are attracted to us and decoded in the form of sound, light, knowledge and realization. The particles, which have the same cell structures as humans (and from which the Tao believes you evolved), are attracted to you magnetically. The body has approximately six trillion cells, which correspond to the universe 'without'. Each of these cells can be seen as a computer with unlimited power and potential. Each cell can become a super conductor, able to receive information from space. You are able to decode this universal information carried from outer space, which may be as old as nothingness itself. When you enter this primordial state or force you are reunited with the true self and divinity within. You literally 'conduct' the universal energy. You may see into the past and future, understand the true meaning of existence, and begin to understand the order of things. You return to the womb, the cocoon of our material structure and Nature's original Dark Room.

'5-MeO-DMT Stage' (Day 6 to 8)

At this stage the pineal gland starts to produce the neuro-hormone 5-MeO-DMT (aka 'akashon'). This psychoactive tryptamine is highly luminescent and also extremely phosphorescent due to the amount of phosphene that it transmits onto the visual cortex. 5-MeO-DMT switches on 40% more of the cerebral cortex and awakens the nervous system to become aware of itself; 'beingness' results. Hence, the possibility of metaprogramming the nervous system's bio-computer - activating healing and conflict message assortment of the nervous system. 5-MeO-DMT is the empathogenic neurotransmitter that expands the emotional body between 'infinity and zero'. It gives rise to telepathy in the emotional and intuitive bodies. It engages the awakening of the 'Flower of Life', the spine, which begins to glow in a state of beingness and peace.

5-Meo-DMT discharges the darkness from the darkroom. A bright light is activated and one experiences a born-again mentality. This Great White Light, the manifestation of the astral body, enables the self to project externally. At this point, some degree of 'N-Methyl-D-Aspartare Inhibition' (NMDA-I) usually occurs. This is a 'soft form' of the slowing of the glutamate input signals into the cells. This makes it easier for the nervous system to cause electrons to stop flowing within the cells, allowing for profound meditative trance states. 5-MeO-DMT intercalates with messenger RNA. One can see in 3 dimensional Holon pictures, as the thoughts behind language.

"Techniques taught in the Dark Room enable one to read and go beyond the matrix, by unifying all directions, and externalize the soul computer so that one can start to interact with ones own genetic code of the Tree of Life. In this intensive process 5-MeO-DMT activates the entire spine, the Tree of Life. The spine is activated and reprogrammed and you can start to process the illusion of the dream from its binary code into the unified translated Self: the Unity Self. Through 14 days of total light isolation your consciousness can be expanded to the wider range of wave emanations and transduce the core hologram of reality that is coherently programming ones nervous system to the Unity Self[25]."

Many exercises will be practiced during this period: compacting Chi, consciousness and awareness into the nervous system, working with the Silent Self and anchoring the Immortal Body.

The 5-MeO-DMT prepares the nervous system, through its empathetic state of being and self awareness of the nervous system, for the DMT or dimethyltryptamine production of the pineal gland, in psychoactive milligram doses.

'DMT Stage' (Day 9 to 12)

When DMT levels reach more than 25 mg, one's experience can become very visual. DMT is the visual third eye neurotransmitter. It enables the energy body and spirit to journey into hyperspace, beyond third dimensional realms of time and space. It is intensely energizing. "After some 10-12 days one starts to see in infra red, and ultra violet, one can actually run across the room and touch a person, by seeing their heat patterns. The Holon Images exteriorize and one is walking in a Virtual Reality, which appears to be the DNA language macro uploaded, and interactive."

When you reach the 'DMT state' you begin to function consciously from the various psychic centers or chakras. The bodily processes of 'Healing Love' are then combined with those of the Dark Room. The human states of true compassion and sexual arousal create a new chemistry and a new vibration within the body. This 'special' vibration occurs at a frequency of 8Hz. 'As in the macrocosm, so it is in the microcosm'; hence if we make love, then all the cells and DNA actually make love as well. The DNA crosses over, like two serpents intertwining in an erotic embrace. You need the orgasmic vibration to arouse this crossover process which leads to the 'two giving birth to three'; the conception of new cells. The two vital states are compassion and arousal leading to orgasm. Both are inextricably linked to love. When this 'love-vibration' reaches the pineal gland a new hormone is produced, which in turn creates whole body conductivity. Only when you feel the waves of orgasmic vibration and unconditional love for the self and others can the process be activated and the essence of the darkroom is magnified.

At this stage of the Dark Room Retreat, the required amount of sleep tends to diminish dramatically. Although the day may last 24 hours, 3 hours of sleep can seem like 12. During this period we will engage in further practices; psychic games and interactivity, Taoist Dream Yoga (advanced levels) and Imagination Expansion.

The meditations, practices and techniques described herein are ***not*** intended to be used as an alternative or substitute for professional medical treatment and care. If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training. This booklet does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Introduction to Fusion of Eight Psychic Channels

In Fusion of Eight Psychic Channels

1. You will open and clean the Great Bridge and the Great Regular Channel. Both consist of a Yin and a Yang Channel. All together they form four channels (Yin and Yang Wei and the Yin and Yang Chiao Channels). They are the last Extraordinary acupuncture (psychic) Channels to open. The others are; the Governor (Du Mai) and Functional (Ren Mai) Channel of the Microcosmic Orbit and the Thrusting Channels (count as one Channel, related to the Chong Mai) and the Belt Channel (related to the Dai Mai).

2. You will learn to protect the spine and your energy field, to seal the aura and the senses and to drill your head.

3. You will learn to transform the Microcosmic Orbit, the Thrusting Channels and the Belt Channel in the Energy Body.

Fusion of the Eight Psychic Channels is the last part of the Fusions. It teaches the last techniques and meditation to prepare you for the higher practices. After you master all the Fusion Practices you are ready and prepared to start the Practice of the Immortal Tao.

Practice of Fusion of Eight Psychic Channels

Great Bridge Channel and the Great Regular Channel

1. Theory

The Great Regulator and Great Bridge Channels have no points of their own, but run across specific points of the twelve organ meridians. They connect in this way all these meridians together which enables the energy to flow from one meridian to another, balancing and regulating the energy flow in the meridians. The *Great Bridge*

Channel (Yin and Yang Chiao Mai) serves to connect all the meridians. The *Great Regulator Channel* (Yin and Yang Wei Mai) serves to regulate, coordinate and balance the energy flow between these meridians, also called the body's channels. The routes they follow lie close together.

Although they are separate channels we practice them in Fusion of Eight Psychic Channels as one channel with a Yin and a Yang part. The Yin part connects all the Yin organ-meridians and regulates the flow of energy in these meridians, the Yang part connects all the Yang organ-meridians and regulates the flow of energy in these meridians. The Yin channels run along the inside of the legs and arms and the front of the body. They also regulate the blood. The Yang channels run on the outside of the legs and arms and the back of the body. They control the defensive energy and regulate resistance to external infections. In other words, the Yin Channels protect the body from "attacks" from within and the Yang Channels protect the body from external "attacks".

The most important reason to open the Bridge and Regulator Channel is to promote the unimpeded flow of energy in the body, to heal the body and to prepare the body to receive and to circulate the higher energy forces of the Immortal Practice in your body. All the Eight Psychic Channels act as receivers and distributors to the organs and glands of the *Universal Force*. For this reason, working with the Eight Psychic Channels is considered spiritual work in the Taoist system.

Forming the control base of the Eight Psychic Channels is the *Gate of Death and Life* (also known as the *Gate of Mortality*) at the perineum point. The perineum point serves many purposes. It is considered the sexual energy base. It is also the point to which is joined the Bubbling Spring, the collection point of the Earth energy at the soles of the feet. The Belt Channel passes through the perineum point as it interconnects the other seven channels. The interconnection of the Belt Channel makes it possible to move the energy from one channel to any other channel, while it serves to protect all the body's centers. The crown point at the pineal gland is the other common point of the Eight Psychic Channels.

2. Location of the Points of the Great Bridge and Great Regulator Channels

In this part we give you all the points of these channels with their locations and their meaning as acupuncture point.

A. Locate GB-17 and ST- 4

Part of the Yang Route of the Channel

1. **GB-17 (Gall Bladder Meridian)**
Traditional Name: Cheng Yin = Correct Management
Location: Slightly behind the center of the top of the head, and to the right and left sides.
Uses: To help relieve headaches and toothaches.

2. **GB-16 (Gall Bladder Meridian)**
Traditional Name: Mu Chuang = Eye Window
Location: On top of the head at the central point, and to the right and left sides.
Uses: To help relieve eye problems and facial edema (swelling through water retention).

Fig. 1 *Yang Route of the Channel*

3. **GB-15 (Gall Bladder Meridian)**

Traditional Name: Lin Chi = Temporarily Weeping

Location: On top of the head in front of the central point, and to the right and left sides.

Uses: To help relieve stuffed nose, eye problems and strokes.

4. **GB-14 (Gall Bladder Meridian)**

Traditional Name: Yang Pai = White Yang or Pure Yang.

Location: One finger's width above the eyebrow in direct line with the pupil of the eye.

Uses: To help relieve eye problems such as glaucoma, night blindness, forehead pain, facial nerve paralysis, stuffed nose and strokes.

Fig. 2 *GB-14 (Gall Bladder Meridian)*

Fig. 3 *Yin Side*

5. **ST-2 (Stomach Meridian)**
Traditional Name: Szu Pai = Four White
Location: Below the eye in direct line with the pupil.
Uses: To help relieve eye disease, toothaches, facial nerve paralysis, nose bleeding, and colds.

6. **ST-4 (Stomach Meridian)**
Traditional Name: Ti Tsang = Ground Storehouse
Location: At the intersection point of a line straight down from the pupil to the base of the cheekbone, and another line along the curve of the cheekbone.
Uses: To help clear nasal passages, colds, toothaches, eye problems, facial paralysis, nose bleeding, and dribbling.

Fig. 4 *ST-4 (Stomach Meridian)*

B. Locate CV-23 and K-1

The Entire Front (Yin) Route of the Channel

1. **CV-23 (Conception Vessel or Functional Channel)**
Traditional Name: Lien Chuan = Corner Spring
Location: Behind the midpoint of the lower edge of the chin bone. Hook the thumb behind the bone, CV-25 and press upward and forward.
Uses: Can help to relieve laryngitis, clears the throat.

Fig. 5 *CV-23 (Conception Vessel or Functional Channel)*

2. **CV-22 (Conception Vessel or Functional Channel)**

Traditional Name: Tien Tu = Celestial Protrusion

Location: At the top of the breastbone (sternum) in the V-shaped indentation; press downward in a 45-degree angle.

Uses: Can relieve asthma, bronchitis, coughing, sore throat, larynx spasms. Pressing and releasing CV-22 can cause energy to flow more easily through the chest, thereby helping to restore the proper freer breathing.

Fig. 6 *CV-22 (Conception Vessel) and ST-13*

3. **ST-13 (Stomach Meridian)**

Traditional Name: Chi-Hu = Door of Chi

Location: Below the midpoint of the collarbone between the first and second ribs. Press straight into the body. The point feels sore or like an electric shock.

Uses: Can relieve asthma, bronchitis, chest and back pain, hiccups. Unrestricted flow through ST-13 allows good energy to flow through the chest.

4. **ST-16 (Stomach Meridian)**

Traditional Name: Yin Chuang = Breast window

Location: Between the third and fourth ribs, one rib directly above the nipples in males, slightly higher in females. When pressed the point feels somewhat sore, especially on females.

Uses: Can relieve coughing, asthma, swelling of the breast, chest and stomach pain, heartburn, short breath, melancholy. Good energy flow clears the whole breast region and promotes optimism.

5. **LV-14 (Liver Meridian)**

Traditional Name: Chi Men = Gate of Hope

Location: At the junction of the ninth rib cartilage to the eighth rib. Follow the bottom edge of the rib cage from the sternum until the first major indentation, then trace a line down from the nipples. The intersection is the LV-14 area. Press slightly up and into the abdomen. The point will feel quite sore when pressed.

Uses: Can relieve difficulty in breathing, chest pain, diarrhea, cholera, menopausal disorders, childbirth pains, abdominal tension. Pressing LV-14 affects the liver, gall bladder, and diaphragm. Used traditionally to relieve side aches from too much running, and to relieve hiccups, belching, and snoring.

Fig. 7 *LV-14 (Liver Meridian)*

6. **SP-16 (Spleen Meridian)**

Traditional Name: Fu Ai = Abdominal Sorrow

Location: Below the bottom edge of the rib cage in direct line with the nipple. For women, it is in line with ST-13 under the collarbone, and just beneath the rib cage from LV-14 at the edge of the bottom rib. For men, it is in line with ST-13 and ST-16, just beneath the rib cage.

Uses: Can relieve abdominal pain, constipation, dysentery.

7. **SP-15 (Spleen Meridian)**

Traditional Name: Da Heng = Big Horizontal

Location: To the sides of the navel in direct line with the nipple.

Uses: Can relieve nervousness, dysentery, constipation, excessive sweating, diarrhea, abdominal pain, intestinal paralysis.

8. **SP-13 (Spleen Meridian)**

Traditional Name: Fu She = Palace Dwelling

Location: Two fingers' width above the middle of the groin. Hold this point firmly without excessive pressure; it may feel ticklish.

Uses: Can relieve abdominal pain and tension, colic pain, appendicitis, constipation. Good energy flow through SP-13 relaxes the abdominal region, groin, thigh and sexual organs; it relieves menstrual cramps, indigestion, and intestinal weakness.

Fig. 8 *SP-13 (Spleen Meridian)*

9. **SP-10 (Spleen Meridian)**

Traditional Name: Hseuh Hai = Sea of Blood

Location: Three fingers' width above the knee on the inside of the thigh. Place the left palm on the kneecap, fingers pointing to the inside of the knee. Press down on the inside with the thumb. The point is sensitive to pressure.

Uses: Can relieve abnormal menstrual flow and cramps, uterine bleeding, rashes, indigestion. Good energy flow through SP-10 promotes smooth functioning of the female organs. This point also releases the flow of energy through the thighs and knees.

10. **SP-9 (Spleen Meridian)**

Traditional Name: Yin Lin Chuan = Dark Tomb Spring

Location: On the inside of the leg below the top of the tibia bone (the large bone of the leg.) The point is very tender.

Uses: Can relieve abdominal pain and distension, excessive menstrual flow, menstrual pain, lower back pain, swelling. Unrestricted energy flow through SP-9 increases the flow of energy through the knees and legs.

Fig. 9 *SP-9 (Spleen Meridian)*

11. **K-6 (Kidney Meridian)**

Traditional Name: Chao Hai = Shining Sea

Location: One finger's width below the inner ankle. The point is sensitive to pressure.

Uses: Can relieve mental disorders, insomnia, tonsillitis, menstrual disorders, epilepsy, sadness. This point helps balance the Yin aspect of the Great Bridge Channel. When good energy flows through K-6, problems in the female sexual organs and the kidneys will be reduced. Also, a deep refreshing sleep is encouraged by pressing this point.

12. **SP-4 (Spleen Meridian)**

Traditional Name: Kung Sun = Grandson

Location: On the bottom of the foot, in a hollow behind the joint of the big toe. The point is sensitive to pressure.

Uses: Can relieve heart pain, stomach pain, epilepsy, vomiting, diarrhea, paralysis of the big toe and foot, cold feet, foot cramps, abdominal tension. This point helps balance the Yin aspect of the Great Regulator Channel. When energy flows well through SP-4, the body energy is balanced.

Fig. 10 *SP-4 (Spleen Meridian)*

13. **K-1 (Kidney Meridian)**

Traditional Name: Yong Quan = Bubbling Spring

Location: At the center of the ball of the foot when curling the toes in at the hollow; a sensitive spot.

Uses: Can help to calm the spirit; It opens the senses. Connects the earth energy to the perineum

Fig. 11 *K-1 (Kidney Meridian)*

Fig. 12 *Yang Side*

C. Locate GB-41 and SI-9

The Entire Back (Yang) Route of the Channel.

1. **GB-41 (Gall Bladder Meridian)**

Traditional Name: Lin Chi = Attending the Crying Child

Location: Facing the outside of the foot at the joint, in the upper space between the fourth and little toe.

Uses: Can help to relieve arthritis, inflammation of the breast, hearing problems, ringing in the ears, irregular menstruation, insufficient breast milk, headaches, rheumatism, perspiration problems, excessive water retention. This point helps balance the Yang aspects of the Great Regulator Channel and the Belt Channels.

Fig. 13 *GB-41 (Gall Bladder Meridian)*

2. **B-62 (Bladder Meridian)**

Traditional Name: Shenmai

Location: On the outside of the ankle, in the small depression just under and slightly behind the ankle bone. Press straight into the side of the foot.

Uses: Can relieve headache, mental confusion, epilepsy, dizziness, insomnia, backache, aching of the lower extremities.

Fig. 14 *B-62 (Bladder Meridian)*

Fig. 15 *GB-31 (Gall Bladder Meridian)*

3. **GB-34 (Gall Bladder Meridian)**

Traditional Name: Yang Ling Chuan = Life Tomb Spring

Location: On the outside of the leg, in a hollow below the top of the fibula (slender, lower leg bone.)

Uses: Can relieve rheumatism in the knees, weakness of the legs, pain or paralysis of the leg, soreness after exercise, headaches, abdominal problems, constipation, lower back tension, and extreme fright.

4. **GB-31 (Gall Bladder Meridian)**

Traditional Name: Feng Shih = Windy City

Location: Standing upright with the hands at the sides, the point is located behind the femur (thigh bone) where the middle finger touches the leg. The point is very sensitive to pressure.

Uses: Can relieve paralysis of the legs, knee joint pain. Energy flowing through GB-31 encourages good energy flow to the knees, legs, hips and back points.

5. GB-29 (Gall Bladder Meridian)

Traditional Name: Chu Liao = Dwelling Bone

Location: At the joint of the top of the femur bone and the hip.

Uses: Can relieve diseases of the hip joint and surroundings, lower leg pain.

Fig. 16 *GB-29 (Gall Bladder Meridian)*

6. **B-48 (Bladder Meridian)**

Traditional Name: Pai Huang = Round Tissue below the Diaphragm, Uterus, or Placenta

Location: Two fingers' width from the top of the sacrum. The point feels sore.

Uses: Can relieve the pelvic area, abdominal problems, constipation, hemorrhoids, prostate gland and urinary problems.

Fig. 17 *B-48 (Bladder Meridian)*

7. **B-47 (Bladder Meridian)**

Traditional Name: Chi Shih = Room of Resolution

Location: On the back, halfway down from the lowest rib to the top of the hip bone, and halfway between the spine and the side of the body.

Uses: Can relieve abdominal problems, appetite balance, genital problems, prostate, urinary, and kidney problems. Good energy flow through B-47 strengthens the lower abdomen and releases energy flow to the lower back.

Fig. 18 *B-47 (Bladder Meridian)*

8. **B-42 (Bladder Meridian)**

Traditional Name: Hun Men = Gate of the Soul

Location: On the back, between the ninth and tenth rib, and about two fingers' width below the bottom tip of the scapula.

Uses: Can relieve stomach pain, liver problems, fullness in the chest, poor digestion, fainting. Pressing this point releases the back and affects the diaphragm.

9. **B-38 (Bladder Meridian)**

Traditional Name: Kao Huang = Fat Tissue between Heart and Diaphragm

Location: On the back, between the fourth and fifth rib, between the spine and the left scapula. The point feels like a knot of muscular tension and is sensitive to pressure.

Uses: Can relieve circulation and lung problems, releases the neck, upper back and arms, respiratory difficulties, coughing, hyperactivity, fatigue. Pressing this point strengthens the entire body. This is a very important point and can be used to treat many diseases.

10. **TW-15 (NTB-15) (Triple Warmer (Burner) Meridian)**

Traditional Name: Tian Liao = Heaven's Seam

Location: Above the shoulder blade, toward the side of the neck.

Uses: Can relieve pain in the scapula, back, neck, and the pain of fever.

Fig. 19 *TW-15 (NTB-15) (Triple Warmer (Burner) Meridian)*

11. **SI-10 (Small Intestine Meridian)**

Traditional Name: Scapulae's Hollows

Location: On the back, on the scapula directly above the armpit and joint.

Uses: Can relieve chills, fevers, inability to move the arm, soreness of the arm, hypertension, shoulder pain.

12. **SI-9 (Small Intestine Meridian)**

Traditional Name: Jian Zhen = Shoulder Chastity

Location: On the back, just above the armpit.

Uses: Can relieve shoulder problems, paralysis of the upper limbs, excessive perspiration in the armpits, pain in the shoulder blades, toothaches, deafness, swelling of the joints.

Fig. 20 *SI-9 (Small Intestine Meridian)*

D. Locate LI-14 and TW-5

The Yang Arm Route of the Channel.

1. **LI-14 (Large Intestine Meridian)**

Traditional Name: Binao = Arm and Scapula

Location: On the upper arm, above the midpoint between the shoulder and elbow.

Uses: Can help clear vision, and relieve arm and shoulder, eye problems.

Fig. 21 *LI-14 (Large Intestine Meridian)*

2. **LI-11 (Large Intestine Meridian)**

Traditional Name: Quchi = Crooked Pool

Location: At the front of the arm in the inner crease where the forearm joins the upper arm.

Uses: Can cool heat; can relieve arthritic pain in the arms, paralysis, hypertension, high fever, anemia, allergies, skin problems.

3. **TW-5 (Triple Warmer Meridian)**

Traditional Name: Waijuan = Outer Gate

Location: Two fingers' width above the wrist on the outside of the arm.

Uses: Helps to circulate stagnant Chi; can relieve common colds, high fevers, pneumonia, deafness, insomnia, headache, stiff neck, paralysis.

Fig. 22 *TW-5 (Triple Warmer Meridian)*

E. Locate P-8 and L-1

The Yin Arm Route of the Channel.

1. **P-8 (Pericardium Meridian)**

Traditional Name: Laogons = Gakor's Palace

Location: At the center of the palm.

Uses: Can cool the heart and drain heat, relieving heat exhaustion and chest pains.

Fig. 23 *P-8 (Pericardium Meridian)*

2. **M-UE-12 (Miscellaneous Point)**
Traditional Name: Nei Yangchi = Inner Yang's Pool
Location: At the center of the inner crease of the wrist.
Uses: Can relieve paralysis, infantile convulsions.

3. **P-6 (Pericardium Meridian)**
Traditional Name: Nei Guan = Inner Gate.
Location: Two fingers' width above the inner wrist.
Uses: Can calm the heart and spirit and regulate Chi; can relieve rheumatic heart disease, vomiting, chest pain, stomach ache.

4. **P-3 (Pericardium Meridian)**
Traditional Name: Quze = Crooked Marsu
Location: On the middle of the crease of the inner elbow.
Uses: Can open heart Chi, and disperse heat; can regulate the intestines, gastrointestinal problems, bronchitis, heat exhaustion.

5. **P-2 (Pericardium Meridian)**
Traditional Name: Tianjuan = Heaven's Spring
Location: Next to the armpit in the front of the arm, within the biceps muscles.
Uses: Can relieve cough, palpitations, chest pain.

Fig. 24 *P-2 (Pericardium Meridian)*

6. **L-1 (Lung Meridian)**

Traditional Name: Zhong Fu = Central Radiance

Location: On the outside of the upper chest, below the clavicle.

Uses: Can relieve bronchitis, pneumonia, asthma, tuberculosis, coughing, blocked throat, congested nose.

Fig. 25 *L-1 (Lung Meridian)*

F. Locate LI-16 and GB-20

The Last Part of the Yang Back Channel.

1. **LI-16 (Large Intestine Meridian)**
Traditional Name: Fusu = Crest Bare
Location: In a hollow of the shoulder at the end of the clavicle.
Uses: Can relieve shoulder problems, disperse blood congestion, convulsions, neck problems.

2. **GB-21 (Gall Bladder Meridian)**
Traditional Name: Tian Jing = Shoulder Well
Location: On the shoulder, in a hollow of the collarbone near the neck.
Uses: Can relieve uterine bleeding, back pain and shoulder pain.

3. **M-HN-41 (Miscellaneous Point)**
Traditional Name: Jingbi = Neck and Arm
Location: On the side of the neck, above the clavicle.
Uses: Can relieve numbness in the arm; paralysis of upper limbs.

4. **M-HN-29 (Muscle Point)**
Traditional Name: Xinshi = New Recognition
Location: On the back of the neck between the third and fourth cervical vertebrae.
Uses: Can relieve stiff neck, headaches, sore throat.

Fig. 26 *M-HN-29 (Muscle Point)*

5. **GB-20 (Gall Bladder Meridian)**

Traditional Name: Fenschi = Pool of Wind

Location: On the back of the neck in the hollow at the base of the

Uses: Can help a hot wind condition; can improve hearing and vision; can relieve the common cold, headache, stiff neck, hypertension, sinusitis, red eyes, deafness, insomnia.

Locate and become familiar with the points and proceed then with the next procedure.

3. Practice of Opening of the Great Bridge and Great Regulator Channels

We will open the channels in two ways:

A. Concentrate on the Flow of (Energy in) the Channel(s)

The most important thing is that you will feel the flow of (energy in) the channels. Therefore just go along the Channels with your hands and mind and be aware of the Channels and the flow of energy.

Start at the top (GB-17) and go over the face and down in a straight line, along the front of the body and the inside of the legs to the K-1 (Bubbling Spring). Then go up, on the outside of the legs, hips and spine to the shoulder and down to the armpits (SI-9). Next go with the right hand over the outside of the left arm and back on the inside of the left arm to LI-16 on the shoulder. We continue with the left hand from SI-9 over the outside of the right arm and back on the inside of the right arm to LI-14 on the shoulder From there we continue with both hand along the neck to GB-20 back to CB-17. Touch lightly each point and use your mind/eyes, when you go down and up along the Channel in this way. You can repeat a few times until you really are aware of the Channel and feel the flow of energy.

B. Open the Channel(s) More Specific by Individually Opening and Connecting each Point along the Channel

a. Open and connect the points GB-17 to ST-4 on both sides of this part of the Channel.

Preparation:

1. Sit or stand up, and smile down.

2. Practice quickly Fusion of the Five Elements, reactivate the pakuas, the facial and universal pakua as well. Spiral the pakuas and draw all the energies also of the organs, the senses and the mind to the big space, the cauldron in your Tan Tien. Balance the emotional energies in the organs as taught in Formula III and let the Compassion Energy grow with the creation cycle of Cosmic Fusion.

Spiral and condense the energies in the cauldron to form a shining pearl.

3. Move the pearl down to the perineum and circulate the energy a few rounds in the Microcosmic. Let the pearl absorb forces of the Earth, the Cosmic Particles and the Universe. Move the pearl down to the perineum again.

4. At the perineum use the pearl to clear the Left, Middle, and Right Thrusting Channel. Move the pearl up and down through all three Thrusting Channels to the crown, in the following way.

- Hold your left arm, with your fingers pointing down to the earth, along your side. Inhale, close your right nostril and pull up your left anus and suck the energy up through the left Thrusting Channel. Exhale and let all the toxic and sick energy flow through the channel down into the earth.

- Close both nostrils, pull up the middle part of the anus and suck the energy up through the middle Thrusting Channel. Exhale, bring your right hand along your side, keep the left nostril closed, and let all the toxic and sick energy flow through the middle Thrusting channel into the earth.

- Keep the left nostril closed, and the right arm hanging down. Inhale, pull up the right side of the anus and suck the energy up

through the right Thrusting Channel. Exhale and let all the toxic and sick energy flow down through this right channel into the earth.

- Repeat the procedure for the middle thrusting channel (when you exhale down, keep your right nostril closed and your left arm hanging down), the left Thrusting Channel, the middle Thrusting Channel (exhale down on the right side), the right Thrusting Channel, the Middle Thrusting Channel (exhale down in the left side) and the left thrusting Channel.

- Rest and feel the three Thrusting Channels and all the organs, they penetrate, open and clean. With your mind/eyes you can still let the energy flow up and down in the three channels. All the routes and clean the Thrusting Channels.

Practice:

1. Then move the pearl through the Left and Right Thrusting Channel to point GB-16 on both side of the Pai Hui, at the top of the head. Use your right and left's hand middle finger to press on the center of the crown through which the Middle Thrusting Channel runs. Now move this fingers to a point about one and a half inches to the left and right of the crown, and press on this point, GB-16. The points GB-16 will feel painful when pressed. Release; press again, then rest. Concentrate on and feel this point.

Note: It is not necessary to find the exact location of each point. The points are quite large. When you use three fingers to cover the point(s), you will find it/them by feeling the spot(s) where the energy is most condensed, recognizable by the strongest pulsation.

2. With the middle fingers of each hand remain on GB-16, place the index fingers about one inch away from the middle fingers on GB-17, and the fourth fingers to a point about one inch away from the middle fingers on GB-15. Press and release all three points a few times simultaneously. All three points will feel painful when pressed. Then continue to use all three fingers to press them lightly until you feel a pulsation at the fingertips.

3. Continue to press the fingers on these points. Then, using the index, middle, and fourth fingers together, gently press on point GB-

14 on both sides, in the middle of the forehead over the left and right eye. When you feel the points, mentally move the energy down from the crown to the forehead. Feel the energy flowing. The energy will flow quite easily through this point, perhaps it will be a little bit painful. Continue to press here until you feel again a pulsation at the fingertips. If you feel tense and worried, GB-14 is usually blocked. Wrinkle the brow as you do when you are tense, and hold GB-14 on both sides to stimulate the energy flow. Stiffness in the neck and face, which is the product of overall tension, can be relieved by restoring proper flow to the area of GB-14. In addition, since this point is strongly related to consciousness, good energy flow through GB-14 will calm the spirit and brighten vision.

4. Move the three fingers of both hands down to press on ST-2 on both sides of the cheekbone in line with the pupil and GB-14. Feel the energy flow in a line from the top of the head down the forehead, through the eyes to the cheekbone points, ST-2. You may feel a pain in the cheekbone area.

5. Move the same fingers to the point at the corners of the mouth, ST-4. Press ST-4 in and slightly upward. This point is also tender upon pressure. You may feel pain from pressing this point manifesting in the teeth. Run the energy again from the crown through the points to the corners of the mouth.

6. Now release both hands from the points they have been pressing. Clasp them together in the holding position of meditation, and mentally run the left route from the top of the head points, GB-17, GB-16, and GB-15, down to ST-4.

7. Rest. Let the energy flow by itself.

b. Open and connect the points ST-4 to SP-4 along the entire front route on both sides.

1. If you start fresh, repeat the steps of A. Otherwise you just proceed to the next points of this route.

2. Keep your fingers on ST-4 in the corners of your mouth and move the energy down to CV-23. Use the left or right thumb to press

CV-23, under the chin. Press upward toward the tongue, and feel the energy flow down to this point. As the energy flows, you may feel a pulse or electricity in the hand.

3. Use the left or right thumb to press down on the top of the sternum toward the chest. Rest, and then use the left index, middle, and fourth fingers to press lightly on the CV-22 point above the sternum. Move the energy to this point, and relax for a while.

As you relax, use the mind to connect these points (CV-23 and CC-22) with the previous points.

4. Move the index, middle, and fourth fingers of each hand from the three points at the top of the head to point ST-13 under the collarbone. Then, move the left and right index, middle, and fourth fingers to just above the nipple at ST-16. Trace the energy flow from the crown down to the forehead, cheekbone, comer of the mouth, CV-23, CV-22 above the sternum, to ST-13 under the collarbone (ST-13), and to ST-16 just above the nipple.

5. Continue to keep the right and left fingers on ST-13. Move the left and right hand down straight in line with the nipple and middle of the collarbone to LV-14 between ribs eight and nine. Feel the energy flow inside your body. Massage, release, and press again until you feel a pulse at this point indicating that the energy has traveled this far. Move the left and right fingers to just beneath the rib cage in line with the nipple to SP-16. Move the energy to the point.

6. Move the left and right fingers to SP-15 at both sides of the navel and to SP-13 at the groin area above the leg bone and in line with the above points. Feel the energy connection and movement.

7. Move the left and right fingers to SP-10 on the inside and just above the knee, Feel the connection. Then, move with the fingers to SP-9 just below the knee, and connect it with the flow of the energy from the above points.

8. Move the left and right fingers to K-6 one finger's width below the inner ankle. Feel the connection. Then, move the left and right hand to SP-4 on the inside of the feet in a hollow just behind the ball of the feet. The energy may pulsate at this point as it connects to the above points.

9. Then move the left and right hand to K-1 (Bubbling Spring) at the center of the ball of the feet.

10. Now, clasp your hands, and put them on your lap in the meditation position. Mentally trace the energy flow from the top of the head to soles of your feet.

11. Slowly open your eyes. You should feel peaceful as the energy connects.

c. Open and connect all the points K-1 to SI-9 along the entire Yang (back) route of the channel.

1. When you start fresh, continue the above procedure all the way down to K-1. If not, just continue.

2. As above, put first the right and left hand on GB-17, GB-16, and GB-15.

Begin to run the route again down to ST-13.

3. Place the three fingers on ST-13 under the collarbone on both sides as before, and continue to hold this point with those fingers as you proceed with the three fingers to press and connect each succeeding point. Run the route in this manner down through ST-16, down the front, left side .of the body to K-1 and GB-41.

4. Continue to follow the route upward in one straight line at the outside of the ankles and legs along B-62, GB-34, GB-31 over the hip GB-29 to B-48 on the back, a little above the top of the sacrum.

5. Then, move the right and left three fingers to the back to the points B-47, B-42, and B-38, all the way up to TW-15 at the top corner of the scapula.

6. Now, move the right and left three fingers to the points SI-10 and SI-9, above and just above the armpits.

7. Now, clasp your hands, and put them on your lap in the medication position. Mentally trace the energy flow from the top of the head to soles of your feet and up to SI-9 just above the armpits.

8. Slowly open your eyes. You should feel peaceful as the energy connects.

d. Open and link together the points LI-14 and TW-5 of the Yang armroute of the left arm.

1. Use the three fingers of your right hand to move down to points LI-14 and LI-11 on the arm, and TW-5, above the outer wrist.
2. Rest, close your eyes and feel the flow of energy.

e. Open and connect the points P-8 - L-1 of the Yin armroute of the left arm.

1. Then move the right three fingers down and over the middle finger to point P-8 on the palm.
2. Next, move the right three fingers up along the inside (Yin) side of the left arm to join the points which are running down the Yang (outer side) of the left arm to the points M-UE-12, P-6, P-3, P-2 and L-1.
3. Rest, close your eyes and feel the flow of energy along the points the Yang and Yin route of your left arm.

f. Repeat step d and e on your right arm to open the points of the Yin and Yang part of the Channels on this arm.

g. Open and connect the points LI-16 to GB-20 on both sides of the last part of the Yang route of the Channel.

a. Move with the fingers of both hands from L-2 to LI-16 on top of the shoulders.

b. Move from there to GB-21, M-HN-41, M-HN-29 to GB-20 at the base of the skull.

c. Put the hands together in the meditation position, mentally move energy through the whole left and right sides of the Great Bridge and Great Regulator Channels. Run both sides of the Channel together by simply using the mind to direct the energy from point to point.

d. Collect the energy at the cauldron, and finish with Chi Massage.

Daily Practice

Quick Morning Checkup of the Eight Psychic Channels

1. Smile down, quickly form the pearl, and bring it down to the perineum. Practice six rounds of the Microcosmic Orbit.

2. Return to the perineum and clear the three Thrusting Channels, including the leg routes with the procedure described in Cosmic Fusion and on page 24 of this handbook.

3. Women, guide the energy into the earth, absorb the energy and spiral it clockwise and then counterclockwise. Start the Belt Channel up to and above the crown. Absorb the heavenly force. Continue spiraling counterclockwise and then reverse the direction and spiral the Belt Channel down to the earth again and back to the feet. Men, guide the energy above the crown. Spiral counterclockwise and absorb the Heavenly force. Spiral then clockwise and circle the Belt Channel down into the earth. Spiral clockwise and absorb the earth force. Reverse the direction and spiral counterclockwise the Belt Channel up to the Crown and then down to the earth again in a clockwise direction, back to the feet.

4. Men and Women split the energy (pearl) at the feet and start the flow of the energy through the Great Bridge and Regulator Channels from the inside of the left and right the foot (SP-4) and run the Channel along the inside of the legs, the groins, the front side of the body up to GB-14. Continue up, over the head, passing GB-15, GB-16, GB-17 down to LI-16. When you go up on the inside of the legs and the front side of the body, you will feel feel the energy flow along the outside of the legs (Most of the Yin and Yang points are located just opposite each other) and the back of the body at the same time. From LI-16 you go to L-1 and then, along the inside of the arms, P8 and from there you go over TW-5 up on the outside of the arms to join again at LI-16. From there you go up to the crown (GB-16) again.

5. Rest. Guide the energy with your mind/eyes through all the eight Channels.

6. Rest and bring the energy and your attention back to the cauldron in your Tan Tien. Gather and blend all the energy. Turn your senses and mind inward. Empty the mind in the Tan Tien and do nothing.

7. Collect the energy and end with a soft Chi Self Massage.

Protection of the Spinal Cord

1. Spinal Cord Microcosmic Orbit: Supplemental Belt Channel

This practice serves to strengthen the spine and protect it, and it is also important in the higher practice to wrap the spine with energy for its maintenance during trips to the midplane.

A. Practice Fusion, and then run the Microcosmic. Bring the pearl into the sacrum, and run it up the inner side of the back of the spinal cord to the brain. Wrap the energy around the frontal lobe and inside the skull. Return it down the inner side of the front of the spinal cord, and wrap it around the whole length of the spine.

B. Bring the pearl down to the coccyx and through it, and then up the outer side of the back of the spinal cord to the outside of the head. Wrap it around the frontal lobe and bring the pearl down along the outer side of the front of the spinal cord and return it to the coccyx.

C. Wrap the pearl around the coccyx. Wrap it around the outside of the spinal cord all the way up to the brain and the frontal lobe of the brain. Wrap the pearl around the skull, and then wrap it down the inside of the spinal cord to the coccyx.

D. Rest and do, with the mind/eye, the Spinal Cord Microcosmic Orbit for a few times.

2. Spinal Cord Cutting from the Throat Center

A. If you start fresh, always start with Fusion of the Five Elements to form the pearl, and circulate it in the Microcosmic Orbit for a few rounds.

B. Stop the pearl at the throat center at the top of the sternum. Inhale, exhale, and project the pearl out from the throat, and around the outside of the head toward the back to cut through C-7. Cut through and cut down through each of the cervical, thoracic, and lumbar vertebrae, down to the sacrum and coccyx.

C. Finish by bringing the pearl back into the throat.

Fig. 27 *Spinal Cord Cutting and from the Throat Center*

3. Protection of the Spine, Organs and Glands Cutting from the Third Eyes

A. Begin at the mideyebrow, and use the pearl to cut either clockwise or counterclockwise through the neck, the thoracic, and lumbar vertebrae. Cut until the whole body has been cut, including all the organs and glands. Return the pearl to the mideyebrow. The spine is now completely wrapped with energy.

B. When finished, bring the energy back down from the mideyebrow to the navel to collect it there.

Butterfly Protection of your Body

Cutting with Energy.

1. Start at ST-16 just above the nipples. (This point is slightly higher on women than on men.)

Fig. 28 *Spiral Energy From ST-16 Just Above the Nipple, Increase the Spirals on the they Encompass the Body.*

2. The pearl spirals in line with the body from ST-16. As it spirals, it cuts through both sides of the body through the rib cage in outward and downward ares (like the wings of a butterfly), and then cuts back in.

3. The spirals grow larger each time to include the whole body and legs. Eventually the spirals come forward out of the body into the aura.

4. Collect the energy at ST-16.

This exercise is often used in the Martial Arts. Because you are spiraling your energy all around you, your opponent can not find where the center of your energy is and can therefore not “attack” you. We use the Butterfly for the same reason in the higher practices to hide our center of energy so “nobody” can attack us. It is a very good psychic protection.

Cutting the Senses

This is a good way to protect and seal our senses.

A. Begin about half an inch in front of the eyes, spiral the pearl in three figure eight motions from the mideyebrow in the following manner.

Fig. 29 *Cutting the Senses*

1. Spiral the pearl down to the bottom of the left eye, circling it up to the top of the left ear. Then, circle it down the back to the bottom of the left ear, and circle up to the left eyebrow.

2. Circle across the mideyebrow, down to the bottom of the right eye, up to the top of the right ear. Circle around the back of the right ear, up to the right eyebrow, and join the first spiral at the mideyebrow.

3. From the mideyebrow spiral down to the left side of the nose, and down to the right corner of the mouth in a half circle. Spiral under the mouth to the left corner of the mouth, and then cut across to the right side of the nose. Return to the mideyebrow.

B. Collect the energy at the mideyebrow when finished.

Drilling the Head with Energy

This exercise is used to drill our head more open in order to receive the higher frequencies. Drilling the head with energy helps also to clear the brain.

1. Drill with the energy by spiraling the pearl into the head horizontally from points on the forehead to the back of the head, starting from the mideyebrow.

2. Later you can drill with energy all over the face, horizontally and vertically, including from the top of the skull to the neck and chin, until you feel your head clear.

Fig. 30 *Drilling the Head with Energy*

Sealing the Aura

1. This Taoist practice concentrates on containing the aura to preserve energy, and creating a thicker aura to protect the body.

2. Begin at the navel and send a pearl of energy down the front of the leg to the big toe of the right foot. Jump the energy from the big toe of the right foot to the big toe of the left foot.

3. Run a sheet of energy that traces the toes of the left foot and the outside of the left leg. Trace the outer left side of the body to the armpit. Trace the inside of the left arm, thumb and fingers. Trace the outside of the left arm, over the left shoulder, and over the crown.

4. Now trace the outside of the right arm, fingers, and inside of the arm. Trace the right side of the body, down the outside of the leg to the toes. Trace each toe and bring the sheet of energy up the inside of the right leg, around the perineum, to the inner left leg, to the toes, and jump the energy to the right toes again to finish the procedure. Bring the energy up, and collect it. If you wish to continue with this exercise, do not jump the energy back to the right toes.

Sealing the Aura: First Part Sealing the Aura: Second Part

Fig. 31 *Sealing the Aura*

5. Trace the front side of the left leg up to the left pelvis. Cross the energy over the solar plexus to the right collarbone, and bring it down the inside of the right arm. Trace the fingers and trace up the outside of the right arm. Wrap the energy over the crown and down the outside of the left arm to the fingers. Trace the inside of the left arm to the left collarbone. Bring the energy down the front side of the body, crossing over the solar plexus again, to the right hip, and then down the front side of the right leg.

6. Bring the energy up the backside of the left leg, and cross over to the T-11 and the right scapula. Trace the inside of the right arm, around the fingers, up the outside of the right arm, over the crown, down the outside of the left arm, up inside of the left arm to the left scapula and across to T-11. Cross over to the right, to the back of the right leg, to end at the toes.

Bring the energy up to the navel, and collect the energy at the cauldron.

7. Rest. Turn your senses and mind inwardly. Empty your mind in the cauldron in your Tan Tien. Feel nice, calm and protected.

Fig. 32 *Third Part Sealing the Aura.*

Energy Body

Transfer the energy of Microcosmic, Thrusting and Belt Channel from the Physical Body into the Energy Body above. Once you have practiced to this level, you are ready to form the pearl into an energy body.

1. Always do Fusion of the Five Elements to clean out the negative emotions.

2. Condense the pearl and practice the Creation Cycle, Thrusting Channels and Belt Channels.

3. Run the pearl in the Microcosmic, and control its movement with the senses.

4. Move the pearl to the perineum. Inhale in short sips, drawing in ten percent of lungs capacity and pull up the anus. Inhale up to the navel, and inhale up to the heart.

5. Inhale up to the crown. Swallow your saliva (imagine swallowing upward) and exhale forcefully to open the crown and shoot the pearl out.

6. Feel the Universal Force, the forces of the North Star and Big Dipper above your head, and the Cosmic Particle Force in front of you as they shine down to your pearl. Feel your pearl start to absorb this energy, and then feel it expand.

7. Bring your awareness to your feet. Feel the earth energy flow up through your feet, supplying this energy to your body. The pearl continues to expand with all the energy coming to it from outside the physical body.

8. Relax the senses, and form the energy body. Count the years of your age and with each year your energy body is growing. Form the energy body in the way you like.

9. Run the Microcosmic in the physical body. Open the crown, transfer the Microcosmic pathway into the energy body.

10. Form another pearl in the cauldron, and shoot the pearl into the energy body. Circulate the pearl through both Microcosmic Orbits.

11. Move the Thrusting Channels into the energy body.

Extend the Microcosmic Orbit.

Extend the Thrusting Channel.

Extend the Belt Routes into the Body Above.

Fig. 33 *Energy Body*

12. Practice all the Belt Channels up through the crown to and around the energy body. Feel the Belt Channel spiral around the physical and the energy body, connecting all the Channels in both bodies and protecting them.

13. Continue to practice until you are in full control of the energy body. Bring your awareness in this body. Just let it very carefully, travel a little bit, still close connected with your physical body (especially with the cauldron in the Tan Tien) and the Earth. Let it collect and absorb the energies of the North Star and Big Dipper, of the planets and the stars.

14. When you are ready, shrink the body to a pearl again. Activate the Cranial Pump. Press your tongue up, clench your teeth, pull back your chin, pull up your anus, and look up to the crown. Feel the beating in your heart and the pulse at your crown.

15. Activate the lead light, and let it shine up from your crown. It may feel like a frequency going out of the crown. Draw the pearl down to the lead light, and land the pearl. Inhale and draw the pearl back into the crown.

16. Move the pearl in the Microcosmic Orbit and nourish the physical body with all the energies the pearl has absorbed. Then bring it down to the navel and to the cauldron at the body's center. Collect, spiral and condense the energy in the cauldron.

17. Sit back. Turn yourself inwardly toward your center. Rest and stay in this energy.

Note: The energy which the pearl/energy body is absorbing, is nourishment for your physical body and especially for your energy and spirit body, which are formed in the practice of the Immortal Tao.

Fusion of Eight Psychic Channels

Opening and Sealing Psychic Channels

Mantak Chia

Illustrations by Udon Jandee

Fusion of Eight Psychic Channels

Fusion of the Eight Psychic Channels is the last of the three Fusion practices. It teaches you the last techniques and meditation to make you ready and prepared to start the Practice of the Immortal Tao.

In this booklet, you will learn how to open and clean the Great Bridge and Regulator Channels, to protect your spine and energy field, to seal the aura and the senses. You will also learn how to open crown your head. Finally, you will learn to transform the Microcosmic Orbit, the Thrusting Channels and the Belt Channel in the Energy Body.

With the help of many diagrams, you will first be able to locate and discover the practical uses of the points of the Great Bridge and Regulator Channels. You will then learn to concentrate on the flow of energy in the channels and to open and connect each point to enable the energy to flow freely.

The Spinal Cord Microcosmic Orbit practice strengthens and wraps the spinal cord with energy. Sealing the Aura enables the practitioner to create a thicker aura to protect the body, while opening the crown energy helps to clear the brain and facilitates the reception of higher frequencies.

This booklet is designed so you can use it to do your practice at your home or anywhere in the world. We are happy to welcome you to the Universal Tao family as a practitioner of the Universal Tao System.

Such problems should be corrected before you start training. This booklet does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Introduction

Greatest Kan and Li

Somewhere in the Heavens is the North Star. Looking at the sky at night, one would see it past the top stars of the bowl of the Big Dipper. It lies almost directly above the North Pole, with the Earth angled at 23.5 degrees towards it. To navigators, it appears as a fixed point in the sky, serving as a reliable reference in their travels. It is just one of the myriad stars, rather insignificant and ordinary, but to the Taoists it is the Center, unmoving while all the rest of the constellations revolve around it. It is called by different names—Tian Shu, Tai Yi, the Great One, the Purple Rose, even Zi Gong, the Dwelling Place of the Immortals, because it is believed by the Taoists to be the Gateway to Heaven.

If there is a universe up there, there is one in the body too. To the Chinese, the body is a microcosm of the universe. “As above, so below.” Whatever happens up there happens down here. Hence, the physical body is marked with gridlines of energy and meridians of light around a Center, with different body parts equated with planets and the zodiac. The Center in the body is called Tan Tien, or “field of energy”.

The idea of a Central Axis—the Polestar in the firmament and a Cauldron in the body—is a cardinal tenet in Taoist philosophy and alchemical practice. To get to the Center of the body, open the Tan Tien; to get to the Center of the heavens, enter through the North Star. Both are doorways to the heart of the true Tao, the Wu Chi, from which both Heaven and Earth are born.

Fig. 1 *Connecting to the Earth and the Polestar by opening the Microcosmic Orbit*

Getting to Heaven and/or achieving immortality without going through countless reincarnations is a vision Taoists cherish. How to get there is a problem they have tried to solve in countless ways through the millennia. One school used external alchemy -- the forging or mixing of metals and elements and herbs to produce some kind of philosopher's stone that transformed mortality into eternal life. Another school relied on internal alchemy --fusion of the body's energies to give birth to a spiritual embryo capable of maturing into a deathless existence and of flight inward, beyond time and space, to the Source.

Fig. 2 *Central Axis - the Polestar in the Firmament*

The internal alchemy path relies on a regime of diet, exercise, virtue, and meditation to achieve immortality. To certain practitioners, the goal is possible immortality of the physical body and definitely of the spirit. In short, eternal life here on earth and survival beyond. Others believe that physical immortality is not achievable, so they aim to prolong life to gain time in surviving physical death.

It is not exactly known how the Taoists arrived at the contemplative practices for which they are justly famous, nor how they tracked the energy lines of the body. Whatever means the Taoists used, it is a fact that to them meditation is not just "sitting quietly, doing nothing". It is actively moving the energy through the channels and organs, mixing the energies of the body with the cosmos, giving birth to the Immortal Fetus, and nurturing its growth into the Divine Child within, which matures into a spirit-body that unites one with the Tao.

The Taoist road to that primordial birthplace traverses a difficult and uncertain terrain. It is necessary to prolong life through nutrition, breathing, herbs and exercises to give the adept more time to cultivate the Immortal Pill. Likewise necessary is the rejuvenation of the body through the reversal of the energy flow (as for instance retaining the sexual energy and using it to nourish the organs and endocrine glands), the development of Wu-Wei (non-action) and a serene mind, and a host of other regimens. As important is the calm acceptance of death, for after all, the physical body is only an ephemeral vessel for the earthly transit.

The Taoist adepts do not, of course, end their meditation within the terminus of the physical body, but expand the Immortal Spirit to explore all space both inner and outer. Like the physical self, the Immortal Spirit starts as a fetus, is born and grows slowly into maturity as it is nurtured. Later, it becomes capable of independent existence.

Kan and Li practice points to the Taoist road to spiritual immortality and Taoist internal alchemy. Understandably, there are various versions of how it is done; after all, the Transmissions are shrouded in mysticism and secrecy. Master Mantak Chia is the first Taoist to introduce this spiritual discipline to the Western public.

Through the years, different Universal Tao practitioners have evolved different versions of the formulas. But we all started from the same beginning. Here then, in outline form, is the highest Kan and Li practice as taught by Master Chia of the Universal Tao Center.

Fig. 3 *Necessary is the rejuvenation of the body through the reversal of the energy flow.*

Greatest Kan and Li

Kan and Li literally means Water and Fire. In Taoist alchemy, the meaning of each depends on the level of meditation you are doing. In the formulas, it generally refers to the reversal within the body of hot/fiery and cold/watery energies so that an alchemical transformation can occur.

Fig. 4 *Greatest Kan and Li*

Yet Water and Fire are not defined by the physical glands and organs, i.e. kidneys and heart. Nor do they refer to pure Yin and subtle energy.

Water and Fire are the Yin and Yang energies after they have manifested into a particular energy form, and are functioning somewhere between the extreme poles of Earth/matter and Heaven/spirit. We are not tapping into the body as matter, but for the energetic emanations of the physical (Chi, emotions, temper and sexual energy). We reverse and couple Water and Fire in order to dissolve any dualistic energy pattern that limits our spiritual growth.

On our return journey back to the Tao, there are many seemingly fixed patterns of reality that block our progress. As Taoists, we do not struggle or fight with these seemingly impassable obstacles within our body/mind — we simply identify the polarities present, and Dissolve them. This is a necessary step in our return through the 5 Elements and Yin-Yang dialectics to the Uncarved Block, the Undifferentiated Whole, Wu'Chi, the Tao.

Lesser Kan and Li started the reversal of Water and Fire (the Cauldron and Stove) in the lower Tan Tien, between the navel and the Ming-men near the spine. We gathered our Chi to form a special pearl and seeded it with the wood/thunder Chi from the liver, thereby impregnating our soul.

Greater Kan and Li raised the Cauldron to the solar plexus, or Yellow Court. We added more types of Water and Fire energies, both internal and external, to the equation. Our pearl seed was mixed with earth Chi from the spleen, and our spiritual embryo was formed. The steaming process purifies the organs and helps us achieve emptiness; it also softens and clears the Thrusting Channel for our embryo's passage to the Heart.

In Greatest Kan and Li we move the Cauldron up to the heart center, also known as the middle Tan Tien, or Cinnabar Palace. We will again reverse and couple new and more subtle levels of Water and Fire energy. The spiritual embryo is seeded with the third essential alchemical ingredient, Shen, which is our spirit or higher consciousness that resides in the Crystal Palace. If conditions are right, our inner child is born in the heart-womb in a sea of bliss.

Fig. 5 *Greater Kan and Li raised the Cauldron to the solar plexus.*

We also gather the inner light to form the Small Pill or the Great Pill of Immortality, which refer to levels of cosmic consciousness attainable from an expanded heart center as the Holy Spirit descends to impregnate the Cauldron.

We continue to tap into the extra-terrestrial sources of power—the moon, sun, planets, constellations, and especially the Big Dipper and North Star—to fuel our Inner Child's growth towards immortality.

In Greatest Kan and Li, we use Water and Fire to dissolve the ego/mind's arbitrary boundaries between our inner world and outer space. We travel to the farthest reaches of the Universe in order to return to the center of our own Tan Tien.

There are three parts to the practice: A. Basic Formula (Preparation),B. Greatest Kan and Li Proper, and C. Supplementary Practices.

A. Basic Formula (Preparations)

It is often asked, "how do we prepare ourselves for the higher practices?" There is no fixed formula for this, but you are advised to regularly clean your energy field using the basic Fusion meditations. As the energy work becomes very subtle in the Greatest Kan and Li, you must develop and maintain a calm mind and a pure, virtuous energy body in order to receive these subtle cosmic frequencies and perform the exquisite alchemical operations.

If you are living in a stressful urban environment you should practice on a regular basis, if not daily, Fusion of the Five Elements and Cosmic Fusion and if time allows, Fusion of the Eight Psychic Channels. These formulae address the basic transformational and energetic needs of spiritual practice; they clear the channels (Governor, Conception, Belt, Thrusting); and in the Advanced Fusion formulae, allow the practitioner to hook up to the available energies around in the environment.

One problem is time. Not everybody has the convenience of time and leisure. There is that job waiting or that test to be taken. Simply, how do we squeeze one more exotic practice into our already harried lives? Finding time is only a matter of self-discipline and setting priorities in your life. We have to give up a few things—that football game, movie, party, or week-end nap.

Practitioners of the Universal Tao follow a flexible regimen. Along with the Fusions, Iron Shirt and Tai Chi Chi Kung are practiced on a regular basis of at least twice a week. Kan and Li practices, with their dissolving processes, could leave the practitioner spaced-out and ungrounded if he/she does not complement them with rooting. A balanced practice will also nourish both the physical and spiritual, the ascending earth and descending heaven energy and include good nutrition.

Caution: A good rule of thumb—only do what you are comfortable with, never rush into a higher practice unless you are ready. You will know how you feel; if you are not sure, call a person who has practiced at your level. Develop a network of people who are your classmates and share your experiences.

If you have not practiced Lesser or Greater Kan and Li, it is useless to study the Greatest, as each builds on the previous. Spiritual dilettantes will waste their time memorizing this formula—it is an empty husk without the self-discipline of daily meditation. If your Lesser or Greater practice has fallen slack, practice it for a few weeks before proceeding.

Strictly avoid any black magical practices. This means do ***Not*** project any desires for material gain or power over others into your spiritual child. It will corrupt your inner child and derail your spiritual growth into a blind alley. Your inner child is seeking the Tao of Immortality; worldly gain is in the opposite direction.

If you are feeling uncomfortable, consult this manual again or call the Universal Tao Center. Remember that the spirit of Taoism is characterized by joy, humor, compassion, ease, Wu-Wei (loosely translated as patient waiting) and healthy non-attachment. Enjoy your practice, allow for the spontaneous to happen, be patiently aware.

B. Greatest Kan and Li Proper

The essence of Greatest Kan and Li practice is the establishment of the cauldron in the Heart Center and the further refinement of the Soul and Spirit. It is in the Heart Center that most of the Greatest Kan and Li practices take place. The coupling of the energies here, involving macrocosmic-microcosmic energetics, is the central formula. It is therefore important to spend more time on this rather elaborate but enjoyable procedure.

C. Supplemental Practices

These practices are techniques to draw more energy from both outside and within the body, to facilitate the alchemical process. When one becomes familiar with them, they are integrated into the Greatest Kan and Li. They can also be practiced independently as a separate discipline.

All of the above practices will be combined and integrated into one continuous formula for individual and group practice during the week-long retreat.

Fig. 6 *Twenty-Eight Constellations*

Fig. 7 *North Star - Big Dipper - 28 Constellations*

Outline of Greatest Kan and Li Practice

A. Basic Formulae Simplified

As stated above, it is necessary to keep up one's basic practice, Microcosmic Orbit, Iron Shirt (especially Iron Shirt I), Universal Love and Tai Chi Chi Kung I. It is also necessary to practice the three Fusions before Greatest Kan and Li. A schedule should be followed.

Suggested Practice:

Fusions should be practiced in the morning and Kan and Li in the afternoon or evening. Iron Shirt I and Universal Love (Testicle or Ovarian Breathing, Scrotal and Ovarian Compression and Big Draw), followed by Tai Chi Chi Kung about 2-3 times a week.

In Fusion practice, it is suggested that the practitioner start with Cleansing the Negative Emotions (from Fusion of the Five Elements) and creating a Pearl, Creation Cycle (Meditation on the Virtues from Cosmic Fusion), Clearing the Thrusting Channels and Belt Routes (also from Cosmic Fusion), Microcosmic Orbit Meditation, the Three Planes (Projecting the Pearl through the Perineum/Bubbling Spring to the Earth, through the Third Eye to the Cosmic Plane and through the Crown to the Universal Plane; Projecting the Microcosmic, Thrusting and Belt Routes into the Three Planes, from Fusion of the Five Elements) and then, if time allows, Fusion of the Eight Psychic Channels (Great Bridge and Great Regulator Channels and Cutting techniques). As one gets familiar with the routine, the practice should take about 25 to 45 minutes or it could be stretched to an hour or two hours if one includes the Advance Practices of Fusion of the Five Elements (especially the two formulae—Calling the Earth Force to Empower and Protect and Calling Forth the Planets' and Stars' Forces for Empowerment and Protection).

We cannot, of course, prescribe one regimen for everybody. In time, if you practice consistently, you will find the right combination of formulae and develop a comfortable routine that is suited to your schedule and temper. Whatever your routine, remember to spend time in creating a Pearl to use in cleansing yourself and growing positive virtues.

Many practitioners of the Universal Tao spend more time on Embracing the Tree, Holding the Golden Urn and Golden Turtle/Water Buffalo than on any other postures and find that with this set of three, they attain the rooting that they need for the higher practices. Find out for yourself what postures are ideal for your practice. Avoid packing with physical breath if you are preparing for Greatest Kan and Li. Understand that Chi has different refinements and meanings; at this level you should be drawing the Chi in your body and using mostly your mind to pack the Earth Chi into your organs and fascia.

Here is a brief Preliminary /Preparatory Meditation:

1. Inner Smile (starting with the eyes and covering the head, neck, shoulder, arms, body, hip, legs and feet with Universal Light).
2. Fusion Outline:
   a. Form the 4 Pakua (front, back, right and left).
   b. Collect and balance the Negative energies on all 4 sides. Form the Immortal Pearl.
   c. Creation Cycle (Meditation on the Virtues using a Pearl to travel through the different organs/phases).
   d. Clearing the Channels (Thrusting Routes and Belt Routes).
   e. Microcosmic Orbit (using the Pearl).
   f. Three Planes/Forces (Projecting the Pearl, Pakua, Microcosmic Orbit, Thrusting Routes, Belt Routes, through the Perineum/ Bubbling Spring, Third Eye and Crown).
   g. Closing and Collection of Energy (if further practices are not covered).

B. Greatest Kan and Li Proper

The central focus is the Coupling at the Heart Center. To practice this, however, requires a foundation, part of which we have established in earlier courses.

1. Activating the Cranial and Sacral Pumps
2. Alignment of Three Triangle Forces
3. Coupling in the cauldron.

We will now use these practices on a higher plane. In a way, we have built the structure block by block, starting with the Inner Smile, each piece becoming a new awareness that supports the growth of the next practice level of consciousness.

1. Activating the Cranial and Sacral Pumps

The essentials of this practice have been developed in Iron Shirt and Healing Love. The technique helps to open the Crown by vibrating the bones at the sutures with micro-pressure and to project the Pearl/Soul/Spirit. It has been found that when one holds the breath, the skull vibrates thus loosening the bones, making it possible to open the Crown for the Egress of the Spirit, Basically, the procedure for activating the Cranial and Sacral Pumps (needed in the Alignment of Three Triangle Forces, below) is to:

a. Clench the teeth and look up.

b. Press the tongue to the palate.

c. Bring the chin down and gently push the C-7 back.

d. Sink the sternum and round the scapulas (muscles stay soft).

e. Gently squeeze the buttocks, anus and perineum.

f. Inhale, pull up the genitals. Send the energy up the spine to the Crown, look up, and swallow saliva upward as you feel the earth force come up to you.

g. Spiral feet outwards into the ground.

h. Exhale and completely relax any muscles you have tensed.

Practitioners who have advanced in Iron Shirt I and Healing

Love should have no problem with this sequence. Practice the sequence until you are comfortable with it. Do not overtighten your muscles. You must be able to totally release all body tension so that the Chi can flow easily through the pumps and throughout the body. Work towards activating these pumps through structural alignment and mental focus only.

2. Alignment of the Three Triangle Forces

This technique is basically the same as Activating the Cranial and Sacral Pumps, except for a few differences.

Fig. 8 *Activating the Cranial and Sacral Pumps*

a. The First (Upper or Crystal Room) Triangle -- Pull the jaw/chin back towards the cervical, thus straightening the Jade Pillow. Gently stretch the neck up and open your C-7 to align them to the Crown. This also aligns the Crystal Room (Pituitary Gland, Pineal Gland, Fornix, Mammillary Body) with the Heart (and the Middle Triangle) and the Sacrum/Coccyx (Lower Triangle).

Fig. 9 *Alignment of the Three Triangle Forces.*

b. The Second (Middle) Triangle—Allow the sternum to move down or as the expression says, “Softly sink the chest”. This motion moves the Heart Center and sternum (the solid bone joining the ribs in the chest) back and aligns the Middle Triangle with the Sacrum/Coccyx (Lower Triangle) below and the Crystal Room above.

c.The Third (Lower) Triangle—Arch the sacrum and tilt the coccyx down to align the former to the Upper and Middle triangles and the latter to the Earth.

Practice the Alignment of the Three Triangle Forces separately until you are comfortable with it.

Note that the bones of the Three Triangle Forces (chin, sternum/xiphoid process, and sacrum/coccyx) are themselves triangular in shape. Triangle and pointed bones are able to project and attract energy more efficiently than round or flat bones.

When one aligns the Three Triangle Forces, it is easy to see that they create a kind of arrow, a trajectory upwards to the North Star and downwards to the Earth. Thus the physical body and its varied energies and technology become an efficient machine for attracting different forces, projecting and fusing energies between heaven and earth. The practitioner develops himself/herself into a powerful instrument capable of attuning itself with great precision to its purest source.

3. Coupling at the Cauldron

We established the Cauldron earlier in the Navel, then in the Solar Plexus; now we place it at the Heart Center.

To the Taoists, the heart (usually spelled with a capital H to serve as a metaphor for its functions) is like the mind (usually also caps and lower case); it contains and reflects all the emotions. To empty the heart means to empty it of the negative emotions. To control the heart is to control the emotions themselves.

Fig. 10 *Heart controls the following a circulation of blood for distribution of nutrients and oxygen.*

The Heart is a complicated machine. For our purpose, we need to know some of its basic mechanism and functions (in esoteric practice and in eastern and western medicine). It controls the following: (a) circulation of blood for distribution of nutrients and oxygen. The cleansing and oxygenation of blood through the aorta (sun, Yang), vena cava (moon, Yin), and right atrium, right ventricle, left atrium, left ventricle; (b) Yin Regulator channel; (c) Yang Regulator channel; (d) Yang Bridge channel; (e) Yin Regulator channel; (f) Belt Channels (g) Thrusting Channels; (h) Microcosmic (Governor and Conception);(i) 12 Meridians; (j) nerves;(k) bones.

All the electromagnetic currects come into the heart and are sent out ghrough the heart. The electromagnetic current is directly connected with the brain. The fire in the heart and the water in the kidneys balance the heart. Practicing virtue and compassion is the way to control the heart in order to increase the current. Otherwise, the heart overheats and the kidneys become too Yin. The heart and the kidneys are the step-up transformers and batteries of the body. The universe has all sorts of electric-magnetic energies which the heart and the kidneys can absorb. The circulation of the blood utilizes the same type of electric circulation as the heart and kidneys. The heart is the main generator and step-up transformer of the body.

A few facts about the heart: It beats at an average of about 65-75 times per minute, depending on different factors like age, physical activities, sex, body size, health, climate. As large as a fist, it contains four chambers-- the Right Atrium (into which de-oxygenated blood flows from the Superior and Inferior Vena Cava); Right Ventricle (which receives the oxygenated blood from the Left Atrium and pumps it into the Aorta. From there the blood is pumped to the different parts of the body. There is a system of valves and contraction which regulates the flow of blood back to the heart.

Exercise: Sensing the Heart's Polar Energies.

a. Use the mind to follow the Aorta (Yang) and Vena Cava (Yin) as they move the blood, the former away from the heart and the latter towards the heart.

Fig. 11 *Kidneys are the transformers of energy of the lower branches of the Aorta and Vena Cava.*

b. Collect the electricity from both sides of the head, neck, shoulders, upper chest, arms, hands, and collect it in the heart. Feel the recharging of energy.

c. The Kidneys are the transformers of energy of the lower branches of the Aorta and Vena Cava and they act as step-up transformers of energy. Use the mind to direct the circulation of the blood in the lower part of the legs up to the kidneys and feel the two kidneys become electrically charged. Direct the energy back to the heart.

Exercise: Listening to the Moment of Emptiness

a. Follow the flow of blood as it enters the Right Atrium from the Inferior and Superior Vena Cava. The blood is blue as it moves from the extremities towards the Heart.

b. Follow the flow of blood as it enters the Left Atrium from the Pulmonary Vein. The blood is red as it has just been oxygenated by the Lungs.

c. As the blood enters the atria, there is a relaxation. Two valves open and the blood drains into the Left and Right Ventricles.

d. There is a contraction of the Left and Right Ventricles, closing the two valves. The Right Ventricle forces the oxygen-spent blood into the Pulmonary Artery while the Left Ventrical pumps oxygenated blood to the Aorta and on the rest of the body.

e. There is again a moment of emptiness (relaxation) between the heartbeats (contractions). It is this second of emptiness that we should wait for.

Fig. 12 *Heart and main vessels of the circulatory system.*

Exercise: Activating the spirals of Heaven and Earth

a. Spiral the vortex in a clockwise direction descending from the Crystal Room to the heart; then spiral back up in a counter-clockwise direction.

b. Spiral the vortex in a counter-clockwise direction ascending from the Earth to the Perineum.

4. Coupling in the Cauldron at the Heart

Note that the same Thrusting Channels are used (Left, Right, and Center *or* Front, Back, and Center) as before. Note, however, that:

a. We use not only the Cold/watery energies from the kidneys and the sexual organs and the Hot/Fiery energies from the adrenals, thymus and the heart, but other energies as well. The Human (Third Eye) Force and the Universal (Crown) Force are added at the Crystal Room. The Earth (Perineum/Bubbling Spring) is added to the Cool/Watery energy at the perineum.

b. The warm energies of the hands, arms, shoulders, upper chest, neck and head could be added to the Crystal Room just before it goes down to the Solar Plexus.

c. The Cold/Watery energies of the Earth, legs and hips could be added

d. The Hot/Fiery Energies move from their sources up to the Crystal Room first, via the Left Thrusting Route or Front Thrusting Route; then back down to the Solar Plexus via the Right Thrusting Route or the Back Thrusting Route. You may also simply focus on the place you want to draw the energy to.

e. The Cold/Watery Energies move from their sources down to the Perineum via the Right Thrusting Route or Back Thrusting Route and then up to the Throat Center via the Left or Front Thrusting Route or simply draw the specific Chi to the desired point using your mind.

Exercise: To Mix Hot and Cold Energy

1. Be aware of the different energies of the kidneys (cold/watery) and adrenals (hot/fiery). Take your time in distinguishing the quality of each.

2. Send the Cold/Water Energy of the Kidneys to the Perineum Collection Point, taking along the Cold/Watery Energies of the genitals. Picture the Perineum Collection Point as a blue or dark blue sphere, a Cauldron (or Pot).

3. Combine the Hot/Fire Energy of the adrenals at T-11 on the spine and send it up the Left Thrusting Channel to the Crystal Room. Picture a Stove in the Crystal Room to contain the Hot/Fire Energies collected there.

4. Draw in the Earth Energy through the Feet (Bubbling Spring) and combine with the Cold/Water Energy at the Perineum Collection Point.

5. Build a vortex from the Heart to the Crystal Room.

6. Build up a vortex from the Earth to the Perineum.

7. Move the Hot/Fire Energy in the Stove from the Crystal Room to the Solar Plexus. Simultaneously move the Cold/Water Energy from the Perineum to the Throat Center.

8. (a) Add to the Hot/Fire Energies at the Solar Plexus or Crystal Room the energies felt at the head, neck, shoulders, arms and chest. (b) Add to the Cold/Water Energies at the Perineum the energies felt at the feet, legs, thighs and lower parts of the body.

9 Move the Hot/Fire Energies and the Cold/Water Energies to the Middle Thrusting Channel from the Solar Plexus and the Throat Center respectively.

10. Trace the aorta back to the Heart as you inhale and exhale. Listen to the pulse as you find the times when the Heart empties itself before being filled again. It empties as it pumps blood out. Synchronize the cleansing of the heart, the pulsing of the fire in the Stove and the rising of the steam from the Cauldron to that moment of emptiness.

11. Sink the sternum, round the scapulas, sink the chin, arch the sacrum/coccyx. Move the heart toward the spine. This will assist in the coupling/cupping process.

12. Bring the Fire Energies in the Stove and the Water Energies in the Cauldron towards the Heart Center and couple precisely at that moment of emptiness, that second between heartbeats.

13. Use the rhythm of the breath or the pulse to fan the fire.

14. See the steam rising. Spread it throughout the body, moving to the extreme outer areas and limbs. Steam the Microcosmic Orbit, Thrusting Channels, Belt Routes, Great Bridge and Regulator Channels, the organs and endocrine system, the Crystal Room.

Note: Watch for dripping from the Crystal Room as you steam upward. The drops may come from the Mammillary Body and may taste different, like honey, coconut milk, champagne, something rich and unusual. This is the Fountain of Life. A pool or mirror may form at the Heart, Solar Plexus or Perineum from these drippings. The images reflected there may give you insight into yourself, others, or life itself. Watch for the Crystal Eye in the pool or lake formed by the dripping as the steam condenses.

15. The kidneys as transformers of the heart. Be aware of the kidneys as they are filled and emptied of blood through the Aorta and Vena Cava. Draw the energies of the Earth, feet, legs, thighs and the lower body into the kidneys. Repeat several times. Condense the energies at the kidneys and spiral into the heart. Remember that the Kidneys are the Source of Original Chi (Moving Chi Between the Kidneys, or Pre-Natal Chi) and they transmute Primordial Chi into usable Chi.

Time	Organs	Extremity
3-5 a.m.	Lung	Thumb Forefinger
5-7 a.m.	Colon	Forefinger
7-9 a.m.	Stomach	Middle Toe Second Toe Big Toe
9-11 a.m.	Spleen/Pancreas	Big toe
11-1 p.m.	Heart	Little Finger
1.3 p.m.	Small Intestine	Little Finger
3-5 p.m.	Bladder	Little Toe
5-7 p.m.	Kidney	Little Toe
7-9 p.m.	Diaphragm (Sex/Circulation)	Ring Finger Middle Finger
9-141 p.m.	Umbilicus (Triple-Warmer)	Ring Finger
11-1 a.m.	Gall Bladder	Big Toe Ring Toe
1-3 a.m.	Liver	Big Toe

Fig. 13 *Organ Energy flows into fingers and toes.*

16. Other procedures could be practiced at this point. See Supplemental Practices, below. If no other formula is followed, then proceed to: Slow down the Pulsing. Collect the energies in the Solar Plexus or Navel.

5. Birthing your Inner Child

Watch for a golden or yellow-green or white light from above. It may come in front of you from somewhere. Feel gentle and loving towards it. Bring it with your mind and heart towards the Cauldron and let it seed the Cauldron at the heart. It is the Pill, the Elixir of Immortality, the Holy Spirit and the Divine Child that the ancients talk about and wait for. It is a rare event in the life of the practitioner. Like the appearance of a miracle, the Inner Child or Pill of Immortality should be held with awe and gratitude. It is a gift from the Tao and a sacred responsibility to protect and nurture. Birthing the Immortal Inner Child or gathering the Pill is an advanced stage that may not happen for a long time. Do not be discouraged; be virtuous and continue the coupling and steaming. We are adding it here as a supplement:

Gathering the Small Pill:

The Small Pill, or Lesser Medicine, is another metaphor for the seed-Pearl and Embryo formed in Lesser and Greater Kan and Li, as it first mixes with the Shen/higher mind. The pregnant meditator has begun the labor of giving birth to the inner child.

1. First Light. When you see a light with your eyes closed in meditation, bring it to the Cauldron at the Navel (in Lesser Kan and Li). Pull up the sexual organs. The Light may be dim at first and look like a cloud. It may appear in the middle of the sky or start at the navel and come up to the eyes. Make it grow brighter. Feel the Light inside and outside. Create a Pakua in the navel, crown, Third Eye or anywhere you wish, even in the palms.

2. Condense the Light through the Pakua. The bright light will disappear and will reappear condensed in the Cauldron.

3. Spiral the Light in the Cauldron and condense it into a Pearl. The Pearl is the distillation of the external and internal forces, and becomes a thick energy ball.

4. Move the Pearl down to the Perineum and then to the Door of Life (Ming-Men) and to the Crown. Stop at the Crown for about 5 minutes. Then move the Pearl down to the Solar Plexus and into the Cauldron at the Navel. This gives your mind great calmness and detachment.

Note: The first Pearl produces the Small Medicine. The Taoists believe that this Pearl can heal many deadly diseases because it is the condensation of the life force. It has the power to rebuild the body and destroy foreign antigens.

Gathering the Larger Pill:

This is also called the Great Medicine, or giving birth to the Inner Child. This is a metaphor for the advanced stage of Greatest Kan and Li, when the spiritual fetus is born and begins breathing on its own. This is true internal breathing, and results in the temporary cessation of outer breath and pulse in the meditator. The Universal Life-Force has entered your divine child, giving it the awareness and power of a baby God. (Also called the Red Baby). You may or may not see the visual form of a child within; some adepts see an ancient adult, others feel only divine sound, light, and vibration.

1. With your eyes closed, see a Light inside. When you see the Light outside, mix the two together. The Light will become red. You may hear a sound. Seal all the senses tightly. You should feel something move in the navel area.

2. When a third Light appears outside, bring it down to the Cauldron at the Solar Plexus (in Greater Kan and Li). Seal the senses and the anus until you feel a stirring in the Cauldron, signifying a pregnancy. Collect saliva: it will have a fragrance. Smell the fragrance. Breathing at this point will become slow and even, long and

light, until you seem to stop breathing. The Light will move up from the Cauldron to the nose. Let the energy build into a vortex. Self-intercourse (Bliss) may happen here spontaneously. The pleasure will be greatly multiplied.

3. Move the Pearl through the Microcosmic Orbit 360 times.

4. Guide the Pearl up the Door of Life and rest. Guide the Pearl up to the Crown and down to the Solar Plexus and Cauldron.

5. Seal the Pearl at the Cauldron.

Note: When you put the Light in the Cauldron, do a slow fire (slow breathing, not Breath of Fire) or you can use the mind to slowly fan the fire. When the second light comes, you'll see a brighter Light and you'll see a Dragon (on right) and a Tiger (on the left). You may also hear their voices-high-pitched for the Dragon and low-pitched for the Tiger. The Cauldron will get hotter. The sexual organ will also get hot and muscles will vibrate. The Light will spiral clockwise. When the third Light comes, blend inside and outside and seal the senses. You can swallow saliva until energy stays with you. Remember that the Light does not come to everyone. When the Coupling and Steaming are correct, we attract the Universal Energy and there is a mating. Our inner child is born instantly. If the Universal Energy comes and you are not ready, then you do not get it, and you will have to remain "pregnant" until you are truly ready to receive your spiritual child.

Fig. 14 Forming the Immortal Fetus

C. Supplemental Practices

Notes on the Constellations and the Stars:

1. The Big Dipper controls one's death and the planet Neptune enforces it.

2. The Southern Constellations control the time of birth and the information is sent to Neptune which enforces it.

3. The Northern Constellations control death.

4. The Western Constellations control the family and intelligence.

5. The Eastern Constellations control the Kitchen God who reports on one's life to the North Star every first and fifteenth days of the month. (That is why many Chinese people eat vegetarian diet on these days.)

The outside energies we tapped into in Lesser and Greater Kan and Li and earlier in Fusion of the Five Elements become increasingly powerful as our capacity to absorb and use these energies becomes more developed. Now, we come to a point where we "plug" into a more powerful resource.

Exercise: The Big Dipper and North Star Connection

In this meditation, we connect the bones of the skull to and draw energy from the 7 Stars of the Big Dipper and the North Star.

The 7 Stars of the Big Dipper, their numbers, elements, planets and days are:

- Alkaid (the first star at the tip of the handle), # 7, Water, Mercury, Wednesday
- Mizar, # 6, Metal, Venus, Friday
- Alioth, # 5, Fire, Mars, Tuesday
- Megrez, (the first star of the cup) # 4, Water, Saturn, Wednesday
- Pheeda, # 3, Earth, Saturn, Saturday
- Merak, # 2, Water, Mercury, Wednesday
- Dubhe (the last star of the cup), # 1, Wood, Jupiter, Thursday

Fig. 15 *Big Dipper and North Star Connection*

Bones and areas of the skull and their corresponding stars:

- Crown—# 7
- Occiput—# 6
- Chin—# 5
- Left Temple and Left Cheekbone—# 4
- Right Temple and Right Cheekbone—# 3
- Right Mastoid Bone—# 2
- Left Mastoid Bone—# 1
- Crystal Room (Pineal, Pituitary, Thalamus)—Polaris (North Star). The thalamus gland connects with the pole star and is considered the pole of the body. The thalamus also connects with all the 28 constellations.

Exercise: Macrocosmic/Constellation Meditation

a. In this meditation, imagine you have a giant body, billions of light years from head to toe. When done properly, you become the Cosmic Being whose crystal palace is the North Star, who has constellations and planets for vital organs; whose heart is the Sun, whose kidneys are the Moon, and whose lower Tan Tien is the planet Earth. This Cosmic Being—the mind of Tao—beams down its exquisite rays to one cell of its being, the human sitting on a chair on planet Earth, meditating up on the stars. This cultivates the cosmic consciousness and opens the three Tan Tiens to receive energy from their heavenly counterpart.

b. Be aware of the North, South, East and West Constellations. Bring down energy from these constellations through the North Star connection. (It serves as the Center for all of these energies as well as its own.)

c. Beam their combined energies through the crown into the heart.

d. Pull up the genitals and the perineum.

e. Be aware of the palms and the soles of the feet as you draw energy up from the earth through the two bottom holes of the sacrum. (The Sacrum has eight holes called the Ba Liao—where Bladder 31, 32, 33, and 34 are located—and are close to the Governor Channel.

f. Align the Three Triangle forces of the body.

g. Beam or Spiral the virtue energy of the organs back to the heart and up to the Crystal Room. Return it to the Heart and to the Crystal Room again. This process, among others, serves to enhance the development of a more advanced Energy Body.

h. Send this Energy Body to the Crown and to the North Star. Picture a tube or a white cord leading up from the Crown to the North Star for this purpose.

i. Keep drawing more virtue energy from the organs into the heart and up to the Crystal Room and back to the heart again.

j. When you are ready, send this virtue energy to the North Star. Spread this positive energy from the North Star to the North, South, East and West constellations. From the Four Constellations, beam this energy to your own planet. (Materials will be distributed so that you can determine which is your planet.)

k. Then beam the energy to yourself, or if in a group, to where you are sitting.

l. Bring more virtue energy from the organs to the heart, to the Crystal Room, and back to the heart a few times. Send it again to the North Star and bring it back to yourself.

When you are ready, send this good energy to the North Star. Spread this good energy from the North Star to the North, South, East and West constellations. rom the Four Constellations, beam this energy to your own planet. (Materials will be distributed so that you can determine which is your planet.)

Then beam the energy to yourself (or, if in a group, to where you are sitting).

Bring more good energy from the organs to the heart, to the Crystal Room, and back to the heart a few times. Send it again to the North Star and bring it back to yourself.

Exercise: Beaming Energy to Yourself

a. Be aware of your palms and feet.

b. Receive energy from the Constellations:

c. Left Palm—Eastern Constellations

d. Right Palm—Western Constellations

e. Left Foot (Bubbling Spring)—Northern Constellations

f. Right Foot (Bubbling Spring)—Southern Constellations

g. Mentally focus on any problem in your life. Be clear about the problem. Send it to the beam. (If in a group, send it into the center of the circle.) The problem can burn up from the intense energy of the practice. Remember to take only the energy you can use and send out any excess that can overheat you.

Note: Collect saliva and swallow it down if you feel that you are overheating. Swallow the saliva down to the throat, heart, solar plexus, navel, sexual center, perineum, sides of both legs, below the knees, small toes, Bubbling Springs, backs of the knees, coccyx, sacrum, Ming-Men, T-11, T-5, T-6, T-7, C-7, outer elbows, middle fingers, palms, inner elbows, Jade Pillow, Crown, Third Eye, tongue, and return to the throat. Repeat this cycle several times to help you cool down.

Exercise: Cleaning Out of the Heart

a. Align all Three Triangle Forces.

b. Beam up the kidney energy to the heart.

c. Beam up all the energy of the different organs (liver/ gall bladder, lungs/large intestine, small intestine, stomach/spleen/pancreas) into the kidneys and then beam it to the heart.

d. Force the heart to clear itself by filling it with so much energy that it will act more powerfully to empty itself and create longer moments of emptiness.

e. When the heart expands to its limit, exhale and spread out all of the energies into the head, hands and body. Rainbow colors should come out of the other organs: receive their respective energies. When the heart is clean, you should feel only joy and happiness--the virtue energy of the heart.

Repeat this procedure of cleansing and emptying several times, up to 9 times.

Fig. 16 *Forming the Cauldron Yang to Yin*

Exercise: Drawing the Power

To help draw the power for:

a. The Crystal Room: Pure Yang energy is on the top. Concentrate on the Thalamus gland and collect the Yang energy and concentrate it at the 10 holes of the crown, connecting them with the 10 meridians of heaven.

b. The Navel and the Heart: Yin and Yang balanced in the middle. Pull in the lower abdominal wall and balance the energy and absorb the spiritual energy of the earth.

c. The Perineum: Yang and Yin at the bottom. Contract the anus and pull toward the coccyx and absorb the spiritual energy of the Earth. This Earth energy will be combined at the heart at the moment of emptiness and stillness. Feel the vibration of the heart.

d. The spine connects the Heart, Pons, Brain and Brain fluid. The heart, tendons, meridians, bones, spinal fluids, coccyx and sacrum are connected to the 12 earth meridians.

***Note*:** The soul body is a Yin energy. The spiritual body is a Yang energy. These energies help to balance the Yin-Yang energy of the body. The soul body (Yin) energy serves as an earth cable and absorbs the Yang energy from the heavenly wire to the soul body and down to the human body. It also absorbs the earth energy to balance the Yang energy absorbed from the spirit body.

The soul body absorbs the earth spirit energy and is sent up to the spirit body to balance and increase the power of absorption of the spirit body to connect earth, man and heaven. The triangle forces combine and align the heavenly, human and earth forces.

1. Spiral the perineum counterclockwise and the crystal room clockwise. Slowly spiral the heart clockwise. Tilt the heart back. Feel the body getting light and the heart like a feather. Contract the solar plexus and abdomen and sink the chest. Feel the three empty spaces enlarge. When practicing with a partner you can create a heart-to-heart connection. When you align all three together the wandering mind in the Crystal Room, the restless emotions of the heart and the sexual desire will eventually come under control.

2. Move the heart center near to the spine, slightly contract the anus, adjust the coccyx and align the pituitary gland. The body will become very light.

3. Move your awareness to the left Bubbling Spring, to the right Bubbling Spring, the left palm and the right palm. Feel the Chi coming out of the T5-T7 region. This will make the hands and legs light.

Note: The three empty spaces serve as a most sophisticated instrument and are similar in construction to a crystal and can send out a powerful electromagnetic beam. When all the energy is concentrated in the heart, you can send a strong beam out of the tip of the sternum to the hand, the head, the leg, or to any organ.

Remember to do bone breathing at the end of Greatest Kan and Li practice. The bones constitute the largest storage of energy in the body. Concentrate especially on drawing energy into the spine. Also do the heart sound several times and you can connect your Ten Heavenly Stems to the Universe and the Twelve Earthly Branches to the Earth as you do the practices.

Greatest Kan and Li
Gathering the Cosmic Light

Mantak Chia

Illustrations by Udon Jandee

Greatest Kan and Li

This booklet contains instructions for the final of the Kan and Li meditation series, the Greatest Kan and Li. The essence of the Greatest Kan and Li practice is the establishment of the cauldron at the Heart Center, also known as the Middle Tan Tien or Cinnabar Palace, and the further refinement of the soul and spirit. It is at the Heart Center that most of the Greatest Kan and Li practices take place. The coupling of the energies here, involving macrocosmic-microcosmic energetics, is the central formula.

The Kan and Li practices point to the Taoist road to spiritual immortality and Taoist internal alchemy. The immortal fetus is produced, nurtured and finally matures into a spirit body which unites one with the Tao. Master Mantak Chia is the first Taoist to introduce this spiritual discipline to the Western public.

As well as the instructions for the Greatest Kan and Li practices, the student is given instructions on the basic formulae to practice in preparation for the higher practices, The practitioner then learns the foundation procedures leading to coupling at the Heart Center; the activation of the Cranial and Sacral Pumps and the Alignment of the Three Triangle Forces. Coupling then leads to the birth of the Inner Child or Pill of Immortality. Other practices described in this booklet help you to draw energy from the Cosmos, enabling you to "plug in" to a resource of limitless power.

The meditations, practices and techniques described herein are ***not*** intended to be used as an alternative or substitute for professional medical treatment and care. If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training. This booklet does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Performing the Healing Hands Meditation

The more you are aware of your sources of energy, the more that energy will come to you from those sources. According to the wisdom of the ancient Taoists, the energy that you receive from meditating is superior to the energy that you obtain from food.

The Healing Hands Meditation will help to grow and strengthen the energy in your hands and fingers. Your hands will develop sensitivity and you will be able to feel the energy in your own and your student's organs and abdomen. You will find this to be very useful.

Meditating to Expand the Aura

a. Practice the Inner Smile down to the organs and glands.

b. Bring the energy to your Navel Center and practice the Fusion Meditations.

(1) Form the four pakuas and the collection points.

(2) Clean out negative emotions by transforming them into positive, healing forces.

(3) Form their energies into a pearl.

c. Circulate the energy in the Microcosmic Orbit faster and faster until it expands outward from your body.

d. Feel the energy expanding outward from your navel as you visualize the sun shining in that area. Feel the energy filling your aura with a warm, pleasant sensation.

e. Be aware of the North Star and Big Dipper above you and absorb their respective violet and red lights, the golden light of the Cosmic Particles and the blue force of the Earth into the navel.

f. When you feel your aura has expanded, maintain a distance of at least two square feet away from other people. If their auras are stronger than yours at this time, your aura may be squeezed and you will experience discomfort. After you have felt the outer forces strongly, proceed with the following meditation.

Channeling the Force through the Palms

a. Hold both of your hands in front of your eyes and gaze at both palms.

b. Focus on the middle of your palms by using the corners of both eyes to gaze at the palms' centers. The corners of the eyes have special cells that can see in very dim light. Using your eyes to focus this way will help you develop the ability to see auras and movements in the dark. Using the combined power of the mind and the eyes, you can cause the aura of each palm to grow and expand. The Chi can feel like it is contracting and absorbing, and the sensation can be of drawing the forces into the palms, or an expansion of the palms. You might see a ball of Chi or a ball of color between the palms through the corners of your eyes.

c. Be aware of the fingers. Feel your fingertips pulsing. Use your mind and eyes to absorb the Cosmic Chi into the right palm. Send the Chi from the right palm and fingers across to the left palm and fingers. Repeat nine times.

d. Next move the fingers of both hands until they nearly touch each other: thumb to thumb, index finger to index finger, etc. You can feel sensations like electric sparks traveling across from one fingertip to the other. Some can feel pain, swelling, or simply expansion in their fingertips.

e. Gradually spread the hands apart, but not so far that you permit the Chi connection to diminish or break. If this happens, stop moving them and project more energy with the mind to re-establish the connection. Spread the hands from nine to eighteen times.

This practice will increase your sensitivity to energy and your healing ability. Transforming the Universal and Cosmic Particle Forces for immediate use will prevent drainage of your life-force. The energy can feel warm and pleasant.

Growing the Right Fingers' Auras

When your palms feel full of Chi, start to grow more Chi in the right hands' fingers.

a. With both hands' fingertips still raised in front of your eyes, begin by gazing at the right hand's fingers.

b. Use the corners of both eyes to gaze at the tips of the fingers. Focus on the tip of the index finger. Using the energy of your eyes, cause the aura of the index fingertip to grow and expand. Feel that fingertip pulsing. Make the energy cool and pleasant.

c. Next grow the middle finger, thumb, fourth finger, and pinky finger auras.

d. Choose your main healing finger(s) by observing and feeling which finger most noticeably permit(s) the energy to be absorbed in and passed out. Choose by comparing the length of the aura of each finger by the intensity of a tingling sensation or by any method that feels comfortable to you. Don't neglect the finger(s) that you do not select. Continue to practice with them as well.

Fig. 1 *Focus on the right hand's index finger and let the Aura grow.*

Growing the Left Fingers' Auras

a. Inhale energy into the left hand and fingers.

b. Grow the thumb aura beginning with the tip.

c. Next, grow and absorb the auras of the index, middle, fourth, and little fingers. Receive and feel the Universal and Cosmic Particle Energies.

Fig. 2 *Grow the aura of the left thumb.*

Fig. 3 *Grow and expand the auras of the left hand's index, middle, ring, and little fingers.*

d. Select the finger on the left hand with the strongest energy. Press that fingertip with the tip of the thumb, forming a circle. Keep the other fingers straight. Rest the left hand on your lap. This circle is the best way to receive Universe and Cosmic Particle Energies.

e. Curl the pinky and fourth fingers of the right hand and press them with the tip of the thumb, again forming a circle. Keep the index and middle fingers straight.

Fig. 4 *Choose which finger in the left hand has the strongest energy. Join the thumb with the strong finger, and place the left hand on the lap. Curve and join the right hand's little finger and ring finger with the thumb. Keep the other fingers straight.*

f. Form these circles and use your mind and eyes to absorb the external Cosmic Particle Force through the fingers of the left hand. Send it up through the left hand, outside the left arm and the left shoulder, to the back side of the left ear, and across the crown. Blend this energy with the Universal Force entering through the crown. Then send their combined energy down to the right ear, the right shoulder, the outside right of the right arm, and the right hand to its index and middle fingers. Send it out through these fingers and receive it again through the extended fingers of the left hand. Continue this practice for nine, eighteen, or 36 cycles.

Fig. 5 *Absorb the Human Plane (Cosmic Particle) Energy through the left fingers and circulate it blend it with the Universal Force at the crown. Then circulate the energies down the right arm, out thought the index and the middle fingers, and back to the left fingers.*

Open the Wind Gates

It is important to master and clear out the winds at beginning of every session. This will help to activate the abdominal energy and loosen the tightness and tension in that area. Some persons will have abdomens that are too painful to bear the pressure of this procedure. In such cases, first do gentle skin detoxification.

Fig. 6 *Pressure Points Around the Navel. Number sone to eight list the sequence to follow and indicate the organs you will affect.*

Wind Gate Chart

a. Open the winds gates in the order listed. Visualize the Tai Chi symbol as the navel.

b. Follow the navel center guides 1-8 and use the thumb or elbow to press at the point indicated. For example, after you do the groin gates and the Gate to the Sea of Winds (Tan Tien), go to point I and notice that on Monday the pulse is held for eight beats of the pulse. If it were Tuesday, you would hold the pulse for seventeen counts, on Wednesday nineteen counts, on Thursday 21 counts, and so on, through the end of the week.

c. Then go to point 2. The point in that area would be held for seventeen counts Monday, nineteen counts Tuesday, and so on.

d. You will travel all round the navel opening the gates. After each point pause to let the effect take place and the energy settle. The daily number guide is traditional in the Taoist numerology practice for opening the Wind Gates.

Fig. 7 *Wind Gate points are on the sides of the navel and not in the navel.*

Flushing the Blood at the Groin

a. Stand or kneel beside the student (unless the person is very large, in which case it is best to kneel between his or her legs.) Press the edge of each palm into the femoral artery pulse at the crease of each leg in the groin area.

b. One pulse will probably feel stronger than the other. In that case, press down on the pulse that is strongest. This will help bring more blood and Chi to the weaker pulse. You should feel them equalize.

c. Hold the pulse for 36 or 72 counts to stimulate the circulation in the lower abdomen and legs and break up obstructions. Some winds will exit through the legs. This procedure will open the passageways.

Note: Do not practice this technique on someone in danger of, or afflicted with, thrombosis or a severe case of varicose veins.

a b

Fig. 8 *a. Pressure Points for Opening the Groin*
b. Opening the Wind Gates of the Groin

Opening the Gate to the Sea of Winds

You may remain between the student's legs, or move to the side of the body

a. Locate the Tan Tien pulse (the Gate to the Sea of Winds) in a depression approximately one and a half inches below the navel at six o'clock.

b. Press down until you feel the pulse. Usually a thumb is used; if you are working on someone who is very fat or very muscular, you may to use your elbow to find a pulse. Whether you use your finger or elbow, be gentle and don't slip. Sometimes you cannot find a pulse; in that case, all you can do is slowly count out the number for that day (one thousand, two thousand, three thousand, and so on.)

c. Fig. out the number of pulse counts you will hold for that day. Consult the chart under "Tan Tien." On a Monday you would hold for fifteen counts, Tuesday eight counts, Wednesday seventeen counts, and so on.

d. Release the pressure after the required number of counts has expired. The student should feel energy flowing down to the lower part of the body.

e. To gain experience you should do all the points or gates on yourself as well.

Fig. 9 *Opening the Gate to the Sea of Winds*

Opening the Wind Gate to the Left Kidney - the Western Gate

a. Check point 1 on the chart to note the daily count.

b. Press the point just to the left of the navel at three o'clock until you feel the pulse.

c. Hold for the count.

d. Just before you release, direct the energy to the left kidney by using your mind and intention. The student may feel warmth and comfort spread to that area.

Fig. 10 *Opening the Gate to the Left Kidney*

Opening the Wind Gate to the Heart - the Southern Gate

a. Check the chart for point 2 and note the daily count.
b. Press the point above the navel at twelve o'clock.
c. Hold the count with moderate pressure.
d. Before you release, direct the energy toward the sternum. The student may feel warmth and comfort spread to the chest and heart area.

Fig. 11 *Opening the Gate to the Heart*

Opening the Wind Gate to the Right Kidney - the Eastern Gate

a. Get the daily pulse count from the chart for point 3 and press at nine o'clock.

b. Send the energy to the right kidney just before releasing.

Fig. 12 *Opening the Gate to the Right Kidney*

Shape of the Navel

The Taoists learned by observing the most obvious things. They learned that it is possible to know a great deal about the condition of the abdominal area and organs just from examining the shape of the navel.

1. Examination of the Navel

Always note the shape and position of the navel before beginning a session. The navel is similar to a funnel, and it divides into three parts: the rim, the sidewall, and the bottom. The navel should be round, centered, and symmetrical. It should be firm and springy, not hard and tight, or soft and weak. The sidewalls should be symmetrical. The floor or bottom should be in the center of a circular rim.

The rim can be misshapen and off-center. The sidewall, and sometimes the rim, can be puffy, curved, high angled, or pulled in one or more directions.

The floor of the navel can be puffy and congested, or it may be very deep. It may be twisted or pulled, and may or may not include the sidewall and rim. The navel may be pulled in one or more directions. It may be vertical, horizontal, diagonal, teardropped, collapsed, blown out, or turned clockwise or counterclockwise.

With some practice, you will find that by reading the three parts of the navel, you can determine which way or ways it is being pulled. Distortion of the navel indicates the direction and location of tight, congested areas and blockages. Sometimes this will show which organs or systems are involved and at what depth.

2. Different Navel Pulls and their Effects

Imagine a pie six inches in diameter placed on the navel. Now divide that pie into eight sections. Note where the navel is pushing or pulling according to the eight directions. Notice if the navel is pulling in one or more directions simultaneously. When you learn which organs

are in each pie piece and can associate them with the distortion of the navel, you will have a very good means of determining what imbalances are present in the body.

The pulling may only affect the superficial tissues or a specific organ or system. Usually the pulling affects the body's center, both superficial and deep, and involves more than one organ or system. Remember that any pulling distorts the body's center and the first system to be influenced is the Navel Center Chi system. When the Chi system is off-center, the physical body is also off-center, creating an imbalance in the emotions, systems, and organs.

Fig. 13 *Chart for Reading Navel Pulls*

Fig. 14 *Navel Pulls*

Skin Detoxification

In CNT we treat the skin of the abdomen, starting at the navel. This is where the umbilicus of the fetus received nutrition and eliminated toxicity. As the original center of the body, the navel is still connected with all the organs. Whatever toxins the organs cannot process, they store in the navel for later detoxification.

By massaging the skin lightly and stimulating its surface, you can draw the pressure and toxicity from deep within all parts of the body to the surface. It is easier to reach the toxins on the skin to break them down. The longer you work on the skin, the easier it will be to work deeper later. The skin is a storage space for whatever extra toxicity the organs have. When you release the toxins stored in the skin, you create an open area on the skin. The organs can now release more toxins to the new storage space just made available. Instead of clearing, sometimes the skin may swell. This is because more toxins have been released from the organs to the skin. Once cleared, the skin will recover its balance.

The toxins, tightness, and tension in the abdomen also block the flow of energy from the vital Navel Center or Tan Tien. When you clear the area, the pre-natal Chi can begin to flow through the body more forcefully.

Warning and Caution: If there are any warts or moles very close to the rim of the navel, do not work on the student. This suggests that there is a serious viral problem and a doctor should be consulted. You can, however, teach the student to work on himself or herself.

1. Spiraling Technique

The Spiraling Technique is the main technique for skin detoxification. Gently use both hands on the abdomen to loosen the tissues. Begin by massaging with the thumbs, finger, or fingers together in small, tight, clockwise circular motions around the navel. The sequence for each point is to press in, spiral, and loosen the skin. Continue to

create tight, clockwise circles outward from the previous points you have worked on. This will create a large spiral, extending from the navel to the outer edges of the abdomen. Although this procedure mainly influences the small intestine, the clockwise direction also follows the path and motion of the large intestine, the body's "great eliminator." With this movement toxins are encouraged to pass from the body. This technique is especially powerful for breaking up a constipated large intestine.

Conversely, if your student has diarrhea problems, you should teach him or her how to spiral in a counterclockwise direction. This will encourage the watery waste to slow its exit, until it has formed into normal stool consistency.

If your student's abdomen is tense, nervous, hot, hard, and too Yang, this means there is excessive energy and you should drain some off. Spiral counterclockwise to withdraw the energy. Use your concentration. Ask the energy to leave. Direct it into the Microcosmic Orbit, where it can be circulated and stored safely in the Navel Center. You can also direct it to go into the Navel Center.

If the abdomen is cold, soft, weak, sick, and too Yin, this means that there is deficient energy. Spiral clockwise to add energy. Concentrate to direct some of your energy to pass from your fingertips into the student's abdomen, to help warm the area. .

When you finish the finger spiraling technique, apply the following hand techniques. You will become very familiar with these techniques, for they are used repeatedly in CNT.

2. Scooping Technique

With your fingers together, press inwardly and scoop in, or press downward and scoop out. There are many variations to the direction and use of this technique.

a. Use Two Thumbs

b. Use Four Fingers

c. Use a Single Finger

Fig. 15 *Spiraling Technique: Use the (a) thumbs, (b) fingers, or (c) finger to press in, spiral, and loosen the toxins locked in the skin.*

3. Rocking Technique

Use all the fingers to hold the abdominal muscles while rocking forward and back. Spread your fingers to cover the ascending and descending colon, or change the width and cover the small intestines.

4. Kneading Technique

Use all the fingers of both hands to scoop the intestine into the navel and central area. Follow by pressing with the heels of the palms into the navel and the central area as though you were kneading a loaf of bread.

5. Shaking Technique

Use either the index or middle finger to press on the knot or problem area. Move the finger quickly up and down or from side to side. Use two or three fingers to cover a larger area.

6. Patting Technique

Pat around the navel and the entire abdominal area with the fingers and with a soft, open palm. (Patting is generally used to finish a CNT session.)

7. Elbow Press

Remember, if you are working on someone who is very large or very muscular, sometimes the only way you can have an effect is to use you elbow. Press straight down or spiral with your elbow.

Small Intestine

The small intestine is the digestive tract between the stomach and the cecum. It is in charge of absorption and digestion. The small intestine divides into the duodenum, jejunum, and ileum. The small intestine is about twenty feet long and fills up the central space of the abdomen. Its main role is the absorption of food. It allows the digested food to go through its lining to the liver via the portal vein system, where the food is further processed before reaching the rest of the body.

Fig. 16 *Small Intestine and Neighbors*

1. Abdominal Brain

The small intestine is in charge of digesting emotions as well as food. Different contractions of this intestine correspond to undigested emotions. In Chinese medicine it is called the abdominal brain. All negative emotions are expressed in the small intestine by contraction and circumvolutions. Anger contracts the right side of the intestine near the liver. Worry affects the upper left side near the spleen. Impatience and anxiety affect the top. Sadness affects both lower lateral sides. Fear affects the deeper and lower abdominal areas.

Fig. 17 *Effect of Negative Emotions on the Small Intestine*

2. Toxins in the Small Intestine

Toxins travelling inside the intestines are still outside the body, since they do not penetrate the membranes of the digestive system. They are on their way to being eliminated. These are toxins that have not been digested or broken down by the stomach and its digestive juices into particles small enough to go through the digestive membrane and into the blood system. When the intestines become too crowded with toxins the speed of digestion will slow down and the absorption function of the small intestine will be impaired. The intestine will become congested ant cannot perform all its physiological functions. Though you may eat well, you may be undernourished.

3. Healthy Small Intestine

A healthy small intestine can be covered with one spread hand When touched, it should feel even and soft. It should move easily, painlessly, and give way to the fingers without creating any muscle reflex reaction. It will move back to its normal position after releasing the pressure. A light small intestine will be firm when touched and will often allow you to feel the pulse of the aorta very strongly. A loose and weak small intestine will be unevenly shaped and filled with bubbles gas and fluid. Often some parts are too tight and others too loose.

Fig. 18 *A healthy small intestine can be covered with a spread hand and should feel soft and even.*

4. Small Intestine Techniques

Working on the small intestine is of primary importance to the practice of CNT. Any congestion, toxification, or stagnation, including trapped emotions, will inhibit the Navel Center from supplying the rest of the body. These are not only techniques; they involve using your personality and spirit. When you push in to massage and spiral your student's stomach, you may feel your stomach being massaged and spiraled as well. You attach the spirit of your intestine to his or her intestine and connect your healing energy as well. It will take some time before you can do this well, but start trying immediately. The small intestine work is very much like playing and should be approached with a bubbling kind of joy. If you are tight, it is transmitted to the student. Therefore, you have to be very grounded, safe, comfortable, relaxed, and spontaneous.

a. If the student's abdomen is very hard and so painful that you can hardly touch it, you will have to be softer and more patient. Your fingers can only skim over and lightly touch them with a feathery pressure. You can lay the whole surface of the palm or the heel of the palm on the skin and gently spiral it. After some time it will start to soften. The harder the abdomen, the softer your finger should be. If you want to go in deeply, your fingers must also be soft.

b. Practice deep skin detoxification and use the Wave Technique.

c. When doing the Wave Technique, your fingers may feel one area of the intestines is tighter than another, or you may feel knots. This could be chronic contraction of the involuntary muscles within the tissues of the intestine, a diverticulum (a pouch or sac), or a hernia. As long as it is not a painful spot, massaging this area will progressively alleviate the problem.

d. The small intestine has a serpentine or S-shaped design, with one curve of it lying on top of the other. When you detoxify the intestine, use the basic spiraling techniques of the fingers, but try to feel and follow its sinuous design. When your fingers come to a "switchback," shake it until it feels loose. This will help to move the food (chyme) and activate the intestine.

e. Work with short, bubbling bursts, back and forth, counterclockwise and clockwise half spirals. You can use a left-right-left-right, one, two, three, four motion or longer sets. Always end by pulling the fingers and energy toward the cecum, which is where the contents of the small intestine flow into the large intestine.

f. Keep working until you have stimulated the entire small intestine.

g. Cover the small intestine with your hands and have the student breathe into your hands. Both of you do the Inner Smile. Breathe with the student. Fill yourself with light and exhale through your hand into the student as he or she inhales. Teach the student deep abdominal breathing.

h. A good time to work on your own small intestine (and all other areas) is when sitting on the toilet. You can bend over, lean into your finger, and probe deeply.

Work in clockwise and counterclockwise half spirals.
Always end by pulling the energy toward the cecum.

Fig. 19 *Working on the Small Intestine*

Open the Large Intestine

Many of the problems with the large intestine occur at the cecum/ ileocecal valve or at the sigmoid colon. Your palpation of these areas should indicate the problem. If the problem is in the sigmoid area, don't start there but work around it. Never work directly on a painful area (in the large intestine or anywhere else); prepare a place for the pain and congestion to go. To release the congestion in the large intestine, start at the left side of the rib cage at the splenic bend. This will release congestion there and make room for more congestion coming from the problem area.

Fig. 20 *Large Intestine and the Viscera*

Relaxing the Diaphragm

The diaphragm is a breathing muscle attached to the lower portion of the rib cage and anchored to the spine in the lumbar region. It is shaped like a dome and projects up against the heart and lungs. Upon inhalation it pushes down against the abdomen, creates a vacuum in the chest, and allows air and Chi to fill the lungs. If the diaphragm becomes tense or stiff, which it often does when one feels inhibited, it interferes with the ability of the lungs to breathe fully and deeply.

The lungs are called the Sea of Chi. Chi in the lungs drawn from the air mixes with Chi derived from food (by the stomach and spleen). Together they form the blood and nutritious Chi which service all the functions of the body. A deep breath also draws Chi to the lower organs, to the kidneys and bladder, and especially to the large intestine. The large intestine gets energized this way. If it does not have energy, it will not be able to do its elimination work.

During inhalation, the diaphragm goes down. When exhaling, the diaphragm goes up.

Fig. 21 *Front View of the Diaphragm*

1. Abdominal Breathing Exercise

a. To practice abdominal breathing, keep the chest very relaxed. This may be difficult at first, but it is important.

Begin by breathing in and drawing the air into the abdomen. It may help you to imagine that you are first breathing into the coccyx, then the sacrum, and then up each vertebrae of the spinal column.

b. Make the chest hollow and drop the diaphragm down. You will feel pressure inside the abdomen which will begin to protrude on all sides in a rounded shape. Do not expand the stomach only. With the diaphragm lowered and the abdomen filled with air, the space containing the abdominal organs is minimized, and the organs massage themselves.

c. Expel the breath by drawing the abdomen up, squeezing in on all sides of the abdomen, and forcing the breath out of the nose.

2. Technique for Releasing the Diaphragm: Creating a Space

a. As in every CNT session, start massaging around the navel to loosen the tightness. This will prepare a place for the breathing when the abdomen does start to expand. Sometimes you will encounter an abdomen that is contracted and full of toxins and tension. Your student will hardly let you touch the abdomen; it hurts too much. Imagine what his or her breathing pattern is like. There is no way they can do deep abdominal breathing, even if they knew how. It's too painful. This is common. If you meet a student with an abdomen in this condition, you can be sure that you will need to do diaphragm work. This is a worst-case scenario. Even when you work on diaphragms paired with healthier abdomens nearly every one will need some work.

b. When the large intestine is full or constipated, it will push up into the diaphragm, lungs, and heart. Release the intestine, starting from the lower left side of the rib cage, along the descending colon, near the splenic bend. Then start working across the transverse

colon, under the right side of the rib cage, loosening the area. Be conscious that you want to work back toward the beginning of the large intestine, which is at the ileocecal valve.

c. Place one hand on the left side of the rib cage, while the other penetrates under the ribs to lift them while breathing in.

d. The hand on top of the rib cage will be pushing down while the student is exhaling. The range of motion of the ribs will be increased, because you will be progressively releasing the tensions in the inter costal muscles. If the tension is severe, you may have to use the technique for loosening the rib cage described for asthma treatment .

f. Work on the right side.

g. Start at the lower left rib cage and work your way to the lower right rib cage. Use your fingers to press down all along the edge of the rib cage.

Fig. 22 *Releasing the Diaphragm Using Both Hands*

Hand Techniques for the Lungs

a. Working with the Left Lung First

Always start by removing any congestion in the splenic bend under the left rib cage. Use the Figure Five Technique outlined in Chapter Five.

b. Lung Detoxification

Reach progressively under the left rib cage to stimulate the lung area. Then hold the left LU-1 or LU-2 on the Lungs' Channel below the clavicle. Press in firmly and stimulate it with your fingertips. Have the student breathe the Lungs' Sound (***Sssssssss***) into your finger a few times, until you feel the lungs' energy activate on the meridian. When it is activated, you can feel a pulsing in LU-1.

Fig. 23 *Lung Detoxification—Exhalation Phase*

c. Exhalation Phase

(1) Place one hand on the upper rib cage and the other hand on the lower rib cage. When working on a woman, place one hand above and the other hand below the breast.

(2) The student inhales using deep abdominal breathing. When the lungs are full, rock the rib cage. Upon exhalation push the rib cage toward the opposite side.

(3) Upon completion, hold and press momentarily. Then follow the inhalation with a gentle, but firm pressure of the hands. Return to the starting position and begin again to rock and shake.

(4) Repeat for three to five breaths. Note that you may also rock the rib cage on the complete exhalation as well.

d. Inhalation Phase

(1) Begin this phase with the same hand position. This time start in the full exhalation position. Rock the exhaled rib cage and ask the student to do deep inhalations.

(2) While the student is inhaling, hold the pressure on the rib cage and ask him or her to breathe into your hands.

(3 When the student reaches full inhalation, keep rocking and maintaining pressure. Follow the exhalation to the starting point of inhalation, repeat for three to five breaths.

(4) On the last inhalation, ask the student to inhale deeply and quickly. When the student reaches full inhalation, remove the pressure, but not the contact of the hands from the chest. Allow the chest and lungs to overfill with air.

(5) Use this technique for the right lung as well.

Liver Hand Techniques

Liver work starts with making space by releasing the congestion of the large intestine. The large intestine, which runs over the liver at the liver bend, needs to be clear, or you will not be able to work on the liver without pain. Clear the large intestine from the ileocecal valve to the sigmoid colon. This is important for clearing the flow of the liver meridian that runs right through the ileocecal valve around the testicles and the ovaries. This is the only way to affect the part of this channel that runs deep and is not accessible to acupuncture needles.

a. Make small, circular motions with your fingertips on the liver, searching for the hardened spots. These hard places are areas where there are accumulations of toxins. As these toxins leave, the liver has more room and energy, allowing it to function more efficiently, and the health improves.

b. When you find a place that is unyielding, spend more time there, working until it becomes softer. Remember not to release too many toxins at once. Ask for feedback from the student. Talk, and watch the eyes for signs of pain. If the student falls asleep, listen for groans and moans.

c. To work on and drain the lower part of the liver, switch from using the fingertips to using both thumbs together or side by side. Place them underneath the lower right side of your student's rib cage. Let your fingers rest gently on top of the ribs.

d. Press in and rock up with both thumbs under the right rib cage reaching into the liver. Scoop in and down with both thumbs releasing the lower edge of the liver and creating a pumping action as you work. Move along the lower border of the rib cage. Proceed slowly and be gentle. Make small circles in a spiral motion, working upward toward the common bile duct. Move slowly, but go deep enough to meet the liver tissue. Loosen any knots or tightness. Have your student do the Liver's Healing Sound (***Shhhhhhhh***) and breath directly into the tension. Remember to be gentle.

You will be working further up the liver, underneath the rib cage. Whenever you can, change the angle of your thumbs so that you can contact more of the liver tissue. Again, be cautious and go slowly. You can go over the area several times, adding more pressure and going deeper each time. Work until you reach the gall bladder.

e. To work the upper part of the liver, start with your hands positioned to the right of the xiphoid process.

f. Use one hand on top of the other for guidance and support.

g. Use the fingertips to move underneath the rib cage, sweeping toward the gall bladder. Working this area will activate the heart. The upper lobe is just beneath the heart and right on the heart reflex point. When the liver overheats, it will heat up the heart. Make sure you do not stimulate too much heat in this area.

h. Have the student do the Liver's Healing Sound through the whole process, but when you work near the heart reflex, practice the Heart's Sound (***Hawwwwww***). This will counteract the tendency to overheat this area.

i. When finished ask the student to push your fingers out with his or her liver and Chi.

Liver Pumping Technique

The liver is like a sponge, since all of its cells either filter or store. When you use the pumping technique, you work its sponginess and help the liver in its work. The Liver Pumping Technique is as follows:

a. The right hand is stationary. It is positioned with the right thumb under the lower portion of the rib cage and the index finger pointing toward the sternum.

b. The left hand is placed on top of the right ribs over the liver and does the pumping action. This is a gentle downward motion toward the navel or the left hip.

c. Pump several times, coordinating with the exhaling breath. This technique is very relaxing. Remember to follow the rhythm of your student, rocking your body to create the movement.

d. Keep your body and hands relaxed throughout.

Pancreas Massage Technique

a. Place the fleshy, knife edge of the palm on the head of the pancreas at the centerline, and press deeply into it. Apply as much pressure as the student can take. If possible, apply extra weight with the other hand resting on the working hand. If you are working on a sugar addict or alcoholic, the area will be very painful. Remember the rule is to be gentle and to go slowly. The harder the pancreas is, the softer the massage should be.

b. Apply a rolling pressure with the edge of the palm and fingers. (Caution: Pump toward the body's midline so that stones or crystals do not enter the spleen.) As you get to the narrow end of the pancreas near the lower left rib cage (where the mass of the pancreas decreases), the pressure you are exerting will decrease as the tips of your fingers tail off.

c. Together you should do the Spleen's Sound (***Whoooooo***) during the massage.

d. When working on yourself, use the basic two-handed spiraling technique. If you are sitting and leaning into your fingers, you can apply pressure.

Fig. 24 *Working on your own Pancreas and Stomach*

Fig. 25 *Spleen Detoxification—Spiraling with the Thumb*

Hand Techniques for the Spleen

a. First remove any congestion in the large intestine at the splenic bend.

b. Use your thumbs or fingers to spiral in the spleen area. The spleen is deep so add weight by pressing down on the thumb or fingers using the other hand.

c. As you reach the level of the spleen under the left rib cage, you should not encounter any hardness because the spleen is soft tissue. It is unlikely that you will be able to feel it. However, you should take time to work at length on it to improve its natural function and increase its pumping action. Massaging the spleen will help it to pump blood in and out and thus increase its cleansing effect on the blood. The massage will also increase the energy level in the spleen/pancreas meridian system and spread its benefits to the entire lymphatic system.

d. Have the student push away your fingers with his or her spleen and Chi.

e. Use the Baking Technique with one hand on top of the spleen and the other beneath it (on the back).

Hand Techniques for the Heart

Massage the heart area with one hand while pressing Heart-7 on the wrist with the other hand. This will sedate and slow down the heart.

Hand Techniques for the Heart Controller

Massage the heart controller area with one hand while pressing Heart Controller-6 with the other hand. This will relax the diaphragm and stimulate the appetite.

Hand Techniques for the Triple Warmer

Massage the Triple Warmer area with one hand while pressing the Triple Warmer-5 with the other hand to calm the nerves.

Triple Warmer-5 Point

Triple Warmer-5 Point (On Both Arms)

Fig. 26 *Hand Technique for the Triple Warmer*

Kidneys Hand Techniques

a. To work on the right kidney have the student lay on the back and then twist the pelvic area over to the right so that the right hip is pointing straight up and the right knee is drawn toward the chest. Place a cushion behind the right knee to support it and keep it in position, or kneel behind the student and use your knee to support the raised hip. Ask the student to relax the shoulders.

b. Look at the area where the kidney should be. Look for an indentation or slight depression on the skin surface.

c. Use both hands and eight fingers to go into this area. You won't use all eight fingers to massage the kidney. Usually you will use just your two middle fingers with the others for support.

Fig. 27 *Working from the Side to Gain Better Access to the Kidneys*

d. Every kidney is different. If the kidney is normal and is not situated too low, you will only be able to feel the bottom of it. If it is in good shape, it might have the texture of a marshmallow or be just a little firmer. Inhale air to make your cheeks round and puffy. Feel the surface of your skin to feel what a healthy kidney feels like. It feels soft and gentle, but with a slight surface tension.

e. Use your student's assistance in finding the kidney. The student can guide you to the kidney and you may hear such comments as, "'That just feels like your finger nail," or, "That feels like your just pushing against my skin." When you hear, "I feel something in my back," or "You are touching it now," you can start massaging in small spirals.

f. An unhealthy kidney will feel uneven with alternating soft and hard spots. At times it is painful, and you may not be able to work on it for long. Sometimes you can't reach the kidneys because the tissue surrounding it has become very hard. In that case, gently massage this area until the congestion dissolves and you can reach the kidneys. Assign homework.

g. When you begin to use a spiraling massage with your fingers, have the student continuously use the Kidneys' Sound every time he or she exhales. Massage very gently.

h. On the average you can spend one or two minutes on each kidney, but do not spend more than five minutes maximum.

i. The question of how long this procedure should take permits us to introduce an advanced healing technique developed by a woman who is very talented CNT practitioner. You may attempt it when your energy is highly developed, and you are sure of your ability to recover and protect yourself. In a meditative state, she works organ to organ by uniting the energy field of her organ to that of her student. By doing this she knows when her fingers have reached the kidneys because she feels "something very respectful and valuable." If she finds a sick kidney, then her kidney also feels sick; if the kidney she is working on hurts, then hers hurts. When she begins to spiral her fingers, she can feel fingers spiraling in her kidney. She is constantly sending good kidney energy from her kidney to that of her student while constantly doing the Kidneys' sound with

her student. She determines when she will stop the massage and the healing process by evaluating the feeling in her kidney. When her kidney feels well again, then she knows she has helped her student to restore her own kidney to full functioning and a healthier state. The practitioner approaches each of the organs in this manner.

j. The release technique is very important. When you have finished the massage, have the student push your fingers out of her kidney with her energy and Chi.

k. After you have finished the massage, blow warm air into the Kidney. This is an early shamanistic Taoist practice adopted by Chinese healers when they started applying burning moxa on a cold area that needed heat.

Lymphatic System

1. Feeling a Lymph Node

Since maintaining the activity of the body's immune system, much of which concerns lymphocyte production and distribution, is central to the practice of Chi Nei Tsang, acquaint yourself with the lymphatic system. Note where the many lymph nodes are and where the main ducts are commonly found.

To acquaint yourself with the feel of a lymph node, you can find one under the armpit or, since the armpit can be a very delicate area; it may be easier to find a superficial node in the groin area.

a. Locate the large nerve under the artery; it will feel like a nylon cord soaked in oil. Be gentle.

b. Next find the vein; it will feel hollow, like a water hose. You can feel the blood flowing through the vein, though there is no pulse, and the pressure is lower than in the artery.

c. Behind the vein is the artery. Here you can feel the definite pulsations of the blood.

d. Finally locate a lymph node along the artery. Practice until you can find and distinguish all four things, but take care not to massage a swollen lymph node in the armpit. (The abdomen is the only area in which swollen lymph nodes can be massaged.)

2. Concentration of Lymph Nodes in the Abdomen

The largest lymph nodes are near the navel. These become very clogged because the blood has picked up toxins from the body. When a lot of toxins accumulate in this area, cells can become so toxic that they begin to die. The first step in healing is to detoxify the body.

The nodes in the abdomen are positioned in two layers. The shallow group is just below the fatty layer under the skin and the other major concentration is very deep, around the kidneys and just above the backbone. There is a tendency for more lymph nodes to be concentrated and congested in the lower abdomen than in the upper abdomen.

3. Lymph Drainage

The lymph drainage system covers the whole body. The lymph from the abdomen, lower body, and legs drains into the cisterna chyli (in the lower abdomen in front of the first two lumbar vertebrae) and from there into the thoracic duct. There it is joined by the lymph from the left side of the head, neck, and chest. The right lymphatic duct drains lymph from the upper right side of the body and from the right side of the head and neck.

Eventually, the thoracic duct empties all of its lymph into the left subclavian vein and the right lymphatic duct empties all of its lymph into the right subclavian vein. Together they drain the lymph into the heart and into the blood, and the cycle repeats itself.

4. Detoxifying the Lymphatic System

As you massage the abdomen, the lymph glands will automatically be stimulated by the motion given to the tissues. This stimulation is increased by working directly and gently on the lymph nodes.

Lightly stimulating the lymph in the abdomen will help to decongest the lymph nodes in this area. The abdominal lymph nodes and system are important because of their close connection with the intestines and digestive system and the detoxification system of the liver. Generally, eating loads everyone up with lymphatic waste (animal proteins, fats, milk). Bad eating habits damage the intestines and then the whole system. The remedy is a good diet and Chi Nei Tsang lymph massage.

Once you begin the process of draining the lymph, the body continues the process. It is not always necessary to continue working on a particular lymph node until it is completely clear. You may observe, in a following session, how that node has continued to soften, and how the entire lymph flow has irnproved. It is beneficial to point this out to your student, emphasizing the remarkable healing properties of the body and noting that the body likes a little encouragement.

a. Hand Techniques to Release Toxins from the Deep Abdominal Lymph

(1) Detoxification of the lymph toxins in the abdominal area begins by massaging the navel, first clockwise, and then counterclockwise.

(2) Do the Wave Technique until you can clear and reach deep into the abdomen. Feel for lymph nodes along the midline. They are smaller than knots or tangles. If you can feel them, then they are congested. Massage them lightly with your fingertips.

(3) Continue searching for nodes in this area especially around the aorta and vena cava close to the spine. Massage any that you find.

b. Working on the Rest of the Body's Lymph

(1) Begin by place your hands flat on the navel. Ask him/her to breathe against them while you press down. When the student exhales press down a little more, thereby activating the lymph flow into the thoracic duct.

(2) Clear the superficial lymph system in the skin by stroking the ribs. Move your hands to the lower ribs at the level of the liver. Place your thumbs underneath, pushing up from the sides in a forward motion toward the centerline. Stroke (do not rub) the skin very gently. Gradually move your way up toward the sternum.

(3) Go to the spaces between the ribs on the left side of the sternum. Place the fingertips of all eight Fingers into the spaces and, with a circular and downward pressing motion, push the lymph into the body toward the thoracic duct. Work the lower ribs first and gradually move up to upper ribs just below the collarbone. Repeat on the right side.

(4) Drain the areas above the collarbone and again direct the lymph down into the body. Place your middle and index fingers above each side of the collarbone into the hollow spaces and make a circular motion into the body, thereby draining the lymph into the vena cava.

(5) Stand at the head of your student, and turn the head to the left.

When you turn the head, cradle it in your left hand and support it so that the student relaxes. Lay the head down just before you move the lymph down from the right collarbone. It is very important to use a light, feathery touch in this area since it is very delicate. Use the fingers to drain lymph vessels from below the jaw and ear, down the side of the neck.

Drain it into the space above the right collarbone. (Do not work on anyone with a thyroid problem since this procedure can be very uncomfortable for this person.)

(6) When the lymph nodes under the armpit and around the neck are enlarged and painful, do not massage them. Wait until the pain is gone. These lymph nodes are close to the heart drainage area. Massaging them could push the infection into the bloodstream, thereby spreading it throughout the body.

The lymph nodes in the abdomen are large and numerous. Since they are far from the heart drainage area, the lymph system has a chance to deal with them. Massaging the lymph nodes in the abdomen can help improve the overall immune system.

(7) Next, turn the head to the right, cradle the head, and repeat the massage on the left side.

You can work both sides simultaneously by placing one hand on each side of the neck (with the fingertips on the back of the neck).

Make a circular motion downward, without rubbing the skin. If your hands are small, you might have to place them a little lower and do the movement a second time to work the whole neck.

(8) Using your flattened hand press the lymph nodes in the left armpit downward into the body. Repeat for the right side.

(9) Press the groin nodes towards the lower abdomen collect point near lumbar-2, also with your flattened hands or fingers.

(10) You may end by placing the students' hands over the navel and allowing rest. Thank the lymph nodes for letting you work on and disturb them.

Fig. 28 *Superficial and Deep Lymphatic Drainage of the Head and Neck and Direction of the Flow*

Psoas Muscles

1. Releasing Sciatic Pains by Working on the Psoas Muscles and the Lumbar Sacral Plexus

Work on the iliopsoas muscles and the sciatic nerves goes together because they can influence one another. The accumulation of toxins and tensions in the abdomen presses against the nerves, muscles, and tendons that are coming out from the spine. This impairs communication between nerves. Tension in the muscles goes on unnoticed and the muscles don't receive the message to relax. To restore the nerves to their function of controlling the muscles, the pressure has to be relieved.

Major psoas muscles originate along the twelfth thoracic to the fifth lumbar vertebrae bones, descend through the pelvic region, and attach to the top part of the femur (thigh) bone. They form part of the posterior wall of the abdomen and help support the organs in the abdomen. They are also the flexors of the thigh. On some the psoas muscles do not descend to the thighbone, but anchor to the lower brim of the pelvis.

Fig. 29 *Psoas Muscles*

2. Techniques for Releasing the Psoas Muscles

a. While the student is lying down, look at the legs and feet. One leg may be shorter than the other. This indicates tension in the psoas muscle on the short side. One foot may be naturally turned out while the other is pointing straight up. The tense leg and foot indicates tension in the psoas muscle and sciatic nerves on that side.

b. Work in the lower abdomen and pelvic area and loosen any knots or tangles.

c. Press all your fingers into the area of the psoas. The psoas is very deep, and you will need the student's help to find it. Help the student to raise the knee closest to you and pull it toward the chest. Have him or her take over and rotate it, moving it back and forth while you search for the psoas. The psoas muscle is engaged by this movement of the knee and leg. You can feet it moving. This is a simple way to find it, since it is so deep. When you feel it moving, lock in on it with all your fingers lined up in a row along its length.

d. Press down and hold your fingers still. Shake your body sideways, right and left. Be vigorous; keep the fingers on the muscle so that they can massage it. If you are working on yourself, elevate and rest your feet on armchair and use however many fingers you are comfortable with. Use a standard spiraling motion up and down its length.

Fig. 30 *Place all the fingers on the psoas muscle.*

Releasing Sciatic Nerve in the Buttocks and Legs

a. With the student on his back, lift the leg closest to you toward the chest and rotate it in the hip socket. This will help set the bones in the pelvic region in their right place. You can also lift both legs at the same time. Keep the knees together and gently rotate both hips in their sockets.

b. Place the student on his or his left side. Feel for an indentation or “hole” between the gluteus medium and gluteus maximum to find the piriformis muscle. Massage and release the contracted piriformis muscle, which is close to the sciatic nerve running through the buttocks. Press straight down with the thumb or elbow. Often this area is very painful if there is a problem. If there is no pain there is no problem. It is important to spend some time working here While it is painful, the massage has a “sweet ache” to it; it hurts but the student starts to feel that he or she is going to get better. Do not forget to use your concentration to send healing energy into this area.

c. Massage down the middle line of the back of the thigh to loosen the muscle there.

d. The next position is behind the knee at the popliteal tendons. Work on both sides of the knee, since the Sciatic nerve branches into two divisions here. Massage with the thumbs on the left and right side and use your fingers to pull the tendons apart. This will stretch the tendons and muscles and release the pressure on the nerves.

e. The third position is under the inner ankle, under the bone. It is very close to Kidney-3. Massage and press it with your finger (s) or thumb.

f. End the procedure by lifting the lower leg and tapping the heel with your fist.

g. Repeat the procedure on the right side.

Fig. 31 *Stretch the tendons at the back of the knee apart so that you can reach the nerves.*

Fig. 32 *massage the nerve area below the ankle bone.*

Massaging the Uterus

(1) Place eight fingers to one side of the uterus and the thumbs together on the opposite side. Keep the edges of both hands together and aligned. Apply a deep, probing, kneading motion with this combination. Massage any tangles or twists you find and hold the uterus with both hands for a while in the center.

(2) There are often knots and tangles in the uterus and along the branches of the uterine tubes leading to it. Trapped or excessive heat often causes this. Release the heat using the techniques for removing winds.

(3) Tightness in the muscles and fasciae holding the uterus in position can also cause this problem. This congestion may cause the uterus to be slightly tilted. Use detoxification massage techniques to clear the congestion. Then cup the hands between the ovaries, gently push in, and massage the area above the cervix, removing any congestion. If during ovulation and menstruation the energy flow through this area is disturbed, pain and cramps can occur. This practice also seems to have the very beneficial effect of helping to balance the hormones.

(4) Another technique is to do gentle circular massage on the fallopian tubes.

Fig. 33 *Locating the Uterus and Ovaries*

Ovarian Massage Technique

a. Have the student pull her knees up. Search for the ovaries.

b. Use the fingers and heel of the hand in a rocking motion. If working from the right side, the heel of your hand massages the right ovary. As your hand slowly sinks in, the fingers massage the left ovary. You can add your other hand for extra weight, although one hand is heavy by itself. Do this for five minutes (or longer) and many of the conditions listed above will correct themselves. Push and pump. Do a soft rock and roll. Send them energy, talk them back to health. This is very comfortable to the student, and she will feel serene and trusting.

c. This technique works better if is it is done by another person. It is much faster than working on just one side at a time. Nevertheless, you should teach your students to work on themselves at home to maintain the work you have done. If the student doesn't do homework, the ovaries will revert to their old position after a few days. They are used to being in the same place and would like to go back. Its like an old habit. Make them feel comfortable in their new situation.

Fig. 34 *Ovarian Self-Massage*

Prostate

Blockages near the prostate gland can cause impotence. When these blockages are removed, virility may return. Toxins in that gland are usually another cause of this problem.

The prostate is right above the perineum, between the anus and the testicles, just under the skin. Massage this area as well as the testicles.

More about Headaches

Headaches are a pain. Any pain has to be taken as a warning signal that something is wrong. If you take a pain killer, you are only suppressing the signal (symptoms) and are ignoring the cause of the pain. Your body is alerting you; do not ignore it. In CNT pain is a guide to the source of the problem. Respect this pain and rest. You can save the body's energy which it can then use to strengthen the organs. Of course, people do not want to hear this; they want to keep working or playing, so they take pain killers in the belief they have no time for preventive measures.

Often, the pain is expressing itself along a specific channel when it involves a specific organ. Most channels run through the head. If the head pain is localized, study a chart of the head channels. Then you can figure out the organ that is involved with the problem. The most common causes are heat in the liver, blockage in the gall bladder, and constipation.

Tension and stress are also causes. Fear gets trapped in the kidneys and weakens them and the adrenal glands. This can create tension which causes heat in the heart. The heat rises up and creates tension and pressure in the head.

You can alleviate this pressure as follows:

1. Detoxify the skin.
2. Release the large intestine.
3. Detoxify the liver, gall bladder, and kidneys.
4. Work on the adrenal glands.

Balancing the Pulses

If you find a knot blocking the aortic pulse in the solar plexus, you may assume that the other pulses are out of synchronization. The idea is compare the aortic pulse with the pulses at different places in the body. Using it as a gauge is wise because it reflects the pulse of the heart and the center of the body. Compare the speed and intensity of the pulses with each other and with the aorta. They should be nearly the same, but can be slightly different. If they are different, check the abdominal area for blockages and begin to remove them with small circular motions using both hands. You can adjust the pulses by applying pressure on the aorta with one hand while keeping contact with the unsynchronized pulse using the other hand.

Balancing the pulses and clearing abdominal blockages may take more than one session to accomplish. You may find it easy to balance and clear them in one session, only to find that the student has incurred the problem again between sessions. Give your students homework!

Remember, releasing knots and tangles in the abdominal area has a general effect on the body. Your efforts to undo these tissues induces pressure on the aorta and vena cava simultaneously. Thus, it is easy to affect many systems and organs, either directly or indirectly. For example, if you are working on the stomach at a moderate to deep level and pressure, you are also affecting the aorta, pancreas, transverse colon, and psoas muscle since these organs are aligned in layers next to each other from front to back.

1. Hand Techniques—Practicing on Yourself

a. Check the navel area. Press into it in all directions and observe the sensations. Use your thumb to move your intestines and work your way in. Sometimes you can feel your aortic pulse deep within your abdomen. If it is off-center, try to center it using the navel massage centering technique. It is possible to align everything when you are quiet. Sometimes it may take repeated corrections before

you can center your pulse. Once you feel a satisfactory aorta pulse, follow the techniques listed below and compare, contrast, and balance it with the other pulses in the body.

b. Compare it with the wrist and other pulses. Keep the left hand on the master pulse by the navel and feel the left radial wrist pulse with the fingers of the right hand. Hold the pulse until it synchronizes and beats at the same time as the aortic master pulse. Switch hands and feel the other wrist.

Fig. 35 *Searching for Your Own Aortic Pulse*

2. Hand Techniques—Working on Another to Balance the Aorta with Other Pulses

First work on the pulses on the left side of the body, and then the right side.

a. Work from the left side of the student's body. First, locate the aortic pulse and maintain your hold on the aorta with your left hand. Then place one or two fingers of the right hand on the left carotid, feel the pulse, and gently hold until the aorta pulse and carotid are synchronized.

Chi Nei Tsang I

Internal Organ Chi Massage

Mantak Chia

Illustrated by Juan Li

New Approach to Healing

In Chi Nei Tsang I Master Mantak Chia, continues to bring the ancient, time-tested wisdom of the Universal Tao System to the Western world. Chi Nei Tsang I presents a whole new understanding and approach to healing with detailed explanations of self-healing techniques and ways to avoid absorbing negative, sick enegies from others.

Hands-on Techniques for Detoxifying and Rejuvenating the Vital Organs

Chi Nei Tsang I is full of new ideas and ancient healing techniques gathered from thousands of years of experience. The art evolved in an era when there were few physicians and people had to know how to heal themselves. For many today the situation remains the same. Chi Nei Tsang I teaches people how to take full charge of their health and well-being.

First known Techniques that Apply to Navel Center

In the Navel Center negative emotions, stress, tension and sickness accumlate and congest. When this occurs, all vital functions stagnate. Using Chi Nei Tsang I techniques in and around the area of the navel provides the fastest method of healing and the most permanent results. Many techniques of other systems only work at the body's extremities, far from the Navel Center and the organs. The Chi Nei Tsang techniques taught in this book can be applied to the abdominal center where the Universal, Cosmic Particle and Earth Forces are combined and stored.

Supplement 55

The meditations, practices and techniques described herein are *not* intended to be used as an alternative or substitute for professional medical treatment and care. If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training. This book does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Introduction

What is Iron Shirt Chi Kung?

Iron Shirt Chi Kung is the martial arts aspect of the Universal Tao System which develops internal power and a well-conditioned body through simple techniques that build and store Chi (life-force energy). The Iron Shirt training first of all develops a body relaxed and open, strong and healthy, and structurally aligned with the forces of heaven and earth. The Iron Shirt techniques help us to become rooted to the earth, thereby keeping the body centered and balanced. Iron Shirt offers a means of perfecting our inner selves, allowing us to reach higher spiritual levels.

Chi Kung is a form of internal aerobics that involves mind and Chi power and breathing exercises.

The term Chi Kung means: “the skilled use of energy”. It teaches us how to detoxify and clean out the body in order to stimulate the flow of energy and all fluids through the body. It also teaches us how to draw in the energy from outside, to pack and condense it and to circulate it in and around the human body as a protection.

Chi Kung can also be translated as “practicing with the breath”, and includes any exercise that uses breathing to energize the body. Breathing, which is the act of gathering the energy from the environment, is one of our most important bodily functions. The physical breath activates the Chi, also known as subtle breath, which generates increased physical and psychic strength (see the booklet *Tan Tien Chi Kung*).

In Iron Shirt Chi Kung we use the breath to pack the organs, glands, muscles and bones with so much Chi that they will stay healthy and strong and resist aging and disease. This will release long held tension as well.

All the Chi Kung movements and breathing exercises should be done mindfully in order to reach the deeper emotional layers of your body. These emotional layers can cause tension and blockages in the physical body. If you are not aware of this, the breathing exercises and movements of the Iron Shirt will intensity the blockages as well as the emotions themselves.

The real point of Iron Shirt Chi Kung is to prepare the body to receive higher spiritual energies.

The Core Iron Shirt Chi Kung training consists of:

- Packing breathing process.
- Iron Shirt postures.

Main goals are to develop:

- Centering and Rooting power.
- Structural alignment with the earth and also with the heavenly force.
- Internal power.
- The ultimate goal is to prepare the body for the higher spiritual energies.

As stated in Chapter 78 of the Tao Te Ching

When people are born, they are soft and gentle.
When they die, they are stiff and callous.
When myriad things, grasses and trees, are born, they are soft and tender.
When they die, they are withered.
So stiffness and callousness are the company of death.
Softness and suppleness are the company of life.
The powerful army will not win.
A stiff tree will break.
So stiffness and power stay below.
Softness and suppleness stay above.

Iron Shirt Breathing

Breathing, which is the act of gathering energy from the environment, is one of the most important bodily functions. It is used in Iron Shirt to strengthen the internal organs and glands by increasing the Chi energy pressure (pounds per square inch) around them and in the Tan Tien and the spine.

Iron Shirt breathing techniques provide a longer, deeper, more relaxing breath cycle and sufficient oxygen to cleanse the body of waste materials, sediment, and toxins that have accumulated in the organs. The increase in circulation also provides enhanced nourishment for the organs. The circulatory, lymphatic, nervous, and endocrine gland systems are all activated, and blood, spinal fluid, and hormones flow more easily to reduce the work of the heart. Sexual (creative) energy, another source of life-force, is also used in this process to enhance the body and produce spiritual energy.

Packing Breathing

Packing Breathing is the most important breathing technique in the Iron Shirt practice. It is used in all the related Iron Shirt postures. “Packing” condenses energy into each individual body section to increase the Chi/air pressure, especially in the abdomen, the glands, the organs, and the fasciae around the organs. Chi pressure will help the organs to hold their shape and lift the organs to their own positions so that energy can flow easily. Thus, the Chi pressure serves as an energy charger for the organs and the fasciae. After you practice for a period of time, you will feel a permanent flow, vibration and a suction of the Chi inside the Tan Tien, your lower abdomen.

Tan Tien Chi Kung teaches the packing process in the abdomen (Tan Tien) in a more elaborate way. (see the *Tan Tien Chi Kung* booklet).

The principle of Packing Breathing is to compress the abdomen from three directions: above (from the lowered diaphragm), below (from the upward pull of the perineum/sexual organs, also the uterus and the prostate gland) and in front (from the abdominal wall). It reduces the space in the abdomen and packs and condenses the Chi there. The packing process should be done carefully and without strain. Always breathe through the nose from the lower abdomen and exhale slowly (in some exercises through the mouth) in all the Universal Tao breathing techniques. Be sure to keep the diaphragm down, to sink the rib cage and the sternum and to relax the chest during the Packing Breathing. Keep your heart soft and gentle. Feel the Yin in the Yang fire of the heart. And keep the tongue against the palate during the packing process.

In Packing Breathing we use small sips of air (a small part: 10% of the whole breath) which is like sucking up the breath from the lower abdomen. We sometimes refer to it as “part of the breath” or “inhale more” or as “a little bit” and when you are trained you can also use a breath we call “inhale without inhaling”.

You can increase the suction in your abdomen as follows: Inhale, exhale, flatten down the stomach, hold the breath, and very lightly pull up the anus and the sexual organs (especially the uterus and the prostate gland) a few times, until you feel a suction. The uterus and prostate gland will work like little pumps.

Practice

We start the “Packing” with the Energizer Breathing. It is always good to relax yourself first with calm, deep, and smooth abdominal breathing and to activate the Tan Tien Chi.

1. Start with bellows breathing. Inhale slowly but forcefully. Keep the chest relaxed and feel the area of the lower abdomen below the navel and in the perineum bulge. Exhale forcefully, flatten the stomach and feel the pull of the pelvic and urogenital diaphragm and the sexual organs. Regulate this breathing to a steady, strong pace 18 to 36 times.

2. Exhale very slowly down to the navel and flatten the stomach towards the spine. Exhale once more and lower the diaphragm; exhale once more and pull up the sexual organs and the anus. Hold for a while and feel a suction in the abdomen. In the next stage, we continue with reverse breathing.

3. Packing Breathing/building Chi pressure.

- Inhale part of the breath down to the navel, suck in the abdomen and put pressure on the navel. Relax the chest and the belly and keep diaphragm down.

- Inhale more; enhance the suction, relax and pull the left and right anus up to the left and right kidney, put pressure on the kidneys and wrap them with Chi. Feel the kidneys and the Door of Life expanding. Hold the breath.

- Inhale without inhaling and feel the suction in the abdomen sticking in the sexual organs and the anus. Relax and press the Chi down into the lower abdomen. Hold the breath.

- Inhale and suck in more, relax and press the Chi down to the perineum. Feel pressure in the perineum and the whole lower part of the abdomen.

- Continue inhaling without inhaling while enhancing the suction in the Tan Tien, sucking in the sexual organs and anus even more and sealing them.

- Hold this as long as you can. If possible, inhale more, and exhale then very slowly and smoothly. Keep the pressure. Relax and let/feel the Chi flow into the organs and fasciae, inflating them with Chi. Feel a suction in the Tan Tien and feel the Tan Tien Chi breathing and vibrating.

With this breathing method, the organs become packed, compressed and strongly massaged.

Normalize your breathing by doing abdominal/Energizing Breathing, circulate the Microcosmic Orbit for a few rounds and brush down the excessive energy from the chest. Walk around and shake out the arms and the legs.

Always remember: Do not use force. Relax the chest, and let the rib cage, the chest, the sternum and the diaphragm sink down.

With Packing Breathing you should remain soft inside. If you feel uncomfortable and can no longer hold the breath, exhale a little bit in between, but maintain the pressure.

Do no more than three cycles of Packing Breathing a day in the beginning.

Fig. 1 *Packing Process Breathing*

Fig. 2 *Packing Process Breathing*

Precautions

The following is a warning to all practitioners, especially those with high blood pressure, emotional instability, heart or chest pain, or any acute illness.

1. If you have high blood pressure, check with a doctor before attempting to practice Iron Shirt. Do not do the exercises and breathing techniques strenuously.

2. Women should not do Iron Shirt breathing during menstruation, but may practice the structure, standing meditations, and Bone Breathing. If pregnant, do not practice Iron Shirt Packing Breathing; use only Energizer Breathing and standing meditation.

3. Be sure that the diaphragm is lowered while practicing these exercises to avoid accumulating energy in the heart and to facilitate the flow of the Microcosmic Orbit. Do not pack the chest as this can cause energy to congest there, which can affect the heart. Again, you should always relax the chest.

4. Always breathe into the lower abdomen and perineum to avoid trapping negative energies in other parts of the body, especially in the brain, the heart, or the liver.

5. After practicing the postures, be sure to place the tongue on the roof of the mouth to connect the Microcosmic channels so that all energy from the head can be drawn down through the Functional Channel to the navel for storage. Do not leave energy in the head or upper body.

Iron Shirt Postures

The Iron Shirt Chi Kung consists of five standing postures. There are many standing Chi Kung postures. Master Chia has taken the essence of all these postures and distilled them into five postures. Every posture teaches:

a. To align one's muscular skeletal structure with the gravity of the earth and with the forces of heaven. Each posture presents a slightly different energetic variation and teaches a new alignment skill.

b. The packing breathing in different postures to increase the Chi pressure, especially in the abdomen, organs, glands and spine and to improve the rooting.

c. How to test the structure and the rooting in the different positions. The Embrace the Tree position is the most important position, because it teaches the basic alignment of every standing position and of Tai Chi Chi Kung.

Horse Stance and Embracing the Tree

1. Position

A. Stand Shoulder Width and the Feet Parallel

B. Distribute the Weight of the Body Evenly over all the Nine Points of the Feet

"Claw" the ground by gripping the earth with the toes, particularly the big toes. The human body is like a tree. The roots are in the feet, the legs and torso are the trunk and the arms are the branches. The inner foundation of Iron Shirt is the life force, the outer foundation the feet. The feet support the whole body's weight, and at the same time they connect with the earth force. Feel the Tan Tien Chi pushing down.

You must feel that the weight of the body is evenly distributed over all nine points of the feet. Check and feel which parts are too tense or have too much pressure on them. This can cause the body to misalign and the spine to tilt to one side.

C. Relax the Soles of the Feet and Turn the Big Toes Slightly Inwards and Root the Feet

The second toes should point straight ahead, while the outside of the feet stay parallel. This will help to open or keep the sacrum open by rounding the pelvis. Feel that the rounding of the pelvis corresponds with the circle around the toes/feet.

Fig. 3 *Nine Rooting Points of the Foot.*

When the soles are open and relaxed, you can feel the soles "sucking" and having a connection with the ground. Turning the feet inward will help to make the connection between the tendons of the big toes and thumbs and of the small toes and the pinky fingers, thereby increasing your rooting power. Note that if, at this point, the toes and the balls of the feet were raised, you would have no rooting.

D. Align the Ankle and the Knee Joints

Let all the points of the feet especially the big toes, press firmly with the same weight into the ground and twist the ankle joint very slightly outward. If one can properly press the soles of the feet in the earth and gently twist the ankle joints, this will help transfer the weight into the ground. When one part of the foot raises or collapses, this is a clear sign that the ankle joint is not aligned.

Fig. 4 *Rooting to Mother Earth's Energy*

Next, keep the ankle joints locked and the feet pressed firmly into the earth and lightly twist the femurs with a slight twist at the knees. This will align the ankle and knee joints. In this critical joint alignment, the "saddle" of the tibia (shinbone) is situated over the talus (ankle bone) which stabilizes everything above. In this way, all the internal pressure of the synovial fluid is kept constant and the ball and the socket of the joints will remain aligned.

The spiraling action that begins with the ankle joints now connects with the knee joints, the next vital element in transferring the earth force from the ground to the hips. If you twist the knees prop-

erly, all the tendons are rotationally wrapped around the bones, creating a strong spring force. In this position, the earth, ankles, knees and hips are in one line of power. Instead of the knees supporting the full weight of the body, the weight is transferred from the ankles through the heels and the soles of the feet to the ground. With all this twisting, It is important to reemphasize the lightness and gentleness of this posture. Listen and smile to your body. If you feel joint pain, stop.

E. Open the Kua. Align the Hip Joints and the Sacrum and Sink from the Kua

a. The position of the hip joints and the sacrum is very important for the structural alignment of the body. When your ankles, knees and hips are aligned, your sacrum and hip joints will be open and the tendons in the groin area firm and relaxed. This allows the transfer of force from the legs to the spine.

Fig. 5 *Kua Anatomy*

b. You sink from the kua and not from the knees!

The sacral alignment determines whether your structure is strong or weak. You sink in the kua by relaxing the lower back and slightly dropping the pelvis and the sacrum as if you were tucking the tail-bone between your legs and sitting down on a chair. If you have your hands in the inguinal crease, you will feel it deepen. If you feel the feet, especially the heels and the big toes, pressed firmly into the ground, you will have also aligned the sacrum with the legs. You will feel one line of power from the feet, the groin, the sacrum, and up to the spine.

Perineum power, the sacral and cranial pumps and the Tan Tien will also help you to open and align the hip joints and the sacrum. When activated, they help to tuck in the coccyx, tilt the sacrum, and expand the sacrum and the lower back.

c. Opening the kua is also very much related to the psoas muscles. Successfully opening the kua very much depends on relaxing the psoas muscles. Iron Shirt Chi Kung, Tai Chi Chi Kung. and the Tao Yin are internal exercise systems that attempt to lengthen and free up the functioning of these muscles.

In Iron Shirt, awareness of the psoas muscles is vitally important. Because the psoas muscles connect the lower vertebrae to the lower kua, they are the major keys in linking the power of the legs to the spinal column.

The psoas muscles are also closely connected to latissimus dorsi muscles which extend from the upper spine to the humerus and the shoulder bones. Therefore, the psoas muscles are an important bridge between the lower and the upper body. If the psoas muscles are relaxed and supple, the power of the legs can flow unimpeded, like a wave from the legs, up the spine, and to the head.

F. Activate the Chi Belt

You can activate the Chi Belt in the following way:

a. Activate the Tan Tien Chi and let it expand to the kidneys, and the Door of Life, and T-11.

Fig. 6 *Developing the Chi Belt*

b. Hold the Chi Pressure in the Tan Tien. Inhale, pull up the left side of the anus and let the energy of the left kidney expand out to the left side of the waist and from there to the navel in front. Inhale more, pull up the right side of the anus and let the energy of the right kidney expand to the right side of the waist and from there to the navel. Join both sides together at the navel. Hold the breath and exhale slowly, expanding the Chi Belt around the waist.

The Chi Belt acts as a major bridge linking the tower part of the trunk to the upper part. If the Chi Belt is not properly developed, the feet, legs, and hips will have no connection to the upper body.

The psoas muscles are also closely connected to the diaphragm. If the psoas muscles are supple, you can breathe more deeply and easily and can fully use the power of the diaphragm and breath to help link the lower and upper body together in the Chi Belt.

G. Aligning and Elongating the Spine

To elongate and align the spine, you have to open the spinal joints and expand the Chi pressure in the whole spine. You can start the practice by activating the Chi pressure in the Lower Tan Tien, as described above and in the *Tan Tien Chi Kung* booklet. Then inhale, exhale, press the diaphragm down and pull up the anus toward the coccyx. Use the sacral pump and guide the energy up the spine, pushing the energy into the spaces between the discs which separate the vertebrae. This will elongate the spine. You can also use meditation to develop the Chi that will open the spine. Feel a string through the center of the spine is pulling you up from the crown. Imagine that the string is connected with a star above your head. Feel this string lifts the body and elongates the spine. The sacrum is pulling down and the crown is pulling up. Keep the chest and ribs relaxed (The arm position will vary according to the exercise being practiced in this posture). Keep the back straight and the neck pushed back at C-7 and the base of the skull. The head should feel as if that string extending from the crown is lifting it. You may practice against a wall.

The spinal cord is formed from 24 vertebral bones plus the sacrum and the coccyx. It connects the head, arms, and legs. For the Chi to pass back and forth between the head and the limbs, it must go through the spinal column. The alignment of the spine is thus an essential part of Iron Shirt, Tai Chi, and meditation.

The spine, when properly aligned, is full of power and can greatly amplify the force from the legs (earth) and from the arms (cosmic and universal force) to the feet. By slightly pulling up the sexual organs and the anus, tilting the sacrum and rounding T-11 and T-5 one draws the spine like a bow to shoot an arrow.

H. Aligning the Arms with the Scapulae and the Spine

The arms are connected to the trunk via the clavicles in the front and the scapulae in the back.

Be aware of the different points:

- Keep the arms at shoulder level and round the scapulae as if holding a big ball or hugging a tree. Your fingers should be slightly separated by holding the fingertips of each hand one to two inches from each other.

Fig. 32 *Trapezius Muscle*

Fig. 7 *Connect the Ams with the Scapulae Properly.*

-Sink the shoulders and open the shoulder joints. Relax the trapezium (which connects the back of the neck with the back of the shoulders) and the neck muscles.

Fig. 8 *Press down on the bone structure.*

- Let the elbows sink down and turn them inwards. Feel the force of the sinking elbows push down the entire skeletal structure. If the elbows are up, you will disconnect yourself from the power of the tendons.

- Push C-7 out and be sure to move the sternum in and sink the rib cage down (Keep the lower part of the rib cage in and when you sink the rib cage down, T-11 will protrude outward, connecting with the sacrum and the hips and all the way down the legs to the heels).

Fig. 9 *Tendons of the big toes join with the tendons of the thumbs.*

- Turn the thumbs upward to make the tendon connection with the big toes, thus, the two muscle-tendon meridians join together; the front structure of the bones, tendons, fasciae and muscles tighten together as one.

- Attach the hands and fingers to the scapulae and cranial bones by pulling the thumbs' tendons away from the body and the pinky fingers' tendons toward you. Feel a spiraling action when you pull the scapulae to the sides.

-In practicing this. you will feel a stretch of force like a bow from C-7 to the thumb, and a stretch of the neck joints, which will align the neck and the crown. If you sink your elbows down and press them inward, you will feel more stretching of the bow. This will connect the fingertips and the arms with the scapulae and with the back between the scapulae (T-5 - T-6).

Fig. 10 *Connect the Scapulae with the Spine*

By stretching the scapulae and spine tendons and connecting them, the shoulder joints open more, and the shoulders and the scapulae are rounded. You can now sink the chest and push it back toward T-5 - T-6 which is pushed outward.

-It is very important to keep the chest relaxed, and the center of gravity low and practice abdominal breathing. If one is a chronic shallow chest breather with lots of accumulated tension in the chest muscles, there will be very little flexibility in the chest and sternum. If one attempts to sink the chest in such a situation, the shoulders usually compensate by moving upward.

The initial preparations, the Iron Shirt Packing Breath, and the Inner Smile meditation, and other meditations will relax the chest and diaphragm and restore a smooth breathing pattern.

I. Connecting the Whole Body in One Structural Alignment

Connect the upper body from C-7 and T-5/6 down through the Chi Belt (T-11), the sacrum, and the hip joints, down through the knee and ankle joints and the feet into the earth. Feel the connection with the ground.

All points should form one straight line. Feel a star pulling you up and a star pulling you down. Feel the energy in the Tan Tien and the spine. Stay very relaxed for a while in this position. Feel the whole body connected and aligned. Feel rooted and centered and the Tan Tien Chi moving you frontwards and backwards. Let the eyes look at your fingertips and your ears listen inside your body to the Tan Tien. Feel calm and peaceful.

Test and strengthen this structure by asking a partner to push gently against you while you are in this position.

The Embrace the Tree posture is the basic standing position of the Universal Tao practices. Just standing for a while enhances the power of the muscles, bones, and tendons.

You can start by standing 5 minutes in this position and increase this up to half an hour. Just stand and relax, feel the Tan Tien as an ocean and waves are moving you back and forth. If you like, you can also do the meditation in this standing position.

Fig. 11 *Connect hands, scapulae and spine to sacrum.*

2. Packing Breathing

Packing Breathing, applied along the different points of the abdomen and up the spine, releases long-accumulated tension and strengthens the muscles, tendons, tissues, bones, and bone marrow by subjecting them to gradually increasing pressure. The releasing of this tension often gives us a general sense of well-being and self-confidence along with better posture.

In the Embrace Tree position, we do the Packing Breathing in three stages. If, after each stage, you do not continue with the next step, it is very important to collect the energy in the navel.

To do so, stand straight and place both palms over the navel (women, put the left palm over the navel and cover it with the right palm; men, do the same in reverse. Don't follow this rule too strictly).

If you feel uncomfortable, exhale a little bit in between but maintain the pressure.

Remember always keep the diaphragm down!

Before you start to do the Packing Breathing, concentrate on the abdomen for a while. Feel the pulsation and vibration of the Tan Tien Chi inside you and the fire of the Tan Tien and the kidneys/Door of Life. Feel the skin and bones breathing. If you have time, you can start with the Bone Breathing. Always stay as relaxed as possible. Smile and be gentle.

A. Stage One: Connecting with the Earth Force from the Tan Tien to the Soles

1. Stand in the Embrace the Tree position, as described above.

2. Begin energizer breathing. Practice breathing this way from the lower abdomen 9 to 18 times. When you do this breathing, emphasize inhalation by rounding the abdomen, and emphasize exhalation by flattening the abdomen on all sides, pulling the breath to the center. Feel the sexual organs move up and down with the breath.

3. Exhale, and flatten the stomach. Exhale again and push the diaphragm down. Exhale more and feel the pelvic and urogenital diaphragms and the sexual organs pull up.

4. Begin the packing breathing. (Always keep the diaphragm down!) Use perineum power. Remember that the muscles of the arms have a close relationship with all the organs and glands. (Keep the tongue against the palate).

Inhale, suck in the stomach and pull up the perineum and the anus. Hold the breath, inhale more, pull the sexual organs up, and press down on the navel area. Inhale more as if you are breathing (inhaling) without breathing (inhaling). Pull up both sides of the anus to the kidneys and suck the energy to the kidneys. Wrap the Chi in and around the kidneys and feel the kidneys expanding outwards. Relax and hold the breath. Inhale without inhaling, pull up the perineum and the front part of the anus even more and feel a suction in the middle abdomen as you push the Chi down from the diaphragm. Feel the abdomen expanding. Spiral the energy at the navel.

Relax the abdomen, inhale more, continue to pull up the perineum and push the Chi down into the middle abdomen. Hold this pressure for a while. Inhale without inhaling, feel a suction at the perineum, and press the Chi down through the lower abdomen to the pelvic area and the perineum. Hold the breath and the Chi pressure and pull up more at the perineum and the anus.

5. Be aware of the soles and the earth force. Feel the connection to the perineum.

Exhale very slowly, controlling the breath with the mouth. As you exhale, direct the Chi down the legs to approximately six inches beneath the earth. Feel the palms and soles breathing and drawing energy in as you practice abdominal and simple bone breathing to regulate the breath. Feel the energy circulating in the Microcosmic Orbit.

B. Stage Two: From the Soles to the Perineum; Absorbing the Earth's Force

1. Start with the energizer breathing and proceed with steps 2 - 4 from stage one.

2. Inhale, contract the perineum without force, keep the tongue gainst the palate and use the power of the mind and suction in the abdomen to draw the earth energy up.

Press the soles of the feet into the earth. Claw the toes as though you were clenching the earth and spiral with the eyes and the mind. Spiral the energy around the Bubbling Spring (K-1). Hold the breath.

3. Inhale more, and suck the earth energy through the legs to the knees and all the way up to the perineum. Spiral the energy around the perineum. Feel the perineum bulge.

4. Exhale very slowly, hold the Chi (pressure) in the perineum and Tan Tien.

Regulate the breath with energizer breathing and simple bone breathing,

Be aware of the soles, the perineum and the palms breathing together. Feel the earth energy as a nice, cool, blue (or yellow) force, kind and gentle. Relax. Practice the Inner Smile and collect loving energy from all the organs. Feel the energy flow in the Microcosmic Orbit.

C. Stage Three: Pumping the Energy up through the Spine to the Brain

Spiral the energy at each station nine times clockwise and nine times counterclockwise.

1. Start with energizer breathing.

2. If you start fresh, develop Chi pressure in the Tan Tien by following steps 2-4 from stage one.

3. Loosen the abdominal muscles without exhaling, increase the pull at the perineum and push the energy to the perineum.

4. Inhale without inhaling, pull up the front and back part of the anus, suck in the coccyx and tilt the sacrum back. Hold the breath and push the energy into the coccyx to the sacrum. Feel the sacrum expanding. Hold the breath and spiral around the sacrum.

5. Inhale without inhaling, pull up the left and right sides of the anus toward the kidneys and suck the energy up to the kidneys, the Door of Life, and T-11. Feel the lower back, the kidneys and the Chi Belt expanding. Hold the breath and spiral around T-11.

6. Inhale without inhaling, pull up the middle and back part of the anus and use the power of the sacral pump to suck and guide the energy to C-7. Sink the chest and push the sternum and the chin to the back. This will straighten the curve at the neck and lock the neck. Feel the whole spine expanding with Chi. Hold the breath and spiral around C-7.

7. Continue to pull up the middle and back part of the anus; inhale without inhaling and suck and guide the energy to the Jade Pillow. Clench the teeth, keep the chin in and squeeze the skull and temple bones to activate the cranial pump. Hold the breath and spiral at the Jade Pillow.

8. Continue to pull up the middle and back part of the anus, feel the suction in the abdomen. Inhale without inhaling and suck and guide the energy up to the crown and into the brain. Exhale very slowly and let the energy flow into the brain, energizing the brain.

9. Be aware of the crown, the North Star and Big Dipper emanating violet and red light. Inhale, and use the eyes to spiral and blend these energies. Exhale slowly out of the crown and the soles.

10. Concentrate on the mideyebrow until you feel the Chi building up there. Regulate the breath with energizer breathing.

11, Exhale and guide the energy down through the centers of the throat, heart, solar plexus to the navel. Spiral the energy at each center.

12. Feel the sensation of the flow of Chi through the Microcosmic Orbit. Regulate the breath with an even abdominal breathing. Feel the Chi in the Tan Tien and the spine breathing/vibrating. Turn your senses inward and empty the mind in the Tan Tien. Feel nice and calm inside. Also feel the skin and bones, the soles, the palms, the perineum, the mideyebrow and the crown breathing. Just stand for a while like a wave is moving you back and forth.

13. Rest. Put the feet together and place both hands on the navel. Gather and condense the energy in the Tan Tien.

14. Walk around and brush the energy down, if necessary, and shake your legs and arms loose.

Stand still. Relax the whole body and direct the Chi flow.

Fig. 12 *Smile! Settle into the Tree Position.*

3. Testing and Rooting

The principle of rooting is to become like a stick, which is most powerful when positioned sticking out of the ground at a 45-degree angle. The stick is not what is powerful; it is the earth behind it which has the power. Naturally, the stick has to be strong to pass the force. The foot, the leg, the knee can all be adjusted to be like a stick protruding from the earth at a 45-degree angle. If your body is aligned with the ground in such a manner, a force coming against your body will pass right through your bone structure, through the soles of your feet, and into the earth. When a person pushes you, he passes the force to you. Therefore, if you are properly rooted, you can receive the powerful healing energy created by the blending of your energy, your partner's energy, and raw earth energy. No matter where the force is coining from, you can redirect it down to the earth rather than let it break your alignment.

The first principle of testing the structure and the rooting is being as relaxed as possible!

Next, when you are pushed, be aware of perineum power, the diaphragm, Chi pressure in the Tan Tien, and the Chi Belt. Let the eyes look at your fingertips and listen inside your body, in the Tan Tien. Feel calm, centered, and rooted, aligned with the forces.

A. Left and Right Side Rooting Practice

Assume the posture. Let your partner push you horizontally from the side, with one hand on your hip and the other on your shoulder. Keep your structural alignment, with the knees spiraled out and the scapulae rounded in order to redirect the force down the structure to the earth.

Fig. 13 *Partner's force is transferred down to the ground though the bone structure by the left and right side rooting practice.*

B. Front Rooting

Let your partner push you horizontally from the front. The push should be on the wrists, not the back of the hands, to avoid injury. Keep the elbows down and inwards, and the arms relaxed. Let the force pass through the shoulders, scapulae, spine, sacrum, hips and legs as one line. Do not lean toward your partner when he pushes you. Trust your structure and feel the whole body join into one piece. Feel the bones absorbing the force like sponges and passing it along the bone structure to the ground.

Fig. 14 *Front Pushing and Transferring the Force to the Ground.*

C. Back Pushing

Back pushing strengthens the whole spinal cord. Let your partner push you gently on your sacrum, Ming Men, T-11, C-7, and Jade Pillow. Push back (expand) at this point with the power generated from the Tan Tien Chi and the perineum and your structural alignment.

Fig. 15 *Partner's force is transferred down to the ground though the bone structure by the force of the sacral pump.*

Fig. 16 *Partner's force is transferred down to the ground through the bone structure by the force of T-11.*

Fig. 17 *Partner's force is transferred down to the ground though the bone structure by the force of C-7.*

Fig. 18 *Partner's force is transferred down to the ground through the bone structure by the force of C-1 and the base of the skull.*

Holding the Golden Urn

1. Positions

A. Yang Position

This position helps to absorb the earth's force.

-Assume the Embrace the Tree position.

Lock the position of the elbows. Turn the palms down, lock the wrists and stretch them outward by stretching the pinky fingers, in a 45-degree angle to the forearms.

Feel the connection between the pinky fingers and the little toes, activating the muscle-tendon meridian that extends from the pinky fingers up the arms, up the sides of the face and around the ears, then down through the scapulae, into the sacrum, and down the outer sides of the legs to the little toes.

Fig. 19 *Holding the Golden Urn-Yang Position.*

B. Yin Position

The Yin force of the palms helps to absorb the Heavenly force. Hold the same position and turn the hands up. Lock the elbows and the wrists and stretch the hands 90-degrees outward with the stretch of the thumbs, moving inward. Feel the stretch of the wrist tendons by locking the elbows and the wrists by turning the hands. The stretch of the thumb activates the muscle-tendon meridian that extends from the thumbs, up through the insides of the arms, to the sides of the sternum, reaching down to the navel. From here it spreads out to the insides of both thighs to access the lower legs and to the big toes. Both tendons have strong rooting power.

Fig. 20 *Holding the Golden Urn-Yin Position.*

2. Packing Breathing

A. Yang Position

1. Assume the posture.
2. Start with Energizer Breathing.
3. Exhale, flatten the stomach. Exhale more and press down the diaphragm, exhale more and pull up the perineum, anus, and sexual organs.
4. Inhale, draw more Chi into the abdomen and pack the Chi into the kidneys. Hold the breath and keep this energy in the kidney area for a while.
5. Release the abdominal muscles; inhale without inhaling, and pack the middle abdomen. Hold the breath, suck up the perineum and the anus and condense the Chi.

Fig. 21 *Flow of energy during holding the Golden Urn*

6. Inhale again, suck up the anus and perineum even more and push the Chi down to the perineum.

7. Be aware of the soles and the earth energy as you pull up the perineum to attract the earth force. Use your mind and eyes to spiral and draw the force up through the soles, spiraling around the legs to the perineum.

8. Inhale, suck up the perineum once more, maintain the pressure and the suction in the lower abdomen. Keep pushing the energy down until you feel it move through the lower trunk toward the sacrum. Inhale more, pull up the middle and back part of the anus, tilt the sacrum and push and pack the energy into the sacrum.

9. Inhale without inhaling, pull up the left and right side, and the back part of the anus. Expand the left and the right kidneys, sucking the energy up to the kidneys, the Door of Life, and T-11. Feel the Chi Belt expanding.

10. Inhale without inhaling, pull up the middle and back parts of the anus, relax and sink the chest. Push the chin back, slightly tense the neck muscles and suck the energy up to C-7 as you inflate the neck with Chi.

11. Inhale without inhaling, continue to pull up the middle and back parts of the anus and guide the energy to the Jade Pillow. Squeeze the skull and temple bones to activate the cranial pump.

12. Inhale once more. Pull up the middle and back parts of the anus and suck up the energy all the way to the crown and into the brain. Exhale slowly and let the energy flow into the brain, energizing the gray matter.

13. Be aware of the North Star and the Big Dipper. Feel the violet and red light shining upon the crown. Inhale and draw the light into the crown, using your mind and eyes to spiral the energy.

B. Yin Position

1. Exhale slowly, turning the palms up with the wrists locked. Energize the thumbs, and bring the energy down through the tongue to the navel. Use the mind and the eyes to spiral at the navel.

2. Put the feet together and place the hands on the navel. Gather and condense the energy in the Tan Tien. Relax.

3. Testing Structure and Rooting

Side push. The pushing method is as follows: The pushing partner uses the web between his/her thumb and index finger to press against your wrist while pushing against your hip with the palm of the other hand. Start with the left side and continue with the right side. You should push in a horizontal direction.

A. Side Push, Yang Position

Assume the Yang position and pack Chi into the abdomen, the spinal cord, and the neck, Feel the strength of the spine, like a bow. Brace your tendon lines by stretching your pinky fingers out very forcefully. Have your partner test your structure by gradually pressing horizontally against the wrist and the hip of either side.

B. Side Push, Yin Position

Stay in the same position, turn your hands over, maintain the Chi pressure and connect the force to the ground through your bone structure. Brace the tendon lines by stretching the thumbs inward very strongly. The whole front line, starting from the thumb and continuing to the hand, arms, head is aligned.

Have your partner test your structure and rooting in the same way as in the Yang position.

C. Back and Front Pushing

Back pushing strengthens the whole spine, the pinky fingers, the little toes and the back fasciae. Be sure to press the big and little toes down, and feel the force you are exerting upon the little toes and the pinky fingers. Let your partner push you from the back while you assume the stance.

Front pushing will increase the thumb and tendon power. Maintain the stance and let your partner push you against your chest or the front of the shoulders.

By using the tendons, you need less effort to maintain a good structure.

Fig. 22 *Side Pushing*

Fig. 23 *Back Pushing*

Fig. 24 *Front Pushing will increase the thumb and tendon power.*

Golden Turtle (Yang Position)/ Water Buffalo (Yin Position)

Precaution: People with high blood pressure should consult a doctor before attempting this posture. Women who are menstruating or pregnant should not practice this exercise.

The Turtle energizes the toes and all the tendons of the toes and the fasciae of the thighs and legs and strengthens the back fasciae, spinal cord, sacrum, kidneys, adrenal glands, neck and head. This position is also called the “turtle back”.

1. Positions

A. Golden Turtle Immersing in Water, Yang Position

- Stand in the same position as in Embrace the Tree. The feet are a little wider apart. In this position, the alignment of the ankles, knees, hip joints, and sacrum is very important in order to let the weight of the body go down to the hips, to the knees, to the feet, and

finally to the ground, which make it easy to hold the posture. Tighten the fists and fold the forearms against the upper arms.

- Bend down from the kua, push both hips to the side in order to open the sacrum and straighten the back. The back should make one horizontal line to the floor, from the coccyx to the head.

- Keep the arms in the folded position resting in front of the chest. Keep the armpits open and the scapulae rounded. The back should feel like a turtle's back.

Fig. 25 *Muscle-Tendon Meridian in the Turtle Position.*

B. Water Buffalo Emerging From the Water, Yin Position

Look slightly up by moving the neck up, thereby relieving the tension, and tilt your head and eyes upwards without straining them. Sink the sacrum and extend the arms down in front of you with the backs of the hands facing forward and the fingertips touching the perineum and the anus or touching the ground. Keep the groin open.

Open Groin Breathing Process

Fig. 26 *Buffalo—Left Side View*

2. Packing Breathing

A. Golden Turtle Immersing in Water-Yang Position

1. Assume the Horse stance.
2. Practice Energizer Breathing.
3. Exhale, flatten the stomach, exhale more and press down the diaphragm, exhale more and pull up the anus and the sexual organs.
4. Inhale, tighten the fists, fold the forearms against the upper arms, round the back and sink the chest. Bend forward from the kua with the back straight to maintain the energetic structure through the spine and the neck. Open the sacrum by pushing the hips, knees, and ankles in one line outwards so the weight of the body can sink down from the hips to the knees, the feet and the ground. Tuck the chin and set the neck firmly in position. Press the elbows against the inside of the knees.

Fig. 27 *Packing the energy during the Golden Turtle.*

5. Inhale part of the breath, pull up the perineum and pack the energy into the navel area. Hold the breath.

6. Inhale without inhaling, suck in the perineum and press the energy down in the lower abdomen. Hold the breath.

7. Inhale without inhaling, feel a suction in the abdomen sucking up the sexual organs and the anus and press the energy to the perineum. Suck up the earth energy from the perineum.

8. Inhale, pull up the middle and back parts of the anus and suck the energy to the sacrum. Tilt the sacrum and feel the sacral pump activated. Hold the breath.

9. Feel the suction in the abdomen. Pull up the perineum and the left and right sides, and back part of the anus, bringing the energy all the way lo the kidneys. Feel the kidneys, the Door of Life, T-11, and the Chi Belt expanding.

10. Inhale and suck the energy up to C-7. Tighten and elongate the neck. Tighten the skull and cranial bones and clench the teeth.

11. Inhale again and suck the energy up to the crown and into the brain.

B. Water Buffalo Emerging from Water-Yin Position

1. When you have packed the energy into the head, exhale and look slightly up by moving the neck up thereby relieving the tension from the back of the neck. Extend the arms down in front of you with the backs of the hands facing outward and the fingertips touching the perineum and the anus, or touching the ground.

Keep the groin open and practice the open groin breathing process. Relax, keeping the tongue against the palate. Inhale less and exhale more, breathing right into the groin, energizing the sexual organs and the urogenital and pelvic diaphragm. The blood and Chi flow in the lower areas of the body.

When your breath has normalized, close your eyes and slowly come up to a standing position.

Collect the energy at the navel and in the Tan Tien. Practice bone breathing and let the Chi flow in the Microcosmic Orbit.

Walk around, brush the energy down and shake out the arms and the legs.

3. Testing Structure and Rooting

A. Turtle Position/Side Rooting Practice

- In this position, hold the elbows in tightly, press them against both thighs so that you can feel the energy concentrated in the groin area. The spine should be horizontal to the ground.

- Pack Chi from the abdomen along the whole back. Have your partner stand on your left side with one hand on your shoulder and the other hand on your hip.

- When your partner is pushing you, pull up the sexual organs, perineum, and anus, then open the sacrum and the hip joints (by pushing the hips outward to both sides) and align them with the knees and ankles in order to transfer the force to the ground.

Become one with the earth, and expand both kidneys and the Chi Belt.

The bone structure should be like a sponge absorbing the force and transferring it to the ground. Once you become adept in this practice and you feel your body's structure as one piece. you can

relax the muscles more and you will find no need for packing breathing. If you simply concentrate on the Chi flow and relax, the force will pass through the bone structure.

- Change sides and let your partner push you gradually. The purpose is not to push you over, but to let you feel where the force comes from so that you can redirect the force to the earth. And when the push is gradual, it is possible for you to realign or to relax that part to let the force pass through. Once you know how to redirect the force from any part of your body, you will start to learn how to reabsorb the force from the earth.

You can use this energy for self-healing or to counteract your partner's pushes.

- The Turtle Position strengthens the whole spine. You will feel that, as your partner pushes from the left, the force goes from the left shoulder, past the scapula to the spine, to the right scapula, down the spine to the hip. to the right thigh, the right leg, and foot and down to the ground. At the same time, feel the soles breathing and "claw" down with the toes into the ground.

Earth Force is transferred down to the ground.

Fig. 28 *Rooting practice during the Golden Turtle—Left side position.*

B. Buffalo Position/Front Rooting Practice

Your partner should place one hand on each shoulder and gradually push you in order to strengthen the frontal aspect of this posture. To maintain this difficult posture you must keep the perineum and anus contracted, the kidneys expanded, and gradually feel the connection of the shoulders to the scapulae and the spine to the sacrum and the hips. Keep the neck locked and elongated. Front rooting requires more practice. The soles/heels and feet are very important in the front rooting. With practice, you can maintain the feet's firm contact with the earth.

Fig. 29 *Turtle/Buffalo—Front Rooting Practice*

Golden Phoenix Washes Its Feathers

The Phoenix Position strengthens both sides of the ribs, from the armpits down to the sides of the hips and enhances the Chi pressure of all the major organs.

The Phoenix also strengthens the fingers, toes, tendons and the tongue (which is one of the main tendons of the body). The pinky fingers are small, but can activate many tendons, especially along the sides of the body.

Position/Packing Breathing

1. Assume the Horse Stance and practice energizer breathing. Exhale. Pull up the perineum and feel the Chi pressure in the Tan Tien.

Fig. 30 *Phoenix Exercise*

Palms continue to face up

Side View

Rotate the hands medially

Push from the C-7 by sinking down the sternum and pressing towards the back.

Fig. 31 *Phoenix Exercise*

2. Put your arms in front of your body with the backs of the hands facing each other. Inhale, swing the arms to the sides of the body near the kidneys, the palms face up and are turned in toward the body with the pinky fingers pointed up. Feel the pull of the tendons.

3. Inhale more. Pull up the middle part, and the left and right sides of the anus, press the diaphragm down and feel the kidneys expanding with energy.

4. Inhale more, and raise the hands along the sides. Continue to pull up the middle part, and the left and right part of the anus and suck the Chi into the lungs and spleen. Pack and wrap them with energy.

5. Inhale once more, raising the hands higher. Continue to pull up the middle part, and left and right part of the anus and suck the Chi into the lungs and the heart. Pack and wrap them with Chi. Feel the rib cage bulge.

6. When you have brought your hands as close as possible to the armpits, continue to maintain the contraction in the perineum and anus, and rotate the hands medially until the palms face outwards. Keeping the wrists flexed, push from the sternum to C-7, and extend your arms at shoulder level. Exhale, and as you push the hands out. begin the Lungs' Healing Sound of "***Sssssssss***"

7. Inhale, and tighten the perineum and anus. Gather the fingers to the thumbs, and press them together into a small point by exerting force on the pinky fingers (which should be in the middle with all the fingers pressed against them). We call these finger positions "beaks." Inhale, bend the elbows, and bring the beaks in toward the shoulders. Repeat, raising the beaks a little higher.

8. Exhale with the Kidney's Healing Sound "***Shoooooo***", releasing the perineum, anus, and the beaks as you lower the arms while straightening and locking the elbows and knees.

9. After this sound, when the hands are down with the wrists flexed, turn the hands out to the sides of the thighs, and spread the fingers and toes as much as possible. Turn the eyes to look up at the bridge of the nose as you push up the tongue and pull up the anus and sexual organs and make the sound "***Hawwwwww***".

Push the fully extended arms.

Arms fully extended

Gather the fingers and form “beaks”

Pulling the “Beaks”

Fig. 32 *Phoenix Exercise*

Pulling the “Beaks”

Exhale, Release the “Beaks”. Press your arms against the front of your body.

Arms Pressed Down

Sexual organs are connected to the tongue.

Fig. 33 *Phoenix Exercise*

10. You can just do one sound and go on to the next step of your practice, or you can do all of the sounds. Replace the Healing Sounds of the lungs and kidneys, first with the sounds of the liver ("***Shhhhhhh***") and heart ("***Hawwwwww***"), and then with the sounds of the spleen ("***Whoooooo***") and Triple Warmer ("***Heeeeeee***").

11. After the last Healing Sound, repeat step 9.

12. Collect the energy at the navel.

Iron Bridge

1. Position

A. Yang Position

One muscle-tendon meridian begins at the second, third, and fourth toes of both feet, running up to the ankle where it splits into two main branches. One branch travels up the middle of the lower leg, crossing at the knee to the outer thigh, then returning in toward the pubic bone. It travels up through the abdomen, through the collar bone to the side of the neck and the jaw where it splits in two, one section veering around the corner of the mouth, and the other running along the jaw line to the temple. The other main branch of this meridian runs laterally to the first, but continues up to the hip joint, over the upper pelvis, and up to the lower ribs of the spine.

1. Stand with the feet at a knee-to-toe length apart.

2. Place the hands al the sides of the body. Touch both thumbs and index fingers together, forming a circle. The other three fingers of each hand should remain straight and touch one other.

3. Begin with abdominal breathing: exhale and flatten the stomach. Inhale to full capacity, and bring the hands up and to the back. Bend the elbows back and place the palms up. Fingers should be about two inches apart and remain close to the scapulae. This will open the sternum, activate the thymus, the thyroid, and parathyroid, and stretch the chest and the side fasciae.

Arch the upper and middle back, but not from the lower spine and the hips. This will stretch the front fasciae. You can release any accumulated tension in the chest and the abdomen in this way. To

protect the lower spine, arching the back strongly from the upper spine is necessary while firmly tightening the thighs and buttocks.

This will squeeze the sacrum down, lessening the compression in the lower back. The knees should be firmly locked and straight.

Caution: Keep your chin on your chest. Keep the spine and neck straight to avoid blocking the circulation to the brain.

4. Look to the ceiling and lock and pull the neck fasciae. From there you will feel a stretch in the chest that will arch the upper spine more, and in the abdomen all the way to the groin area.

5. Squeeze the thumbs and index fingers together and tighten the muscles of the arms and shoulders. This will stabilize your position.

6. Hold the breath and maintain this position for 30 to 60 seconds.

Arch the upper and middle back and be sure to tuck the chin to protect the cervical spine (neck).

Fig. 34 *Iron Bridge-Yin Position.*

B. Yin Position

1. Exhale. Straighten up and bring the arms to the front, maintaining the hand position, and slowly bend forward from the hip joints. The head should be down and the hands just above or touching the ground. Do not force yourself.

2. Adjust the tendons. At first, do not bend too low. For additional comfort, you can bend the knees slightly.

3. Feel the Chi flow down to the head and back and down the tongue and through each finger. If you can touch the ground, you will feel the energetic connection. Breathe normally.

4. Come up very slowly from this position. You may feel dizzy at first. Stand still for a while, and feel the energy flow in the Microcosmic Orbit. Collect the energy in the navel. Walk around, or lie down on your back and massage your belly from right to left to assist your Chi circulation.

Iron Bridge-Yang Position

Stretching the hamstring

Fig. 35 *Iron Bridge Stretch*

2. Testing Structure and Rooting

A. Yang Position

Assume the posture. Let your partner push you very gently. Remember that the main arch is in the upper back. **Be very careful in this Iron Bridge Rooting Practice. Your partner has to be aware that it is dangerous when you arch too much backward to push. The back and spinal cord are vulnerable to injury in this position. Be careful to apply a gentle pressure to avoid hurting the spinal cord or falling down.**

Your partner puts one hand on your back near T5/6 and one hand on your chest. Your partner slowly and gentle presses up from the back and down from the chest till you find your alignment of the upper spine with the heels of your feet.

Fig. 36 *Iron Bridge Rooting "Yang Position Rooting"*

B. Yin Position

While you are bent forward, your partner presses his/her hands on your shoulders. You push up the lower spine. Your partner can use his entire body to press down. In this position you are exerting more force on the lower back. This will strengthen the lower spine, especially the lumbar region.

Fig. 37 *Iron Bridge Rooting "Yin Position Rooting"*

Yin Stage of the Practice

After all these exercises brush the energy down, shake out your arms and legs and walk around.

Take your stance again or sit down and put both palms on the navel area.

Turn yourself inward and observe the flow of energy in your body. Smile to your whole body, especially to the organs, glands, spine, brain and bones. Feel the healthy vibration of the Chi in all these different parts of your body. Feel you are aligned and firmly rooted in the earth.

Bring you attention back to the Tan Tien. Empty your mind in the Tan Tien. Feel Chi pressure in the Tan Tien. Keep the lower gates closed and feel a little suction in the lower abdomen. Fix your mindeye and other senses in the Tan Tien. Feel the waves of this ocean of Chi moving you gently back and forth. Feel very calm and peaceful inside in this way for a while, breathing with a long, soft breath. For a while, just sit still like this and do nothing. It can happen that at one moment the physical breath stops and the Tan Tien (Chi) will function as a lung. We call this inner or embryonic breathing (Tai Hsi) and it can only happen when your whole being is calm and quiet and full of Chi at the same time.

Supplement

After practicing Iron Shirt, before the Yin stage of the practice, you can do some exercises to make your energy connection with the forces stronger.

You can practice the “Opening of the Three Tan Tiens to the Six Directions” or part of this practice after the Iron Shirt training or one of the three following exercises:

Cosmic Energy Mideyebrow Connection

1. Stand in Embracing the Tree and face the sun or moon. If you are facing the sun, this exercise should only be performed at sunrise or sunset, when the light of the sun is softer and will not damage the eyes. Close and rest your eyes whenever the light feels too intense.

2. Slowly raise the palms out in front of the body with elbows slightly bent outward. Bring the arms up to just above the level of the mideyebrow and make a triangle between the index fingers and thumbs of both hands, with either the sun or the moon centered within the triangle.

3. Hold this position and draw the Yang (sun) or Yin (moon) energy in through the mideyebrow.

4. Gather some saliva in the mouth, and mix this energy drawn in with the saliva to collect a ball of Chi energy in the mouth. This increases the amount of saliva produced.

5. Slightly extend the neck. Swallow the saliva with a strong gulp and mentally direct it to the navel. Feel the navel warm up with the arrival of this new energy.

6. Repeat these steps 9 to 36 times, and then close by slowly lowering the arms to the navel. Place the left hand over the right, and collect energy by spiraling at the navel as described earlier.

Washing the Body with Heavenly and Earth Energy

1. Stand in the Embracing the Tree position. The feet should be shoulder-and-a-half width apart, with the nine points of the feet pressed firmly against the ground. The knees are bent and torqued slightly outward with a corresponding torque in the ankles and hips. This acts to screw the body into the ground and to initiate the earth connection. Straighten the spine by slightly tucking in the sacrum (this increases the connection to the earth) and by tucking in the chin to connect with the heavenly energy.

2. Reach down and forward, keeping the palms cupped upward, and slowly scoop up the earth energy (use your imagination at first until you are sensitized) though the body. Simultaneously, feel a cool blue water-like healing sensation rising through the body at the level of the hands as you raise them until they are fully extended above the head.

3. Turn the palms of the hands up and connect with the heavenly energy.

4. Slowly lower the arms to the sides. Simultaneously, feel the heavenly energy descend through the body at the level of the hands. The heavenly energy may feel like a hot white firey expansive sensation that washes down through the body until it reaches the ground, at which point the hands will have returned to their original position.

5. Repeat this exercise 9 to 36 times until you feel fully saturated with both types of energy.

Navel/Palm Connection

1. Place both hands approximately two inches out from the navel.

2. Slowly inhale, allowing the abdomen to fill completely with air. As this is happening, tug a “string” of energy lightly away from the navel using the centers of the palms.

3. Then, slowly exhale and feed the “string” back into the navel.

4. Repeat this 9 times and then collect energy at the navel.

Iron Shirt Chi Kung I

Rooting Cosmic Internal Energy

Mantak Chia

Illustrations by Udon Jandee

Iron Shirt Chi Kung I

Iron Shirt Chi Kung is part of the Universal Tao System's basic practices. The Iron Shirt techniques are learned and then the improved body (healthy Chi posture and healthy Chi breath) utilizes the results of the Inner Smile and Six Healing Sounds. This powerful Inner Structure is the ideal environment for the healing elements of the Microcosmic Orbit. Many students claim that Iron Shirt Chi Kung postures, movements and breathing have helped alleviate or directly cure pre-existing maladies and complaints.

Here are some of the detailed fundamentals that you'll discover described step-by-step within this essential booklet: Rooting, Centering, Inner Structure, Packing Breathing, and Chi Belt.

There's more! These basic Iron Shirt Chi Kung postures and movements are explained in detail: The Horse Stance, Embracing the Tree, Holding the Golden Urn, Golden Turtle and Water Buffalo, Golden Phoenix Washes its Feathers and Iron Bridge.

Have fun working with a partner to improve your earth connection and to boost your Chi generation and flow. Your practice can be helped tremendously with these Structure Testing and Rooting Pushing exercises performed with a friend. Smile, center yourself in the Tan Tien, root to Mother Earth and enjoy the myriad benefits of Iron Shirt Chi Kung!

About of Author viii
How to use this Book xi
Words of Caution xii

1.General Introduction..... 1

A. Universal Tao System and Iron Shirt Chi Kung..... 1
1. Iron Shirt Chi Kung, an Ancient Kung Fu Practice..... 5
a. Bolin Period (the Time of Kung Fu Fighters)..... 5
b. Iron Shirt Helps to Perfect Mental Faculties 6
c. Age of Gunpowder 6
2. Creating Chi (Life-Force) Pressure..... 7
a. Breath of Life, Chi Pressure 7
b. Origin of Iron Shirt Breathing 8
B. Why Put on Your Iron Shirt?..... 9
1. Internal Management 9
a. Chi, the Fasciae Organs and Bones..... 10
(1) Fasciae 10
(2) Iron Shirt Strengthens and Protects the Organs..... 12
(3) Burn Out Fat and Store Chi in the Organs..... 14
(4) Structure of the Bones 14
b. Chi Pressure and Meditation Increases Circulation while Reducing the Heart's work 15
c. Preventing Energy Leakage 16
2. Iron Shirt Prolongs Life 18
3. Summary of the Benefits of Iron Shirt Chi Kung Training 19
C. Iron Shirt Chi Kung Exercises 20
D. Three Levels of Iron Shirt 22

2. Initial Preparations

A. Iron Shirt Breathing and Relaxation 23
1. Abdominal and Reverse Breathing (Energizer Breathing) 23
2. Pelvic and Urogenital Diaphragms 28

3. Iron Shirt Packing Process Breathing (Chi Pressure) .. 30
4. Points to Remember in Practicing the Breathing Exercises 37
5. Preliminary Exercises..... 37
a. Check the Diaphragm 37
b. Massage the Diaphragm 37
c. Abdominal Breathing in a Lying Position..... 38
d. Abdominal Breathing on a Slant Board..... 39
e. Strengthening though Counter Pressure..... 39
f. Abdominal Breathing in a Standing Position..... 40
g. Getting Energy to the Abdomen by Training the Mind to Direct It 43
h. Practice—Development of Iron Shirt Protection 43
B. Summary of Iron Shirt Breathing..... 45
1. Exercises to Improve Abdominal Breathing..... 45
2. Iron Shirt Chi Kung Packing Process Breathing 46
a. Abdominal Breathing 46
b. Lower the Diaphragm 46
c. Reverse Abdominal Breathing 46
d. Slightly Contract the Pelvic and Urogenital Diaphragm 46
e. Packing Process Breathing..... 47
f. Pack the Organs with Chi 47
g. Exhale and Relax 47
C. Cranial, Respiratory and Sacral Pump Functions..... 47
1. Sacral Pump..... 47
2. Cranial Pump 48
D. Microcosmic Orbit Meditation..... 50
1. Circulate Your Chi in the Microcosmic Orbit..... 50
2. Importance of the Microcosmic Orbit..... 52
E. Perineum Power..... 53
1. Anus is Connected to Organ Energy..... 53
2. Anus Region is Divided into Five Parts 53
F. Precautions 59

3. Practice of Postures..... 60

I. Developing the Iron Shirt Horse Stance Using a Wall..... 60
A. Sequence of Practice in Using a Wall to Develop the Iron Shirt Horse Stance..... 61

1. Distance between Feet..... 61
2. Foot Alignment 62
3. Distance from the Wall..... 63
4. Rooting with the Feet 63
5. Knees 63
6. Pelvis 63
7. Pelvic Tilt 63
8. Middle Back 64
9. Head/Neck/UpperBack 64
10. T-11 Thrust 64
11. Shoulders 65
12. Head/Neck (C-7, Base of the Skull) 66
13. “Locking” the Structure 66
B. Summary of Practice for Using a Wall to Develop Iron Shirt Horse Stance Basic Alignment..... 68

II. Starting Position for all Exercises: Embracing the Tree..... 69

A. Embracing the Tree (Explanation of Procedure)..... 69
1. Correct Stance 69
2. Rooting of the Feet 72
3. Elongation of the Spine 77
4. Three Chi Circles 79
5. Eyes Can Help to Direct Chi 90
6. Begin with Energizer Breathing (Abdominal and Reverse Breathing) 92
7. First Stage 93
8. Second Stage 107

C. Personal Experiences of Students..... 277

Universal Tao System Overview .....Overview 1-64

About the Author

Mantak Chia

Master Mantak Chia

Master Mantak Chia is the creator of the Universal Tao System and is the director of the Universal Tao Center and Tao Garden Health Resort and Training Center in the beautiful northern countryside of Thailand. Since childhood he has been studying the Taoist approach to life. His mastery of this ancient knowledge, enhanced by his study of other disciplines, has resulted in the development of the Universal Tao System which is now being taught throughout the world.

Mantak Chia was born in Thailand to Chinese parents in 1944. When he was six years old, Buddhist monks taught him how to sit and “still the mind.” While still a grammar school student, he learned traditional Thai boxing. He was then taught Tai Chi Chuan by Master Lu, who soon introduced him to Aikido, Yoga and broader levels of Tai Chi.

Years later, when he was a student in Hong Kong excelling in track and field events, a senior classmate named Cheng Sue-Sue introduced him to his first esoteric teacher and Taoist Master, Master Yi Eng (I Yun). At this point, Master Chia began his studies of the Taoist way of life in earnest. He learned how to circulate energy through the Microcosmic Orbit and, through the practice of Fusion of the Five Elements, how to open the other Six Special Channels. As he studied Inner Alchemy further, he learned the Enlightenment of the Kan and Li, Sealing of the Five Senses, Congress of Heaven and Earth and Reunion of Heaven and Man. It was Master Yi Eng who authorized Master Chia to teach and heal.

When Mantak Chia was in his early twenties he studied with Master Meugi in Singapore, who taught him Kundalini, Taoist Yoga and the Buddha Palm. He was soon able to clear blockages to the flow of energy within his own body. He learned to pass the life force energy through his hands also, so that he could heal Master Meugi’s patients. He then learned Chi Nei Tsang from Dr. Mui Yimwattana in Thailand.

A while later, he studied with Master Cheng Yao-Lun who taught him the Shao-Lin Method of Internal Power. He learned the closely guarded secret of the organs, glands and bone marrow exercise known as Bone Marrow Nei Kung and the exercise known as Strengthening and Renewal of the Tendons. Master Cheng Yao-Lun’s system combined Thai boxing and Kung Fu. Master Chia also studied at this time with Master Pan Yu, whose system combined Taoist, Buddhist and Zen teachings. Master Pan Yu also taught him about the exchange of Yin and Yang power between men and women, and how to develop the Steel Body.

To understand the mechanisms behind healing energy better, Master Chia studied Western anatomy and medical science for two years. While pursuing his studies, he managed the Gestetner Company, a manufacturer of office equipment and became well acquainted with the technology of offset printing and copying machines.

Using his knowledge of Taoism, combined with the other disciplines, Master Chia began teaching the Universal Tao System. He eventually trained other Instructors to communicate this knowledge and he established the Natural Healing Center in Thailand. Five years later, he decided to move to New York, where in 1979, he opened the Universal Tao Center. During his years in America, Master Chia continued his studies in the Wu system of Tai Chi with Edward Yee in New York.

Since then, Master Chia has taught tens of thousands of students throughout the world. He has trained and certified over 1,200 instructors and practitioners from all over the world. Universal Tao Centers and Chi Nei Tsang Institutes have opened in many locations in North America, Europe, Asia, and Australia.

In 1994, Master Chia moved back to Thailand, where he had begun construction of Tao Garden, the Universal Tao Training Center in Chiang Mai.

Master Chia is a warm, friendly and helpful man who views himself primarily as a teacher. He presents the Universal Tao System in a straightforward and practical manner, while always expanding his knowledge and approach to teaching. He uses a laptop computer for writing and is totally at ease with the latest computer technology.

Master Chia estimates that it will take thirty-five books to convey the full Universal Tao System. In June, 1990, at a dinner in San Francisco, Master Chia was honored by the International Congress of Chinese Medicine and Qi Gong (Chi Kung), who named him the Qi gong Master of the Year. He is the first recipient of this annual award.

In December, 2000, the Tao Garden Health Resort and Universal Tao Training Center was completed with two Meditation Halls, two open air Simple Chi Kung Pavilions, indoor Tai Chi, Tao Tao Yin and Chi Nei Tsang Hall, Tai Chi Natural Swimming Pool, Pakua Communications Center with a complete Taoist Library, Internal World Class Weight Lifting Hall and complete 8 Court Recreational Facilities.

In February 2002, the Immortal Tao practices were held at Tao Garden for the first time using the Darkness technology creating a complete environment for the higher level Taoist practices.

Master Mantak Chia has previously written and published these Universal Tao books:

Awaken Healing Energy of the Tao - 1983
Taoist Secrets of Love: Cultivating Male Sexual Energy co-authored with Michael Winn - 1984.
Taoist Ways to Transform Stress into Vitality -1985
Chi Self-Massage: the Tao of Rejuvenation - 1986
Iron Shirt Chi Kung I - 1986
Healing Love Through the Tao: Cultivating Female Sexual Energy - 1986
Bone Marrow Nei Kung - 1989
Fusion of the Five Elements I - 1990
Chi Nei Tsang: Internal Organ Chi Massage - 1990
Awaken Healing Light of the Tao - 1993
The Inner Structure of Tai Chi co-authored with Juan Li - 1996
Multi-Orgasmic Man co-authored with Douglas Abrams 1996 - published by Harper Collins
Tao Yin - 1999
Chi Nei Tsang II - 2000
Multi-Orgasmic Couple co-authored with Douglas Abrams 2000 - published by Harper Collins
Cosmic Healing I - 2001
Cosmic Healing II co-authored with Dirk Oellibrandt - 2001
Door of All Wonders co-authored with Tao Haung - 2001
Sexual Reflexology co-authored with W. U. Wei - 2002
Elixir Chi Kung - 2002
Tan Tien Chi Kung - 2002

Many of the books above are available in the following foreign languages:

Arabic, Bulgarian, Czech, Danish, Dutch, English, French, German, Greek, Hebrew, Hungarian, Indonesian, Italian, Japanese, Korean, Lithuanian, Malaysian, Polish, Portuguese, Romanian, Russian, Serbo-Croatian, Slovenian, Spanish, & ***Turkish*** editions are available from the Foreign Publishers listed in the Universal Tao Center Overview in the back of this book.

Acknowledgments

I thank foremost those Taoist Masters who were kind enough to share their knowledge with me, never imagining it would eventually be taught to Westerners. I acknowledge special thanks to Roberta Prada and Roderick Kettlewell for encouraging the production of this book, for their input on the original manuscript, and for their editing regarding technical procedures.

I thank the many contributors essential to the book's final form: the artist, Juan Li, for many hours spent drawing, making illustrations of the body's internal functions and for the artwork on the cover of the book; Terry Goss for his chapter on Breath Alignment which helps tremendously in the practice of Iron Shirt; Larry Short for sharing some of the Tibetan Nui Kung Exercises; Michael Brosnahan for helping to clarify the technical points of structure; Dr. Michael Posner for sharing his view of Chiropractic and Iron Shirt; Gunther Weil, Ph.D., Rylin Malone, and many of my students for their feedback; Jo Ann Cutreria, our secretary, for making so many contacts and working endlessly; Daniel Bobek for long hours at the computer; John-Robert Zielinski for setting up the new computer system and for his interview of Michael Winn; Valerie Meszaros for editing the book, organizing, typing, and revising it on the computer, and proofreading; Helen Stites for proofreading; Adam Sacks, our computer consultant, who assisted in solving computer problems as they arose during the final stages of production; Michael Winn for general editing, and Cathy Umphress for design and paste ups. Special thanks are extended to David Miller for overseeing design and production and to Felix Morrow for his valuable advice and help in editing and producing this book and for agreeing to be the publisher of Universal Tao Publications.

Without my son, Max, the book would have been academic; for his gifts, my gratitude and love.

Words of Caution

The practices described in this book have been used successfully for thousands of years by Taoists trained by personal instruction. Readers should not undertake the practice without receiving personal transmission and training from a certified instructor of the Universal Tao, since certain of these practices, if done improperly, may cause injury or result in health problems. This book is intended to supplement individual training by the Universal Tao and to serve as a reference guide for these practices. Anyone who undertakes these practices on the basis of this book alone, does so entirely at his or her own risk.

The meditations, practices and techniques described herein are ***not*** intended to be used as an alternative or substitute for professional medical treatment and care. If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training.

Neither the Universal Tao nor its staff and instructors can be responsible for the consequences of any practice or misuse of the information contained in this book. If the reader undertakes any exercise without strictly following the instructions, notes and warnings, the responsibility must lie solely with the reader.

This book does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

The Universal Tao is not and cannot be responsible for the consequences of any practice or misuse of the information in this book. If the reader undertakes any exercise without strictly following the instructions, notes, and warnings, the responsibility must lie solely with the reader.

How to use this Book

In the last pages of this book the reader will find descriptions of the courses and workshops offered by our Universal Tao Centers. This material is also in effect, a comprehensive description of the whole Taoist System. All of my books together will be a composite of this Taoist world view. Each of my books is thus an exposition of one important part of this system. Each sets forth a method of healing and life-enhancement which can be studied and practiced by itself, if the reader so chooses. However, each of these methods implies the others and is best practiced in combination with the others.

The foundation of all practices in the Taoist System, the Microcosmic Orbit Meditation, is the way to circulate Chi energy throughout the body and is described in my book, *Awaken Healing Energy Through the Tao*. This practice is followed by the meditations of the Inner Smile and the Six Healing Sounds, set forth in my book, *Taoist Ways to Transform Stress into Vitality*. All three meditations are emphasized throughout the Taoist System.

The practices of Iron Shirt Chi Kung are very powerful and therefore very effective. To insure that you carry them out properly, prepare yourself first by learning the Microcosmic Orbit Meditation, the Inner Smile and the Six Healing Sounds. These will enable you to identify and eliminate energy blockages that may occur in your Iron Shirt practice during the learning stages.

Second, learn information contained in the chapter in this book on body alignment.

Third, understand the rooting principles.

Fourth, learn the preliminary exercises until you are proficient at them and comfortable with them. This will give you the conditioning you need to proceed comfortably to the postures.

You can use the complete description of each posture during your learning. The shorter description of each posture is meant as a guide during your practice.

Lastly, we offer to you a suggested practice timetable, although it is not necessary for you to follow it exactly. Use it merely as a guideline for adjusting your own schedule. As you read the information provided in this book and become aware of concepts not contained in Western thought, you will deepen your understanding of the relevancy of these practices to your physical, emotional and spiritual advancement.

Mantak Chia

Chapter 1
General Introduction

A. Universal Tao System and Iron Shirt Chi Kung

In addition to the more popularly known martial arts disciplines of Kung Fu and Tai Chi the Universal Tao System includes health practices, healing arts, the development of a state of mindfulness, and the management of vital energy (Chi). The martial arts aspect of this training, the practice of Iron Shirt, develops a highly refined moral and spiritual awareness.

The goal of the Universal Tao System is to keep our physical bodies in good condition in the physical plane in order to build and store more Chi energy for further use in the higher level of the spiritual plane. (Fig. 1.1)

Fig. 1.1 *Realm of the Primordial Tao*

In the spiritual plane, the aim is to develop the immortal fetus. The immortal fetus is developed in two stages. The first stage is concerned with overcoming reincarnation. The next stage develops and educates the immortal fetus to become a full-grown immortal spirit.

Iron Shirt is one of the most important exercises of the physical plane because through its practice one learns rootedness to Mother Earth energy, a phenomenon intrinsic to the spiritual plane. (Fig. 1.2)

Fig. 1.2 *Rootedness to Mother Earth Energy*

Fig. 1.3 *Launching of the Spiritual Body*

One may compare the foundation, or rootedness, of the physical body to an Earth Control Tower, vital to the travel of a space shuttle in space. (Fig. 1.3) To boost the space shuttle, the spirit, into space the Earth Control Tower requires a booster rocket, the soul or energy body, which is guided by an inner compass and computer, the pineal gland. The Earth Control Tower, in the form of our physical body developed during the practice of Iron Shirt, becomes a storage place for fuel: Chi (our life-force energy) and our creative or sexual,

energy. Here our fuel awaits transformation into another kind of energy: spiritual energy. As we learn how to develop an immortal spirit compass and computer by opening the pineal gland which will guide us back to Earth to complete the unfinished job of development here, we must maintain our foundation, or rootedness, to the Earth. (Fig. 1.4) Thus we are able to return to Earth, refuel and resume our space travel to our destination until, eventually, we are able to discard the earthly base entirely.

Fig. 1.4 *Rootedness*

1. Iron Shirt Chi Kung—Ancient Kung Fu Practice

a. Bolin Period (the Time of Kung Fu Fighters)

Kung Fu was used in China long before the advent of firearms. During the Bolin Period, approximately 1000 B.C., training in the various spiritual/martial arts was very intense. It is said that at the time one tenth of the population of China was involved in some sort of Kung Fu.

In ancient Kung Fu practice, training began in very early youth. One first worked to develop internal power (inner strength through organ exercise), a venture that could take as long as ten years. Thereafter, one might have to throw a straight punch 1,000 times a day for a period lasting from three to five years. One might be instructed to strike the top of a water well with the flat of his palm 1,000 times a day for five to ten years, or “until the water leapt out of the well”.

Iron Shirt Chi Kung, a method of Kung Fu, was learned as a protective training, providing internal power by the practice of simple external techniques. The practitioner was guarded against the effects of blows to his vital organs and glands, the primary sources for the production of life-force energy (Chi). The word Chi means air. Kung means discipline: one who puts time into practice. Therefore, Chi Kung means “to practice the process of breathing to increase Chi pressure (life-force pressure)”.

A thousand times a day internal power was cultivated until it could be felt flowing out of the hands. With weights tied to the legs, the practitioner ran and jumped in prescribed ways for over three hours a day until, eventually, he could jump easily to great heights and, at the same time, further develop his internal power. Only after these exercises were mastered were actual fighting techniques taught.

The importance of the development of internal power in martial arts training may be compared to the effect of being struck by a steel rod as opposed to one that is made of soft plastic. The Chi Kung practitioner of old practiced one punch for years until he could feel the power go out of the lower part of his hand, while the rest of his body seemed as though made of steel. There were many other benefits as well, e.g., internal power improved general health and is claimed to have maintained youthfulness.

b. Iron Shirt helps to Perfect Mental Faculties

Chi Kung also helped to perfect mental faculties, enabling the practitioner to have knowledge of many things. One reads that during the Bolin period, there were eight “immortals” who spent most of their lives in such practice and developed extraordinary abilities. They could predict the future and see into the past. They are said to have been capable of space travel and of clairvoyance and clairaudience. It is also said that during that period, many people had at least some such powers, a result of widespread Kung Fu practice. Some sources attempt to explain this by claiming there must have been a general universal reservoir of power, far greater than is now available, from which the more capable practitioners could draw.

c. Age of Gunpowder

After the invention of gunpowder and the subsequent elaboration of firearms, men no longer felt the need to spend a decade or more of their lives learning skills that no longer seemed practical. A man could now defend himself, or cause great damage at a great distance from his objective, with weapons. (Fig. 1.5) Contact fighting became a thing of the past, and much of the associated knowledge that was useful to man was lost with it.

Fig. 1.5 *Age of Gunpowder*

Today, however with the recent revolt against the depersonalizing and unhealthy effects of a technology of monstrous proportions, there has been a revival of interest in the simpler ways of life. Thus, Kung Fu is again in the limelight. Kung Fu has been called a way of perfecting the inner self.

2. Creating Chi (Life-Force) Pressure

Chi Kung may be thought of as internal aerobics. Chi, as an aerobic energy involving air, steam, and pressure, presses out and circulates to protect the human body. One can compare the internal pressure created by Chi to the force of air in a tire which is sufficient to keep the tire inflated and maintain a cushion between the car and the road. (Fig. 1.6)

Fig. 1.6 *An inflated tire provides cushioning.*

a. Breath of Life—Chi Pressure

Breathing is the most important part of our lives. We can go without food for months, or without water for days, but we can go without air for only a few minutes.

In practicing Iron Shirt, we use our breath to maximum advantage. We can actually increase our vital energy, strengthen our organs, and promote self-healing by increasing the Chi pressure (pounds per square inch) in the organs and cavity of the body. The circulatory system, the lymphatic system, the nervous system, and the endocrine glands will be activated, and blood, spinal fluid and hormones will flow more easily so that the heart will not have to work hard.

b. Origin of Iron Shirt Breathing

Taoists believe that while we are in the womb, we use Iron Shirt Packing Breathing. Before birth, the infant does not use the lungs and nose to breathe. The Chi (life-force) enters through the umbilical cord to the navel (Fig. 1.7), down to the perineum, up the sacrum to the spinal cord to the head, forehead, and down the front from the tongue (Taoists believe the fetus always holds the tongue on the palate) to the throat, heart, abdomen and navel centers in the abdominal area where the Chi pressure can be used. You will recognize this as the path of the Microcosmic Orbit (described more fully in Chapter 2).

At birth, we begin to use lung breathing and generate our own energy rather than use the internal source of energy. To begin with, the lungs are not strong. The abdomen, closer to our original source of energy in the navel, has more Chi pressure. It assists the lungs in breathing by pulling down on the diaphragm so that the lower portion of the lungs fills with air; initiating inhalation. In this way, the lungs use less energy, but take in more life-force (oxygen). As children, we still use abdominal Chi pressure energy.

Fig. 1.7 *In an unborn infant, the Chi (life-force) enters through the umbilical cord to the navel.*

One can see the effects of reduced Chi pressure with age. In older people the prenatal life-force (Chi) is drained out from the navel and kidney areas. Gradually Chi pressure is lost, creating an energy imbalance: when the pressure is low, the fluid flow in the entire system slows down. As a result, at the times when our energy becomes too hot, it will move up and congest the chest and head. Cold energy will move down through the sexual organs and leak out. Gradually, we lose Chi pressure. We begin to lose the habit of abdominal breathing. The lungs are left alone to do chest breathing.

This is inefficient. It requires greater energy to expand the rib cage, which action fills only the upper third of the lungs. Scientists have affirmed that we use only one-third of our vital capacity (lung capacity) for breathing. This method of breathing actually expends more energy than it creates. Yielding to the external pressure, we collapse inside. With abdominal breathing we can expand the amount of pressure exerted on the organs and voluntarily compress them so that they will strengthen upon release.

B. Why put on your Iron Shirt?

1. Internal Management

Many of the physical changes associated with Kung Fu come through management of the internal organs and endocrine glands.

In Kung Fu, a person's life-force is said to depend primarily upon the endocrine glands, or sexual hormones. It is very likely that this was deduced from the following observations.

Consider what happens when someone is deprived of a fully functional endocrine system. A male is radically altered when his testes, part of the endocrine system in males, are eliminated, and more so when this is done before puberty. Such characteristics as weak musculature and feminine fat distribution develop. Depending upon the time in life in which he was so mutilated, he might also lack such secondary male characteristics as a deep voice, facial hair and sexual drive. Male and female castrates have been well documented to have shortened life spans.

With Iron Shirt Chi Kung, one is able to increase the flow of hormones produced by the endocrine glands, building up the immune system and giving a general sense of well-being. The sexual (creative) energy produced as a result is another source of Chi energy which may later be transformed into spiritual energy.

Integral to Iron Shirt are the organs' exercises which clean and strengthen the organs. Strong, detoxified organs are important to modern life. Iron Shirt practice will strengthen; help to clean out the toxins, waste materials and sediment in the organs; and convert the fat stored in layers or sheaths of connective tissue (fasciae) in the body into Chi energy. The Chi is subsequently stored in the fasciae layers where it works like a cushion to protect the organs. As previously mentioned, this process may be compared to a tire which, when inflated with air, can sustain tremendous weight. Chi which has been stored in such a way then becomes available for transformation to a higher quality energy that can nourish the soul and spirit.

In the practice of Iron Shirt, we put more emphasis on the fasciae connective tissues, organs, tendons, bones and bone marrow and less emphasis on muscle development.

a. Chi, the Fasciae, Organs and Bones

The body may be conceived as consisting of three layers: (a) the innermost which is made up of the internal organs that produce Chi; (b) a layer consisting of fasciae, bones and tendons; and (c) the muscles, which constitute the bulk of the body. Chi, after being developed in the internal organs, is then distributed throughout the fasciae. It is with the fasciae that Iron Shirt I is primarily concerned.

(1) Fasciae

Each organ has a fascia layer covering it. (Fig. 1.8) In the heart this layer is called the pericardium; in the lung it is called the pleura. The fasciae which cover the stomach, liver and kidneys have protective, connective, regenerative and nourishing properties. They act as energizing chambers for the organs.

In Heller work and Rolfing massaging techniques, the fasciae are dealt with from the outside in. The art of Rolfing involves the freeing of areas of fasciae that have become stuck together through trauma, infection or chronic muscular tensions. Iron Shirt works from the inner layer of fascia out. (Fig. 1.9) The intent is to allow for a free flowing energy in the body and to enable psychological insight into events long harbored in restricted musculature.

Fig. 1.8 *Each organ has a fascia layer covering its cavity.*

Fig. 1.9 *Fasciae Layers*

The fasciae are extremely important in the practice of Iron Shirt because, as the most pervasive tissues in the body, they are believed to be the means whereby Chi is distributed along acupuncture routes. Research has shown that the least resistance to the flow of bioelectric energy in the body occurs between the fascial sheaths, and that when these routes have been charted, they have been found to correspond to the classical acupuncture channels.

(2) Iron Shirt Strengthens and Protects the Organs

When we pack and wrap the organs with Chi pressure, we start to strengthen the organs. The fasciae layers covering the organs, when filled with Chi pressure, will act as energizers to the organs. Extra Chi pressure will escape to the abdominal fascia layer fill the abdominal cavity with Chi pressure, act as a protector to the organs and permit the Chi to flow more easily. When the abdominal cavity fills with Chi pressure, the Chi pressure will start to fill in the deep fasciae and, finally, fill in the outer layer, acting as a triple layer or cushion of Chi pressure to pack and protect all of the organs, muscles and vital glands.

To better understand how Chi, the fasciae and the organs relate to one another, picture an egg residing inside a balloon filled with air residing inside another air-filled balloon, both of which reside inside one more air-filled balloon. (Fig. 1.10) An egg is normally quite vulnerable, but inside a blown-up balloon, it is cushioned against blows. Inside a triple layer of balloons, we see that the egg has even greater protection. You can throw and kick these three layers of balloons and the egg will remain unharmed. Chi and the fasciae act in the same way to protect the fragile organs. The fasciae are elastic and protective like balloons, and the Chi, expanding as the air expands within the balloons, creates pressure (Fig. 1.11)

When Chi pressure is reduced by sickness or a weakened state the organs become cramped because they yield and become compressed by pressures external to them.

Most people, when hit in the abdomen will fall down, or if they are so unlucky as to have the vital organs hit, are seriously injured in the vital organs. When the vital organs are injured, life can be endangered. With this practice of building layers of protection, you will greatly reduce the risk of unexpected injury and in many instances might help to save your life.

From the fasciae, Iron Shirt extends to involve the bones and tendons and, finally the muscles.

Fig. 1.10 *Balloons containing an Egg*

Fig. 1.11 *Pack the Chi into the organs and fasciae layers to protect the organs.*

(3) Burn Out Fat and Store Chi in the Organs

Food (nutrition) that is taken into the body but is not required by the body is turned into fat and stored in the outer layers of fasciae. This fat will greatly reduce the flow of Chi. The Iron Shirt Packing Process will help to pack and squeeze the fat, transforming it into energy to be stored in the fascial covers of the organs for use whenever needed. When Chi pressure occupies the fascial layers, the fat cannot be stored there. Therefore, the body becomes trained to convert fat into Chi energy for storage in the fascial layers.

(4) Structure of the Bones

When the fasciae are filled with Chi, the tendons are strengthened and the bones hold together as one structural piece. When the fasciae are weak, the muscles are weakened and the bone structure will not hold together. Similarly, when the muscles are weak, both the fasciae and the tendons are weak. When muscles are not used, they diminish in size and strength as do the fasciae which contain them and the tendons upon which they pull when activated.

There is a constant turnover of most of the cells of the body and replacements are governed by ongoing needs. It has been demonstrated that during prolonged periods of weightlessness in outer space, the constitution of bones is not as dense as it is on the surface of the Earth where the greater stresses of gravity signal heavier bone growth. When we are young, our bones are filled with marrow. (Fig. 1.12) When we become adults, the bones gradually hollow out, filling with fat and producing less blood cells, until they become brittle and susceptible to fracture. Iron Shirt Chi Kung is primarily designed to gradually reabsorb the Chi life-force back into the bones, which can be transformed into bone marrow to strengthen the bone structure.

Fig. 1.12 *When we are young, our bones are filled with red marrow.*

b. Chi Pressure and Meditationi increase Circulation while Reducing the Heart's Work

As mentioned, we must learn again to use the abdomen to aid in breathing and to help increase the circulation. The abdominal area accounts for two-thirds of the blood supply that flows through the liver, kidneys, stomach and spleen. When one knows how to pack and release, the abdomen will act like the most efficient heart you could ever have. In Iron Shirt Chi Kung Packing Process Breathing, by limiting the space of the abdomen and increasing the pounds of pressure per square inch, all the organs in the abdominal area will be packed in a very small space. This will expel all the toxins and sediment which have accumulated in these organs. The diaphragm will pull down to create a vacuum in the lower part of the lungs, filling the lower lobes first, and extending to the whole lungs. This gives a longer deeper breath which will furnish sufficient time and quantity of oxygen to cleanse the body of waste materials, sediment and toxins.

Our systems rely entirely upon Chi pressure to move the fluids. Increased pressure in the abdominal cavity will help to increase

the Chi pressure in order to move Chi, blood and lymph fluids. (Fig. 1.13) When the new blood is released, oxygen and nutrition will enter into the organs. With this practice, you will gradually increase the flow of the circulatory and lymph systems and, in return, will greatly reduce the work of the heart. As you gradually increase your vital capacity by learning how to pack air into the organs, thereby creating the cushion, or Chi pressure, to protect and strengthen them, the heart will have to work with progressively less effort and circulation will increase. The vital energy thus conserved can be used to enrich our spiritual and creative lives.

Our goal, then, is to increase the organ and abdominal pressure so that the Chi presses outward on the fasciae layers from inside. To do this, you will learn Packing Process Breathing to increase the pressure of Chi in the organs and abdomen. When this pressure is released, the fasciae expand, as do the organs.

Chi circulation meditation affords a means of generating and directing far more Chi than would ordinarily be available without causing pressure on the heart. Meditation increases circulation and the production of lymphocytes without affecting blood pressure the way running and western aerobic exercises do. Once you have practiced Chi circulation meditation by learning the Microcosmic Orbit, you will understand that the energy made use of in Iron Shirt travels very much along the same route of the Microcosmic Orbit, but is found to be expressed differently in each of the channels. As the Chi flows more freely throughout the entire body the experience takes on new dimensions.

c. Preventing Energy Leakage

The Taoists believe that Chi can be transformed into anything in our body. Certainly the energy we channel in the body has a generative effect. Therefore, an important function of Iron Shirt is to learn how to create space in the body to store Chi energy and how to prevent energy leakage. Energy is dispersed and scattered in the average person, escaping out daily through various openings in the body. Iron Shirt teaches the practitioner how to seal these openings. A process is then learned to direct this conserved energy to the navel region, there to be packed and condensed into an energy ball (Fig. 1.14) which can be directed to any part of the body or in later practice, to build an energy body to boost the spirit to a higher plane.

Fig. 1.13 *Compressing the organs, thereby creating a pressure in the abdomen, can cause the abdomen to pump like a heart, moving fluids through the system.*

Fig. 1.14 *Concentrating Energy into an Energy Ball.*

2. Iron Shirt prolongs Life

Long life and happiness have been pursued by people for centuries, and the search still continues. However, even with the added impetus of all that modern science and technology can offer, little, if any real progress has been made that is in the common domain. It is currently believed by many here in the West that daily physical exercise helps to stave off aging. However, statistically, athletes do not live longer nor seem to be appreciably healthier for their efforts. In fact, as the effects of aging impede them more and more, many of them become subject to depression. They are no longer able to compete successfully. In order to do more strenuous exercises, parts of the body must be changed. Also, there seems to be some basis for thinking that certain situations, such as the stress of competitive athletics or the use of drugs, may contribute to premature aging (discounting injuries that are sustained in more violent pursuits). A Taoist might comment that this is so because in accenting the physical, the spiritual was neglected, as well as the mind, the nervous system and the internal vital circuits.

Man's life span has been prolonged by science and technology. However, more often than not, the added life span can be of a low enough quality not to seem to be of great benefit.

The old Taoist sages say that in ancient times, men lived from 500 to 1,000 years. Modern society emphasizes material aspects of life whereas the ancient Taoists sought a balance of the material with the spiritual. The Taoist and Yogic approaches describe an "inner world" which man can develop and cultivate that is reflected in his "outer world". There is an old Taoist saying, "Living one hundred years is common. Life is in my hands, not in the hands of a Universal Being." It might be that this positive statement is derived from a genuine knowledge of how to prolong life in such a way that it is also vital and satisfying.

The Taoist System is very precise in the matter of building Chi, guiding it and finally developing skills to make the best use of it. To attempt to hasten the process by skipping steps is to end with nothing or to create complications such as irregular heartbeat, chest congestion, headache, pain in the heart, chest or back, which result from not knowing how to guide the energy.

3. Summary of the Benefits of Iron Shirt Chi Kung Training

In summary, Iron Shirt Chi Kung I training is divided into three levels: physical, emotional and spiritual.

a. On the physical level, one learns how to (1) align structurally to strengthen and alter a weak structure into a strong structure so that Chi can flow easily throughout the body and provide room for organs to grow within the body's structure; (2) develop a Chi Belt, the major connection of the upper and lower energy channels, without which proper structural alignment and Chi energy will be lost; (3) detoxify and exercise the organs and glands in order to charge and pack the Chi in them, to serve as cushioning to surround and protect them, and to fill the cavity of the body with Chi pressure; (4) increase Chi storage between the fasciae sheets; open the fasciae to serve as Chi storage areas of the body replacing fat previously stored there; understand the function of the fasciae layers as cushions around the body which protect the vital organs; (5) root down to the earth, sink down and become one with the earth, to be able to pass the outside force down to earth through the structure without obstruction, and to pump the earth force up into the structure and counteract outside forces with the assistance of the earth; (6) generate an easily flowing Chi through the meridians of the body and transform Chi to a higher "octane" to serve as the nourishment of the soul and spirit body.

b. On the emotional level, or soul level, one learns how to (1) condense the Chi into a controllable mass of energy, transforming and moving the Chi by changing negative energy into positive energy; (2) condense life-force Chi into a ball. This is one of the most important functions of the Iron Shirt Chi Kung practice since it enables one to control his Chi so that the Chi will not scatter around the body and leak out of the system. Condensed Chi will stay together and have more condensed power to be used as a person desires. When you are well trained in condensing the Chi energy into a ball, by physically moving the abdomen up and down, or left and right, you will be able to move the ball. In later practice, you will be able to use your mind to move the ball and direct it through channels in your body, always returning it to the navel. In the higher level, the condensed Chi becomes a light ball, like a glowing pearl, which develops into the energy body, serving as a booster rocket to boost the spirit or space body into orbit.

c. On the spiritual level, Iron Shirt Chi Kung condenses, strengthens and creates more Chi, thereby laying the groundwork for a spiritual foundation (rootedness) which serves the later part of the system. Previously referred to as an Earth Control Tower this foundation will direct the spirit in its journey through space where preparations are made for life after death.

C. Iron Shirt Chi Kung Exercises

The Iron Shirt exercises introduced here are primarily concerned with the fasciae and bone structure as well as with some tendons.

These eight exercises (namely, Embracing the Tree, the Yin and Yang Positions of Holding the Golden Urn, the Golden Turtle Immersing in Water (Yang Position), the Water Buffalo Emerging From the Water (Yin Position), The Golden Phoenix Washes Its Feathers, the Iron Bridge and the Iron Bar), condensed from forty-nine postures, are very precise in developing the most vital energy routes. There are many exercises known that will serve this purpose; however, by doing the eight exercises and the structural alignment exercises described in this book, you will derive as much benefit as you would from a much wider selection of positions and movements. These exercises develop Chi flow and strengthen fasciae, tendons, bones and muscles. In the tradition of Taoist Esoteric Yoga, it is said that (a) Chi moves the blood (and the heart works less); (b) blood moves muscles; (c) muscles move tendons, and (d) tendons move the bones to which they are attached.

Iron Shirt strengthens muscles, tendons and bones by subjecting them directly and gradually to increasing stress. It is a well rounded approach which offers, as an additional benefit, a means of releasing long held areas of tension. This often reflects in a general sense of well-being, of self-assurance and ease, along with better posture.

Many of my students report that Iron Shirt has enabled them to achieve a deep sense of feeling grounded and centered. Others suddenly discover that their hands and feet are no longer cold.

There is another advantage to Iron Shirt. The pneumatic effect joins what would otherwise be separate members of your body into one continuous unit. This produces a tremendous increase in mechanical advantage that increases geometrically as this work progresses.

The Universal Tao System offers many types of practices, many of which can be practiced individually. However, it is most beneficial to the practitioner to realize that all are interrelated and practicing them together will bring the best results. If one attempts to practice Tai Chi Chuan, for example, before having first cultivated internal energy through Iron Shirt, it might be compared to entering high school without having learned the alphabet.

Iron Shirt Chi Kung is the foundation of Tai Chi which uses structural alignment as a basis for exercise. Many people have the wrong idea about Tai Chi. When the energy is felt in the Tai Chi movements, the practitioner wants to move the energy. However, the moving form of Tai Chi occupies the mind with many things other than moving the energy. The more the practitioner moves his form, the busier his mind, making him less aware of the subtle energy that can be felt within himself. In other words, the simpler one keeps the activity of the mind, the better one can feel his inner workings. Iron Shirt uses the mind to guide the Chi flow in a static position. If you train in the methods of Iron Shirt first, you learn well how to move the Chi. Then when you practice Tai Chi, it is easier to move the Chi while practicing the moving forms. In the Universal Tao System, we require students to learn the Microcosmic Orbit, Iron Shirt Chi Kung, and then Tai Chi. Therefore, the structural rooting and energy discharge and control that is learned in Iron Shirt can be transferred into the Tai Chi form. It should also be noted that to practice Tai Chi Chuan properly, it is necessary that your meditation practice take you at least to the levels in the Universal Tao System of Fusion of the Five Elements or to Lesser Enlightenment Kan and Li.

Since the basic approaches of the Microcosmic Orbit, Iron Shirt Chi Kung, Seminal or Ovarian Kung Fu, and Tai Chi Chi Kung deal with some aspect of coaxing energy out of the deepest and outermost reaches of the body, it is wise for the practitioner who is interested in developing fully his physical, emotional and spiritual potential to consider the Universal Tao System in its entirety.

D. Three Levels of Iron Shirt

This first Iron Shirt book is concerned with the first level of Iron Shirt, Iron Shirt Chi Kung I, in which, through internal organs exercises, the fasciae (the connecting tissue which cover the organs and glands) are energized.

The second book, Iron Shirt Chi Kung II, deals with tendon exercises, known since olden times as 'Changing the Tendons'. This practice utilizes the mind and heart to direct, stretch and grow the tendons.

Iron Shirt Chi Kung III, the third book in this series, works on bone structure and increases the bone marrow. This procedure, known by the ancient Taoists as "Cleansing the Marrow", is used to clear out fat stored in the hollow bone and absorb the creative power (sexual energy) into the bone to rebuild the bone marrow. Bones are the major blood builders, including the white blood cells necessary to the body's defense mechanisms.

Chapter 2
Initial Preparations

A. Iron Shirt Breathing and Relaxation

You must not use force in any of these procedures. These exercises depend very much upon mind control and relaxation. In doing the chin press, which is accomplished by pressing the chin down to the chest and pushing out C-7, the chest must remain relaxed if you are not to develop chest pain and congestion and if you are to avoid difficulty in breathing. Practice the relaxation of the Inner Smile and run your Microcosmic Orbit (described briefly in this Chapter and more fully in the book, *Awaken Healing Energy Through the Tao*). If you find yourself shaking and jerking about, just simply let it all happen. It is a refreshing experience.

In a standing or walking position, you can stroke your chest with your palms from top to bottom from nine to eighteen times to relieve any congestion that might have accumulated there. Burp, if the need arises. If you begin to salivate copiously, tighten your neck muscles, press your chin to your chest, 'smile down" through all of your organs and then put your tongue to your palate and, using force, swallow saliva so that you feel as though you have indeed swallowed all the way down to your navel. Concentrate there until you can feel your navel grow warm.

Practice the Iron Shirt Chi Kung breathing twice per day only during your first week of practice and three times per day in the following week. By the second to fourth week, you can increase six to nine times and increase the length of time in Packing Breathing.

1. Abdominal and Reverse Breathing (Energizer Breathing)

Those who have not been trained in Chi Kung, Yoga or any other breathing exercise will be tense and will use very shallow, short breaths, uilizing only one-third of the lungs. This causes lose of Chi pressure in the abdominal cavity. With practice, proper breathing is accomplished.

Iron Shirt breathing combines various types of breathing. First, abdominal breathing is practiced to energize and loosen the fascial

layers of the body. When the breath is harmonized, Chi is sent down to the navel. At this time, reverse breathing is initiated. Abdominal and reverse breathing are the two basic ways of breath training. Practiced together they are known as Energizer breathing, but have also been called “Breath of Fire” or “Bellows Breathing”.

Fig. 2.1 *(a) Abdominal Breathing* *(b) Reverse Breathing*

Abdominal and reverse breathing are caused by the up and down movement of the thoracic diaphragm. (Fig. 2.1 (a) and (b)) During abdominal breathing, the diaphragm lowers and forces the vital organs, especially the adrenal glands, to compress downward, allowing the lower lobes of the lungs to fill with air, and forcing the abdomen to protrude. The chest and the sternum sink, which presses and activates the thymus gland. Upon exhalation, the stomach returns to a flatter shape and the other vital organs return to their original size and shape. In reverse breathing, on inhalation

we flatten the stomach, push the organs and diaphragm up, and allow air to fill the whole lungs. As your practice develops, you will be able to maintain a lowered diaphragm during reverse breathing, thereby lowering and compressing the organs. Upon exhaling, we fill the abdomen out. The motions thus created massage the vital organs to a certain extent. It is to reverse breathing that "Packing" Breathing is added.

a. Practice Abdominal Breathing (Fig. 2.1 (a))

(1) To practice abdominal breathing, keep the chest very relaxed. This may be difficult at first, but it is important. Begin by breathing in, drawing the air into the abdomen.

(2) Make the chest hollow and drop the diaphragm down. (Fig. 2.2(a)) Pressure is felt inside the abdomen which will begin to protrude on all sides in a rounded shape. Do not expand the stomach only. With the diaphragm lowered and the abdomen filled with air the inches of spacing containing the abdominal organs are minimized. (Fig. 2.2(b))

Fig. 2.2 (a) Diaphragm pressing down on the Adrenals and Kidneys.

(3) Hold your breath for a moment and exhale, flatten the stomach to the spine and feel the perineum (the region between the genital organs and the rectum) flood with the pressure. Pull the sexual organs up. The chest and the sternum sink, pressing and activating the thymus gland. (Fig. 2.3) Do not use force. It is enough to feel a slight pull and flattening of the chest.

(4) Inhale and relax, maintaining a dropped diaphragm, and feel the air expand on all sides of the abdomen (not only the front) like a round ball. Exhale and feel the pull of the sexual organs.

(5) With each inhalation and exhalation counting as one set, practice each set nine, eighteen, and then 36 times. Abdominal breathing, as the initiation of what is called “Energizer Breathing”, is used throughout all the exercises as a pre-exercise to Packing Process Breathing. It is also used after packing process breathing to regulate the breath.

Fig. 2.3 *When the diaphragm presses down on the adrenal glands, the sternum sinks. This activates the thymus gland.*

(6) If you find that your diaphragm becomes tight and pushed up into the rib cage, rub the diaphragm with both hands using the fingers to gently work the diaphragm so that it will drop down out of the rib area into a relaxed position. (Fig. 2.4) Tightness in the abdominal area is one of the main causes of breathing problems. Abdominal massage will help to relieve the tightness of the diaphragm. Use your fingers to lightly massage the abdomen in the navel area until you feel the tightness ease. This will greatly improve your deep breathing.

Diaphragm down,
lung capacity increases.

Diaphragm up,
lung capacity decreases.

Fig. 2.4 *Front View of the Diaphragm*

b. Practice Reverse Breathing (Fig. 2.1 (b))

Tight muscles in the chest can be a problem, and so it is important to relax. It is not the muscles but this relaxation which holds the Chi packed inside. Moreover using and training the mind to direct and condense the Chi are the ultimate goals of Iron Shirt training.

As you begin to inhale for reverse breathing, the organs and diaphragm are pushed up as the air fills the entire lungs. As your practice develops, you will be able to control the diaphragm and organs, maintaining them in a lowered position.

Reverse breathing, as the preparation for Packing Process Breathing, also takes place in the lower abdomen and should be practiced in conjunction with abdominal breathing. Draw air into the abdomen while contracting the muscles in front of the abdomen.

Begin with abdominal breathing, and follow with reverse breathing.

(1) Practice abdominal breathing six times. Upon the last exhalation, flatten the stomach. Maintain the flattened stomach and begin reverse breathing upon inhalation. Feel the abdomen flatten even more, as if it were approaching the spine and feel the perineum flood with a pressure. Pull the sexual organs up and, at the same time, try to lower the diaphragm so that you are pushing down on the organs. Try not to let the diaphragm push up. Lowering the diaphragm is the hardest part of reverse breathing. It is very important now to practice the relaxing technique of smiling to the diaphragm and the abdomen.

(2) Exhale, releasing the pressure in the perineum and in the sexual organs. Exhale through the lower abdomen, allowing the pressure to protrude from the lower abdomen to all sides and not only the stomach. Relax, letting the fasciae expand while releasing and relaxing the chest totally. Smile down. Relax.

(3) Counting each inhalation and exhalation together as one, practice reverse breathing six, nine, and then eighteen times. Practice until you are able to control the diaphragm with your mind, commanding it to lower down or rise up.

2. Pelvic and Urogenital Diaphragms

The body also contains a pelvic diaphragm and a urogenital diaphragm which are exceedingly important in transmitting energy in Iron Shirt. (Fig. 2.5) The pelvic diaphragm is a muscular wall that extends across the lower part of the torso, suspended concavely downward from the level of the symphysis pubis (the joint of the pubic bones) in front and the sacrum (the back of the pelvis) in back. There are several organs that penetrate this muscular partition that lies between the pelvic cavity and the perineum. These are the urethra, the vagina and the rectum, and they are supported by the pelvic diaphragm. In fact, the pelvic diaphragm is the floor of the pelvic cavity which contains the large intestine, small intestine, bladder, kidneys, liver spleen, and pancreas. It is the pelvic diaphragm that lifts up and maintains the shapes of the vital organs.

Below the pelvic diaphragm and above the perineum is another muscular diaphragm called the urogenital diaphragm. (Fig. 2.6) This is penetrated by the urethra, while its underside is the attachment site of the root of the penis or vagina. The pudendal

nerve connects the muscles of the urogenital diaphragm, the penis or vagina and the anus. There is a membranous superficial fascia that attaches to the back of this lowermost diaphragm that comes forward to engulf the scrotum or vagina (which also contains muscle) and joins with the abdominal wall. The importance of these anatomical structures will become apparent as you progress in your work in Taoist Yoga, especially in Iron Shirt I, II and III and in Taoist Secrets of Love (Seminal and Ovarian Kung Fu). These two diaphragms serve to assist the flow of pressure to the vital organs and glands, and help tremendously to increase Chi pressure in the organs and the abdomen. Knowing how to utilize and control these diaphragms will improve your capabilities in all levels of the Universal Tao practice.

Fig. 2.5 *Pelvic and urogenital diaphragms are the major lower seals which prevent vital energy from leaking out the lower openings.*

Fig. 2.6 *A closer view of the urogenital diaphragm in the male*

3. Iron Shirt Packing Process Breathing (Chi Pressure)

Packing Process Breathing is the most important breathing technique to master in the practice of Iron Shirt. It is used in all of the Iron Shirt postures and practicing it well will be a great aid in benefitting from the postures.

The Packing Process creates air pressure in a small space so that the body can have more pounds of pressure per square inch (psi). The importance of not only expanding the abdomen out in the front but allowing it to protrude on all sides has been stressed in the description of abdominal and reverse breathing. The same is true of Packing Breathing. The expansion of the front, back and sides occurs proportionately until the abdominal area becomes round like a ball. (Fig. 2.7) Watch a child breathe and you will notice

that his/her abdomen is round. In Chapter 1, we compared this phenomena to a tire which inflates to a certain number of pounds of air pressure (psi) in order to lift and support a car By utilizing this process, the human body can store air pressure (energy) in various parts of the body. When the pressure (Chi) drops, all the organs will drop and stack on each other dropping down and giving a greater burden to the pelvic and urogenital diaphragms. Chi pressure will help the organs hold their shape and uplift the organs into their own positions so that energy can flow easily. Thus, the Chi pressure serves as an energy charger of the organs.

Fig. 2.7 *Abdomen during Packing Process Breathing become rounded like a ball.*

The Taoists believe that the body has many openings: one front door the sexual organ; one back door the anus; and the seven openings of its windows, two eyes, two ears, two nostrils, and one mouth. It is through these openings that energy can enter or leak from the body. In the practice of Iron Shirt, we learn to seal our bodies to prevent energy leakage and the loss of Chi pressure, enabling us to pack, condense and store energy in our bodies and organs. Pulling up the pelvic and urogenital diaphragms helps to seal the sexual organ and anus doors. Turning the attention of your senses down to the navel area will also help to seal the energy.

a. Preparation Using Abdominal and Reverse Breathing (Energizer Breathing)

Sit at the front edge of your chair (the best position for practicing the Microcosmic Orbit also). Place your tongue at the roof of your mouth to seal the leakage of tongue and heart energy. Listen inwardly to your kidneys and breathe inwardly to the lungs. Look inwardly to the liver, and all of the other organs as well, to seal the senses from the inside.

(1) Start with the first stage of Energizer Breathing; that is, abdominal breathing. (Fig. 2.8(a)) Inhale slowly but strongly. Keep the chest relaxed and feel the area of the lower abdomen below the navel and perineum bulge. (Remember abdominal and reverse breathing originates from the lower abdomen, approximately one and one-half inches below the navel.) Then, forcefully, exhale. Notice that when you exhale, the belly flattens toward the spine. (Fig. 2.8(b)) Feel the sexual organs pull up. The perineal bulge diminishes. Learn to keep the stomach flat after exhaling. Inhale slowly again and allow the perineum to bulge as you do so. Repeat in multiples of eighteen to 36. The purpose is to energize the Chi and is also called “Fanning the Fire”.

(2) When you are ready and feel that you have sunk the Chi downwards towards the navel, exhale so that the abdomen flattens towards the spine. The chest and sternum sink down, pressing and activating the thymus gland. Exhale once more and lower the diaphragm down. (Fig. 2.8(c)) Hold for a while and then, using reverse abdominal breathing, inhale ten percent of your full capacity to the navel (ten percent means a short, little breath) while keeping the belly fiat (Fig. 2.8(d)), then relax the chest and belly. Try to keep the diaphragm low.

b. Building Chi Pressure

(3) Inhale about ten percent while contracting the pelvic and urogenital diaphragms. (Fig. 2.8 (e)) Pull up the sexual organs and tighten the anus to seal in your energy. Compress the abdominal organs in three directions: above from the lowered daphragm, below from the sexual organs, and in front from the abdominal wall. The ribs and spine hold from behind. (Fig. 2.2(b)) Inhale ten percent. Contract the left side of the anus, thereby bringing the Chi to the left kidney. Pack and wrap the energy around the left kidney and the adrenal glands. At the same time, pull in more of the left stomach towards the spine. Pull up the right anus and bring the Chi to the right kidney. At the same time, pull more on the right side of the abdomen wall, flattening it towards the spine. Pack and wrap the energy around the right and left kidneys. (Fig. 2.8(f)) Hold this position for as long as you can.

Remember if the diaphragm becomes tight and pushed up, rub it with both hands to gently work the diaphragm so that it will drop down into a relaxed position. (Fig. 2.4)

(a) Energizer Breathing

(b) Exhale, Flatten the abdomen to the spine.

(c) Exhale and lower the Diaghragm.

(d) Inhale ten percent, keeping the belly flat.

(e) Inhale ten percent, contracting the Pelvic and Urogenital Diaphragms.

Fig. 2.8 *Packing Process Breathing*

(f) Inhale ten percent. Contract the left and right anus. Bring Chi to the left and right kidneys. Pack and wrap the kidneys.

Fig. 2.8 *Packing Process Breathing*

(4) When you can no longer hold your breath, inhale ten percent more air on top of the air that you already have inhaled. Contract the perineum more tightly especially the sex organs. You can jerk a little, in order to pack the energy in the lower abdomen. Seal and limit the energy to a small area. You must maintain a relaxed chest and sink the sternum so that the diaphragm will stay soft and lowered. The stomach is flat and held in. Feel the pressure extend to the area of the sperm palace/ovary palace. (Fig. 2.8(g)) Pull the sex organs and the anus up again and seal them so that no energy can leak out.

(5) Inhale ten percent more air. (You can exhale a little in order to inhale more air). Contract the pelvic area and lower part of the abdomen, and hold this position for as long as possible. (Fig. 2.8(h))

(6) Inhale ten percent more. Repeat. Feel the pressure build in the perineum. (Fig. 2.8(i))

(7) By this time, it may seem that you cannot accommodate any more air, but if you exhale a little bit, bend forward slowly and direct your attention to the kidneys, feeling them expand on both sides and backwards, relaxing and trusting that the air will have room there, you will be able to inhale the last ten percent of your full capacity to that area in the back. (Fig. 2.8(j)) Hold as long as possible. This will help to open the sides and back.

(8) Exhale. Sit up straight.

(9) Normalize breathing by using abdominal breathing.

When you exhale and relax at the end of such a session, you will immediately experience heat or feel the energy run all around the body. Put the tongue to the palate. At this point you should meditate and circulate the Microcosmic Orbit for a few rounds. Collect the energy in the navel when you have finished. (Fig. 2.8(k))

Using this breathing method, the organs are packed, compressed and strongly massaged. When you inhale, blood and energy (Chi) will rush in with great force to clear the organs out, making them progressively stronger and healthier.

If you feel energy stuck in the heart area, use both hands to brush the chest in a downward motion. In addition, you may want to do the Healing Sound for the heart (see the method described in the book, *Taoist Ways to Transform Stress into Vitality*) and walk around, shaking out the arms and legs.

(g) Inhale ten percent down to the lower abdomen.

(h) Inhale ten percent down to the pelvic area and lower abdomen.

(i) Inhale ten percent down to the perineum.

(j) Bend forward to accommodate more air.

(k) Collect the energy at the navel.

Fig. 2.8 *Packing Process Breathing*

4. Points To Remember in Practicing the Breathing Exercises

a. Always remember: ***Do not use force***. Relax the chest so that the chest, sternum and diaphragm can sink down.

b. When packing, stay soft inside, not tense, at least for a good deal of the time. Soft energy is said to be unlimited.

c. Do no more than three cycles of packing per day for the first week. Gradually increase to six, nine and eighteen cycles per day. This exercise is much more strenuous than you might imagine. Energy, wrapped around the organs and pushed into the fasciae by opposing pressure, eventually increases the amount of energy stored in the fasciae and organs, protecting you against blows or unexpected injuries.

5. Preliminary Exercises

Here are some exercises which will be very helpful to you in the practice of Iron Shirt Chi Kung. All exercises should be performed as often as the body finds necessary in multiples of three.

a. Check the Diaphragm

The following is a procedure to check that the diaphragm is lowered. First, press deeply on the stomach with the fingers of one hand directly below the sternum. You will feel a sharp pain that will tell you that you have pressed on the stomach. Next, inhale, allowing the abdomen to balloon out. Touch the diaphragm under the rib cage near the sternum, above the stomach. You will feel a pain which is quite different from stomach pains. Make sure you are relaxed so that the diaphragm lowers. This is the most important part of Iron Shirt practice. Keep the diaphragm lowered at all times while using the packing process. This will prevent the Chi from congesting the lungs and heart and allow it to continue its course downward to the navel.

b. Massage the Diaphragm

Many people have a very tight, stiff diaphragm which sticks to the rib cage. To release the diaphragm, you can massage above the rib cage: (a) massage along the rib cage from top to bottom; (b)

use the index, third and fourth fingers to push downward from the rib cage, and feel the stretch of the diaphragm. (Fig. 2.9) When the diaphragm is stretched, you will feel breathing to be easier and deeper. This can easily be accomplished in the morning when you rise.

Press in and down all along the edge of the rib cage.

Fig.2.9 *Releasing Tension in the Diaphragm*

c. Abdominal Breathing in a Lying Position

Your greatest reservoir of Chi is in the area of the navel. Concentrating on this area can increase Chi pressure and stimulate its flow. Your Chi always travels to where your attention and activity is centered. When you breathe high in the chest, your Chi goes there and, because Chi cannot be stored there, you will begin to feel distress. Abdominal breathing will avoid this problem.

This exercise will help you accomplish abdominal breathing in a lying position easily.

Lie flat on your back with the legs flat on the floor or with the feet on the floor and the knees raised just enough to allow the lower back to flatten against the floor. Place one hand on the sternum and the other hand on the lower abdomen. When you inhale, allow

the belly to swell enough to raise the hand that you have resting on it, while the chest remains comparatively still. Do this to the count of nine, and then put the arms at the sides. Exhale. Breathe in for nine more such cycles. Breathe abdominally without using the hands. Then place the hands on the chest and lower the abdomen again and repeat the exercise. Be alert to this breathing process and not to how you feel. Put the hands at the sides of the body again, and realize what you have learned.

Repeat this exercise lying on one side and then the other. To give you stability in this position, bend the knees in front of you so that if someone were to look at you from above, you would look as if you were seated in a chair. When breathing, gradually feel the air expand from the lower lungs to the middle, the left, the right side and up, until the chest feels like a cylinder.

d. Abdominal Breathing on a Slant Board

This exercise will greatly increase the pressure and strength of the abdomen and strengthen the diaphragm.

Lie on a slant board with the head towards the floor while doing this same exercise. Using a weight on the lower abdomen while lying flat, breathe in so that the weight is raised as the diaphragm lowers. Exhale. The diaphragm goes back to its normal position and allows the belly to flatten and lower the weight. Practice this daily, increasing the weight once a week and you will soon acquire a great control in directing Chi to the lower abdomen while strengthening the abdominal muscles. By putting the board higher up on the wall, you can increase the demands made on the abdomen and diaphragm. This approach allows you to discover various ways of adapting to a new position and gain greater control. Always repeat in multiples of three to 36 times.

When you are proficient at abdominal breathing, you may go on to the next exercise.

e. Strengthening through Counter Pressure

For this exercise you will need a partner who will exert pressure on specific points of your body using a fist. Your partner should coordinate with you to determine the correct amount of pressure required for you to respond.

(1) Have your partner hold a fist against your solar plexus. (Fig. 2.10) Inhale, directing your attention and your diaphragm to the

point of contact, and produce a counter pressure. Practice this six times only, resting after each time, and you will see how quickly you have learned to respond.

(2) Your partner should hold a fist against your navel area. (Fig. 2.11) Inhale, direct your attention and your diaphragm to the point of contact, and produce a counter pressure. Practice at this spot six times, resting after each time.

(3) Now, have your partner hold a fist against the lower abdominal area. Inhale and direct your attention and your diaphragm to this area, producing a counter pressure. Practice this exercise six times also, again resting after each time.

(4) Finally, ask your partner to hold a fist against each side separately, a little towards the back in the kidneys' areas (vulnerable areas which are easily hurt by a blow). (Fig. 2.12) Inhale, direct your attention to the spot and produce a counter pressure. Do this six times, remembering to rest after each time. This exercise will begin to strengthen the kidneys' areas.

(5) Change places with your partner and repeat (1) through (4). The effects of this simple exercise are widespread. It is invigorating, will mobilize an otherwise lax abdomen and can help you complete the Microcosmic Orbit quickly. If you cannot do it with a partner use a wooden dowel affixed to a flat board. The dowel should be about one and one-half inches in diameter. Simply place the fiat surface against a wall and lean against the dowel so that it presses against those places described above.

f. Abdominal Breathing in a Standing Position

Standing positions are mostly used in the Iron Shirt practice. It is harder to accomplish abdominal breathing in a standing position, thus you need to be more relaxed.

As your abdominal breathing in a lying position improves, you will more easily control it in a standing position. While standing, the fasciae have tension to hold the muscles and the organs. This exercise is to strenghthen the abdominal fasciae. This is a means of acquainting you with the way the mind and body work together and of learning how to bring energy to a fascial area. Stand with the feet a shoulders' width apart. Relax the entire body and make sure the diaphragm is lowered. Take a deep abdominal breath, swelling out the belly. Hold it as long as you can comfortably. Exhale. When you feel the need, inhale. Repeat this cycle in multiples of three.

Fig. 2.10 *Your partner with his fist againt your solar plexus.*

Fig 2.11 *Your partner with his fist againt your navel.*

Fig. 2.12 *Your partner pressing with his fist against your side, towards the back, in the kidney area.*

Fig. 2.13 *Train the mind to direct Chi to the organs and glands.*

g. Getting Energy to Abdomen by training the Mind to direct it.

After you have learned Iron Shirt Breathing, you can practice sending energy to the abdomen. With this exercise, you will gradually train your mind to direct and increase the Chi pressure at will to the upper middle and lower abdominal areas, or to the left or right kidneys, packing, wrapping and energizing them, to the adrenal glands, the liver, the spleen, the pancreas, the lungs, the heart, the thymus gland, or the thyroid and parathyroid glands. (Fig. 2.13) (In the advanced level, you will learn to direct Chi to other parts of the body as well.)

h. Practice: Development of Iron Shirt Protection

Make your left hand into a fist, with the inside edge of the fist facing inward as if it were holding a knife, and hold it over the abdominal area. Inhale. Imagine that Chi is filling the lower abdomen and that the edge of the fist is exerting 100 pounds of pressure against the abdomen. (Fig. 2.14) Resist. Now relax. Inhale. Do not force the energy in any way. When you feel comfortable with this pressure, gradually increase it so that the body will be able to handle it. This prepares you so that if you were hit without any warning anywhere on the body, you could send Chi to those points to cushion the body and vital organs from harm.

Most people cannot take a punch to the stomach, which is located at the level of the solar plexus. With this training, you would be able to do just that. However in the Taoist practice we do not encourage people to show off by taking a punch.

You must make sure you are relaxed throughout this exercise. begin by “filling the abdomen with air”. You can achieve this by concentrating on the area around and below the navel. The area from the navel to the sternum is divided into four parts. (Fig. 2.15) Wherever you direct your attention, Chi appears and protects the area like an inflated rubber tire. Use no force at any time in this practice. Simply breathe into the area you want to cushion, and concentrate on it while gradually pushing your palm into it. Do this systematically so that you cover all the body surfaces that you can reach.

Once you develop energy in the region between the sternum and the navel sufficient to protect you against unexpected injury, the rest of the abdomen is more easily protected. The counterpressure that is created drives Chi into the fasciae. When the deep fasciae fill with Chi pressure, the Chi pressure will spread out to the second layer of the fasciae. (For more detailed information regarding fasciae, see Chapter 4.) Soon, as you increase pressure in the abdomen, you will be able to move the Chi pressure around the abdominal area. Practice this constantly in conjunction with all of the Iron Shirt exercises.

Once you have become proficient with the hand, you can use a short stick. Press the stick in the abdominal area and push in as you bring the Chi pressure to the area to counteract the stick.

Fig. 2.14 *Imagine exerting 100 pounds of pressure against the abdomen.*

Fig. 2.15 *Four Divisions of the Abdomen below the Sternum.*

B. Summary of Iron Shirt Breathing

The breathing processes explained in this Chapter may seem to be numerous but, in fact, all relate and lead to Iron Shirt breathing.

1. Exercises to Improve Abdominal Breathing

a. Abdominal Breathing in a Lying Position

(1) Lie supine, legs flexed or extended, hands on belly. Inhale nine counts. Raise hands. Exhale. Repeat nine times with your hands at your sides.

(2) Lie supine, legs flexed or extended, hands on chest and lower abdomen. Inhale nine counts, allowing the belly to rise. Exhale. Repeat nine times with your hands at your sides.

(3) Repeat (1) and (2) on each side with knees flexed.

b. Abdominal Breathing on a Slant Board

(1) On a slant board, using a weight on the belly, inhale, raising the weight. Hold. Exhale.

(2) Lower the weight. Repeat, adding to the weight on a weekly basis. Repeat in multiples of three, nine, eighteen and 36.

c. Strengthening Through Counter Pressure

Use mind and body to direct pressure from within against an outside force, concentrating Chi in a particular area of fascia.

d. Abdominal Breathing in a Standing Position

(1) Stand with feet a shoulders' width apart. Inhale and hold as long as comfortable. Exhale. Repeat in multiples of three.

2. Iron Shirt Chi Kung Packing Process Breathing

a. Abdominal Breathing

Begin with abdominal breathing, expanding the lower abdomen.

b. Lower the Diaphragm

Lower the diaphragm upon inhalation while keeping the chest relaxed. Exhale, flattening the stomach, and feel the pull of the pelvic and urogenital diaphragms and sexual organs.

c. Reverse Abdominal Breathing

When you have brought the energy down to the navel, begin reverse breathing with an exhalation, flattening down the stomach. When inhaling, relax the chest and maintain a flattened stomach.

d. Slightly Contract the Pelvic and Urogenital Diaphragm

Contract the pelvic and urogenital diaphragm and, at the same time, slightly pull up the anus, and pull up the testicles or contract the vagina.

e. Packing Process Breathing

Begin Packing Process Breathing with an inhalation. Using the packing process, seal and limit the energy to a small area. The diaphragm is lowered. The stomach is flattened and held in. Pull up the sexual organs and anus and seal them so that no energy can leak out of these three areas.

f. Pack the Organs with Chi

The energy goes back, filling out and packing the kidneys' areas.

g. Exhale and Relax

Exhale and let the Chi out. Relax.

C. Cranial, Respiratory and Sacral Pump Functions

Contained and protected within your spinal column and skull is the very "heart" of your nervous system. Cushioning it is the cerebrospinal fluid, cerebro for the head and spinal for the vertebrae. This fluid, as described by the Taoists in ancient times, is circulated by two pumps. One is in the sacrum and is known as the sacral pump. The other is in the region of your upper neck and head and is known as the cranial pump. Many people who have been able to feel these pumps working have reported feeling a "big bubble" of energy travel up their spine during Packing Breathing.

1. Sacral Pump

The sacrum consists of five pieces of bone when we are young; when we grow up these five bones fuse into one piece. Taoists regard the sacrum as a pump which will help to hold the sexual energy coming from the sperm/ovaries and perineum and transform the energy, at the same time giving it an upward thrust. It is similar to a way station, refining the sperm/ovaries' energy as it circulates in the body. In the Iron Shirt practice we tilt the sacrum to the back, or against a wall, exerting force to straighten the sacrum. This helps to activate the sacral pump to pump the spinal cord fluid up.

Fig. 2.16 *Sacral Pump*

2. Cranial Pump

The cranium of the skull has long been regarded by Taoists as a major pump for the circulation of energy from the lower centers to the higher centers. Medical research has recently confirmed that minute movements of the joints of the eight cranial bones occur during breathing. (Fig. 2.17) Cranial movement is responsible for the production and function of the cerebrospinal fluid surrounding the brain and spinal cord, which fluid is necessary for normal brain, nerve and energy patterns in the entire body.

Improper cranial respiratory function develops for many reasons. It may have been present from birth. At this time the skull is soft and moveable and the trip down the birth canal could jam a baby's skull, or it may be the result of a difficult birth in which forceps were used. It may also occur later in life. A bump on the head coming from a certain direction while the person is breathing in the specific manner that allows the bone to move can cause improper cranial respiratory function. Auto accidents causing whiplash very often are the cause of cranial faults. Since cranial faults affect the flow of the fluid and the brain, nerve and energy patterns of the entire body, symptoms can develop anyplace. Strengthening the cranial joints can increase energy and alleviate symptoms, such as headaches, sinus problems, visual disturbances and neck problems.

In Taoism, cultivation of the movement of the pelvis, perineum, urogenital diaphragm, anus, and the sacrum and cranial pumps is very important in helping to move the life-force and sexual energy up to the higher center. The Iron Shirt Chi Kung Packing Process activates these pumps using various methods, e.g. mind control, muscle action, clenching of the teeth and tightening of the neck, and pressing the tongue to the palate. All of these methods will help to activate the eight pieces of cranial bone.

Upon Deep Inhalation

Upon Deep Exhalation

Fig. 2.17 *Micromovement of Cranial Bones*

D. Microcosmic Orbit Meditation

1. Circulate your Chi in the Microcosmic Orbit

In the preceding breathing exercises, you have been asked at certain points to circulate the Microcosmic Orbit. Your life-force energy thus must be circulated through specific pathways in the body efficiently and safely to be used for healing and growth. The Microcosmic Orbit circulation uses the power of the mind to help activate the sacral and cranial pumps into pumping the life-force energy throughout the body.

It is much easier to cultivate your energy if you first understand the major paths of energy circulation in the body. The nervous system in humans is very complex and is capable of directing energy wherever it is needed. The ancient Taoist Masters discovered that there are many channels of energy flow. However, two energy channels carry an especially strong current.

One channel is called the "Functional" or "Yin" Channel. It begins at the perineum, the point located at the base of the trunk, midway between the testicles/vagina and the anus. It goes up the front of the body past the sex organ, stomach, organs, heart, and throat and ends at the tip of the tongue. The second channel, called the "Governor" or "Yang" channel, also starts at the perineum but goes up the back of the body. It flows from the perineum upwards into the tailbone and the sacral pump and then up through the spine into the brain and the cranial pump, finally flowing back down to the roof of the mouth.

The tongue is like a switch that connects these two currents—when it is touched to the roof of the mouth just behind the front teeth, the energy can flow in a circle up the spine and back down the front. The two channels form a single circuit that energy loops around. This vital current of energy circulates past the major organs and nervous systems of the body in a loop, giving cells the juice created from organ energy and smiling energy that is necessary to grow heal, and function, and spreading vitality throughout the body. This circulating energy is the Microcosmic Orbit, and forms the basis of acupuncture. Western medical research has already acknowledged acupuncture as being clinically effective, although scientists admit they cannot explain why the system works. The Taoists, on the other hand, have been studying the subtle energy points in the body for thousands of years and have verified in detail the importance of each channel.

Fig. 2.18 *Learn to circulate your Chi in the Microcosmic Orbit. Tongue touches the roof of the palate to complete the circuit of the Governor and Functional Channels.*

2. Importance of the Microcosmic Orbit

By opening up this Microcosmic Orbit and keeping it clear of physical or mental blockages, it is possible to pump the life-force energy up the spine. If this channel is blocked by tension, then learning to circulate the Microcosmic Orbit is an important step to opening up the blocks in the body to circulate and revitalize all parts of the mind and body. Otherwise, when intense pressure builds in the head, taking such forms as headaches, hallucinations, and insomnia, much of the life-force energy escapes through the eyes, ears, nose and mouth and is lost. This is like trying to heat a room while all the windows are open.

The way to open the Microcosmic Orbit is by sitting in meditation for a few minutes each morning as you practice the Inner Smile. An essential Taoist technique, described in detail in *Taoist Ways to Transform Stress into Vitality*, the Inner Smile is a means of connecting visual relaxation and the ability to concentrate. Allow your energy to complete the loop by letting your mind flow along with it. Start in the eyes, and mentally circulate with the energy as it goes down the front through your tongue, throat, chest and navel and then up the tailbone and spine to the head.

At first it may feel as though nothing is happening, but eventually the current will begin to feel warm in some places as it loops around. The key is simply to relax and try to bring your mind directly into the part of the loop being focused on. This is different from visualizing an image inside your head of what that part of the body looks like or is feeling. Do not use your mind as if it were a television picture. Experience the actual Chi flow. Relax and let your mind flow with the Chi in the physical body along a natural circuit to any desired point, e.g. the navel, perineum, etc.

Study of the Microcosmic Orbit is recommended to all students who truly seek to master the techniques of Iron Shirt. Progress to the higher levels of transforming Chi and our creative energy to spiritual energy, without first learning the Microcosmic Orbit, is very difficult. Some people may already be “open” in these channels or relaxed when they are close to nature. The benefits of the Microcosmic Orbit extend beyond facilitating the flow of life-force energy and include prevention of aging and the healing of many illnesses, ranging from high blood pressure, insomnia and headaches to arthritis.

E. Perineum Power

In Iron Shirt practice, we will utilize “Perineum Power” to direct Chi to the areas, organs and glands that you wish to energize in order to pack and increase the Chi in that region. “Perineum Power” will be used in all Iron Shirt positions.

1. Anus is connected to Organ Energy.

The perineum (Hui-yin) region includes the anus and sexual organs. The various sections of the anus region are closely linked with the organs’ Chi. The Chinese term Hui-yin (perineum) means the collection point of all the Yin energy, or the lowest abdominal energy collection point. It is also known as the Gate of Death and Life. This point lies between the two main gates. One, called the front gate, is the sexual organ which is the big life-force opening. Here the life-force energy can easily leak out and deplete the organ’s function. The second gate, or back gate, is the anus. This gate can also easily lose life-force when not sealed or closed tightly through muscular toning. In the Tao practices, especially in the Tao Secrets of Love and Iron Shirt, the perineum’s power to tighten, close and draw the life-force back up the spine is an important practice. Otherwise, our life-force and sexual energy can become a ‘’river of no return.’’

2. Anus Region is divided into Five Parts.

The anus is divided into five regions: (a) middle. (b) front, (c) back, (d) left, and (e) right. (Fig. 2.19)

a. Middle Part

The middle of the anus Chi is connected with the organs as follows: the vagina-uterus, the aorta and vena cava, stomach, heart, thyroid and parathyroids, pituitary gland, pineal and top of the head. (Fig. 2.20)

b. Front Part

The front of the anus Chi is connected with the following organs: the prostate gland, bladder, small intestine, stomach, thymus gland, and front part of the brain. (Fig. 2.21 (a) and (b))

Fig. 2.19 *The anus is dividded into five regions*

Fig. 2.20 *Middle Part*

(a) Front Part in the Male

(b) Front Part in the Female

Fig. 2.21 *Front Part*

c. Back Part

The back part of the anus Chi is connected with the organ energies of the sacrum, lower lumbars, twelve thoracic vertebrae, seven cervical vertebrae, and small brain (cerebellum). (Fig. 2.22)

Fig. 2.22 *Back Part*

d. Left Part

The left part of the anus Chi is connected with the organ energies of the left ovary, the large intestine, left kidney, left adrenal gland, spleen, left lung and left hemisphere of the brain. (Fig. 2.23 (a) and (b))

(a) Left Part in the Male

(b) Left Part in the Female

Fig. 2.23 *Left Part*

c. Right Part

The right part of the anus Chi is connected with the organ energies as follows: the right ovary, the large intestine, right kidney, adrenal gland, liver, gall bladder, right lung and right hemisphere of the brain. (Fig. 2.24 (a) and (b))

Fig. 2.24 *Right Part*

By contracting the anus in different parts you can bring more Chi to the organs and glands, and the effects of the massage will increase. (Fig. 2.25)

Fig. 2.25 *Wrap the organs, encircling them with Chi energy.*

F. Precautions

The following is a warning to practitioners with high blood pressure, emotional instability, heart or chest pain, or any acute illness.

1. If you have high blood pressure, check with a doctor before attempting the practice of Iron Shirt. Do not do the exercises and breathing techniques strenuously.
2. Women should not do Iron Shirt breathing during a menstrual cycle, but may practice the structure, standing Chi meditation and Bone Breathing. If pregnant, do not practice Iron Shirt Packing Breathing; use only energizer breathing and standing Chi meditation.
3. Be sure that the diaphragm is lowered while practicing these exercises to avoid accumulating energy in the heart and to facilitate the flow of the Microcosmic Orbit.
4. After practicing the postures, while bringing the energy down, be sure to place the tongue on the roof of the mouth to collect all energy from the head (the Governor Channel). Take the energy down from the head, slow it down in the solar plexus, and then store it in the navel.

Chapter 3
Practice of Postures

There is an integral relationship between strong, unblocked Chi flow and good structural alignment. Proper practice of Iron Shirt, as well as all other Taoist exercises, will lead to a dramatic improvement in structural health, as well as increased Chi flow. A refined understanding of the structural interrelationships of the body is inherent in Iron Shirt.

Because of poor postural habits, many people have developed serious structural distortions and have no natural sense of the body in appropriate alignment. If these distortions are carried over into Iron Shirt practice, much effectiveness is lost and bad habits perpetuated. In effect, one is practicing the very problems that need to be corrected.

I. Iron Shirt Horse Stance using a Wall

The following exercise demonstrates how to use a wall to align yourself perfectly in the Iron Shirt Horse Stance used in Embracing the Tree, Holding the Golden Urn and the Phoenix postures. These postures will be described fully in this chapter.

This wall position is a variation of the Structural Training Position against a Wall which is described in Chapter 4. As your practice continues, you will develop the feeling of proper alignment and will be able to follow the same principles without a wall. Whenever you practice your alignment against the wall, when you feel you can hold the position, step away from it and apply the same principles. After you have learned to adopt the correct stance without the wall, occasionally practice against it again to check yourself. Once you are skilled, occasional use of the wall will allow you greatly to increase your spinal lengthening when you practice.

Use this wall position to practice alignment by itself as well as with the breathing used in Embracing the Tree and the other excersises in which packing is done. Practicing the full exercise with Packing Breathing while against the wall will help to insure that you can maintain the alignment while in the much more dynamic state of packing and energy circulation.

At first, applying some of these details may seem difficult or unclear. However as your body opens up, you will gradually be able to apply each detail easily and naturally. Since these principles represent application of the basic design characterisics of your body structure, you will feel more and more as you practice that your body will naturally fit into these" grooves".

A. Sequence of Practice in Using a Wall to Develop the Iron Shirt Horse Stance

1. Distance Between Feet

Stand with the left foot a few inches away from the wall. The foot should be straight along the second toe, or just slightly turned out at the heel. To measure the proper distance between the feet, touch the knee of the right leg to the heel of the left foot. Place the ball of the right big toe in line with the ball of the left big toe so that both are the same distance away from the wall. Now, as you stand up, rotate the right foot around the ball of the big toe. Both heels will then be the same distance from the wall, and the feet will be the correct distance apart.

Fig. 3.1 *Horse Stance Using a Wall*

2. Foot Alignment

First, feel that you firmly contact the ground with the balls of the big toes. Then, spread the toes by widening the feet across the balls. Now equalize the weight over the whole foot by equalizing the weight on the following three points: the ball of the large toe, the ball of the last two toes, and the middle of the heel. (Fig. 3.2) The toes should remain relaxed and not be grasping the floor. Remember that the feet are the foundation of your stance. As these details become natural, your practice will be much stronger, and you will experience greater body-mind integration. Proper foot alignment is the basis of understanding.

Fig. 3.2 *Nine Points of the Foot*

3. Distance from the Wall

The feet should be the right distance from the wall so that with the spine flattened to the wall, you do not feel like you are leaning back. If the wall were suddenly removed, you would not need to adjust yourself to keep from falling back.

4. Rooting with the Feet

When practicing those parts of Embracing the Tree and Rooting that call for strongly grasping the ground with the toes, feel that this clawing begins at the balls of the feet, not at the toes themselves. Accentuate this grasping at the big toe in particular and there will be much stronger rooting because the foot is used in a more complete and integrated fashion.

5. Knees

Bend the knees so that the kneecaps are directly over the toes. Bend the knees no farther than the ends of the big toes. The knees can be bent less than this, but eventually should be bent this far to insure maximum development of strength.

6. Pelvis

First, allow the lower spine to flatten firmly against the wall for as long as this can be done without discomfort. Then, place your hands on the tops of the thighs at the crease where the thighs connect to the pelvis. With the lower spine flattened to the wall, you will feel that the tendon in the front of the thigh and slightly to the inside is very tight. Now rotate the pelvis slightly so that the lower spine comes away from the wall. You will feel this tendon relax. You should barely be able to place a flat hand between your lower spine and the wall. This will also increase the crease at the junction of the thigh and pelvis. Continue to feel that the sacrum is stretching the spine down.

7. Pelvic Tilt

As your practice of Iron Shirt continues and your attention is focused to the sacral area, the pelvic tilt is used. This is accomplished by strongly pushing against the wall at the sacral area while maintaining the other structural details. As you strongly push back to the wall,

your spine will arch slightly more, and you will feel the muscles around the sacrum become very firm. As this happens, it is very important to feel that you are also stretching the sacrum further down the wall. (Fig. 3.3) If you are doing this properly you will feel a strong force around the sacrum with only a small added arch in the lower spine.

8. Middle Back

To insure that this pelvic aligning does not arch the middle spine, maintain the pelvic tilt position, and push back gently but firmly the back lower ribs, simultaneously lifting them slightly higher up the wall. During this procedure you will feel the middle and lower back lengthen. (Fig. 3.3) This is the work of the psoas muscles.

9. Head/Neck/UpperBack

Remain in the pelvic tilt position and bring as much of the upper spine as fiat to the wall as possible without strain. Maintain the head as if it is being gently pushed back from the upper lip and simultaneously lifted by its crown. (Fig. 3.3) Again, for many people the head held in this way will not touch the wall. This is usually because of excessive curvature of the upper spine, which can be eliminated by practice of the Iron Bridge, the Backbend and Door Hanging. (The Iron Bridge is described subsequently in this chapter; see Chapter 4 for descriptions of the Backbend and Door Hanging.)

10. T-11 Thrust

When Chi energy is brought to the adrenal energy center (the T-11 point, located at the top of the kidneys at the point of the adrenal gland, or at the bottom edge of the rib cage at the spine) and packed in the kidney area, it is necessary to lean forward and thrust the T-11 area back. To feel this on the wall, simply keep the T-11 area firmly pressed against the wall and round the rest of the spine above this point away from the wall, while maintaining the other alignment principles. By practicing against the wall in this way, it is possible to feel this thrust very strongly, as when practicing with a partner pushing at that point.

Fig. 3.3 *Pelvic Tilt*

11. Shoulders

Place the arms in any one of the arm positions as described in the first four Iron Shirt exercises in this chapter . Then move the shoulder blades firmly back to the wall so that the whole area of each shoulder blade is in firm contact with the wall. Now round the shoulders for ward, feeling the shoulder blades move away from the wall, until just the spine and, if possible, the area between the inner edges of the shoulder blades remain on the wall.

12. Head/Neck (C-7, the Base of the Neck, and C-1, the Base of the Skull)

After rounding the shoulders forward, push back gently, but firmly at C-7, the bone at the base of the neck, and at C-l, the bone at the base of the skull. The chin will tuck in as you do this. When bringing the Chi to these two points, you will drop the chin, bringing it closer to the chest. Even when pushing strongly neither point will touch the wall. Until that point in the exercise is reached, however, push back less strongly (particularly at C-7) to insure that alignment with the upper spine and neck remains correct. (Fig. 3.4) If done properly, pushing back at C-7 after rounding the shoulders forward will increase the rounding of the shoulders, and you will feel that the shoulders have become “locked” in place.

13. “Locking” the Structure

Lock the knees and do not move them. As you concentrate on the knees, they will feel as though they are simultaneously being pushed in and out. Then push the knees outward. You will feel a spiraling effect from the knees to the ground as if your legs were screws being screwed down into the earth. In Embracing the Tree, similarly lock the arms, but do not move them. Feel that the elbows are simultaneously being pushed in and pulled out as if the arms were screws being moved by the spiraling action of the forearm. You can also feel this locking action of the elbows and the knees if you imagine that you are straightening the joint, but without actually doing so. Locking these joints greatly improves strength, stability and Chi flow. Practice the Wall Stance and the Embracing the Tree posture for a while, until you can feel you are able to hold the position.

Fig. 3.4 *Spinal Alignement*

B. Summary of Practice for Using a Wall to Develop Iron Shirt Horse Stance Basic Alignment

1. Feet: Measure the proper distance of the feet from each other and from the wall. Align each foot.

2. Lower Back: Lean against the wall with the lower spine flat, if possible.

3. Head/Neck/Upper Back: Bring as much of the upper spine as possible flat to the wall, with the head held as if it is pushed back from the upper lip and lifted by its crown. The back of the head may or may not touch the wall.

4. Pelvis: Rotate the pelvis back until the thigh tendon is more relaxed. Feel that the sacrum is pulling the spine down.

5. Middle Back: Bring the lower ribs firmly to the back wall, then stretch them up slightly higher on the wall.

6. Arms/Shoulders: Position the arms for one of the first four Iron Shirt exercises. Flatten the shoulder blades to the wall. Round the shoulders forward, feeling the shoulder blades move away from the wall until only the spine and, if possible, the area between the inner edges of the shoulder blades remains on the wall. Lock the elbows and knees.

7. Chest: Check that the chest muscles are relaxed. The chest will be somewhat depressed.

8. Head/Neck: Gently, but firmly, push back at C-7 and at the base of the skull. Extend up from the crown of the head. The back of the head does not touch the wall.

Special Alignment During the Exercises:

9. Rooting with the Feet: “Claw” with the feet by grasping with the balls of the feet first, particularly the balls of the big toes. The toes will then follow in grasping the ground.

10. Pelvic Tilt: Rotate the pelvis back farther as you strongly extend the sacrum down the wall. Feel the muscles around the sacrum firmly push against the wall.

11. T-11 Thrust: Push the T-11 area firmly to the wall as you bring the rest of the upper spine away from the wall,

II. Starting Position for all Exercises: Embracing the Tree

We will describe the positions of Embracing the Tree very carefully in a detailed, step-by-step explanation in Part A below. In Part B, we will give a sequence of practice, which will give you a complete sequential picture to follow without distraction. Practice as you read Part A first. Then, join all the steps together by following Part B. Part C is a summary of the sequence of practice. Utilize the Horse Stance with the assistance of the wall to improve your structure.

A. Embracing the Tree (Explanation of Procedure)

Embracing the Tree is the Master Stance practice. This practice joins many body structures and tendons (Chi channels) together into one system. In the beginning it seems difficult, quite like putting a puzzle together. However if you begin this practice by taking one step at a time, practicing each one until you can master it, then moving on to the next step, you will find this practice much easier to do. Once you have mastered the Horse Stance on the wall, you will find it much easier to practice Embracing the Tree.

1. Correct Stance

The correct distance between the feet in all Iron Shirt stances is the length of the lower leg from knee to toes. (Fig. 3.5(a)) Beginners may wish to place feet slightly farther apart, but the standard position yields the quickest results. (Fig. 3.5(b),(c) and (d))

(a) Finding the Standard Position of the Feet. (b) Rooting the Feet

(c) Incorrect Rooting—Front View (d) Incorrect Rooting—Side View

Fig. 3.5 *Embracing the Tree–Rooting*

Fig. 3.6 *Feeling rooted to the Earth.*

2. Rooting of the Feet

As previously discussed, rooting is a very important practice in the Tao System which begins with the physical practice and builds into the higher or spiritual, practice. Like the foundation of a building, the Rooting Practice makes a strong foundation upon which to build, making the structure last longer.

To root is to surrender yourself to the pull of gravity while maintaining a structural skeletal alignment which supports the body in an upright posture.

In beginning the physical part of rooting, the soles of the feet (K-1) are the places where Mother Earth's healing energy enters. When the soles are open, you can feel the soles ''sucking'' and having a connection with the ground. This healing energy passes into the body through the soles and will nourish the organs and the glands.

Like the roots of a tree, the feet support the entire structure. (Fig.3.6) It is important to distribute your weight solidly and evenly on the whole foot. We divide the foot into nine parts, or nine bases: (I)big toe, (2)second toe, (3)third toe, (4)fourth toe, (5)small toe, (6)big ball, (7)small ball, (8)outer edge, and (9)heel. (Fig.3.7)

Fig. 3.7 *K-1 and the Nine Points of the Foot*

You must feel that the nine parts are evenly contacting the ground. Feel and check which parts are too tense or have too much pressure on them. This can cause the body to misalign and the spine to tilt to one side. Over a long period of time, improper alignment can cause spinal cord or disc problems.

The big toe joins with the tendons of the thumb (Fig. 3.8). and the little toe joins with the tendons of the pinky finger (Fig. 3.9); thus, all the tendons of the body are connected, increasing your rooting power. Slightly moving the feet inward, thereby pointing the toes in, will help to make the connection of the big toes and the thumb. In this posture, imagine you have roots extending down into the ground.

Fig. 3.8 *Tendons of little toes join with the tendons of little finger.*

Fig. 3.9 *Tendons of the big toes join with the tendons of the thumbs.*

Note that if, at this point, the toes and ball of the foot were raised, the practitioner could easily be pushed over.

In the spiritual level of rooting, it is important to know that as there is a Mother Earth, there is a Father Heaven. Many people in the spiritual practice always want to raise themselves to a higher level to be filled with spiritual energy. If you want to go higher, you must take care that the foundation, the rooting, is good. This connection of heaven and earth is most important in the Tao practice. In the higher practice, the ground energy from Mother Earth is equally important to the spiritual energy from Father Heaven.

To assist you at this point with an overall view of the Embracing the Tree posture, see Fig. 3.10(a) through (g).

Fig. 3.10 *Embracing the Tree Posture*

(g) Rounding of the Scapula

3. Elongation of the Spine (Fig. 3.11(a), (b) and (c))

When you feel the Chi and fullness down below the navel, slowly sink down into the knees and feel the sacrum pulling the spine down and the head stretching upward as if pulled by a string. Keep the spine erect. Feel the spine suspended upward and the sacrum downward in order to help elongate the spine and keep the discs released. Gradually you will become taller. This elongation gives more room for expansion of the nervous system and for spinal fluid and Chi to travel freely. Look straight ahead, and step to the side with the left foot to the standard position.

(a) Elongation of the Spine

Fig.3.11

(c) Disc is Compressed Because of Stress and the Weight of the Body pressing into the Spinal Cord.

4. Three Chi Circles

a. Connect the arm with the scapula-the First Circle (Fig. 3.12)

Raise your arms in a circle as if holding a large ball or a tree lightly between the hands and chest. This forms the first circle. Your fingers should be gently separated by holding the fingertips of each hand one to two inches apart from each other. The neck (C-7) is the main juncture where energy and the powerful tendons of the body meet. Gradually you will feel the Chi spread from the C-7 to the outside of the arm, to the middle finger to the palm and feel the Chi jump from the right middle finger to the left middle finger and from the right thumb to the left thumb.

Incorrect Rounding of the Scapulae

Fig. 3.12 *First Circle: Connect the Ams with the Scapulae*

Elbows sink down, turning inward, and should feel as if they are maintaining their position by resisting the downward pull. Imagine that someone is pushing you on the outside of your elbows and you, in turn, are pushing outward to maintain the position. Feel the spiral in your forearm as if it were a screw turning clockwise. This will connect the wrist, elbow and arm together. Relax the shoulders. Drop the neck muscles down. The trapezius muscles, connecting the back of the neck with the back of the shoulders, have to be relaxed so that the connection can be transformed down. (Fig. 3.13).

Fig. 3.13 *Trapezius Muscle*

Bring your concentration down the spine, pressing down on your skeletal structure to the sacrum, to the knees, and finally down to the feet and the earth. You are pressing down on the skeletal structure for the body's support, rather than the muscles. The pressure gradually travels down the spine to the sacrum and hips, tightening the legs and feet. Eventually you will feel your bone structure connected down to the ground, rooted as if you had grown into the ground and were all one piece with the earth. (Fig. 3.14)

Stand erect, feet close together and feel the weight distributed evenly on the feet. Relax the neck, the shoulders and the chest. Gradually bring your attention to the navel and send the Chi energy to the navel until you feel a warm fullness there.

Fig. 3.14 *Press down on the bone structure.*

b. Connect the scapulae with the spine—the Second Circle (Fig. 3.15 (a), (b) and (c))

Thumbs point up so that the energy will flow between the two thumbs and the energy will connect with the big toes; thus, the two muscle-tendon meridians join together, and the front structure of bones, tendons, fasciae and muscles tighten the structure together as one. (Fig. 3.15 (a))

(a) The tendons of the big toes' lines connect with the tendon of the tumbs.

(b) Spiral the energy though the arms and out of the fingers.

(c) Stretch like a bow from C-7 to the thumbs, thereby connecting the hands, C-7, scapulae and spine

Fig. 3.15 *Second Circle: Connect the Scapulae with the Spine*

Attach the hands and fingers to the scapulae, or shoulder blades, and cranial bone by pulling the thumb tendons away from the body and the pinky fingers' tendons towards you. Feel a spiraling action turning in a clockwise circle as you pull the scapulae to the side. (Fig. 3.15(b)) As in using the wall, feel as though the inner edges of the shoulder blades remain on the wall with the shoulder blades sticking to the back of the rib cage. This will allow the transference of force from the shoulder blades to the rib cage, which in turn will transfer to the C-7, or energy junction point, to the spine, the sacrum, the knees and down to the feet. In this way the force can also be transferred from the earth to the feet, to the knees, to the hips, to the sacrum, to the spine, to the shoulder blades and, finally, to the hands. Since the shoulder blades, while near the spine, are not connected to it, there can be no force transferred from one to the other unless you practice the proper stretching.

In practicing this posture, you will feel a stretch of force form like a bow from C-7 to the thumb. When your elbows sink and press inward, you will feel more of the stretching of the bow. By stretching the scapulae and spine tendons and connecting them together (Fig. 3.15 (c)), the back becomes rounded and the chest sinks. Feel the hollowness of the chest. The sternum then sinks down to press the thymus gland, the major gland of rejuvenation and the immune system. (Fig. 3.16) Keeping this gland active will increase Chi flow.

These events will help to activate the cranial pump. (Fig. 3.17) Rest and feel the head start to pulsate. Joining the powerful muscle-tendon meridian down to the navel will connect the Chi energy in the front line and join the bone structure of the rib cage together (Fig. 3.15(a)) In doing so you are helping to sink the energy down. This forms the Second Circle.

Embracing the Tree will strengthen the thumb and toe muscles and tendons along this meridian. The thumb and toes have the principal rooting power.

By strengthening these muscles tendon meridians which join at the navel, all the muscles, tendons, bones and fasciae (connective tissues) will become tied together greatly improving the bone structure and holding a good posture.

Bad posture is caused by weak tendons, muscles and fasciae, which cause bones to fall easily out of alignment.

Fig. 3.16 *Thymus Gland is the major gland of rejuvenation and the immune system.*

Cranial Pump becomes activated during the Second Circle when, upon deep inhalation, there is a micromovement of the Cranial Bones.

Fig. 3.17 *Cranial Pump*

c. Connect the hand, scapulae and spine to the sacrum—the Third Circle (Fig. 3.18)

Fig. 3.18 *Third Circle: Connect hands, scapulae and spine to sacrum.*

This connection is made by pushing out the curve of the C-7 from the sternum, the natural curve of the spine, and locking the hips. This will stretch the spine like a flexed bow that will link the spine, C-7, scapulae, shoulders, arms, elbows, and hands together. Push the sacrum out as if you were pushing against the wall; the hips remain the same. The hip bones and sacrum can be separated individually. Once you can separate out and move the sacrum straight, you can activitate the sacral pump which is very important to help circulate the Chi. (Fig. 3.19) You will feel the connection of the spine, the scapulae and the sacrum. Find and adjust the gravity point of the sacrum in between the feet.

Fig. 3.19 *Sacral Pump*

The greatest kinetic energy and power in the human body is generated through the hip joints, around which are attached the largest muscles (the psoas muscles). (Fig. 3.20) However if you cannot open the pelvis and differentiate both sides (pelvic differentiation), the power of the hip joints is limited to only two directions. The simple fact of standing on one leg without leaning to one side would require an internal sense of the angle of the pelvis, and the arrangement of the spine. To feel “empty” on one side can only happen when you feel grounded, supported and aligned on the other (emptiness and fullness: Yin-Yang).

Round the pelvic area like an arched bow. By turning the big toes in slightly, the second toes point straight ahead so that your feet are positioned as though standing on the circumference of a circle, making yet another circle. This will gradually open the groin area and allow the Chi pressure to fill the area as if a ball were in this area.

Fig. 3.20 *Opening the Pelvic Area*

The hip joints are synergistically dependent upon two further joint alignments: the knees and ankles.

The knees, ankles and feet are the next connection to the earth. Embracing the Tree requires a precise alignment of the knee and ankle joints. The critical joint alignment is in the 'saddle' of the tibia (shin bone) over the talus (ankle bone), which stabilizes everything above. Sink, down and open the knees a little bit, turning the knees outward slightly as if you were in a saddle. Feel a spiraling downward movement as if your legs were screws, screwing down into the ground, created by pressing firmly on the feet, and then feel the whole body force transfer to the ankles, the feet, and to the ground. (Fig. 3.21) Feel your bone structure. The knees should feel as if they are simultaneously being pushed in and out. Lock the knee caps.

Fig. 3.21 *Screw the force into the ground.*

If the alignment is oblique, forces through the feet are not spread evenly.

The knee joints should not be positioned over the big toes as this may cause some to experience knee pain, making them unable to continue. If you have trouble with your knees while in the Horse Stance, you must judge just how much you can do. In your own best interest, you may have to forego some of the positions. Note, however that the cause of pain is not necessarily found in the physical location in which the pain is felt.

Fold the tongue back to the soft palate in the area of the Heavenly Pool. (Fig. 3.22(a)) If this is difficult, simply touch the tip of the tongue to the gum line behind the front upper teeth. (Fig. 3.22(b)) Now you should feel the whole body structure connect into one piece from the feet, ankles, knees, hips, sacrum, spinal cord, scapulae, arms, elbows and hands.

(a) Heavenly Pool (b) Tongue touches behind the teeth

Fig. 3.22 *Tongue Positions*

5. Eyes Can Help to Direct Chi

The Taoists regard the eyes as the windows of the soul and a most powerful tool in directing and absorbing Chi into the body.

Direct the eyes to look at the fingertips of both hands. Hold the eyes steady to direct the Chi flow. Keep them wide open while looking at the fingertips to help connect the Chi between the fingers while seeing the tip of your nose with some part of your vision. Allow the ears to listen inside the body to the navel. (Fig. 3.23) This will make you feel very centered, peaceful and calm.

During inhalation, create a ball by expanding the abdomen on all sides. Exhale and feel the ball roll up your chest.

Fig. 2.23 *Inhalation*

6. Begin with Energizer Breathing (Abdominal and Reverse Breathing)

Concentrate on the area just one and one-half inches inside and below the navel until you feel some Chi activity there. At that point, begin breathing, preferably the Energizer Breathing. As described in Chapter 2, this is accomplished by first inhaling into the lower abdomen (the region below the navel). Feel the abdominal wall pull the lower lobes of the lungs down and the air move in. Feel the lower abdomen and perineum bulge on all sides like a ball, then forcibly expel the air through your nostrils. With this expulsion of air, feel as if a ball were rolling up your chest. (Fig. 3.24) Sink the sternum and press into the thymus gland. At the same time, pull up the sex organs and the anus. When exhaling, the abdomen is flat to the spine. Release. One such inhalation and exhalation constitutes a round.

Fig. 3.24 *Energizer Breathing*

7. First Stage

a. Do nine to eighteen rounds of Energizer Breathing. Remember the breath should be generated from the lower abdomen, one and one-half inches below the navel. You can put your hand at the lower abdominal area to make sure the breathing is generating from there.

b. Exhale your last inhalation and be aware of how you flatten the abdomen, pulling in and up behind the front lower ribs to do this. This will increase and strengthen the psoas muscle. Exhale once more and relax the diaphragm downwards. Gradually you will feel the diaphragm press against the adrenal gland. (Fig. 3.25) Do not tighten the abdomen. Contract the perineum and start to do the Iron Shirt Packing Process.

Diaphragm presses down on the adrenals and kidneys.

Fig. 3.25 *Relax the diaphragm downwards.*

c. Perineum power: Inhale ten percent of your capacity with short, quick breaths generating from the navel by using the navel to pull the air in and pull up the sexual organs. (Men pull up the testicles and the penis; women pull up the uterus and squeeze the vagina tight.) Keep the abdominals in the position they assumed when you exhaled and feel pressure build in the upper abdomen. (Fig. 3.26)

Diaphragm, abdominal wall and perineum press into the abdomen.

Fig. 3.26 *Perineum Power*

d. Inhale another ten percent and pull up the left side of the anus. Bring the Chi to the left kidney and wrap and pack the kidney and adrenal glands with Chi. (Fig. 3.27) In the beginning you might not feel it, but when you practice for a while, you will feel something under the back rib cage bulge out. The sensation is very unusual. Inhale again to the right side of the anus and pull the Chi to wrap around the right kidney. The kidneys are the first organs to be exercised. Remember the first point of each kidney, K-1, is on the sole of each foot; these points are the major points of rooting. When the kidneys are strong, the bones will be strong because the kidneys control the bones and the Chi in the bones. When you can master the kidneys' Packing Process, that is, wrapping and packing the Chi around the kidneys, you can easily move to wrapping and packing the ovaries, prostate gland, adrenal glands, liver, spleen, lungs, heart, and thymus gland. (Fig. 3.28)

Fig. 3.27 *Wrap the energy around the kidneys.*

Once you have mastered the Kidney Packing Process, you can proceed easily to wrap and pack the other organs.

Fig. 3.28 *Kidney Packing Process*

e. Concentrate on the navel and circle the Chi in that area nine times in a clockwise direction in an area three inches in diameter, and nine times in a counterclockwise direction, thereby condensing the Chi into a ball. (Fig. 3.29) Use your mind and eye movements to help create the circular direction by moving the eyes in a round circle. (Fig. 3.30) First move the eyes clockwise beginning with the eyes looking downward, moving up to the right comer, to the top, to the left comer and down again nine times; then, circulate the Chi counterclockwise by moving the eyes from the bottom to the left, to the top, down to the right, and to the bottom nine times.

You should begin at your navel and circle inwards using a three inch diameter, while thinking that the Chi in the body is being drawn to that place by that activity and that it is being packed into the smaller and smaller area of an energy ball, to be finally contained in the navel. Slowly do nine rounds. Concentrate and collect your energy when you feel Chi has been generated. The Chi will condense into a small, dense unit.

Circle the Chi and concentrate the energy into an energy ball.

Fig. 3.29 *Creating an Energy Ball*

Use the mind and eyes to help circle the Chi energy ball nine times clockwise...and nine times counterclockwise.

Fig. 3.30 *Circulate the Energy Ball.*

There are nine points in which the Chi is to be circulated and condensed. (Fig. 3.64) In later practice, you will condense, store and bring up the Chi from these power stations. These Chi power stations are tremendously useful in the Kung Fu energy and spiritual practice.

It is most important to keep the diaphram down. Remember to check it by touching the sternum and the stomach. You can feel the diaphram coming down when it is distinguishable from the stomach.

f. Inhale another ten percent. If you feel that you cannot inhale more, you can exhale very little and inhale again. Make the abdomen flatter and draw Chi into the lower abdominal area. The area below

the navel seems to be filled, but keep the upper abdomen flat in order to minimize the space so that the Chi pressure can be increased. As mentioned previously, this sensation is caused by the action of the diaphragm pressing down against the organs contained in the abdomen. The pressure between the outer wall of muscle of the abdomen, which is kept flat, and that of the diaphragm pushing down from above serves to compress the abdominal organs. When you pull up the pelvic and urogenital diaphrams and pull up the sex organs and anus, more energy will pack in the lower abdominal area. There is where the Chi is condensed into an energy ball. This energy ball will expel wastes and rinse out the toxins from the system, aiding in the circulation of blood and lymph through the area and driving excess Chi into storage between the fascial layers. (Fig. 3.31) Remember the Chi will occupy this space, prohibiting fat from being stored there.

Packing and condensing the organs will help to expel toxins and wastes from the body.

Fig. 3.31 *Pack and condense the organs.*

Fig. 3.32 *Condensing Chi*

g. Inhaling ten percent more of your total capacity presses the diaphragm even lower so that now you become more aware of the contents of the lower abdominal area. (Fig. 3.32(a)) Women should be aware of the area in which the ovaries rest. Hold your breath until the need arises to inhale.

It is at this point that you can work on your feet and coccyx, which are most important as energy sources. Those who have already completed the Microcosmic Orbit should make rapid progress here.

h. Inhale ten percent more of your capacity. Concentration should now be on the sexual organs.

With more practice your mind can direct the Chi more easily, giving you greater control over the Chi energy. Condense the Chi into a compact ball. Hold this energy in the lower abdominal area where you can increase it by using your mind and the Packing Process.

i. Inhale ten percent more of your capacity to the Hui Yin (perineum) to activate Perineum Power. Pull up the perineum, push and pack the Chi down to the perineum area and condense it into a ball. (Fig. 3.32(b)) Concentrate on the perineum again. With more practice you will gradually feel the perineum bulge downward. You should be able to feel a big channel running from the navel to the abdomen to the perineum connecting with Chi. Hold the breath as long as you feel comfortable.

j. Now exhale and relax the whole body, sending energy down the back of the legs into the ground. (Fig. 3.33) Regulate your breathing with energizer breathing. Inhale more; exhale less. When you exhale, pull up the perineum (include the sex organs and anus). Be aware of the middle of the palms of the hands and the middle of the soles of the feet. Use the mind to feel the palms and soles “breathing”. Coordinate your breath with the palms and soles, breathing simultaneously. With the Packing Process Breathing, the palms and soles will open easily. Gradually, you will feel as though the soles and palms seem to breathe. (Fig. 3.34) The left eye looks at the left palm, the right eye looks at the right palm. In the forehead, above and between the eyebrows, resides what the Taoists regard as another eye called the “Heavenly Eye”. Feel the Chi from the palms flow to the forehead while the “Heavenly Eye” sends Chi to the palms.

Now exhale and relax the whole body, bringing the Chi down the backs of the legs to the soles of the feet and hold your attention there. Concentrate on the soles until you feel the energy going down into the ground. Gradually, increase the energy down to the ground and feel as though you are growing roots like the roots of a tree inch-by-inch downward, at first six inches, then one foot, and so on. Feel the flow of Chi from the navel to the perineum, to the backs of the knees, to the soles of the feet and down into the ground. Become one line of energy flow.

Exhale and let the energy flow down though the legs and into the earth.

Fig. 3.33 *Send the energy into the earth.*

Fig. 3.34 *Feel the palms and soles breathing.*

k. When you can feel that you are rooting into the earth, you are hooking up to Mother Earth's inexhaustible sources of energy (Fig. 3.35) Become aware of the "loving, healing energy" emanating from Mother Earth, which enters through the soles and rises up the front of the legs six inches at first, then two feet, then three feet or more. Continue in this way until your whole body is full of this "loving, healing energy". Hold and pack the Chi in the perineum until you feel the urge to breathe. Exhale and do the Energizing Breathing to regulate your breath.

Fig. 3.35 *Hooking up to Mother Earth's inexhaustible sources of energy.*

At the end of each stage, once you have finished packing the Chi, standing or holding yourself still and relaxing the muscles of the whole body are very important. You should hold this position for as long as you can or have time to hold it, gradually increasing the time, if possible. Using the Iron Shirt Chi Kung Packing Breathing has created a tremendous Chi pressure and you can now use your mind to condense and direct the flow. (Fig. 3.36) At this point, you will fully feel the energy flow in the Microcosmic Orbit. Use your mind to direct the energy up and down, flowing from finger to finger, down the legs and back up.

Stand still. Relax the whole body and direct the Chi flow.

Fig. 3.36 *Direct the Chi flow.*

In the beginning it seems that you are very tense and nervous when you practice Iron Shirt, the way you felt when first learning to ride a bicycle. However once you are trained and know how to move and pack the energy, you use more structure and mind control with confidence and less muscle.

Each time you finish a stage and are not proceeding to the next stage, you must collect the Chi in the navel. Stand up straight, touch the tongue to the palate, and put the palms over the navel. Men put the right palm over the navel, covering it with the left palm. Women put the left palm over the navel, covering it with the right palm. (Fig. 3.37) Concentrate on the navel for a while, feeling the energy that is generated by the Chi Kung. As you are standing, practice the Bone Breathing Process described below.

Practice the first stage for a week or two, until you can master moving the Chi from the navel to K-1 at the soles of the feet and master palm and sole breathing, and then proceed on.

Woman places the right palm over the left. Man place the left palm over the right.

Fig. 3.37 *Place the palm over the navel and collect the Chi.*

8. Second Stage

Begin with the First Stage and continue as follows:

a. Press the soles of the feet to the floor so that they seem to adhere to it by suction. The toes are part of a tendon line and, as such, are part of an energy flow line. To take advantage of this fact, press and clamp all of the toes firmly to the floor but do not allow them to bulge up. When concentrating on the soles, you may find that they grow warm or feel cool. Inhale ten percent and coordinate with the breath, sucking the earth energy into your soles. Inhale ten percent using the Packing Process breathing technique described in the First Stage. (Fig. 3.38) Pull the energy up to the sexual organs and the urogenital diaphragm, the pelvic diaphragm, the left and right anus, the kidneys (Fig. 3.39) and the lower diaphragm. Feel as though you are sucking the earth. Feel the earth energy begin to enter the soles and move up the leg bones to the knees. The earth energy can feel cool or sometimes tingling. Some people feel warm.

Fig. 3.38 *Pull and lower the entire diaphragm.*

Fig.3.39 *Pull the energy up from the anus to the kidneys.*

b. Using your K-1 center in the soles of the feet as a hub, circle nine times clockwise out from the middle to a distance of three inches, and then nine times counterclockwise back to K-1. (Fig. 3.40) Again, use the mind, coordinating with eye movements, to help circulate the energy.

Inhale ten percent and press the soles of the feet firmly into the Earth.
Claw the toes and circulate the energy nine times.

Fig. 3.40 *Use the K-1 center in the soles of the feet as a hub.*

c. Inhale and bring the energy up out of the big toes to the knees. Lock the knee cap and tighten the legs by turning the knees outward with the feet firm. (Fig. 3.41(a)) Feel the legs like screws being screwed into the ground. (Fig. 3.41(b)) Imagine someone pushing the knees in while you try to push outward. Slightly pull the knees outward and feel the outside force push in. This action will join the sacrum with the knees, and the knees with the ankles and the feet. This also activates and aligns all the lower part tendons together Remember that the feet point in and the knees push slightly outward. Concentrate on them until you feel energy collect there. Do not circulate the energy at this point.

When you feel the urge to breathe you can exhale a little bit. Exhaling and inhaling are very personalized; therefore, each person must adjust to his or her own needs.

(a) Inhale twenty percent and bring the energy up to the knees. Lock the knees.

(b) Press down and turn the knees outward to screw the force into the ground.

Fig.3.41 *Screw the force into the ground.*

d. (1) Inhale ten percent, coordinating the breath with pulling in the sexual organs and anus, thereby bringing the energy up your knees to the buttocks and then to the perineum (Hui Yin). At the same time, feel the energy as it is drawn from the earth enter the soles of the feet and rise to the knees and perineum. Inhale and pack more in the perineum. Use your eyes to help circulate the Chi energy nine times clockwise and nine times counterclockwise in a three inch diameter at the perineum. (Fig. 3.42)

Increasingly send energy down to the Hui Yin from the navel and continue to feel it come up out of the legs. In time, it may seem as though there is a flow as of water entering the Hui Yin from above and from below moving up and down as though through a pipe. It might also become evident why the K-1 points in the soles of the feet are referred to as the “Bubbling Springs”.

Pull the sexual organs and anus in. Inhale ten percent up to the perineum. Circulate the energy nine times clockwise and nine time counterwise.

Fig. 3.42 *Draw the energy from the earth and pack and circulate it in the perineum.*

(2) Exhale and normalize the breath by Energizing Breathing. (Fig. 3.43) Relax and collect “loving energy” from all of the organs. To create the loving energy you can start your smile in the eyes. Bring that smile down the face, slightly lifting the corner of the mouth, and keep on smiling inwardly to the organs: the heart, lungs, liver, pancreas, spleen, kidneys and sexual organs. (Fig. 3.44)

Remember standing or holding yourself still at this point and relaxing the muscles of the whole body are very important. Feel the energy flow in the Microcosmic Orbit. (Fig. 3.45) Remember also that after each stage, if you are not proceeding to the next stage, you must collect the Chi in the navel. Stand up straight, touch the tongue to the palate, and put the palms over the navel. Men put the right palm over the navel, covering it with the left palm. Women put the left palm over the navel, covering it with the right palm. (Fig. 3.46) Concentrate on the navel for a while, feeling the energy that is generated by the Chi Kung. As you are standing, practice the Bone Breathing Process described below, which has just been described above as the First and Second Stages then proceed to the next stage.

Exhale and Inhale. Regulate the breathing though the palms and soles.

Fig. 3.43 *Energizer Breathing*

Fig. 3.44 *Smile down to the organs.*

Fig. 3.45 *Stand still in Embracing the Tree position and feel the energy flow in the Microcosmic Orbit.*

Woman places the right palm over the left.

Man places the left palm over the right.

Fig. 3.46 *Place the palms over the navel to collect the energy.*

9. Third Stage

Begin by repeating the First and Second Stages, then proceed as follows:

a. After you have normalized the breath, exhale and flatten the stomach. Inhale ten percent using the Packing Process Breathing as described in the First Stage. Inhale up the front and middle of the anus, and at the same time, pull up the back part of the anus so that you can direct the Chi into the sacrum, (Fig. 3.47 (a) and (b)) Put pressure on the sacrum by pressing tightly to the ground and tilting the sacrum back without moving the hips. This will activate the sacral pump. (Fig. 3.48) You can practice this by putting your back to the wall and pressing the sacrum to touch the wall, as described in Section I of this Chapter. Do this gradually and do not force it. In gradually developing the psoas muscle, as well as the hip and sacrum tendons and muscles, you will be able to move the sacrum separately. (Fig. 3.49) By this movement, you are activating the sacral pump to help increase the spinal fluid and to open the sacrum for the Chi to enter This will greatly increase the circulation of spinal fluid. When you can master this, you will no longer need the wall. Use wall alignment in practicing Embracing the Tree.

Fig. 3.47 *Direct the Chi into the sacrum.*

Fig. 3.48 *Activate the sacral pump.*

Fig. 3.49 *Sacral tilt will help develop the psoas muscle.*

b. (1) Bring more energy (kidneys' energy) up from K-1 on the soles of the feet to the coccyx and to the sacrum. Inhale, pulling up the left and right anus and the back part of the anus. Pull up toward the coccyx and up to the sacrum, packing Chi to the kidneys. (Fig. 3.50(a)) Feel the back area surrounding the kidneys bulge out. Concentrating here, tilt the sacrum and circle the energy out at the sacrum from that point first nine times clockwise to a distance of three inches, and then nine times counterclockwise back to the sacrum, using the eyes to help direct the circulation. (Fig. 3.50(b)) Feel the collection of the Chi there.

Use the Anus to Pull Up the Energy into the Kidneys.

Fig. 3.50 *Pack and wrap the Chi into the kidneys.*

The Chi feeling is reported differently, even by the same practitioner at different times. There can be a range of feelings such as hot or cold, or pricklings, vibrations, numbness or a combination of all of these and other sensations. The effect is identifiable as something which is not ordinarily experienced. There might be pain or extremes of sensation. This part of the practice should take one or two weeks.

I feel that it is necessary to stress that in this system you must realize that what you experience is very real. There are no visualizations or acts of the imagination here. You actually feel energy accumulate and then go from place to place because it really does. In some people it takes off on its own and goes through the very same routes and stopping off places that would have later been prescribed. If this happens to you, it is extremely convincing and is thereafter self-evident that there really is Chi and that all one needs to do is follow.

(2) When you feel Chi in the sacrum, inhale ten percent and pull the Chi up to T-11, tilting the T-11 (the adrenal glands, Chi-Chung, CO-6) back. (Fig. 3.51(a)) This will push the lower back and straighten the curve. Again, use the wall as a guide. Do not force your spine, but gently ease it until you feel the spine becoming straight. This will open the Door of Life Center (Lumbar 2 and Lumbar 3) opposite the navel. The pumping action will increase as the spine straightens, pulling like a pipe or bow and the Chi will flow easily as if through a straight pipe. With the lower back pushed and the curve straightened, you will be stretching the psoas muscle very strongly. This will help to strengthen the lower back tremendously Connect the sacrum and the C-7 into one pipe or a bow. Bring the Chi to T-11, concentrating at this center, and circle the Chi outward clockwise to a distance of three inches. Do this nine times and then circle back nine times down to that center in a counterclockwise direction, finally concentrating it there. (Fig. 3.51(b)) It can take you from less than a week to more than three weeks to develop to the point where the sacrum and the T-11 fuse into one channel.

It is important to remember that each time you start to inhale and pack, you must start at the navel, gather the Chi, and bring the energy gathered there to the Hui Yin. Then, push the energy to the ground. Bring it up from the soles to the Hui Yin, and mix it with the energy already brought down from the navel before going on to the coccyx, T-11 and up. As you continue to practice in this way, the whole procedure will take less and less time until it finally becomes simply moments.

Inhale ten percent up to T-11. Tilt T-11 back and circulate the energy nine times clockwise and nine times counterclockwise.

Fig. 3.51 *Tilt T-11*

c. Inhale and pull the Chi from the T-11 up to C-7. (Fig. 3.52) Push from the sternum to tilt the C-7 back. Tuck in the chin, clench the teeth (Fig. 3.53(a)), squeeze the temples (Fig. 3.53(b)) and the occipital bone, and press the tongue firmly to the roof of the mouth. (Fig. 3.53(c)) This will create a tension similar to the tension of the arched bow discussed previously which is ready to release an arrow. (Fig. 3.54(a)) The whole neck will be connected to the spine and sacrum, and to the legs and heels. (Fig. 3.54(b)) As the energy moves up from the sacrum to C-7, the major push of internal force occurs. (C-7, T-11 and the sacrum are known as the “stations of

internal force".) Once you can develop and feel the force in the C-7, you will be able to exert the force. This entire process is called self-adjustment of the cranial pump and will activate the cranial pump. (Fig. 3.55) The action of the cranial pump will greatly increase, thereby increasing brain power as well. Circle nine times clockwise and nine times counterclockwise at C-7. Feel the Chi energy join the scapulae, the arms, and the hands and fingers together. You will feel the Chi start to flow from the thumb and fingers of one hand to the thumb and fingers of the other hand, like a jumper cable. Use the eyes to look at the thumbs and direct the Chi to that point.

Fig. 3.52 *Pull the Chi from T-11 up to C-7.*

(a) Clench the teeth. Sink the chin in.

(b) Squeeze the temple bones.

(c) Press the tongue firmly to the roof of the mouth.

Fig. 3.53 *Locking the Head*

(a) Creat a tension similar to a fully arched bow.

(b) As you push from the sternum to C-7, the spine and shouders will connect.

Fig. 3.54 *Spine Alignment*

d. If you are out of breath or cannot go on, exhale a little bit and then inhale again. If you cannot do this, you can simply exhale and bring the Chi up to the crown, omitting the Yu Chen (Jade Pillow, BL-9 or Base of the Skull). If you can continue, bring the Chi up to the Yu-Chen and circle it nine times both clockwise and counterclockwise as you did at the points previously described, until you feel that Chi has developed there. (Fig. 3.55)

Inhale ten percent up to C-7. Tilt the neck back and circulate the energy nine times clockwise (to the left) and nine times counterclockwise(to the right.) Inhale again and bring the energy up to C-1 at the base of the skull. Circulate nine times counterclockwise. Inhale and bring the energy to the crown.

Fig. 3.55 *Self-Adjustment of the Cranial Pump*

e. Inhale and pull the Chi up to the crown (Fig. 3.55), the seat of the pineal gland located at the top of the head, by looking up with your eyes. (Fig. 3.56(a)) Concentrate on the Pai Hui at the crown and circle it again nine times clockwise and nine times counterclockwise, using your mind and your eyes, until energy is experienced there. (Fig. 3-56(b)) Feel the energy flow from the sacrum to the Door of Life, to T-11, to C-7, to the occipital bone, and to the crown as they become fused into one channel and linked together. If you are out of breath, you can pull up and exhale. Normalize your breathing.

(a) Location of the Pineal Gland

(b) Look up to the pineal gland and circle the enerrgy nine times clockwise.

Fig. 3.56 *Circle the energy in the pineal gland.*

f. Make sure that the tongue is up on the roof of the mouth. (Fig. 3.57(a)) Bring the energy down to the mid-eye, concentrating there for a while while practicing normalized breathing, until you feel the energy build up. (Fig. 3.57(b)) Then bring the energy down to the palate where the tongue will serve as a switch joining the Governor Channel to the Functional Channel. Bring the Chi down to the throat, heart center and solar plexus (Chung Wan, CO-12), circling it nine times in both directions, until you feel energy enlivened there again. (Fig. 3.57(c)) Use the eyes to help in this circulation.

Mid-Eye, Third Eye, Pituitary Gland

(a) Tongue is on the roof of the month.

(b) Bring the energy down to the third eye.

(c) Bring the energy down to the solar plexus.

Fig. 3.57 *Functional Channel*

g. Finally bring the energy to the navel. (Fig. 3.58(a)) Concentrate there until you feel Chi freely go down to it. Listen and look inside. Feel the sensation of the flow of Chi in one circulating motion from the navel to the perineum, to the soles, up to the knees, to the perineum again, and up to the sacrum, to the spine, to the crown and down to the third eye, to the throat, to the heart and to the navel. (Fig. 3.58(b)) When you feel the circle is moving well, simply let it flow by itself. Feel the navel warm and fill with Chi.

(a) Bring the energy down to the navel.

(b) Feel the sensation of the flow of Chi.

Fig. 3.58 *Microcosmic Orbit*

Remember as you complete the final stage to stand still and relax all of the body's muscles, holding this position for as long as possible. Simply standing and experiencing this powerful energy flow for ten to fifteen minutes will shorten the time necessary to master the Iron Shirt techniques by as much as one to three hours. You have created a tremendous Chi pressure and your mind will condense and direct the flow. Feel the energy flow in the Microcosmic Orbit.

Stand up straight, continue to touch the tongue to the palate, and put the palms over the navel. Men put the right palm over the navel, covering it with the left palm. Women put the left palm over the navel, covering it with the right palm. (Fig. 3.59) Concentrate on the navel for a while, feeling the energy that is generated by the Chi Kung. As you are standing, practice the Bone Breathing Process described below.

Woman places the right palm over the left. Man places the left palm over the right.

Fig.3.59 *Stand up straight and put the palms over the navel.*

10. Bone Breathing Process

a. The Bone Breathing Process is practiced immediately after you finish the First Stage, the Second Stage and finally, after the Third, and final, Stage of this exercise, to bring the energy down to the navel. At this time, your body is still filled with energy. To practice the Bone Breathing Process you can use Embracing the Tree or any position that you are in at the time.

Bone Breathing or bone compression is the method of "Cleansing the Marrow", or cleaning out fat in the bone marrow so that you can direct and absorb the creative (sexual) energy into the bone to help regrow the bone marrow. (Fig. 3.60) During this process, we take advantage of the Chi generated in Iron Shirt I by absorbing Chi into the bones, thereby greatly increasing the circulation of Chi. With increased circulation, the Chi is permitted to flow freely into the bones and the blood, carrying necessary nutrients and oxygen, and is permitted to circulate freely throughout the body. Tension in the muscles surrounding the bones is lessened. The bones become strong and healthy because the marrow as the major product of red and white blood cells, now has room to grow.

Fig. 3.60 *Bone Marrow*

This process takes time to practice. It is most important that you relax and are not tense when you practice Bone Breathing.

Bone Breathing is a two stage process:

1) Inhale and exhale as though through the fingers and toes: In the first stage of the Bone Breathing Process, by using the powers of the mind and the eyes, outside energy is breathed in through the fingertips and toes, gradually up to the hands and arms to the skull, and then down the spinal column and legs. (Fig. 3.61) A sensation is felt as you breathe into each area. Some people report a numbness, others a fullness, still others a tingling, or "something different" in their bones. Many people claim to feel more in their legs. When you inhale through the fingers, the feeling is cool. When you exhale, the feeling is warm. Feel inside the bones. No matter what you feel, Bone Breathing is practiced to cleanse the fat stored in the bone marrow to make room for positive energy such as creative energy (sexual power), which will allow the bones to store, rebuild and grow the marrow.

(2) Inhale and exhale the same way through the toes: In the second stage, inhale through the toes and then, by degrees, inhale up to and into the thigh bones. After inhaling, hold your breath, but not so long that you experience discomfort. Then, exhale down and out through the toes. In the next progression, inhale up through the legs and into the hips, then exhale down and out through the legs. When you have accomplished this, breathe in through the legs to the sacrum. Here, you may feel energy surge up through the back and throughout the entire nervous system. Breathe up the back; the breath will be quite long at this point.

Finally, while you breathe through the legs and up the back, also breathe in through the fingers, up into the arms and shoulders, through C-7 and into the head.

Keep in mind that energy is absorbed and ejected more effectively at appointed places such as the toes, fingertips, elbows, knees, sacrum, C-7, Door of Life, shoulders, or tip of the nose. (Fig. 3.62)

Fig.3.61 *Use the mind and eyes to breathe Chi though the fingertips and toes, up the arms and legs, and up the spinal column to the skull.*

Fig.3.62 *In advanced techiques, you will learn to breath through the skin to push the Chi into the bones and wrap the Chi around the bones.*

11. Power Exercise

This exercise is another means of increasing the flow of Chi to the bones, squeezing out the toxins, sediment and waste materials, as well as the negative emotions that have become stored in the muscles. Muscles and the Emotions Stored within Them

In this stressful life, pollution and chemicals accumulate in the system, depositing in our organs. In the Tao System we believe that all negative and positive emotions are also stored in the organs. When the organs are filled with toxins, sediment, waste materials and too many negative emotions, these substances will back up into the muscle which handles the overflow of each organ, similar to a backup tank. If we do not squeeze the muscles by increasing the flow of Chi, thereby eliminating the undesirable elements and emotions which have been stored there, the muscles will be very tense and clamp onto the bones. As a result, the person will constantly have the feeling of stress.

Once the negative emotions are cleaned out, the positive emotions have more room to grow. Positive emotions make the muscles relaxed and loose. The explanation below gives details of muscles and the emotions that become stored there. This information is contributed by Larry Short, the founder of the Institute for Total Person Facilitation (T.P.F).

Muscles and Their Associated Negative/Positive Emotions

Hands
– Fear of losing grip
+ Belonging, reaching out

Forearms
Brachioradialis and forearm extensors/flexors
Correspond to Stomach—appropriate meridians
– Rejection
– Fear of attack
+ Acceptance
+ Recognizing the way to proceed

Scapulae
Correspond to Triple Heater
– Fear of taking risks; not willing

Upper arms
Correspond to Stomach and Spleen

Biceps and Triceps, Deltoids
Correspond to Lungs
– I can't do it
– Weakness, fear of lack of capacity
– Sorrow, loss
+ I can do it
+ Strength
+ Responsibility

–Fear Gluteus (Muscles of Buttocks)
– Disloyalty, lack of commitment

to take risks
– Cowardly
+ Vitality, radiant power, life-force, responsive action
+ Brave
SCM, Scaleanus, and Neck Muscles
Correspond to Stomach
Upper Trapezius Muscles
Correspond to Kidneys
– Guilt
– Fear turtle hiding
+ Responsive
+ Expressive
+ Taking risks
Feet
Correspond to Spine
– Insecurity
+ Taking a stand, projects, leaving your mark in the world
Lower legs, Calves
Correspond to Adrenals and Triple Heater
Gastrocnemias
Soleus
– Hesitation, fear of going forward, waiting
+ Setting the stage, preparing
Upper legs, quadriceps
Correspond to Small Intestines
distraction
– Lack of support
Hips, Psoas/Iliacus
Correspond to Kidneys
Jaw Masseter, Pterygoids
Correspond to Stomach
– Frustration
+ Knowing what you want and need
Occiput
Corresponds to Back of skull

+ Loyalty, commitment, letting go
Sacrum, Piriformis
Correspond to Circulation/sex
– Insecurity
+ Security,rootedness,rounded, stable
Lumbar spine, Sacrospinalis
Correspond to Bladder
– Fear of being taken advantage of and/or of being cheated
+ Ability, bravery, courage, ability to take charge of situation
Thoracic spine and rib cage, Spine
Correspond to Bladder
– Fear, cowardice, running away
+ Ability to perform
Ribs
Correspond to Lungs
– Sorrow and grief
+ Vitality, surrender, openness
Cervical spine
Corresponds to Neck extensors
– Inappropriateness, tiredness
+ Clarity
Skull
Corresponds to Breathing
Head
Corresponds to Temple
– Dullness, confusion,

+ Environmental awareness, being present, being here and now
+ Inspiration
– Dullness, worry
Sternum, Pectoralis muscles
Correspond to Liver
– Anger resentment
– Anger resentment

The Power Exercise, also known as Dynamic Tension, will greatly tone up the body muscles by simply a few minutes practice each day instead of an hour of workouts. (Fig. 3.63) In this exercise you evenly work out every muscle and will not overtire them. Studies have been made showing that the proper tension of these muscles for a few minutes each day will indicate that these exercises develop good muscle tone.

Fig. 3.63 *Dynamic tension tones up the muscles, permitting compression of muscles and bones.*

If you tire in the standing position, rest and walk for a while and then resume the same position practiced in Embracing the Tree, or you can simply continue from the Bone Breathing Process.

(1) Relax the hand muscles. Then, use the mind to tighten the hand muscles and squeeze the muscles to the bones of the radius and ulna (the bones of the forearm) tightly. Hold the muscles firmly to the bones for 30 to 60 seconds. Exhale strongly through the mouth, then totally relax the muscles and the shoulders. Feel the rush of Chi as the toxic tensions and negative emotions, such as fear of attack, leave the muscles. Feel the positive emotions, such as recognizing the way to proceed, letting the life-force enter into the muscles.

(2) Relax the arm muscles. Inhale and spread the arm muscles into the humerus (the bone of the upper arm). Tighten the muscles all around the arm. Hold them tightly for 30 to 60 seconds. Exhale and release them. Let go of the fear that you cannot do it. Let go of weakness. Release the feelings of sorrow and loss. Let positive emotions enter into these muscles. Feel that you can do it. Feel that you are strong, and that you have capacity and can take on responsibility.

(3) Relax the legs. Inhale and squeeze the muscles around the fibula and tibia (the bones of the lower leg) tightly to the bones. Hold them tightly for 30 to 60 seconds and exhale. Relax the muscles, letting go of the toxins and accumulated negative emotions such as hesitation and procrastination. Allow the positive emotions to enter such as preparedness or readiness to grow. Be totally aware of the Chi that is generated.

(4) Relax the thighs. Inhale and squeeze the muscles around the femur (the bone of the upper leg) tightly to the bones and hold for 30 to 60 seconds. Exhale and relax the muscles away from the bones. Release the feeling of lack of support; let the feeling of support grow. Be aware of the Chi flowing between the bone and muscle.

(5) Relax the neck. Inhale and squeeze the neck, the head muscles and the cervical (the neck) muscles tightly holding the squeeze for 30 to 60 seconds. Relax and let go of guilt and fear Feel the positive growth of expressiveness, responsiveness and taking risks.

(6) Relax the back, especially the spinal cord, and the chest. Inhale and tightly squeeze the muscles around the spinal cord from the thoracic vertebrae, down to the lumbar vertebrae to the sacrum

as well as the rib cage of the chest. Hold for 30 to 60 seconds. Release the entire spinal cord and the rib cage. Relax and let go of the fear of being taken advantage of or being cheated. Eliminate cowardice and the desire to run away. Release sorrow, grief and tiredness. Grow the positive feelings of bravery, openness and the ability to take charge and to perform.

(7) After you have practiced well for one to two weeks, you can do exercises (1) through (6) all at once by starting from the hands to the legs, to the neck and head, to the spinal cord and rib cage. Hold the squeeze for 30 to 60 seconds and release totally. Feel the muscles and bones separate from each other.

(8) When you finish the exercise, stand up straight and put the palm on the navel. Men should put the right hand on the navel, covered with the left palm. Women should place the left hand on the navel with the right palm over it. Stand still for a while and feel how the Chi flows. Then, concentrate on collecting the energy into the navel. In the beginning, you can use the hand to assist in the collection of energy.

(a) Men, starting at the navel, should spiral the energy out in a clockwise direction, making 36 revolutions, being careful not to go above the diaphram or below the pubic bone. Circling out beyond the pubic bone allows the energy to leak out. Once you have completed the clockwise revolutions, spiral inwards in the opposite direction 24 times, ending and collecting the energy at the navel.

(b) Women should do the same thing, but begin by spiraling the energy out from the navel in a counterclockwise direction, and spiraling back to the navel in a clockwise direction.

Spend one to two weeks on this practice. Review the Microcosmic Orbit Meditation for circulation of the Chi in Chapter 2 of this book.

When you become proficient at using the mind in this practice, you need only use the mind to circulate the Chi.

When you are finished, walk. If you feel the chest tighten or any congestion, use the palms and gently brush down the chest to bring the Chi down.

(c) Once you have completed the circuit, you will need less time to practice it in preparation for this Embracing The Tree stance. Thereafter raise the energy up to your head to the Pai Hui (Crown). Once the energy arrives there, you should feel as though something were pushing up through the crown of the head. Always end by returning the energy to the navel.

B. Embracing the Tree Stance (Practical Procedure)

1. Exercise

When you have practiced well and understand each part of the previous exercises, you can proceed with the next practice as described below.

Fig. 3.64 *Embracing the Tree*

a. Assume a Horse Stance. Sink down onto the hips, keeping the back straight and holding the legs apart in the standard length of the lower legs. Turn the toes inward so that the feet are positioned as though on the circumference of a circle. The knees are well bent and the groin area is relaxed and open.

b. Extend the arms out in front of you at shoulder height as though you were encircling the trunk of a tree. The palms face you. The fingers are gently separated with the thumbs pointing up and the fingertips are held apart a distance of about the width of the face. Feel as though you were lightly holding a ball between your hands.

c. Place the tongue on the palate. Breathe in and out deeply nine to eighteen times so that each time that you exhale, the abdomen contracts and the thoracic diaphragm goes up into the chest, compressing the lungs and pulling the sexual organs up. When you inhale, the thoracic diaphragm goes down to compress the abdomen so that you can feel the perineum bulge outward.

d. After you have exhaled for the ninth, eighteenth or 36th time, inhale ten percent of your total capacity to the level of the navel, while keeping the abdomen flat. Pull up the sexual organs, or close the vagina tight, and pull the anus closed. Inhale again and pull up the left and right anus, bringing Chi to the kidneys. Wrap and pack the Chi in the kidneys, then circle the energy in the navel nine times clockwise and nine times counterclockwise to collect the energy there, pausing until you feel the need to breath again.

e. Inhale ten percent of your capacity down to three inches below the navel or, for women, the Ovary Palace. Pack the Chi in this region. Inhale down to the lower abdominal area or for men, the Sperm Palace and hold it again until you feel the need to breathe. Inhale ten percent more of your capacity down to the perineum and hold it as long as you comfortably can. You can keep on inhaling and packing in as long as you feel comfortable. Sometimes you can exhale a little bit so that you can inhale more. In the beginning, start by inhaling less air in a short period of time. When you are well-trained, you can hold more air for a longer time.

f. Exhale and send energy down the backs of the legs into the ground. The feet will fill with the energy and you should feel the palms and soles “breathing”. Breathe through the palms and soles. Regulate your breath.

g. Apply pressure, especially with the big toes. Feel that you are “sucking” energy up out of the earth through the “Bubbling Springs”

in the soles of the feet (K-1 point). “Claw” the floor with the feet. Inhale and draw the energy out of the ground. Collect energy there by circling the sole (K-1) with energy nine times clockwise and nine times counterclockwise. Contract the muscles of the anus and groin and pull up the testicles or vagina and anus. Bring the energy up the front of the legs to the knees, hold the Chi at the knees and lock the knees by turning them slightly outward. Bring the energy to the buttocks by curving in the upper thigh and then bring the energy into the perineum. Hold the Chi here and circle it nine times clockwise and nine times counterclockwise. Exhale and regulate the breath by Energizer Breathing nine to eighteen times and continue to feel the palms and soles breathe.

h. Inhale ten percent, pulling up the left and right anus and packing the back area and kidneys.

i. Contract the back part of the anus to bring Chi up to the sacrum. Pull up the testicles or vagina. Put pressure on the sacrum and tuck it back, but do not tilt the hips. This pushes the lower back (lumbar vertebrae) out and straightens curves in the spine. Inhale ten percent of your capacity and pack Chi into the sacrum. Collect the energy there by mentally circling it nine times clockwise and nine times counterclockwise. Continue to contract the anus.

j. Inhale ten percent of your capacity again. Pull the Chi up to T-11 and tilt the back to a straight position. Collect the energy there by circling nine times clockwise and counterclockwise within a three inch area.

k. Inhale ten percent of your capacity and pack more at the whole back. Continue to tighten the anus and groin, pull up the testicles or squeeze the vagina, tighten the neck, sink the sternum, and push from the sternum to tilt C-7 back.

l. Tuck the chin in to lock the neck, keeping the chest relaxed. With this action, the energy moves from the sacrum to C-7. Pack the Chi at C-7 by circling the energy nine times clockwise and nine times counterclockwise. This will activate the cranial pump located at the base of the skull (the Jade Pillow C-1) which works in tandem with the sacral pump to move cerebrospinal fluid up the back. The sacral and cranial pumps activate the cerebrospinal fluid in the spine and brain.

m. With your neck still tight, inhale, packing energy up to your Jade Pillow. Collect it, circling nine times clockwise and nine times counterclockwise.

n. Inhale ten percent and pull up to the crown of the head. Stop, turn both eyes up, and look inward to the area of the pineal gland, circling nine times clockwise and nine times counterclockwise, until you are out of breath. Exhale slowly. Relax the neck, anus, groin and urogenital diaphragm. Keep the tongue at the palate.

o. Regulate the breath by Energizer Breathing, but exhale more and inhale less. Concentrate on the third eye. Guide the energy down from the tongue past the throat, heart center and down to the solar plexus. Collect the Chi in the solar plexus, circling nine times clockwise and nine times counterclockwise.

p. With the toes extended, open the knees slightly so that you can feel the force in the ankle joints. This will enable you to grasp the ground with the feet, and feel the soles press down to the ground. Force the energy to flow down inside, putting the dynamic tension on the small and big balls of the feet and to the outer edges, like axles running from the outside of the ankles to the big toes. Make sure you do not lift any of the feet's nine points of contact off the ground.

Woman places the right palm over the left. Man places the left palm over the right.

Fig. 3.65 *Place the palms over the navel to collect the energy.*

q. Stand still, maintaining the position. Feel the energy travel out of the ground, up the legs and into the spinal cord, through C-7 at the base of the neck out into the arms, up to the pineal and pituitary glands, and then down the front of the body to the navel. Feel heat in the navel and continue circulating the energy for as long as you wish.

r. Practice the Bone Breathing Process.

s. Practice the Power Exercise.

t. Stand erect, keep the tongue at the palate, and collect energy in the navel. (Fig. 3.65)

u. Walk slowly and breathe normally. Stroke the chest downward with the palms of the hands to prevent or counteract any congestion that might develop there and walk about to distribute Chi and give the stressed muscles a chance to recuperate. (Fig. 3.66)

Keep the abdomen soft. Remember that softness makes energy: it is said that soft makes strong. To achieve this, keep the muscles in a soft tension.

Fig. 3.66 *Brushing Chi down.*

In time, you should be able to do Embracing the Tree in two breaths: one down the front and one up the back. With practice, if you are relaxed, you can do the whole process in just one breath. The stance strengthens the muscle-tendon lines (meridians) that travel through the thumbs and big toes.

You may have already discovered that all Iron Shirt work exercises the body and instills confidence.

C. Summary of Embracing the Tree

Fig. 3.67 *Circulating the energy during Embracing the Tree.*

1. Stand with the feet a knee-to-toe length apart; press the sacrum down; round the scapulae; relax the chest; hold the head erect; position the arms as if they were encircling a tree; hold the thumbs up; relax the fingers, barely permitting them to touch.

2. Practice lower abdominal breathing nine to eighteen times. When you do abdominal breathing, emphasize inhalation by rounding the abdomen and exhalation by flattening the abdomen on all sides. Feel the sexual organs move up and down with the breath.

3. Exhale; flatten the stomach; lower the diaphragm.

4. Inhale, tightening the perineum and anus by pulling up the middle anus, then the left and right sides of the anus. Feel the Chi energy go up to both kidneys and pack into them. Pull up the sexual organs. (Remember that the anal muscle has a close relationship with all organs and glands.) Pack into the navel without expanding the abdomen. Keep the chest relaxed and the abdomen soft, and spiral first nine times clockwise, then nine times counterclockwise, making a circle of about one and one-half inches in radius.

5. Breathe into the middle abdomen, without spiraling, and pack.

6. Breathe into the lower abdomen, without spiraling.

7. Breathe into the perineum and feel it bulge out.

8. Exhale through the legs and feet down to about six inches into the ground. Feel the palms and soles breathing and use the lower abdominal breathing.

9. Inhale, tighten the perineum, and press the soles of the feet into the ground. Claw the toes and spiral at the kidney points (K-1) on the soles, nine times clockwise and nine times counterclockwise, both spirals moving simultaneously in the same direction.

10. Inhale, bringing energy to the knees. Lock the knees, without spiraling.

11. Inhale up to the perineum, and spiral nine times clockwise and nine times counterclockwise. Feel the bulge.

12. Exhale. Regulate the breath, and be aware of the soles and palms breathing.

13. Inhale up to the sacrum, tilt the sacrum back, packing it, and spiral nine times clockwise and nine times counterclockwise. This will strengthen and activate the sacral pump.

14. Inhale to T-11, inflating the kidney area, and press out on the lower back to straighten the curve there, spiraling nine times clockwise and nine times counterclockwise.

15. Inhale to C-7, straightening the curve at the neck, and lock the neck. Spiral nine times clockwise and nine times counterclockwise.

16. Inhale to the Jade Pillow, clench the teeth tight, and squeeze the skull and the temple bones to strengthen and activate the cranial pump. Spiral nine times clockwise and nine times counterclockwise.

17. Inhale to the crown (pineal gland) and spiral nine times clockwise and nine times counterclockwise. If you cannot go all the way up on one breath, you can pass over the Jade Pillow or take an extra breath where needed until your capacity increases.

18. Exhale with the tongue up to the palate. Regulate the breath.

19. Concentrate on the third eye, until you feel the Chi build up there. Bring the energy down to the solar plexus and spiral nine times clockwise and nine times counterclockwise. Bring the Chi down to the navel. Stand still and maintain this position.

20. Stand up and bring the energy into the navel, putting your hands over the navel and bringing the feet together. Relax. Collect the energy in the navel area. When you feel calm, walk around and brush the energy down, if necessary.

21. Practice the Bone Breathing Process.

22. Practice the Power Exercise.

III. Rooting, Collecting Chi Energy, Illustrations of Postures

A. Rooting Practice

The Rooting Practice is very important in the Universal Tao System. Rooting can be compared to the foundation of a building. The stronger the foundation, the higher the building may be built, and the more difficult it is to topple.

After mastering the Rooting Practice you will feel, as you walk around, stand, or sit in your daily life, that you are more in touch with the earth. (Fig. 3.68) You will feel more stable and practical minded, not “spacey”. Many Universal Tao students, after practicing Iron Shirt Rooting for a while, find that they have good balance and greatly improve the quality of their physical activities, such as running, skiing, tennis and Yoga.

Rootedness serves the soul the soul (Chi Body) and spirit the way a control tower serves a space rocket. The more you can root to Mother Earth, the more balanced the energy will be.

Fig. 3.68 *Rootedness to Mother Earth*

Taoist Practitioners are very concerned with rootedness. The more he or she can root to Mother Earth, the more balanced the energy will be. Such a balance of energy increases healing energy. In advanced practice, rooting is required to perform the practice of the Thrusting Channels and Belt Channels. Tai Chi, the Healing Hand and the higher spiritual practices draw upon the earth energy, as well as heavenly energy, to transform life-force energy into spiritual energy in order to give birth to the soul and spirit. It is the earth energy which helps the soul and spirit grow. Astral traveling requires rooting, and this earthly rootedness serves the soul and spirit the way a control tower serves a space rocket. Those who try to bring Chi up to the head, or receive heavenly energy without grounding in the earth, become “spacey” instead of “in tune” with their experience.

Always balance out by using both sides of the body during practice.

Developing the Rooting Practice requires two people: one to push and the other to stand. This exercise will greatly improve your stance. Many people will find that one side is weaker than the other or the upper part, such as the neck, is weaker than the lower part. Practice on the strong side first and then the weak side so that you will have a reference for improving the weak side.

Gradually you will grow stronger and it will require less effort to maintain your structured position because you will have built extra muscles and strengthened the tendons, tendon attachment sites and fasciae as one structure. When you “root” properly, it feels as if you are sucking the ground, or have grown a deep root into the earth. This is because the whole structure, as a unit, is pressing into the ground. You can feel the entire bone structure sink down to the ground.

With practice you will be able to bring energy along the prescribed course more quickly and easily To test your rootedness, find a partner who can push you while you hold the structure.

1. Stance

The purpose of the Iron Shirt Rooting Principle is to line up the bone structure with the joints to feel the whole body become one piece. Once you become proficient in the practice, you will position yourself in the proper structure quite easily. Stand in the Iron Shirt Horse Stance. Sometimes you can stand with the feet at a slightly

wider position. However if the feet are too wide apart, you have to use muscle strength to hold the whole body together. When the force comes, the muscle will hold the force and knock the alignment off. If the position of the feet is too narrow you will be using the tendons' force to help hold the structure together, affecting alignment as well.

When your partner pushes you with force, your neck must be relaxed so that the force will not go into the neck, causing pain there. Your structure, inner organs, and tendons, muscles and fasciae must work as a whole to hold the position. This will gradually increase your inner strength.

2. Chi Belt

Packing Chi into the organs is very important in the practice of rooting. It is particularly important to pack Chi in the kidneys and to join the kidneys and K-1 (Bubbling Springs) into one line. The navel and the two kidneys must join together feeling like a large belt, belted across your waist. (Fig. 3.69(a)) The joining of the navel, the sides of the waist, the two kidneys and T-11 with Chi energy is basic to the rooting principle and is called the "Chi Belt".

Without the Chi Belt, the major connection of the upper and lower energy joints, the structure and Chi will be lost. To develop the Chi Belt, first pack Chi in the kidneys and the navel, expanding first from the left kidney out to the left waist, then towards the front to the navel. Expand, pack and wrap the right kidney to the right waist, and then forward to the navel. This joins both sides together at the navel. As the Chi Belt expands, it connects to the T-11 and the Door of Life. The navel now feels like a full blown tire encased within a big belt. Once you experience a Chi Belt in the rooting practice, you will be able to attain rootedness quickly and will not need to use your muscles to join your structure together Therefore, mastering the Chi Belt will help you to be very relaxed in your practice.

3. Principle of Rooting

a. Assume Embracing the Tree.

b. Sink the energy down to the lower navel area.

c. Sink down as comfortably as you can, and open the groin by slightly separating the knees.

d. The toes turn slightly inward. When the knee caps are locked (meaning that the knee joints are held tightly), the knees will lock in the ankle joints like the position assumed when you are sitting astride a saddle. Sink into the knees. You can feel the connection between the knees and the ankle joints and the connection down to the feet. Feel your whole body weight drop down to the ground. The force passes through the bone structure. (Fig. 3.69(b)) Feel the bones like sponges that absorb the force and direct into the ground.

e. The hands are at shoulder level, the elbows sink. Feel the force of the sinking elbows pressing into the bone structure. If the elbows are up, you will disconnect from the tendon power.

(a) Chi Belt joins the whole body structure together.

(b) Press down and turn the knee outwards to screw the force into the ground.

Fig. 3.69 *Principle of Rooting*

f. Line up the shoulders, joining the scapulae with the spine by rounding the scapulae and sinking the chest. Connect through the hip joints down to the knee and ankle joints.

Line up the shoulder joints by pushing the thumbs out and the pinky fingers in, feeling the tendons pull. The wrist joints are connected to the shoulders. Relax the neck, especially the trapezius muscle, so that the connection does not go up to the head which will bring force to the neck. Otherwise, when your partner pushes you, you will feel like you were hit by a two-by-four and it will knock you over. When you relax the neck and join the shoulders with the spine, the force travels down the spine and down to the ground.

To connect the shoulder joints with the spine, you need to round the scapulae and sink the chest so that the force can be transferred from the shoulders to the scapulae. Then, push the neck straight and the T-11 out. Keep the sacrum straight without moving the hips, until you feel the spine as a flexed bow full of strength. All becomes one line. When the groin area is open, the hip joints will join with the knees, the feet, and all will join down with the ground. Feel the Chi Belt, belting the waist and joining the entire structure together.

4. Practice of Rooting

Having a partner push against you can increase your rooting power and thus strengthen the fasciae and spinal cord, increasing the function of the sacrum and cranial pump.

Assume the position for Embracing The Tree, and pack with air as described. Your partner should then push (not hit) his fist against your sacrum, T-11, C-7, and the base of the skull, respectively. It is important that these four centers become strengthened and linked together into one line. If they are not linked, they become many unconnected lines, and the partner's force will not travel down to the ground properly.

The spinal cord is the house of the nervous system which joins all the other parts of the body. The spine consists of many bones which are put together and held by muscles, tendons and fasciae. Most of the exercises are not to strengthen the spine solely, however Iron Shirt Chi Kung is designed to strengthen the entire bone structure, especially the spine. Many people have weak spines which cause bad posture, breathing problems and weak organs.

Weak organs are the original cause of a weak spine. Poor posture becomes a vicious cycle: organs are kept weak because Chi cannot circulate throughout the various body systems. Iron Shirt (1) protects organs which generate vital Chi; (2) recharges them with packing; (3) circulates Chi up the spine and strengthens the nervous system; and (4) creates the storage space for the Chi energy by burning out fat.

5. Strengthening the Sacral Pump (Fig. 3.70)

The sacrum is the very important pump that moves Chi into the spine. Assume the Embracing the Tree stance. Be aware of your sacrum, pack with Chi, develop a Chi Belt, and have your partner put his fist right on the sacrum. Slowly tilt the sacrum to the back, pushing against your partner's hand, with very little movement from the hip. Have your partner push you as much as you can withstand, without being pushed over and gradually increase the push until you grow more powerful in the sacrum area. Hold this position for one to two minutes. Breathe normally.

Be aware of the force of your partner being transferred from your sacrum to the legs, to the feet and to the toes. You can exert force from the toes back up the feet to the heels, to the legs and to the sacrum.

When your partner releases you, rest for a while and feel that the sacrum is open and feel how the Chi flows up the spine.

When you are advanced in the practice, you can be very relaxed. There is no need to pack. Simply feel the force pass from the sacrum to the ground, and feel the ground force come up to resist the force through use of the bones. Do not lean towards your partner.

6. Strengthening T-11

T-11, or the eleventh thoracic vertebra (the point of the adrenal gland and the kidneys), is regarded by the Taoist as a pump which aids in moving the energy to the upper body. Assume the position for Embracing the Tree, and pack with Chi as described. Your partner then pushes his fist against T-11 as you press back with that area of the spine. The work is done by the spine, not by the whole body. (Fig. 3.71) Do not lean towards your partner.

Fig. 3.70 *Partner's force is transferred down to the ground though the bone structure by the force of the sacral pump.*

Fig. 3.71 *Partner's force is transferred down to the ground through the bone structure by the force of T-11.*

7. Strengthening C-7

C-7, or the seventh cervical vertebra, is considered the point at which all the tendons of the body join together. By strengthening this part, the tendons, the fasciae and the neck will be strengthened. The C-7 also is the junction point of hand and spinal cord power.

Assume the position for Embracing the Tree and pack with Chi pressure as described. Your partner then pushes his palm (not his fist) against C-7 as you press back with C-7. Hold this position for as long as you can. (Fig. 3.72) Your partner should coordinate with you when you are ready to release.

Fig. 3.72 *Partner's force is transferred down to the ground though the bone structure by the force of C-7.*

8. Strengthening the Cranial Pump

The cranial pump has long been regarded by Taoists as a major pump for the circulation of energy throughout the body. It has been previously mentioned that minute movements at the joints of the eight cranial bones occur during breathing. Cranial movement stimulates the production and function of the cerebrospinal fluid surrounding the brain and spinal cord. The cerebrospinal fluid is necessary for normal nerve and energy patterns in the entire body. Strengthening the cranial pump can increase energy and alleviate symptoms such as headaches, sinus problems, visual disturbances and neck problems.

Assume the position for Embracing the Tree and pack with Chi pressure. Clench the teeth, tighten the neck and contract the cranium by squeezing the muscles around the skull and pressing the tongue tightly to the roof of the mouth to activate the cranial bones. Push back as your partner pushes his palm against C-1 at the base of the skull. (Your partner should use his palm, not his fist.) (Fig. 3.73)

Fig. 3.73 *Partner's force is transferred down to the ground though the bone structure by the force of C-1.*

9. Building Up Rootedness

a. Left and Right Side Rooting Practice

Assume the stance for Embracing the Tree and pack with Chi energy as described. Your partner stands to one side of you, placing one hand on your shoulder and the other on your hip. Your partner pushes you lightly, gradually increasing to full force. If you are well-rooted, the force of the push will flow right through your bone structure, down to the feet and into the earth. (Fig. 3.74) If you have learned to direct and absorb energy through the bone structure and into the soles of the feet, you will be able to receive the powerful healing energy created by the blending of your energy, your partner's energy and raw earth energy. Your practice should have acquainted you with the flow of energy that goes down through the feet into the earth and then back out of the earth, up through the feet into you, while at the same time you are using the rest of the foot to "claw" against the floor.

Fig. 3.74 *Partner's force is transferred down to the ground though the bone structure by the left and right side rooting practice.*

Have your partner push on the left side first, and then the right. Do the Energizer Breathing and resume the stance again. Have your partner push the right side. In the beginning, you will be tight and tense. You will need to use Packing Process Breathing, holding the breath to hold your structure together. As your practice improves and you are able to control and pack the energy, it will not be necessary to hold the breath since you will be able to maintain the structure and rooting in a relaxed manner without packing and without tensing the muscles at all. If the shoulder and spine are not joined together you will fall. (Fig. 3.75)

Fig. 3.75 *If the force is not grounded, the force does not pass though the structure and the body falls.*

b. Front Rooting

Front rooting is primarily training the front structure to root more solidly to the ground, especially the hands, the ribs, the front of the legs, and the soles and toes. Many people will find it hard to do any rooting to the ground at all. You must feel the force of your partner pass to the shoulder, to the scapula, to the spine, to the sacrum, to the hip and to the leg as one line.

Assume the Embracing the Tree stance. Your partner pushes you on both wrists with both of his palms. (Fig. 3.76) Front rooting is very hard and takes a lot of practice. In the beginning it is difficult, so apply only a small force and gradually increase. This will open the leg channels and hand channels and join them together. C-7 and the spinal cord play a very important role in the front rooting practice.

Fig. 3.76 *Front Pushing and transferring the force to the ground.*

c. One Legged Stance Rooting

Stand on one leg and circle out the opposite arm. Sink the chest. Feel how the arms and legs are in one line, connecting together. Sink so that the structure is joined. When your partner pushes, you can guide your partner's force down to the ground. (Fig. 3.77)

d. Force Transfer

The arm, the scapula, the spine, and the leg become one line, similar to a stick sticking into the ground. (Fig. 3.78) If you try to push on the end that is sticking into the ground, all the force is transferred to the ground. If the fasciae and tendons are not as strong as possible, the whole structure will break when pushed.

Fig. 3.77 *One legged stance and transferring the force to the ground.*

Fig. 3.78 *Force transfers though the bone structure as it would through a stick sticking ino the ground.*

e. Rooting against People—Force Transferred by bone structure to the ground.

When your partner pushes you, do not lean towards him. Trust your structure and feel the whole body join into one piece. Feel the bones like sponges absorbing the force and passing it along the bone structure to the ground. When you feel the force, open the knee a little and feel the knees connected to the earth. Feel the energy pass to the ground.

When someone pushes you, he passes the force to you. The tendency as your partner pushes you is to counter the force by pushing the elbows out. This action moves you out of alignment. Therefore, when you feel the energy come at you from the side of your body, keep the elbow down and redirect the force back to the scapula and to the spine. The force, then, will not push you out of alignment.

Fig. 3.79 *Partner's force are transferred down to the ground though the bone structure because the body is properly aligned with the ground.*

When you are good at aligning all of the joints together, no matter where the force directed at you comes from, you will be able to redirect it down to the earth, rather than let it break your alignment.

The principle of rooting is to become like a stick. The stick is most powerful when positioned at a 45 degree angle. When you push the end of the stick from a right angle, the force will go into the earth. If your body alignment is joined with the earth, when the force comes, it will go right through you and into the earth. The stick is not what is powerful; it is the earth behind it which has the power. Naturally, the stick has to be strong to pass the force. (Fig. 3.79) The foot, the leg, the knee can all be adjusted to be like a 45 degree angle stick protruding from the earth. No matter what position you are in, you must always bear in mind that your body must be aligned with the ground, so that the force will not stay in the joints but can pass through the bone to the ground. (Fig. 3.80)

Fig. 3.80 *If the force is transferred down to the ground though the bone structure, it is as if the partner is pushing a stick into the ground.*

B. Collecting Chi Energy after Practice

1. Preventing Side Effects

After each practice, stand silently erect for a few moments. Concentrate your attention on the navel, collecting the Chi there. As the Chi sinks down, stroke the chest from top to bottom with the palms of the hands. This prevents congestion of the chest and heart, as well as other side effects, such as heartburn, headache and eye pain. Move your hands to release the congestion and walk around until you feel the energy settle down.

After practicing Iron Shirt, take time to do the Microcosmic Orbit Meditation, also called the "Awaken Healing Energy" meditation, as described in Chapter 2. During your Iron Shirt Practice, you generate tremendous energy which tends to flow up and become trapped in the brain and the chest, especially in the heart. With practice, you will be able to direct the energy down to the navel from all sides and collect it there. (Fig. 3.81) As your practice of Iron Shirt progresses, you will open up the navel area more for the storage of energy to be utilized in the higher spiritual practice.

Fig. 3.81 *Collect the energy at the navel.*

2. Sitting and Standing Positions for Collecting Energy

When you have finished the Iron Shirt Practice, you should sit down to collect the energy that you have built up.

Sit on the edge of a chair using your sitting bones to find that delicate point of balance which will help hold you erect. (Fig. 3.82 (a)). Men should sit far enough forward to allow the scrotum to hang freely. Women should also sit forward and should keep genitalia covered to avoid energy loss. The back must be comfortably erect, the head bowed slightly forward.

Stand straight, touch the tongue to the palate, and put the palm on the navel. (Fig. 3.82 (b)) Smile down to the organs and bring the energy to them. Let the energy circulate in a circle, starting from the navel down to the perineum and up the sacrum, to the spine, to the top of the crown and down the third eye to the tongue, to the heart, to the solar plexus, and to the navel. Do this several times and collect Chi in the navel by circulating it 36 times outward and 24 times inward to the navel.

(a) Sitting Position

(b) Standing Position

Fig. 3.82 *Sitting and Standing Position for collecting energy in the navel.*

C. Illustrations of Postures

1. Holding the Golden Urn

Designed to strengthen the pinky and thumb fingers, Holding the Golden Urn joins the pinky fingers to a line which runs up and around the ears (at which location is housed one of the two major cranial bones), down the sides and to the small toes (Fig. 3.83(a)), and strengthens the thumb line by joining it to the cranial bone, to the chest, to the navel and down to the big toes. (Fig. 3.83(b)). These two lines are very important in holding the muscle tendons and bone structures together. When connected, these two tendons issue force on the sides and the front. Holding the Golden Urn is divided into two positions: the Yang Position and the Yin Position.

Fig. 3.83 *Holding the Golden Urn*

a. Yang Position

Assume a Horse Stance with your standard width, toes point inward, knees separate and locked as mentioned above in Embracing the Tree. (Fig. 3.84)

Fig. 3.84 *Holding the Golden Urn—Yang Position*

Bend your arms (as shown in the Fig.) so that your elbows, at a shoulders' width apart, drop and are forward vertically, causing your upper arms to be about 45 degrees away from your back and your forearms about 30 degrees out to your sides (not directly in front of your upper arms), with the wrists at 90 degree angles. For both hand positions of the Golden Urn, round the shoulders forward, then feel as if you are pressing up strongly, but without actually moving the arms. The chest sinks down slightly in response to the scapulae pulling around. In the Yang position, your hands are spread, palms down, with a pull exerted on the tendons of your fifth fingers (pinkies), so that the backs of your hands make a flat surface

upon which you could support a large “Golden Urn”. (Fig. 3.85(a)) (The spread fingers with the outward pull felt in the pinkies produce a bracing action that enables you to sustain considerable weight.) The tendon lines that are used here connect the small toes and small fingers, putting more force and energy in the small fingers and small toes. Small fingers are weak and seem useless but, when strenghtened, will give power to the whole structure. (Fig. 3.85 (b)) The diagram shows the meridians of the fifth finger tendons joining the fifth toe tendons. This tightens and strengthens the entire outer structure.

(a)

(b)

Feet the little finger line and little toe line connect.
Union will tighten up and strengthen the outer structure.

Fig. 3.85 *Holding the Golden Urn—Yang Position, Side View*

b. Practice

In the Golden Urn we use one breath, but many inhalations. This means continue to inhale until you are out of breath, then exhale. This is regarded as one breath.

Your tongue should be at your palate throughout to keep the energy flowing safely.

(1) Start with Energizer Breathing, nine to eighteen times. (Fig. 3.86) Exhale and flatten the stomach. Inhale and pull up the left and right side of the anus. Bring the Chi to pack, circle and wrap around the kidneys.

(2) Inhale and pack the Chi in the lower abdominal area, contracting the anus, and pull up more on the urogenital diaphragm. Feel energy draw up from the soles of the feet to the sacrum.

(3) Inhale, packing to the sexual organs. Tilt the sacrum back to create a suction and pull the back part of the anus toward the sacrum.

Fig. 3.86 *Holding the Golden Urn with energizer breathing.*

(4) Inhale and pack the Chi at the sacrum. Tilt the sacrum back.

(5) Inhale and pack up to T-11, tilting or pushing the T-11 to the back (or use a wall as a guide and push the T-11 to the wall) until you feel like a flexed bow. The power of the bow is felt as the T-11, in being pushed back, creates a tension in joining together with the C-7. Inflate the back with Chi pressure, contract the anus and pull up the urogenital diaphragm. Feel the energy rise from the soles K-1 to the T-11. Feel a big band or Chi Belt stretching from the T-11 to the Door of Life and then towards navel and lower abdomen.

(6) Inhale, contracting the anus more and lifting the genitals, drawing more energy up from the feet and packing it into the kidneys and C-7. (Fig. 3.87) Tilt the C-7 to the back (use the wall as a guide and push the C-7 to the wall) until you feel the C-7's strong connection to the T-11 and sacrum. Feel the full strength of the flexed bow as the Chi inflates the entire neck. Hold for a while.

Fig. 3.87 *Draw the energy through the feet up to pack and wrap the kidneys.*

(7) Inhale and pull up more, tighten the neck and squeeze the cranial bones. Clench the teeth and press the tongue up to the roof of the mouth. Inhale. Pull the energy up to the base of the skull and squeeze more in the cranial bones. Tilt the neck to the back (use a wall as a guide by pushing the neck toward the wall). Feel the neck and the base of the skull have a strong connection with C-7, T-11, the sacrum, the knees, and the feet, and feel them become one flexed bow of strength. Inhale more and tighten, bringing energy up to the crown. (Fig. 3.88) Stop for a while, and exhale. Relax. Follow with the Yin Position.

Fig. 3.88 *Flow of energy during Holding the Golden Urn*

c. Yin Position

(1) Turn the hands over palms up, and rotate the hands outward so that the thumbs now pull back and out to the ears with the wrists at 90 degree angles. Feel the stretch of the wrist tendons by locking the elbows and the wrists when turning the hands. The elbows sink in. The scapulae are rounded. When you stretch the thumbs, you are stretching the tendons. This is the Yin position. (Fig. 3.89(a) and (b)).

(2) Breathe normally. You should feel the energy rush up and over the head, into your arms and down the front of the body to the navel. Concentrate on the solar plexus. Make sure the energy is flowing down from the tongue to the solar plexus and navel along the Microcosmic Orbit. Considering an inhalation and an exhalation as one cycle, do nine cycles. Exhale more and inhale less. This is called Yin breathing. It will help to bring the energy down the front more easily.

Fig. 3.89 *(a) Holding the Golden Urn—Yin Position, Front View*

(b) *Thumb and Big Toe Lines*

Fig. 3.90 *Holding the Golden Urn—Yin Position, Side View*

(3) Yin Position—side view (Fig. 3.90): When the thumb and toe lines are linked together they will connect all the muscles, tendons, bones, and the spinal cord to operate as a single structure. This will help the rooting power in the front energy line.

In the Yin position, the flow runs from the thumbs to the upper arms, and the big toes connect with the knees, navel and thumbs. The thumbs connect with the lungs and with tendons that run down the torso and the front of the legs to the big toes.

d. Holding the Golden Urn-Rooting Practice

Using his thumb and index finger your partner will press against your wrist and place another hand on your hip. Start with the left side, then do the right side.

e. Rootedness

(1) Yang Position Rooting: Assume the Yang position and pack in energy to the abdomen, the spinal cord, and up to the neck. Feel the strength of the spine, as a flexed bow. Now brace your tendon lines by extending your pinky fingers out very strongly. Have your partner attempt to push you out of the stance by gradually pressing against the wrist and the hip. (Fig. 3.91(a))

(a) Side Pushing

(c) Front Pushing will increase the thumb and tendon power

Fig. 3.91 *Front, Back and Side Pushing*

(2) Yin Position Rooting: With your bodies connected in Yang Position Rooting, turn your hands over and you can transform the force to the ground through the bone structure. The thumbs link with the big toes. You must feel the thumb gaining force. The whole front line, starting from the thumb and continuing to the arm, hand, front of the head, ear, arm pit, front of the hip, and the leg to the big toe, is connected and pitted against your partner's force. Have your partner attempt to push you out of the stance by gradually pressing against the wrist and the hip.

f. Back and Front Pushing

Back pushing strengthens the whole spinal cord, the pinky fingers and small toes, and the back fasciae. Return to the Yang position. Be sure to press the big and small toes down, and feel that you are exerting force on the small toes and on the small fingers. Have your partner push from the back while you assume the stance. (Fig. 3.91(b)) retain the stance and have your partner push your chest. (Fig. 3.91(c))

When the tendons are used properly, less effort is needed to maintain good structure. In the Yang position, notice the feeling of support along the tendon lines.

Exhale and relax. Begin by assuming the Yang position. Quickly pack in energy to the whole back and to the neck. Move into the Yin position by turning the hands over and pulling the thumbs back. Feel the relationship between the thumbs and big toes. Keep this awareness as your partner pushes you in the Yin position.

2. Summary of Holding the Golden Urn

a. Yang Position

(1) Stand with feet a knee-to-toe length apart; sink the elbows; hold the hands open at shoulder level with the palms down; lock the wrists; hold the hands at a 45 degree angle to the forearms; stretch out the pinky fingers so that you feel the energy in the small fingers; and feel the connection between the small fingers and the small toes. (The muscle-tendon meridian from the pinky fingers goes up the arms, up the side of the face and around the ears, down the outside of the arms, through the scapulae, down into the sacrum, and down the outside of the legs to the small toes.)

(2) Breathe below the navel (lower abdominal breathing).

(3) Exhale, pull up on the genitals, the perineum and the anus,

locking the knees and feet.

(4) Inhale and pack in the navel.

(5) Inhale and pack the middle abdomen.

(6) Inhale and pack the lower abdomen.

(7) Inhale, tilt the sacrum, and pack the sacrum.

(8) Inhale and pack T-11 and the kidneys' areas.

(9) Inhale, lock the neck, bring the energy up to C-7, and inflate the neck.

(10) Inhale to the Jade Pillow, squeeze the skull and the temple bones.

(11) Inhale to the crown.

a. Yin Position

(1) Exhale, turning the hands with the wrists locked, energize the thumbs, and bring the energy down. (The route from the thumbs goes down the inside of the arms to the collar bones, to the sides of the sternum, down to the navel and spreads out to both legs, down the inside of the thighs to the lower legs and to the big toes.)

(2) Place the hands over the navel, bring the feet together and relax.

(3) Practice the Bone Breathing Process.

3. Golden Turtle and the Water Buffalo

People with high blood pressure should consult a doctor before attempting this posture.

This posture energizes the toes and all the tendons of the toes and the fasciae of the thigh and the legs and strengthens the back fasciae, spinal cord, sacrum, kidneys, adrenal glands, neck and the head.

This position is called the ''turtle back''. The back will be energized like a blown-up balloon.

The workout given by this pose is equivalent to a headstand, but rather than blood flowing to the head, Chi is directed to the head, making it easier to direct and circulate the increased blood flow downwards.

Due to weakness in the thighs or tight hip joints, you may feel excessive strain when you first begin to practice the Turtle/Buffalo positions, even if you are not sinking very deeply into the position. If this is the case, practice with a chair or table in front of you on which to rest the arms. This support will enable you to gradually work into the position without straining yourself. (Fig. 3.92)

Note that the back is straight and parallel to the floor.

Fig. 3.92 *Turtle/Buffalo Position—Side View*

It is very important to keep the back straight and parallel to the floor. It may be difficult to feel when this is happening at first. Practice occasionally in front of a mirror to help develop the inner feeling of this occurrence.

a. The Golden Turtle Immersing in Water-Yang Position

(1) Place the legs in the standard stance.

(2) Begin Energizer Breathing. Breathe in and out nine to eighteen times, inhaling more, exhaling less. When exhaling, keep the abdomen flattened to the spine.

(3) Inhale. Tighten the fists, fold the forearms against the upper arms, round the back, and sink the chest. Exhale and bend forward with the back straight so that the line made from the coccyx to the top of the head is horizontal to the floor. (Fig. 3.93)

(4) Keep the forearms folded onto the upper arms, resting in front of the chest. (Fig. 3.94) Keep the armpits open to make a space big enough to accommodate an object about the size of a pigeon egg. Round the scapulae. The back feels like a turtle and is energized with Chi.

This meridian also begins at the tip of the index finger.

This meridian begins at the little toe and runs beneath the foot ascending though the inner side of the leg to the genital region.

Fig. 3.93 *Muscle-Tendon Meridian in the Turtle Position*

Fig. 3.94 *Position of Forearms during the Golden Turtle*

(5) Lock the sacrum and open the knees so that you can feel the weight of the body sink down to the hips, to the knees, to the feet and, finally to the ground. The spine should be horizontal to the ground. Pull the energy into the groin area where the sexual energy is. Tuck in the chin and set the neck firmly in position. Press the elbows against the inside of the knees. With the elbows, press out against the knees, while the knees press in, equalizing the force. Neither should press harder than the other.

(6) Inhale ten percent and pack the energy in the abdominal region (navel). Hold until you are out of breath.

(7) Inhale and pack down to the lower abdomen.

(8) Inhale, pack at the perineum and pull on the sexual organs more tightly. Pull the Mother Earth energy up to the perineum.

(9) Inhale, pack at the sacrum and tilt the sacrum. Pull up the sex organs more firmly.

(10) Inhale, pack at T-11, the kidneys and adrenal gland areas. Tilt the T-11. Feel the entire spine as a fully flexed bow . Inflate the lower back with Chi pressure and energize the kidneys.

(11) Inhale, pack at C-7. Tighten the neck and the cranial bones. Clench your teeth.

(12) Inhale up to the crown. (Fig. 3.95)

Fig. 3.95 *Packing the energy during the Golden Turtle.*

See Fig. 3.96 (a) through (k) for additional exercises utilizing Golden Turtle Position.

(a) From the basic stance, with the outside edges of the feet parallel, squat down, placing the elbows between the knees with the palms together. Keep the back as parallel to the floor as possible and your eyes looking up. Press out with the elbows resisted by the knees. Press and resist for two seconds, then release and relax.

(b) Hook both elbows around the outside of the legs with the forearms behind the knees (Front view).

(c) Side View

(d) Clasp the forearm or elbow with the opposite hand. Bring the head and tail down and toward each other as if looking at your tail. This is very important for protecting your back. Let the shoulder blades be your uppermost point.

(e) Pull up strongly, forcing the T-11 and mid-back upward against the resistance of the thighs, head and sacrum. Pull and resist for only two seconds and relax.

Fig. 3.96 *Following are additional exercises in the Turtle Position.*

For maximum results, they should be practiced in the sequence given, repeating the entire sequence three times.

(f) Unlock the arms and bring them to the sides with the forearms rotated so that the palms face the floor. Pull the shoulder blades together.

(g) Bring the elbows and head up.

(h) Press the elbows up hard, lifting the head and looking forward while pressing the sternum forward. Hold two seconds and relax (Side View).

(i) Front View

(k) Keep looking at the floor while you pull your ear and tail to the side opposite the knee you are holding, resisting with the knee. After two seconds, place the hand on the floor, wag the tail to relax, and then repeat the exerciseon the opposite side.Again, wag the tail to relax the spine. During the exercise, the whole column from head to tail should form a curve like the letter “C” parallel to the floor and you should feel a stretching on the sides of the spine and the neck.

(j) Lock the arms around one knee, clasping the elbows around one knee while looking at the floor.

b. Water Buffalo-Yin Position

(1) When you have packed the energy to the head, exhale and look slightly up by moving the neck up, thereby relieving the tension of the lock in the neck. Extend the arms down in front of you with the backs of the hands facing frontwards and the fingertips touching the perineum and the anus or touching the ground. Keep the groin (genital area) open. (Fig. 3.97)

(2) Practice the open groin breathing process. (Fig. 3.98) Relax, keeping the tongue up. Inhale less, exhale more, breathing right into the groin area. In this position, the groin is open and you can breathe down to the lower part of the body which greatly energizes the sexual organs and increases circulation tremendously. Breathe easily and feel the energy descend to the navel and perineum, activating and strengthening the circulation of the lower abdomen. The urogential and pelvic diaphragms, which hold the sexual organs, bladder, and large and small intestines in place, become activated as well.

When your breath has normalized, close your eyes. Slowly bring yourself to a standing position. Remember when you get up, do so very slowly to avoid dizziness. Stand erect. Work up some saliva and, tightening the neck, swallow down to the navel with a guttural sound. Feel the saliva shoot down to the navel and burn with Chi power. Normalize breathing and place the hands over the navel. Collect Chi in the navel.

Practice Bone Breathing to absorb Chi into the bones. Meditate standing for a while. If you wish, work on circulating the Chi in the Microcosmic Orbit. Then walk around, shaking out the legs and brushing down the chest.

c. Turtle Position—Rooting Practice

In the Turtle Position, the elbows are held in tightly pressed against both thighs so that you can feel the energy concentrated in the groin area. The spine is horizontal to the ground. (Fig. 3.99) Pack Chi along the whole back. Have your partner stand on the left side with his one hand on your shoulder and his other hand on your hip. (Fig. 3.100) When your partner pushes you, lock the sacrum. Open the knees slightly and adjust the feet to align the force of your partner down to the ground. Become one with the earth. Gradually push and increase to whatever pressure you can take. The bone structure is like a sponge absorbing the force and transferring it to the ground.

Fig. 3.98 *Buffalo—Right Side View*

Fig. 3.98 *Buffalo—Left Side View*

Fig. 3.99 *Turtle—Front View*

Your partner should not continue to push when you are out of breath and about to rest. Once you become adept in this practice and you feel your body's structure as one piece, you will feel the muscles relax and find no need for Packing Breathing. If you simply concentrate on the Chi flow and relax, the force will pass through the bone structure.

Change sides and let your partner push you gradually. (Fig. 3.101) The purpose is not to push you over, but to let you feel where the force comes from so that you can redirect the force to the earth. When the force is started gradually you are able to feel where the force is going, permitting you to re-align or relax that part to let the force pass through.

Always balance out both sides by having your partner push on both the left and right sides. Remember one side is generally stronger than the other.

Once you can successfully redirect the force from any part of your body, you will start to know how to reabsorb the force from the earth. The force that your partner pushes you with, when directed to the earth, can be reabsorbed back from the earth and becomes more powerful than before. This energy can be used for self-healing, or to counteract your partner's pushes. In the higher level, you can pass that force to your partner to heal him or her as well.

Earth Force is transferred down to the ground.

Fig. 3.100 *Rooting practice during the Golden Turtle—Left side position.*

Fig. 3.101 *Golden Turtle—Right Side Position*

After each pushing, go back to the Buffalo Position. The chin is up, the shoulders relax, the hands drop down to near the groin area, or touch the sexual organs to strengthen the pelvic and urogenital diaphram energy. Breathe deeply to the groin area to strengthen the sexual/creative energy.

The Turtle Position strengthens the whole back and spine. When your partner pushes from the left, you feel the force go from the left shoulder pass the scapula to the spine, to the right scapula, down the spine to the hip, to the right thigh, the right leg and foot and down to the ground. At the same time, feel the sole breathing and "claw" down with the toes into the ground.

If the pressure is too much, the left foot will uproot. Push down the left foot by exerting more pressure on the hip down to the thigh and the leg.

Partners should be roughly equal in size, stature and strength for pushing.

d. Turtle/Buffalo-Front Rooting Practice

Your partner should place one hand on each shoulder and gradually push you in order to strengthen the frontal aspect of this posture. (Fig. 3.102) To maintain this difficult position, you must gradually feel the connection of the shoulders to the scapulae and the spine to the sacrum and the hips. Front rooting requires more practice. The soles and feet are very important to front rooting. With practice, you can maintain the feet's firm contact with the ground.

Force transferred though the bone structure into the ground.

Fig. 3.102 *Turtle/Buffalo— Rooting Practice*

4. Summaries of the Golden Turtle and the Water Buffalo

a. The Golden Turtle Immersing in Water (Yang Position)

(1) Place the tongue on the roof of the mouth.

(2) Practice lower abdominal breathing in a standing position.

(3) Bend forward with the back straight, bend the arms in close to the body, maintain the continuing line of the spine through the neck. and clench the fists.

(4) Inhale and pack to the navel.

(5) Inhale and pack to the middle abdomen.

(6) Inhale and pack to the lower abdomen.

(7) Inhale and pack to the perineum.

(8) Inhale and pack to the sacrum.

(9) Inhale and pack to the T-11.

(10) Inhale and pack to the C-7.

(11) Inhale and pack to the Jade Pillow.

(12) Inhale and pack to the crown of the head.

(13) Inhale and pack more along the back.

b. Water Buffalo Emerging from The Water (Yin Position)

(1) Exhale and regulate your breathing.

(2) Head and eyes should be looking up, but not straining. Keep the back level and extend the arms with the hands towards the ground slightly behind you or touching the groin area. Maintain the same back position.

(3) Practice lower abdominal breathing while focusing on the genital area.

(4) Close the eyes and gradually stand up. Put the hands on the navel area and collect the energy.

(5) Practice the Bone Breathing Process.

(6) Muscle Power Exercise.

5. Golden Phoenix Washes Its Feathers

The Phoenix Position strengthens both sides of the ribs, from the armpits down to the sides of the hips and packs Chi pressure into all the major organs. On the left side, pack, wrap and squeeze the Chi to the left kidney, spleen, left lung, and heart; on the right side, you are strengthening the right kidney, liver and right lung, (Fig. 3.103)

Fig. 3.103 *Wrap and squeeze Chi into all of the major organs.*

The Phoenix Exercise also exercises the fingers, toes, tendons and the tongue (which is one of the main tendons of the body.) You will also exercise the tendons of the whole body. The pinky fingers are small, but can activate many tendons, especially along the sides of the body.

a. Practice

(1) Assume the Iron Shirt Horse Stance. (Fig. 3.104(a)) Place your arms at your sides. Practice the Energizer Breathing to fan up the energy.

(2) Sweep the arms out to both sides and turn them over so that the wrists are straight. (Fig. 3.104 (b)) The palms begin to face up and are turned in towards the body as though you were gathering something up under the armpits. The pinky fingers are pointed up toward the ceiling. (Fig. 3.104 (c)) Feel the pull of the tendons all the way up the arms to the ears, circling the ears, and down the sides of the body to the small toes. The scapulae are rounded. The neck muscles and the trapezius muscles are relaxed so that the hands and the arms are connected. The elbows are bent out to the side.

(3) Inhale while you pull up the left and right sides of the anus and bring the sexual energy from the testicles/ovaries to the kidneys. Pack in energy to the kidneys and to the level of the adrenals which are located at the top of the kidneys on about the same level as the solar plexus. Bring the palms up along the sides of the body feeling the tension and the pull of the tendons on the insides of the arms up to the elbows, the pinkies and the thumbs.

(4) Inhale higher toward the armpits, pulling the sexual energy from the testicles/ovaries to the kidneys and up to the spleen on the left side and the liver on the right side. Hold and pack the Chi in the organs and then wrap the Chi around them. The palms still face up and the pinky fingers' tendons stretch toward the ceiling. Inhale and get closer to the armpits, pulling the sexual energy up to the heart, and to the lungs. Fill the lungs with Chi.

(5) Feel the whole rib cage and the armpits bulge up, filled with Chi. (Fig. 3.104(d))

(6) When you get as close to the armpits as you can (Fig. 3.104(e) and (f)), exhale while maintaining the contraction in the anus and the pull on the genitals. Rotate the hands medially. Face palms out (Fig. 3.104(g)), pulling from the scapulae which are connected to the earth. The forearms are straight; the elbows are

back; the wrists are locked; the knees are open. Push from the sternum to C-7 in order to feel the force come from the earth up into the heels, the sacrum, the spinal cord, the scapulae and the hands. (Fig. 3.104(h)) As you push, extend your arms and exhale using the First Healing Sound, the Lung Sound "***Sssssssss***". (A complete explanation of the Six Healing Sounds is provided in the book *Taoist Ways to Transform Stress into Vitality*.) From the palms of the hands to the heels of the feet you will feel like one piece. This is what is meant by "structure".

(7) When the arms are fully extended (Fig. 3.104(i) and (j)), inhale and contract the middle of the anus and pull up the sexual organs. Feel the pull at the tip of the fingers of both hands. Gather the fingers to the thumbs and press them together in a small point by exerting more force on the pinky fingers (which should be in the middle with all the fingers pressed against it), and more force on the tips of all the fingers. (These finger positions are called "beaks"). (Fig. 3.104(k)) Feel the pulling force in the anus and in the tips of the fingers combine into a single force.

(8) Inhale, pull the "beaks" inward from the elbows and contract the middle part of the anus. (Fig. 3-104(l)) Feel the force of the anus and the sexual organ pull the "beaks" in.

(9) Inhale again, pulling the "beaks" closer to the body, further tightening the anus and genital area. (Fig. 3.104(m)) While inhaling, pull the elbows and the wrists near the chest with the "beaks" pointed out.

(10) Exhale as you open the "beaks", extend the arms in front of you and then spread the fingers wide apart. (Fig. 3-104(n)) Exhale, using the Second Healing Sound, the Kidney Sound "W0000000", and lower your arms in front of you, the heels of the hands leading the way with the action originating from the shoulders. (Fig. 3-104(o)) When the arms have reached the sides of the hips, lock the elbows, keep the fingers spread apart and rotate the hands laterally out to each side. Flex the finger tendons out, especially the pinky fingers and the thumbs. Spread the toes out, especially the small toes. At the same time, extend the tongue out as far as you can to the chin. (Fig. 3.104(p)) Direct your eyes to look at your nose. Feel the tongue and the sexual organs pull up as one line out to the tongue. Finally, turn the big toes and the heels inward, and then make the feet move towards one another by taking "steps" leading with the big toes and alternating with the heels until the feet come in together. This will exercise the feet tendons.

(a) Assume the Iron Shirt Horse Stance. Place your arms at your sides. Practice the energizer breathing to fan up the energy.

(c) Palms face up and are turned in toward the body with the pinky fingers point up.

(d) Pack the energy in to the testicle /ovaries, into the kidneys, then into the spleen on the left side and the liver on the right side. As you continue to pack and pull the energy up to the heart and to the lungs, you will feel the rib cage bulge up.

Fig. 3.104-A *Phoenix Exercise*

(e) Palms continue to face up.

(f) Side View

(g) Rotate the hand medially.

(h) Push from the C-7 by sinking down the sternum and pressing towards the back.

Fig. 3.104-B *Phoenix Exercise*

(i) Push the fully extended arms. (Side View) (j) Front view of arms fully extended

(k) Gather the fingers and form “beaks”. (l) Front View of pulling the “Beaks”

Fig. 3.104-C *Phoenix Exercise*

(m) Side view of Pulling the “Beaks”

(n) Exhale, Release the “Beaks”. Press your arms against the front of your body.

(o) Front View of the Arms Pressed Down

(p) Sexual organs are connected to the tongue.

Fig. 3.104-D *Phoenix Exercise*

Repeat steps (6) through (10). This time, however replace the Lung Sound in Step (6) as you push your palms out straight in front of you with the Third Healing Sound, the Liver Sound "***Shhhhhhh***". Replace the Kidney Sound in Step (10) as you are lowering your arms in front of you, with the Fourth Healing Sound, the Heart Sound "***Hawwwwww***". Repeat steps six through ten one more time. Replace the Lung and Liver Sounds in Step (6) with the Fifth Healing Sound, the Spleen Sound "***Whoooooo***". Replace the Kidney and Heart Sounds in Step (10) with the Sixth Healing Sound, the Triple Warmer Sound "***Heeeeeee***".

You should feel connected through the legs, spinal tendons, scapulae and arms.

(11) Spread the fingers apart and extend the arms. (Spreading the fingers enlists the use of tendon power.) Feel the force come out from the scapulae. Relax. Feel the Chi spread out to all the tendons of the hands, legs, and tongue. The tongue connects to the tendons.

b. Rooting Practice of the Golden Phoenix:

Feel the Force Transfer from the Hand to the Ground

Practice the Phoenix Exercise and extend the arms out. Lock the elbows. Lock the wrists. Round the scapulae. Pull up the middle anus and the genital area. Open the knees. Feel that the palms and feet are connected to the ground. Have your partner use his palms to hit your palms. If you are well connected and are relaxing the muscles of the neck, you will feel the force travel to the ground.

c. The Lift Up Connected Practice

This exercise requires a locked wrist and hand with the shoulders and scapulae connected while your partner tries to lift you up. Be cautious because you can be hurt in this practice.

Lower the arms, shoulders and scapulae while bringing the hands to the sides of the thighs. Place the palms down, draw the elbows back, lock the wrists, round the scapulae, and feel the connection with the spinal cord. Have your partner put one leg between your legs, his palms turned in against your palms and lift you up. (Fig. 3.105) Find a partner who is your height. Make sure that you lock the elbows, the wrists and the scapulae; otherwise you can hurt your wrists or scapulae, and your partner will be unable to lift you.

Fig. 3.105 *Lift Up Practice*

b. “Beaks” Rooting Practice

Extend the arms and form “beaks”, connecting the arms with the scapulae, the spine, the legs and the feet. Have your partner push the wrists, and feel the force transfer to the ground. (Fig. 3.106)

Fig. 3.106 *“Beaks” Rooting practice*

6. Summary of the Golden Phoenix Washes Its Feathers

a. Practice lower abdominal breathing in a standing position.

b. Place your arms in front of your body with the backs of the hands facing each other. Inhale and allow the arms to sweep out to your sides, pointing the fingers towards the ribs, and pull up the perineum and anus. Pack into the fasciae on the sides of the ribs and pack into the kidneys. Inhale, raising the hands up along the sides. Pack and wrap the Chi into the liver and spleen. Inhale once more raising the hands higher and pack and wrap the Chi into the lungs and heart.

c. Exhale, keeping the perineum and anus closed while pushing the hands out at shoulder level. Keep the wrists flexed.

d. Inhale and tighten at the perineum and anus. Form 'beaks' with your fingers and bring them in toward the shoulders. Repeat twice more, raising the "beaks' a little higher each time.

e. Exhale, releasing the perineum and anus and lowering the arms while simultaneously straightening and locking the elbows and knees. When the hands are down with the wrists flexed, turn the hands out to the sides of the thighs and spread the fingers and toes out as much as possible. Thrust the tongue and pull up the anus and sexual organs.

f. Collect the Chi energy at the navel.

g. Practice the Bone Breathing Process.

7. Iron Bridge

The Iron Bridge is designed to strengthen the front and back fasciae. By stretching the fasciae from the pelvis to the neck and both sides of the rib cage in this exercise, you will greatly increase the flow of Chi between the fasciae and will tone up the front and back muscles considerably.

Arching the spine backwards greatly strengthens the lower spine, especially the lumbar region. By stretching the upper back and spine opposite to the normal direction of its curve, the backbend will help to lessen the often excessive forward curvature of the upper back, limber the shoulder joints, and open the chest. The point to remember is that the bend is from the upper back and not from the hip.

a. Iron Bridge Standing Position - Yang Position

This position will create a tremendous amount of Chi energy which will rise up the spine to the head.

(1) Stand, keeping the knees straight and the feet one foot apart. It is best for beginners if the feet are placed so that they point straight ahead along the second toes. If the toes turn out, there may be unnecessary compression in the lower spine, even if the knees are locked and the thighs and buttocks tightened. The thumbs and index fingers are touching each other and the remaining three fingers are held together. Keep the hands straight, low and slightly in front of the body.

(2) Begin abdominal breathing; exhale and flatten the abdomen. Inhale to full capacity. Bring the hands up and to the back, bend the elbows back, and place the palms up. (Fig.s 3.107(a) and (b)) Fingers should be about two inches apart and will rise close to the scapulae. This will open the sternum, activate the thymus, stretch the thyroid, the parathyroid, the chest and the side fasciae.

(3) Any accumulated tension in the chest and abdomen can be released. Hips stay over the feet. It is most important to arch the upper and middle back and not the hip. This will stretch the front fasciae. Excessive arching of the hip and lower spine can damage the discs between the vertebrae and pinch the nerves because of the excessive weight. Also, if the arching in the Iron Bridge is mostly from the lower spine, there will be much less stretching of the fasciae in the front of the torso. To keep the lower spine protected, it is necessary to arch the back strongly from the upper spine while firmly tightening the thighs and buttocks. By strongly tightening the thighs and buttocks, you can feel that you are squeezing the sacrum down, thus lessening the compression in the lower spine. The knees should be firmly locked and straight. This will allow the thighs and buttocks to be very firmly tightened.

(4) Clench the teeth. As you arch back, begin with the head. Rotate the head back from the upper neck, until you feel the front fasciae of the neck stretching. Do not let the head drop back as this is very bad for the neck vertebrae. If done properly, you will still feel that the neck is elongating upwards, even while it is rotated back. If there is any discomfort whatsoever; you are either practicing incorrectly or trying to stretch back too far.

Look back, locking and pulling the neck fasciae. (Fig. 3.107(c)) As soon as the front of the neck has stretched properly, you will feel an automatic lifting at the chest which, as it stretches up, will then automatically stretch the abdomen. As the abdomen stretches, push the pelvis forward, keeping the thighs and buttocks very tight. As you stretch the chest, feel that the breastbone is being pulled forward and up. In this way, the upper back will be arching, rather than only the lower spine. (Fig. 107(d))

If done properly, you will feel the fasciae being stretched from the groin up to the chest and the neck, pulling tight as a drum without having to arch very far back.(Fig. 3.107(e) If you are arching very far back, then you are inevitably overarching the lower spine. (Fig. 3.107(f))

(a) Standing Position

(b) Back View of the Standing Position

Fig. 3.107-A *Iron Bridge*

(d) Arch the upper and middle back.

(c) Look back and pull the neck fasciae.

(e) Stretch is felt beginning at the second, third and fourth toes up the back to the spine, and up the front until it ends at the sides of the nose.

(f) Excessive arching of the hip and lower spine can damage the discs.

Fig. 3.107-B *Iron Bridge*

If your upper spine is not very flexible, or has a large forward curvature, then you may look as if you are hardly arched back at all when you first practice, though you will still be able to feel a stretch across the front torso. Remember that no matter how flexible you are, you will not arch very far back if you are practicing properly. It is a good idea to practice this upper body stretch while sitting until you can do it well before practicing in a standing position.

Remember also that if you bend too much initially, you may fall back. In the beginning, have a partner look after you when you bend back to steady you, if necessary.

(5) Squeeze the thumb and index fingers together and tighten the muscles of the arms and shoulders. This will stabilize your position.

(6) Hold your breath and maintain this position for 30 to 60 seconds.

b. Iron Bridge Resting Position - Yin Position

(1) Exhale. Straighten up and bring the arms to the front, maintaining the hand position, and slowly bend forward from the hip joint. The head is down and the hands are above or touching the ground. (Fig. 3.108(a)) Do not force yourself.

(2) Adjust the tendons. In the beginning, do not bend too low and, for additional comfort, you can slightly bend the knees. This is particularly important if you are practicing rooting in this position. If the knees are locked back, there will be strain in the knees. If you want to stretch farther forward, do not increase the forward curvature of the upper spine to do it. Stretch forward by letting the hamstring muscles at the backs of the thighs lengthen. (Fig. 3.108(b)) If you are stretching forward vigorously, or are not very limber, bend the knees much more while stretching so that you can lay the whole abdomen firmly on the thighs. Then, test your flexibility by slightly straightening the knees, while keeping the abdomen on the thighs. Practicing in this way will guarantee that you are only stretching the lower spine and hamstrings, and not arching the upper spine.

Feel the Chi flow down to the head and back and down the tongue. The three fingers of each hand are nearly touching each other and you can feel the Chi flow from the right hand's middle finger to the left hand's middle finger up the left arm to the spine, to the head and down to the navel. Stay relaxed until you feel the energy flow without obstruction. Some people may feel a certain

vibration which gradually spreads throughout the body. Allow the vibration to occur for a while. Slowly stand up to avoid dizziness.

Maintain this position only for as long as you feel comfortable. It is quite strenuous and should be approached with moderation.

(a) Resting Position of the Iron Bridge

(b) Stretching the hamstring

Fig. 3.108 *Iron Bridge Stretch*

8. Summary of the Iron Bridge

a. Standing Iron Bridge—Yang Position

(1) Assume the Horse Stance.

(2) Place hands at the sides of the body. Touch both thumbs and index fingers together, forming a circle. The other three fingers of each hand remain straight and touch one other.

(3) Breathe abdominally, inhale and look up at the ceiling. Arch back from the lower back, keeping the legs straight and the hips aligned over the legs to maintain balance.

b. Standing Iron Bridge - Yin Position

(4) When you feel you have had enough. exhale and bring the body slowly to a standing position.

(5) Bend the knees slightly in the beginning. Lower the head, and bend forward from the shoulders and chest, rounding the back.

(6) Relax the arms and allow them to dangle in front of you, maintaining the finger position with the fingers facing each other. Feel the Chi flow through each finger. If you can touch the ground, you can feel a certain connection of the Chi energy. Breathe normally.

(7) Come up very slowly from this position. You may feel dizzy at first. Stand still for a while, collect the energy, practice Bone Breathing and the muscle Power Exercise. Walk around, or lie down on your back and massage your belly from right to left to get your Chi circulating.

Additional Exercises: To strengthen the upper abdominals, do sit-ups with bent knees. The lower abdominals are strengthened by doing sit-ups with your legs extended straight out in front of you, although it is recommended that this, as all exercises, not be excessively practiced.

c. Standing Iron Bridge - Rooting Practice

Assume the posture. Have your partner push very gently. Remember that the main arch is in the upper back. Be very careful in this Iron Bridge Rooting Practice. Your partner has to be aware that it is dangerous when you arch backwards. The back and spinal cord are vulnerable to injury in this position. Be careful to apply pressure gently to avoid hurting the spinal cord or falling down.

(l) Yin Position Rooting Practice

While you are in the backbend position, your partner should put one hand on your back and one hand on your chest. (Fig. 3.109(a)) As your partner slowly presses down, observe that you can take the force only for a few seconds. Bend forward to rest for a while and then practice rooting in the forward position.

(2) Yang Position Rooting Practice

While you are bent forward, your partner should press his/her hands on your shoulders. (Fig. 3.109(b)) You push up from the lower spine. He/she can use his/her entire body to press down. In this position you are exerting more force on the lower back. This will strengthen the lower spine, especially the lumbar region.

(a) Yin Position Rooting

(b) Yang Position Rooting

Fig. 3.109 *Iron Bridge Rooting*

9. Iron Bar

The Iron Bar practice greatly strengthens the front and back fasciae and thus makes the spinal cord very strong. The spinal column consists of 24 vertebrae held together by tendons, fasciae and muscles. Normally we do very little to exercise the vital spinal column. The Iron Bar exercise automatically adjusts all of the spinal column, strengthening it segment by segment.

a. Iron Bar Practice

(1) Place two chairs facing each other. Have your partner hold the chair at your head to keep it steady. If you do not have a partner put one of the chairs against the wall.

(2) Put both hands palms down behind you on the floor and push your self up on the chair. Put the feet and ankles on one chair the head and shoulders on the other. Fold the hands across the belly. Straighten out the body especially the lower back. With the toes pointed down and outward, you can feel a pull on the fasciae and tendons. (Fig. 3.110(a)) Make sure the lumbar region is straight, not bent. This will help to strengthen the front and back fasciae.

(3) If you initially feel that the Iron Bar is too difficult to do properly and comfortably, bring your arms back over your head onto the chair that your head is on. This makes it much easier to maintain a straight spine and is considerably less strenuous. As you feel stronger gradually increase the amount of force with which you are pushing down the arms into the chair. When you can practice without pushing the arms down at all behind you, you are ready to move gradually to the final position with the hands resting over the navel.

(4) Place both hands on the stomach and breathe normally to the abdomen. (Fig. 3.110(b)) When you begin to feel uncomfortable, using the hands to steady and hold the chair that the head and shoulders are on, lower the buttocks and feet to the floor. Sit up and place the tongue on the roof of the mouth and let the energy flow in the Microcosmic Orbit. (Fig. 3.110(c)) Do not stand up right away as you may feel dizzy.

(5) After you have practiced for two to four weeks, you can start, very carefully, to move the chairs further apart so that only the neck and head are on the end of the other chair (Fig. 3.110(d)) Do not rest the head only as this can hurt your neck.

This is a very strenuous exercise for the back. Do not attempt

to move the chairs further apart unless you feel very strong. You can step up training by supporting a weight on the abdomen. Again, work gradually. Eventually you will be able to support 30 pounds or more of weight. (Fig. 3.110(e))

Fig. 3.110-A *Iron Bar*

(d) Once you are well-trained, you can move the chairs further apart so that only the neck, head and heels are resting on the chairs.

(e) In the advanced practice of the Iron Bar, you can add weight and still maintain the position.

Fig. 3.110-B *Iron Bar*

b. Iron Bar Rooting

Have your partner place one hand under your back for support in case you should begin to fall. With the other hand, your partner presses down on your abdomen slowly and gently increasing pressure gradually.

This exercise strengthens the lower back in the lumbar region and the psoas muscle.

10.Summary of the Iron Bar

a. Put two chairs across from one another at a distance that will allow you to:

(1) Place the feet and lower legs on one chair with the toes pointed down and outward, away from you, to develop the most balanced alignment of force in the legs, particularly in the calves.

(2) Place both palms down on the floor behind you and the head and shoulders on the other chair.

(3) Maintain a straight back. To avoid stress in the lower spine while practicing, consciously tighten the buttocks and feel the sacrum squeeze down. This will lengthen the lower spine.

(4) Breathe normally from the abdomen.

(5) When you are ready, come down to the ground slowly.

(6) Stand up and collect the energy at the navel.

(7) Practice the Bone Breathing Process.

Chapter 4
Breath Alignment*

A. Structural Alignment and Taoist Yoga

Radiant health and efficient, powerful movement patterns are attained only when the body structure conforms more closely to its inherent structural pattern. This ideal pattern is the blueprint for the "stacking'' of body segments in space. The function of this more appropriate structural relationship is the unhindered flow of energy breathing, alertness and movement.

The development and use of an aligned structure is basic to Iron Shirt practice. However for many students it will be difficult to apply principles of alignment in their practice without first approaching structural development in its own right. That is the purpose of this chapter. The structural exercises that follow lead to actual structural reformation so that "posturing" oneself according to desirable structural principles becomes easier and more natural. For most of us, without structural change "good" posture will remain alien to our being. Without intentional practice of "good' posture, particularly in the beginning, structural reintegration cannot proceed smoothly.

The anatomical relationships of the entire body are created in these structural exercises, whether moving or stationary. In structural development, it is important to conceptually understand what appropriate alignment means. Application of correct structural patterns during your practice of Iron Shirt movements will reveal their meaning and greatly speed up the process of body development. Remember that these relationships of one body part to another represent an ideal pattern. The more you practice these exercises and apply their principles in daily life, the more closely your own structure will approach the ideal in an increasingly effortless way. There should never be a sense of strain or unpleasantness in trying to "fit" the structural ideal. For most people, simply a month of practice and application will lead to a profound improvement in structural health.

In the beginning of your application of these principles to daily life, there will inevitably be occasional feelings of unnaturalness. This will occur as you choose new patterns of body use which are opposed to previous distorted patterns that have become habitual. This sense of "posturing" in an artificial way will rapidly decrease with time, if you are practicing diligently. You will then experience ease and naturalness in body usage that allows you to respond in any direction with an appropriate amount of force. The principle of automatically applying appropriate force is at the heart of martial arts. In order for this full movement potential to be possible, the body must spontaneously return to its "center" of relaxed alignment after movement. This is the relaxed "idling" position that is most unblocked and energetically economical, and out of which movement flows.

Inanimate objects are completely dominated by the pull of gravity. Plants maintain their uprightness by the rigidity of their cell walls. Animals automatically resist the pull of gravity by normally remaining on a large base created by four legs, or two legs and a strong tail. The upright human being, on the other hand, is a unique expression of evolving self-awareness. The full and intentional expression of standing upright further develops the human spirit. Likewise, the more developed human spirit naturally manifests a greater upright stance. All esoteric traditions that work with energy understand the signifiance of this fully developed upright human form. This is particularly true of the Taoist tradition.

B. Applying Structural Alignment Principles to Iron Shirt Chi Kung Practice

Diligent practice of Iron Shirt Chi Kung will lead to an increased flexibility and range of motion of the spine and other joints. As the body becomes more open, it is important to understand and apply the principles of healthy structural alignment in daily life. Since many of us have come from a background of structural randomness and distortion, it is necessary to learn what to do with our various body segments as our body becomes open and capable of new, more appropriate alignment. In effect, we must learn how best to "wear the body".

The very center of our physical structure is the spine and its foundation, the pelvis. Encased within the spine and cranium is the Central Nervous System, center of our conscious life. Thus, structural health of the spine is the foundation for the structural and energetic health of the rest of the body. For this reason, the basic structural exercises taught in this section focus strongly on the spine. Regular practice of these exercises will help heal any existing structural problems and tremendously enhance your Iron Shirt practice.

The structural exercises that follow: Structural Training Position Against Wall, Spinal Elongation Breathing, Door Hanging, Shoulder Widening and Backbend, develop a straighter, more elongated spine and joint spaces that are not cramped. The spine will retain its three normal curves, but these curves will not be as excessive as they are in nearly everyone. Attention to details will guarantee that your practice is safe, effective and progressive. Also, additional exercises (the Warrior Poses) that complement the practice of Iron Shirt Chi Kung by eliminating structural blocks in the hips and back, and by strengthening the lower body are described.

By applying the structural principles during your Iron Shirt practice, as well as in your daily life, you will feel the primary forces that are always acting on your structure. These two basic forces are (1) a strong downward rooting force connecting you to the earth; and, at the same time, (2) a strong upward elongating force lengthening your spine which connects you to the heavens. To attain balance and integration, both of these forces must be developed.

1. Relaxation

a. Lower Abdomen

At the level of the navel center and the Door of Life (located behind the navel), rooting and elongating forces originate and mingle. For this to happen fully, the lower abdomen must always remain relaxed. The lower abdomen should remain soft, except when you are making a full exhalation, such as when you are very active, or practicing abdominal breathing. The rest of the time (which is most of the time), practice releasing any tension in the lower abdomen until this becomes automatic. Your breathing, digestion and elimination will improve, and the rest of your body will relax more fully.

The two central points of the body that reflect and determine your tension level in daily life are your face and lower abdomen. During your daily activities, practice smiling with the eyes and face, and keep your lower abdomen relaxed. Remember always to relax as much as possible, no matter what you are doing. You will feel much happier, your organs will work better and your energy will flow more easily.

b. Inner Smile

While practicing these structural alignment exercises, also practice the Inner Smile. If you can maintain the Inner Smile while practicing vigorous exercises like Iron Shirt and the Warrior Poses, you will be able easily to maintain it during times of emotional challenge as well. Remember that the face is not only the primary expresser of body language, but also returns to your system the very emotions it expresses outwardly.

Intentionally develop the various details of facial alignment that accompany soft, relaxed, smiling eyes whenever you exercise, and you will gain much more energy and emotional balance from your practice.

When you practice the Inner Smile, let all of the facial muscles relax. This relaxation can be seen and felt particularly around the eyes and mouth. Feel the eyelids subtly close slightly as the area around the eyes relaxes, and the space between the eyebrows widens. Let the eyes be gently receptive to incoming visual stimuli. Feel that sights and sounds flow into their respective organs, rather than being grasped for outwardly. Allow the nostrils and sinuses to subtly widen, creating more space for the breath to enter the body. Let the outer corners of the mouth lift very gently, with the tongue up to the palate, the lips slightly touching, and the jaws just separated or barely touching. This will produce a smile like that of the Mona Lisa or Buddha. This lifting of the corners of the mouth must be effortless, and the outer result of an inner smile. (Fig. 4.1(a))

If you can relax deeply enough, all of these details will take place spontaneously because they are natural aspects of healthy facial alignment in a happy, centered person. Practicing them intentionally will quickly condition them into your basic neuromuscular patterns. Practice the Inner Smile in this way with your eyes opened as well as closed. This will enable you to apply it at all times. A smile in the eyes and the subtle lift at the outer corners of the mouth are the

most important details. Whenever you do this, it will be easy to have access to feelings of inner happiness, serenity and compassion.

Feeling the Inner Smile and relaxed facial alignment during Iron Shirt will insure that the mind remains more centered and calm, and that you are continuous and fluid in your movement. As a result, you can experience and develop the flow of Chi. (Fig. 4.1(b))

(a) Mouth corners are up.

(b) Mouth corners are down, causing the organs to fall and the Chi energy to diminsh.

Fig. 4.1 *Inner Smile*

c. Tight Jaw Muscles

Chronically tight jaw muscles are very common. They often distort the entire facial structure. Clenched or tightened jaws become that way for various reasons. Strong emotions that are held back from expression may produce this. On the other hand, the universal distortion of a collapsed neck in which the chin moves forward out of alignment will often cause compensations in the jaw pattern. Whatever the cause, tight jaw muscles need to be loosened up so that you can fully practice the Inner Smile and relax completely throughout the body.

Since it is difficult to relax the jaw muscles simply through intention, a cork can be useful. (Fig. 4.2) This is a very beneficial

exercise for people who have a lot of jaw tension, although practically anyone can benefit from trying it. Buy a simple cork stopper in a grocery or hardware store. Cut it if necessary to fit between the front teeth, thus keeping the mouth wide open. Make the width of the cork such that it is still possible to open the mouth a little farther so that holding the cork does not result in strain. Simply place the cork in the mouth for about ten minutes every day for several weeks. As the jaw muscles stretch open, use a longer cork until you can easily use a normal sized one. This can be done while reading, driving, showering, or watching TV. Do not do this if it produces pain, if your jaws make audible sounds when they open and close, or if you have a history of jaw dislocation or other problems.

Fig. 4.2 *Practice to Stretch Tight Jaw Muscles.*

2. Structural Training Position Against Wall

Using a wall for feedback, you will be able to feel when you have a structurally aligned, elongating spine. This exercise is dependent only upon a wall or door to lean against, so it can be done anywhere as a postural recharging exercise. For those with back problems, particularly lower back pain and sciatica, it is a powerful method for decompressing the vertebrae and lessening the discomfort.

a. Lower Body

Lean against a wall with the heels approximately one to one and a half feet from the wall. Bend the knees and tuck the pelvis under so that the lower spine becomes flattened to the wall without discomfort. Work gradually to this position if there is discomfort initially The calves will be perpendicular to the ground or slightly angled back toward the wall. You should feel that you are comfortably leaning against the wall.

Fig. 4.3 *Structural Training Position Against Wall*

b. Feet

Press the balls of the big toes firmly to the floor, then widen the feet across the balls. This will spread the toes. Now, equalize the weight on three points of each foot: the ball of the big toe, the last two toes and the middle of the heel. The toes should remain relaxed without grasping the floor with the second toes pointing straight ahead. Keep the feet aligned in this way, even if you feel pigeon-toed. Apply this same foot alignment when standing, walking or exercising.

c. Head/Neck/Upper Back

Bring as much of the upper back as flat to the wall as possible without strain, by beginning with the sacrum against the wall while holding the remainder of the spine rounded forward away from it. Now roll the spine vertebra by vertebra against the wall until you reach your limit of flexibility. Hold the head as if it is gently pushed back from the upper lip and lifted (or suspended) from its crown. Do not overdo this by tucking the chin. For many persons, the back of the head will not touch the wall. (Fig. 4.4)

Fig. 4.4 *Do not lift the upper lip excessively.*

d. Shoulders

Tuck the shoulders down away from the ears and widen them out to the sides. (Fig. 4.5) (See the Shoulder Widening Exercise in this Chapter.)

Fig. 4.5 *Widen the shoulders*

e. Arms/Shoulders

There are several possible arm positions:

(1) Simply let the arms hang relaxed at the sides with the palms facing into the torso. This is the most natural position and is appropriate if you are practicing around other people, at work for example, and do not want to look like you are doing an “exercise”.

(2) Starting from position (1) bring the elbows back to barely touch the wall, without bringing the forearms to the wall or the shoulders back. This position helps to properly align the shoulders. As the elbows are brought back, the shoulders will naturally roll back slightly, without being pulled back excessively.

(3) Roll the left shoulder blade away from the wall until only the inner edge of the left shoulder blade is touching the wall. Now roll the rest of the left shoulder blade back to touch the wall. Repeat on the right side, then bring the arms to position (1) or (2). This position strongly stretches the shoulders out to either side, and thus widens the upper back and chest simultaneously. This stretch is good preparation for the Iron Shirt exercises which require scapulae power.

Do not attempt positions (2) or (3) unless they can be done without strain.

f. Stretching the Lower Spine

For additional stretch in the lower back, bend the knees and sink down lower on the wall. Then, keeping the sacrum in firm contact with the wall, slowly straighten the knees back to the original position. For even more stretch, place the hands around the hips and push down while you straighten back to the original position. This will strongly lengthen the lower spine. Do not attempt this until the lower back can be brought to the wall without discomfort. This is most effective when practiced against a wall that is not completely smooth. This extra stretch is particularly valuable for anyone with lower back pain or sciatica.

g. Spinal Elongation Breathing

Simply standing in the Structural Training Position Against Wall will help to decompress and straighten the spine. It is not necessary to do special breathing in order to derive benefit from this position. The goal is not to have a straight spine, but a straightening spine. The wall gives you feedback when your spine is in a more straightened alignment.

In a structurally balanced body, breathing causes a natural elongation of the spine. This occurs to the greatest degree when the chest is filled during inhalation. The lifting and widening of the ribs causes the vertebrae to separate from each other and the spine to lengthen. Practice of deep chest breathing in this position and in Door Hanging leads to a conditioning of this natural breathing/ alignment relationship. (Fig. 4.6) Once you have developed this spinal elongation, it will occur even in the more relaxed, daily-life breathing that is primarily abdominal. This opening and closing of the spine with breathing is an integral part of the normal body mechanism that pumps blood, Chi and cerebrospinal fluid around the central nervous system.

Fig. 4.6 *Stretching the Spine and Spinal Elongation Breathing.*

3. How to Practice Spinal Elongation Breathing

a. Inhalation

To enhance the effects of the Structural Training Position Against Wall and the use of the breath, first fully exhale. Then, inhale slowly and deeply through the nose, directing the breath up into the chest. The abdomen should remain in and not protrude. As you do this, visualize and feel the spine lengthen. This will happen automatically if you stay relaxed. Do not try too hard. Once you feel spinal elongation, you can refine this sense further by feeling a wave of elongation starting at the base of the spine, traveling upwards as you inhale.

b. Exhalation

As you exhale, continue to feel yourself lengthening upwards, rather than collapsing back completely. You will feel the structural muscles around the spine "take over". The lengthening upwards that occurs with exhalation is more subtle than that which occurs with inhalation, and is really a wave of support that prevents excessive collapse. This wave of support begins at the head, and travels downwards as you exhale.

c. Abdominal Tightening

Because of structural blockage in the chest, it may be necessary at first to tighten the abdominal muscles in order to direct the breath up into the chest. Do this if necessary. Otherwise the abdomen will protrude as you inhale with very little chest expansion. Over time, gradually use less and less force to hold the abdomen in while inhaling, until you can breathe into the chest without either intentional abdominal contraction or unintentional abdominal protrusion.

d. Daily Life Breathing

Breathing into the chest in this way is meant as an exercise to release structural blockage in the chest and lengthen the spine fully.

After you have finished practicing, forget about your breathing and let it flow naturally. Natural breathing begins in the abdomen and only expands the chest when you are very active and, thus, breathing very fully. Do not maintain this type of full chest breathing constantly in daily life or you may cause energy to congest in the chest and head.

4. Head/Neck Alignment as the Basis for Spinal Elongation and Upright Structure

Spinal Elongation breathing cannot lengthen the spine unless the head is held as if it is pushed back from the upper lip and lifted from its crown without strain. (Fig. 4.7) If the chin moves slightly forward and up, the neck collapses and the entire upper body will be collapsed and distorted. Then the spine will curve excessively and no type of deep, free breathing is possible. Even the wind pipe itself becomes constricted. This is the condition of most people's necks. For this reason, it is rare to find people in our culture who do not have chronic misalignment of the neck vertebrae.

Push back from the upper lip and lift the head as if from its crown.

Feel the head stretch up as if pulled by a string.

Feel the sacrum pull down the spine.

Sink the knees down.

(a) Elongation of the Spine.

Fig. 4.7 *Proper alignment of the head and neck is the basis for effective spinal elongation and upright structure.*

The feeling that the head is suspended from its crown and gently pushed back from the upper lip without strain should be applied at all times. It is the foundation for an erect upper body and free breathing. Appropriate alignment of the head and neck insures a healthy communication between the body and head. Thus, awareness spreads more fully to the whole body. In a higher meditation formula of the Universal Tao System called Lesser Enlightenment of the Kan and Li, one learns to observe oneself with the Inner Eye. In the body structure, conscious alignment of the head and neck without strain is the foundation for a greater awareness that results from self-observation and self-awareness. In the practice of Hatha Yoga, elongation of the back of the neck that results from head/neck alignment is called “the root of watchfulness,” or “the root of mindfulness”.

Even after balanced structural alignment becomes easy and natural, a very subtle intention to maintain head/neck alignment may be necessary. This slight lifting and moving back of the head is the single most important factor in erecting the entire body. The actual elongation and shifting back of the head is often only a very small change. Without it, however the chest, upper back and entire spine cannot come into alignment. This importance is due to the fact that the neck and head are the upper end of the column that we wish to lift. The importance of this one factor of neck and head alignment cannot be overstressed. Whole body integration is not possible without it.

It is useful to be familiar with the feeling of neck collapse that afflicts nearly everyone. After aligning the body, let the chin move forward and up, and thus out of alignment. Notice how the back of the neck shortens, the throat closes, the sternum sinks, the chest closes, the upper back arches excessively, the shoulders roll forward, breathing is restricted, and spinal elongation becomes impossible. Then practice a Spinal Elongation breath as the head is once again placed appropriately and feel the sense of full openness that accompanies it throughout the body.

Greater self-awareness, full uprightness of the trunk, and unstrained alignment of the head and neck are integrally related. The interplay of these three factors is particularly evident in Iron Shirt. The intention required to maintain head/neck alignment and the other aspects of fully aligned structure is an expression of the autonomous will of a self-aware being. Likewise, relaxed practice of fully aligning oneself develops this autonomous will in a beneficial way.

5. Door Hanging

Developing a straighter more elongated spine is the purpose of both the Door Hanging Position and the Structural Training Position Against Wall. In Door Hanging, however the arms are held over the head, which puts a traction on the spine and greatly increases spinal lengthening. (Fig. 4.8) Daily practice of Door Hanging for even a few weeks will lead to better posture, a more flexible spine, reduction of chronic back stress and a heightened awareness of natural structural alignment. Door Hanging will also help you to be aware of and control your psoas muscles, which are very important in many Universal Tao practices.

Fig. 4.8 *Door Hanging*

a. Basic Position

Roll up a towel and place it over the top of a door. Lean against the narrow edge of the door bringing the spine as flat to the edge as possible without discomfort. Follow all position details for Structural Training Position Against Wall, except those for the arms.

b. Lower Ribs/Middle Back

Maintain your attention at the lower ribs, and the middle and lower spine. Bring the arms overhead without letting the spine come away from the edge of the door. Feel that you are tucking the lower ribs in as the arms are brought overhead.

c. Hands/Arms/Shoulders

Grasp the towel fairly high, but with the elbows at least a little bent. Continue strongly to pull the shoulders down, and widen them to the sides. Do not hang from the towel. All of the body weight is still on the legs.

d. Shoulder Strain

If the shoulders are strained in this position, hold the towel lower to decrease the shoulder stretch. If necessary the elbows may be only shoulder height or even lower. If a towel is not long enough for this, use a thick rope. Gradually you will be able to hold the towel higher as your shoulder joints become more flexible. The first position of backbend exercise will help limber your shoulder joints.

e. Breathing/Full Spinal Elongation

While maintaining this position, practice breathing up into the chest, as in Spinal Elongation breathing or the Structural Training Position Against Wall exercises described above. Along with the traction of the arms overhead, filling the chest during inhalation will result in tremendous spinal elongation. It will not take much practice to feel your spine start to lengthen. As you feel this start to happen, after every five breaths or so, bring the pelvis and the lower and middle spine a few inches away from the door edge. This allows the lengthened upper spine to lengthen further down the door. Again bring the spine and pelvis back to the door edge and continue practicing.

f. Time

If possible, practice from one to three minutes or longer. Do not continue if discomfort begins. Straining will not open your spine up faster; it will add more tightness. Regular practice and respecting your own limits will inevitably lead to very rapid spinal elongation and realignment.

g. Leaving the Position

To leave the Door Hanging position, walk the feet back toward the door and come straight up. Do not come up by pushing the pelvis away from the door first.

h. Full Hanging

If you are completely comfortable with steps a through g, you can end by letting your full weight hang from the towel. Gradually bend the knees and slide down the door edge until the arms are straight and holding you up entirely. All other details of practice are the same. Hold this for as long as comfortable, which may only be a few seconds, then come up. Be sure to continue stabilizing the shoulders by feeling them pull down and widen to the sides. Practice of Full Hanging is very strengthening and produces tremendous spinal extension, but must not be attempted if it causes strain.

6. Psoas Muscles

a. Feeling and Using the Psoas Muscles

Once you feel comfortable with the details of Door Hanging, consciously relax the abdominal wall while you practice. As you soften the abdominal muscles, relax and straighten the spine against the door edge. You will be able to feel a sensation of ‘pulling in and up’ deep inside behind the front lower ribs. This is the left and right psoas muscles working. (Fig. 4.9)

Feel this same sensation of pulling in and up deep inside behind the front lower ribs when you walk and sit. This will keep your lower spine lengthened and comfortable without needing to “suck in your gut”. Pulling in the abdomen to flatten the belly or straighten the lower spine will hamper your energy flow and organ function. However, working the psoas properly will not only align the lower spine, but will also flatten the belly without tightening it.

Fig. 4.9 *Psoas Muscles*

When you carry the head as if gently pushed back from the upper lip and suspended from its crown, the tendency is to let the lower ribs push forward. To prevent this, feel that you are keeping the lower ribs tucked back slightly. Remember to keep the lower ribs tucked back from inside, not from tightening the abdomen. This will put you in touch with the psoas alignment. You are not actually sinking the lower ribs back, for this would cause you to slouch. You are instead keeping them in a straight line with the abdomen below and the chest above. Feeling the tucking sensation will stabilize the mid-torso, and allow the whole spine to lengthen equally. The feeling, once it is developed, is that there is a subtle pulling back and up deep inside at the lower rib area. Experience this first in Door Hanging, then apply it at all times. Like all structural improvement, intention is required initially. Gradually it will become automatic.

Door Hanging is the key to developing this psoas feeling. If the spine remains on the door and the abdomen is soft, then you need

only relax and gradually sense what is already happening inside. It also helps to have a good mental picture of the anatomy involved. Once you have developed this psoas feeling, you will find how important it is in all of the Universal Tao practices. During your practice of Iron Shirt, when you are using reverse breathing to pack the abdomen, slightly increase the psoas work of pulling in and up behind the front lower ribs. This will allow you to pack even more fully, but without tightening the abdominal wall to do it. Gradually, you will be able to pack very powerfully with very little abdominal tension at all. When you thrust back at T-11 to pack the lower back, apply the psoas work very strongly and you will be able to focus your force to the T-11 area much more directly.

b. Psoas Muscles and the Six Healing Sounds

The relationship between the psoas alignment and the lower area can be felt very well when practicing the Six Healing Sounds. (For detailed information on the Six Healing Sounds, see the book, *Taoist Ways to Transform Stress into Vitality*.) Remember to keep the lower rib area back using the psoas muscles, not by tightening the abdomen. For the Lung, Liver and Heart Sounds, be sure to keep the lower ribs held in. Then, while exhaling and making the unvoiced sound, you can put pressure within each organ more effectively. While exhaling continuously increase the pressure to the particular organ area. At this point you will feel that you are “wringing out” the stale energy from each organ with this pressure.

Using the correct psoas alignment as you inhale will allow you to direct the fresh energy from your breath directly into the organ are more easily. When doing the Liver Sound, tilt to the right and slightly forward. Do this tilting from the lower rib area. This will increase the pressure you can apply to the liver. For the Heart Sound, tilt to the left and slightly forward, and stretch the heart meridian by stretching the little finger. For the Lung Sound, stretch the lung meridian by stretching the thumb.

For the Kidney and Spleen Sounds, the lower ribs should sink back so that you can apply pressure in each organ. When the lower ribs sink back, you are really accentuating the psoas stretch. Using the psoas muscles corectly will improve your practice of the Six Healing Sounds. By simply practicing the Six Healing Sounds you will become aware of the psoas alignment, particularly when the arms are overhead.

7. Standing Pelvic Alignment

Balanced alignment of the psoas muscles is also essential for correct leg movement and pelvic alignment. However the feet are placed, be sure that the pelvis is not tilted back or pushed to one side. The knees should remain at least slightly bent, and the arches of the feet lifted by distributing the weight equally on the three corners of each foot.

If the pelvis is askew or the knees locked back, there is stress in the lower back and knees and integration between the lower and upper halves of the body becomes impossible. For most people, maintaining structural alignment in the lower body while “”standing around” requires more intention than aligning the upper body, though it is also dependent on upper body alignment. This is due to weakness in the legs and buttocks. Maintaining an aligned stance during daily life will do a great deal to strengthen the lower body, improve energetic flow and heal lower back problems.

8. Sitting Posture

When you sit erectly for meditation, be sure that the “sitting bones” of the pelvis are directed straight down into the chair seat. Tucking the chin slightly will align your spine and give a gentle pull to the spinal cord. Then energy will flow more easily into the back portion of the Microcosmic Orbit. If you find that placing your hands in your lap causes your shoulders to roll forward or your upper back to become uncomfortable, place your hands on a thin cushion or folded blanket in your lap to alleviate this. When your Chi flow is strong, this will no longer be a problem. (Fig. 4.10)

Fig. 4.10 *Practice the Microcosmic Orbit while in the sitting position.*

9.Shoulder Widening Exercise

The Shoulder Widening Exercise develops natural alignment of the shoulders by widening the shoulder blades out to the sides, rather than rolling them forward or pulling them back. In all body segments, healthy alignment leads to an increase of space. If the shoulders are pulled back, then the width of the upper back is decreased and the upper spine is compressed. If the shoulders are rolled forward, the chest collapses and its width is decreased. However, if the shoulders are dropped down and widened out to the sides, then there is an equal opening of space across both the front and back of the upper torso.

In several of the Iron Shirt exercises, flexibility and control are developed by widening the shoulder blades out to the sides. One feels the chest sink in, but not collapse, and the shoulders drop down. This movement makes the necessary connection to the rib cage, which will permit the Chi energy to flow, thus giving the practitioner scapulae power. Remember to let the shoulders return to a natural “idling” position of dropped and widened out to the sides after your Iron Shirt practice. Do not permit them to roll forward at all so that there will be no significant loss of potential scapulae power.

a. Position for Practice

You can practice while sitting, standing, or in the Structural Alignment Position Against Wall. Be sure that the spine is erect. Aligned placement of the shoulders must begin with an erect neck head and an erect upper back/chest.

b. Hands/Arms/Applying Force

Hold each wrist with the opposite hand. Keep the arm down low near the torso rather than lifted. Gently, but firmly, pull the elbows out to the sides without letting go of the hands. Be sure the shoulders are kept consciously dropped. Let the force at the elbows be reflected up to the shoulder joints which will increase the sense of widening at the shoulders. This is a subtle feeling, but can very definitely be felt. (Fig. 4.11)

Fig. 4.11 *Shoulder Widening Exercise*

c. Releasing the Force

Slowly release the pulling out of the elbows and the active drop ping and widening of the shoulders. Maintain the same dropped and widened position of the shoulders which are now in a relaxed state with the arms hanging loosely at your sides.

d. Rolled-Forward Shoulders

If your shoulders are usually rolled forward, you will also need to roll them back simultaneously while performing this exercise. Be sure not to roll them back so far that the shoulder blades begin to move toward each other.

e. Practicing without Holding the Wrists

While practicing this exercise, feel which muscles are doing the work of active shoulder alignment. Muscles in both the chest and back will be working. Then, after mastering (a) through (d) above, begin to practice actively aligning the shoulders while the arms remain at your sides. You will be able to align the entire upper body easily and quickly whenever you wish. Be sure to maintain the dropping and widening of the shoulders, even when you raise the arms above shoulder height. This stabilizes the shoulders and makes arm movement steadier and more grounded while lessening the build-up of tension in the shoulders and neck.

10. Backbend

The Backbend stretches the upper back and spine opposite to the normal direction of its curve. This helps lessen the often excessive forward curve of the upper back, limbers the shoulder joints, and opens the chest.

The Backbend is the most important stretch for a healthy upper spine and freer breathing pattern. The Backbend is also very good preparation for the Iron Bridge.

a. Back Position

Roll up a blanket tightly and place it on the floor. Lie over the blanket so that it is just below the top at the shoulders. Lengthen the spine by tucking the pelvis forward to straighten the lower spine, and tuck the chin in to lengthen the back of the neck. If there is any discomfort in the back, the blanket is too high. (Fig. 4.12)

Fig. 4.12 *Position of Back During Backbend*

b. Neck Support

If there is any discomfort in the neck after tucking in the chin and elongating the back of the neck; it is essential to place the head on another blanket or cushion. This extra neck support should be lower than the one under your back, but high enough to eliminate any neck strain and allow you to feel that the back of the neck is lengthening.

As you practice over time and gradually increase the height of the rolled-up blanket, it may be necessary to use a neck support, even though one was not needed when you used a lower rolled-up blanket. This is particularly true in the first position when the blanket is just below the top of the shoulders.

c. Arms

Slowly bring the arms back to rest on the floor above the head with the elbows well bent. Only do this if it can be done without strain. If bringing the arms back causes discomfort, they can remain at the sides, or be brought back only so far as produces stretch without strain. If brought back only part way, the arms can either be held there or placed on a cushion, piece of furniture or other prop. As the shoulder joints become more limber, the arms can be brought lower. As the arms are brought back, be sure to continue keeping the shoulder blades dropped and widened.

d. Breathing

While relaxing in this Backbend posture, breathe deeply and slowly, directing the breath to fill the chest rather than expand the abdomen. This greatly increases the stretch of the spine and chest. If necessary, hold the abdomen in while inhaling so that chest expansion can occur. It may seem very difficult initially to breathe up into the chest while practicing the Backbend, but practice will be rewarded by a great deal of structural opening in the chest and upper back.

e. Several Positions for Blanket

In order to limber the whole upper spine and shoulder joints practice the Backbend in each of the following positions. Do not practice with the blanket below the sternum.

First position: The blanket is just under the tops of the shoulders. Second position: The blanket is under the middle of the chest. Third position: The blanket is under the bottom of the sternum.

f. Time/Resting between Positions

Remain in each position for several minutes or more if you are comfortable. Most people find the Backbend very pleasant from the beginning: similar to getting a back massage. If the Backbend is initially a difficult stretch for you, leave the position and rest before continuing to the next position. Once the Backbend is easy and pleasant, you can shift from first to second to third positions on the blanket without coming up first.

g. Leaving the Position

To get up after the Backbend, use your hand to lift your head to a chin-on-chest position, then roll off the blanket to one side before sitting up. This will prevent strain on the neck or back.

h. Forward Bend

Ideally, bend over forward and relax after the Backbend and upon completion of the Iron Bridge. The knees should be at least slightly bent. If the knees are locked back, they will be strained. If you want to stretch farther forward do not increase the forward curvature of the upper spine in doing so. Stretch forward by letting the hamstring

muscles at the backs of the thighs lengthen. If you are stretching forward vigorously, or are not very limber, bend the knees much more while stretching so that you can lay the whole abdomen firmly on the thighs. Then, test your flexibility by slightly straightening the knees while keeping the abdomen on the thighs. Practicing in this way will guarantee that you are only stretching the lower spine and hamstrings, and not arching the upper spine.

i. Increasing the Height of the Blanket

As the upper back becomes more limber, continue to increase the height of the rolled-up blanket (s) in order to feel a strong stretch but no discomfort.

11. Warrior Poses 1 and 2

Practice of both Warrior Poses leads to great flexibility and strength in the buttocks and legs. As the strength and flexibility develop, there is structural opening and realigning in the hip/thigh /lower back area that is essential in Iron Shirt. The awareness created in the Warrior Poses develops the ability strongly to use the lower body in movement or in standing, without compressing the lower spine or neck.

a. Warrior Pose 1 (Fig. 4.13(a) and (b))

(1) Feet

Stand with the left foot straight ahead and the right foot turned in 45 degrees. A line through the middle of the left heel should intersect the middle of the arch of the right foot. Throughout the exercise, keep equal weight on the three points of each foot. The distance between the two feet should be as wide as possible without losing the indicated alignment for the lower back and back leg.

(2) Pelvis/Lower Back

Start with both legs straight at the knees. Strongly turn the pelvis under, so that the lower back is straight. This will require strong buttocks work. It is absolutely essential that the lower back remains in this straightened position throughout the exercise. If the feet are too far apart, this will be impossible.

Fig. 4.13 *Warrior Pose One*

(3) Spinal Extension

After flattening the lower spine, extend upward through the whole spine. Hold the head as if it is gently pushed back from the upper lip and lifted from its crown. Be sure that the front lower ribs remain in. Do not permit the lower rib area to push forward. This is particularly true in these Warrior Poses, and more so in Warrior Pose 2 than in Warrior Pose 1. Maintain a full extension of the spine throughout the exercise.

(4) Moving Into the Full Pose

Now exhale and bend the left (front) leg, until the left knee is directly over the left ankle, keeping the right (back) leg as straight as possible. Do not let the left knee move to the right as it comes forward. This would prevent the groin from opening. The knee must remain exactly over the ankle.

(5) Distance Between Feet

If the feet are too far apart you will not he able to bend the left knee all the way over the left ankle without arching the lower spine and/or bending the back leg a lot at the knee.

(6) Back Leg

It is all right to let the back leg bend a little to keep the lower spine straight. As you are holding the position, gradually straighten the back leg more at the knee until you reach your limit. Do not straighten it to the point where your lower spine begins to arch.

(7) Time Breathing/Leaving the pose

Maintain this position for one to two minutes, breathing slowly and deeply up into the chest to elongate the spine. Breathe continuously without any pause. Come out of the position while exhaling by first straightening the front leg. Then, turning, both feet parallel to each other, place them together. Repeat for an equal time on the opposite side. (Simply reverse left and right when following the instructions).

b. Warrior Pose 2 (Fig. 4.14(a) and (b))

(1) Feet

Stand with both feet facing straight ahead, the right foot several feet behind the left foot and several inches to the right. Lift the heel of the right foot off the floor. Throughout the exercise, keep equal weight on the three points of the left (front) foot and equal weight across the balls of the right (back) foot. The distance between the two feet should be as wide as possible without losing the indicated alignment for the lower back and back leg.

(2) Pelvis/Lower Back

Turn the pelvis so that the pelvis and whole torso is square with the front thigh, The navel will then be pointing exactly in the direction of the front foot. Begin with both knees straight. Strongly turn the pelvis under, so that the lower back is straight. It is absolutely essential that the lower back remains unarched throughout the exercise. If the feet are too far apart, this will be impossible.

Instructions (3) through (7) for Warrior Pose 2 are identical to Warrior Pose 1.

(a) Feel the stretch

(b) Skeletal Position

Fig. 4.14 *Warrior Pose Two*

(8) Arms Position When Warrior Pose 2 Is Developed

When your practice has become familiar and strong, add the following arms position. Extend both arms straight up, while keeping the shoulder blades dropped and widened. The palms face each other. Pay particular attention not to let the lower rib area extend forward as the arms are extended upward.

(9) Arms Position

Because this is a very strengthening exercise, it requires strong concentration and strong (but not stressful) exertion to maintain the straight lower spine and straightening back leg. When first learning either Warrior Pose, it is usually best to use the arms to aid pelvic alignment. One hand pushes the sacrum down and forward from the back, while the other hand pushes in and slightly up at the lower ribs from the front. (Fig. 4.15) This helps greatly in keeping the spine straight, and you can keep all of your concentration on the lower body exertion.

Fig. 4.15 *Arm Position for Beginners*

(10) Further Details of Practice

If practiced two or three times per week, strength will develop rapidly and flexibility slowly, but surely. As flexibility increases, the feet can he held farther apart from each other until finally the front thigh will be parallel to the floor while the other details of the form are maintained. This final position requires tremendous flexibility and strength. Most people will not achieve this for a long time. Just remember that an arched lower back or well-bent back knee means the feet are too far apart. It is a good idea to check your lower back in a mirror when first learning. You may be quite suprised how close the feet have to be to practice properly.

(11) Arms Position when Warrior Pose One is developed.

When your practice has become familiar and strong, add the following arms position. Extend both arms strongly at shoulder height directly to the front and back. Let the eyes gaze at the tip of the second finger of the forward arm. Keep the shoulders pulled down, rather than hunched. Extend from the fingertips through each joint to the shoulder blades.

Chapter 5
Body Construction - Iron Shirt

This chapter is concerned with the construction of fasciae and their structural interrelationship with bones, muscles, and tendons. Further, instruction on the muscle tendon meridians (or acupuncture routes) of the body increases an awareness of the body's construction, which awareness is vital to the work at hand: the creation and storage of Chi energy and its circulation throughout the body. Dr. Michael Posner, a practicing Chiropractor, provides an introduction to this chapter by discussing the major keys to good health through an understanding of body structure. Learn as much as you can about the way that you are constructed because it will speed your progress. Knowing what makes you tick and how you are put together is very important in putting you in contact with yourself through Iron Shirt Chi Kung.

I. Iron Shirt and Chiropractic
by Dr. Michael Posner

In all health professions nowadays, one thing that is commonly considered detrimental to our health is the phenomenon of stress. Various methodologies and theories have emerged that aim to help minimize the amount of stress one has to cope with. I wish to discuss the unavoidable stress of gravity on a body's structure when in an upright position, some health implications, and how, through proper alignment of bone structure, we can efficiently minimize stress and increase good health.

As gravitational forces act upon our bodies when we are upright, various groups of musculature work so that we can stay erect. To resist gravity, these muscles must exert a certain amount of energy. These anti-gravity muscles help to stabilize the bone structure in such a way that movement is possible in an upright position. The success that a person has in meeting the constant stress of gravity may have a subtle set profound influence on his or her quality of health, performance and emotional states.

Fig. 5.1 *Line of Gravity in a Body's Structure*

At this point, it is necessary to understand some basic concepts such as “line of gravity” and “center of gravity” as they relate to our bodies’ structures. The line of gravity, viewed laterally (Fig.5.1), anteriorly and posteriorly, falls from above downward through the earlobe, slightly behind the mastoral process (or the attachment of muscles behind the ear of the temporal bone, the bone located at the side of the head which contains the organ of hearing), through the odontoral process (a toothlike projection from the body of the axis or second vertebra of the neck upon which the first cervical vertebra rotates), through the middle of the shoulder joint, touches the midpoint of the frontal borders of T-2 and T-12, then falls just slightly outside to the sacrum, slightly behind the axis, or support, of the hip joint, slightly behind to the patella (or kneecap), crosses in front to the middle malleolus (the hammer-shaped bone on each side of the ankle) and through the outer bone of the ankle to fall between the heel and metatarsal heads. When viewed from the back, the· line of gravity passes through the occipital bone (or the lower back part of the skull), C-7 and L-5, the coccyx (or lower end of the spine) and pubic cartilage (or supporting tissue of the pubic bones) and bisects the knees and ankles.

As gravity acts on all parts of the body, one’s entire weight can be considered as concentrated at a point where the gravitational pull on one side of the body is equal to the pull on the other side. This point is the body’s center of gravity. Generally speaking, the center of gravity is located in a region directly in front of, and about one and a half inches above and below the level of the navel. Its location varies according to body type, age, sex, attitude, breathing patterns, stress level, or abnormal neuromusculoskeletal disorders.

The most economical use of energy in the standing position occurs when the vertical line of gravity falls through a column of supporting bone in alignment. If weight bearing bony segments are aligned so that the gravity line passes directly through the center of each joint, the least stress is placed upon the adjacent ligaments, tendons and muscles. When this alignment is achieved, the antigravity muscles which expend much energy to resist the downward pull of gravity need not work as hard. The bones now take on a more active role in supporting our bodies in an upright posture, allowing the muscles to relax and rest, thus conserving energy and diminishing stress and tensions developed from unbalanced bone and muscle patterns.

Health potentials can be realized only when balance of structure exists so that both nerve energy and Chi flow freely.

There are many negative health effects produced when these antigravity muscles are working either too much or too little. Muscles function to move bones and, if muscles are either very tense or too flaccid, unilaterally or bilaterally they will create a derangement in our bone structure. When a person feels knots or spasms in their muscles, this means that the muscle has gone into a state where it has a sustained contraction. A contraction means that the muscle fibers have shortened. As this occurs, bones can be pulled out of their proper alignment. When spinal vertebrae are involved in this structural imbalance nerve roots can be irritated, thus interfering with the function of the nervous system. When the nervous system is interfered with, a multitude of health problems can arise since the nervous system is the means by which all body functions are regulated and monitored.

Health potentials are enhanced when proper communication between the brain and all body parts is maximized. Since this is the function of the nervous system, the structural integrity of our musculoskeletal system is of prime importance. Structure is said to determine function.

The chiropractic profession deals with problems of health and disease from a structural point of view, with special consideration given to structural intergrity, spinal mechanics and neurological relation.

Thus far, it has been shown how gravity interrelates with our musculoskeletal systems, and how this stress on our structure could affect our health in general. Of course, other factors such as emotions, toxins and trauma affect one's structure as well. Muscles store and harbor tension and stress from various sources, but the point is that structural imbalance is the end result and, in turn, our functionability is diminished, as well as our health.

From this standpoint, logically speaking, one must seriously consider how to go about producing optimum structural integrity in a balanced way. To do this, it is necessary to understand the value in learning about alignment; learn the principles from a competent source; recognize one's own problems in this area; and then apply the knowledge to oneself.

As a chiropractor, I am concerned with correcting each patient's structure to allow the body's optimum function to be restored. But

I can only do so much for a person and, in reality, one's health is one's own responsibility. Therefore the necessity for everyone to learn about structure for themselves, and to recognize what is right or wrong is essential for good health. I believe that some of the major keys to good health are proper bone alignment, muscle balance (symmetry), flexibility of joints and fasciae, proper breathing, relaxation and proper body utilization. Finally, of extreme importance, is to learn to conserve, build and store energy that is usually wasted when structural imbalance exists.

Exercise is an indispensible means to attain the above keys to health. The kind of exercise, therefore, must not be unilateral, as most sports are and not tension producing (i.e., not in excess). Well-toned muscles and fasciae are desirable, but not too much or not too little. Balance is, therefore, the key when choosing an exercise system. The exercise system should be one that develops body symmetrically, reduces stress, teaches proper alignment and one that shows how to store, increase and conserve vital energy.

I am a chiropractor who sees health to a great extent dependent on symmetry or balance of body structure and so became interested in the Chinese art of Iron Shirt Chi Kung. Iron Shirt emphasizes the importance of maintaining a bone posture in such a way that the gravitational forces acting to push us down to earth can be transmitted through the bones into the earth rather than wasting energy resisting with the muscles or putting undue stress on the joints. The Iron Shirt postures align the vertebrae in such a manner as to permit the line of gravity to pass through the center of the vertebrae. Now the force is not being resisted, but rather transmitted. The muscles, ligaments and tendons can relax instead of working to resist. Integration of all structural tissues for optimum functions is created by the Iron Shirt postures. Relaxation, proper breathing, symmetrical muscle development, tendon and ligament strengthening; as well as strengthening the bones, result from Iron Shirt practice.

Another very important concept is to learn to experience and recreate one's proper center of gravity. I say ''proper'' because generally one's center of gravity changes from the navel area up into the chest or higher as one confronts life situations and stresses. This interferes with normal breathing patterns which should be originating from the abdomen as well as the chest. One simply has to compare a child's breathing to the breathing of most adults,

and it will become evident that adults mainly breathe from their chests with very little abdominal or diaphragmatic action. It is very important that we utilize our diaphragm when breathing since the diaphragm descends upon and massages our internal visceral organs. This action enhances circulation and blood flow as well as increased oxygen to all of our vital organs.

The increased energy, structural integrity and phenomenal health benefits gained from Iron shirt practice, in my opinion, are outstanding. I feel that its practice can develop future health potential in a wholistic way: physically, mentally, emotionally and spiritually. When one aligns oneself with Iron Shirt practice, he also aligns himself with the harmony of the universe.

II. Construction of Fasciae, the Relationship of Fasciae to Bones, Muscles and Tendons, and Acupuncture Routes, or Muscle Tendon Meridians

A. Fasciae: Protectors of your Vital Organs

After an ovum is fertilized it differentiates into three main systems, the ectoderm, endoderm and mesoderm. Fasciae are derived from the mesenchyme, which is a subdivision of the mesoderm.

Nuclei in the mesenchymal substance give rise to bones, ligaments, muscles and tendons. Then a more structureless system of casings, sheaths and tissue takes shape around the various centers which have been developed.

The fascia is a sheath and its function is that of support, protection, mechanical advantage, some degree of contractility and lengthening, and energizing the organs and muscles to let Chi energy flow through easily. The fascia is a type of connective tissue which is avascular (or without blood vessels), translucent and tough. It is intimately involved with muscles, encasing them and enhancing their duties by various means, which include separating them into distinct bundles, providing bonds of especially tough fibers to offer support for purposes of leverage, and allowing for lubrication by means of fluids released from the tissues of an organ or part so that these enclosed muscle groups can slide over each other.

Fasciae are present throughout the body, separating, connecting, wrapping and supporting various parts of it, and finally on a superficial level, encasing the whole body in a shimmering sheath just beneath the level of the skin.

These superficial fasciae are very resilient, due to the fact that the fibers run in a criss-cross pattern. Damage by trauma alters them, making them denser and shorter, a characteristic of scar tissue.

Since this network is present throughout the body, it might explain the mechanism of trigger points, whereby the malfunction of internal organs is evidenced as pain in small areas often quite remote from the organ involved.

This might also explain another mechanism, the one found in reflexology. Certain areas of the feet might at varying times be painful, coinciding with organs in the body.

There is another little-recognized function of fasciae: that of providing muscle tone. In fact, low blood pressure is associated with a hypotonus condition of fasciae and hypertension with a hypertoned fasciae. (This means that a condition of the fasciae exists in which a high or low pressure causes too much or a limited diffusion of solutions throughout the fasciae.) There are several types of fasciae, all built of collagen. The most widely distributed is the loose connective tissue, which is the most flexible and most elastic of all, its fibers going in all directions. It consists of protein imbedded in a liquid ground substance and is very important to water metabolism and to other fluid exchanges. Tough, fibrous tissue can be found in areas where more tensile strength is required. Here the tissue is tough and unyielding, resulting from the parallel arrangement of bundles of fibers which are also found in tendons and ligaments. Huge fascial sheets found in the body are comprised of such tissue. All variations in fasciae, however, stem from the mesoderm.

The fasciae, though avascular themselves, furnish support for blood vessels, nerve fibers and vessels of the lymphatic system and contain the nerves which convey fluid into the veins and sensory receptors which are responsive to internal stimuli from the muscles, joints and tendons. The fasciae are also responsible for maintaining the relative positions of the various organs and muscles in the body.

1. Fasciae Exist in Three Layers (Fig.5.2)

a. The Superficial or Subcutaneous Layer: The superficial layer (the layer beneath the skin) is composed of two subdivisions: (1) a layer which can contain a tremendous amount of fat in those who are overweight; and (2) the more internal area of the subcutaneous fasciae. This is the most elastic of the various fasciae, since it has to accommodate varying amounts of fat storage, swelling when there is inflammation and muscular activity and distension when the muscles are worked. In this layer we are able to store Chi energy. As this layer of the body fills up with Chi, it is unavailable for storage of fat by the body. By practicing Iron Shirt packing, you can burn out the fat already existing in this layer.

Fig. 5.2 *Fasciae exist in Three Layers.*

b. The Deep Layer: The deep fasciae, which are denser and have a smooth surface, allow for a reduction in friction as one surface slides over another. The deep fasciae produce bundles of fibers in parallel arrangement, giving great tensile strength. This sort of tissue is formed around the ankles, knees, wrists and elbows where it acts as an anchor against which muscles can pull. Fasciae also act in the capacity of a nutritional storehouse, as a source of insulation and support by means of fatty content, and as a barrier to impede the entrance of foreign organisms and objects.

The deep fasciae keep muscles in their distinct shapes and positions. These fasciae, which are the densest and have the greatest tensile strength, are made up of three types. The first and outermost is the external surrounding layer. These cover large muscle groups. The intermediate membranes separate individual muscles and, finally, the internal surrounding layer covers the external surfaces of the body cavities.

c. The Subserous Layer or Peritoneum: Internal to the intermediate membrane lie the subserous fasciae, or fascial layer beneath the membranes of the body which line all of the large cavities of the body. There are two types: (1) the parietal (or cavity wall) fasciae which cover the inner surfaces of the body cavities such as the thorax or abdomen; and (2) the visceral (or internal organ) fasciae which cover the organs in those cavities such as the lungs or liver. Again the main functions are protective and supportive, as well as a means of lubrication. During irritation these serousal surfaces sometimes adhere to one another, causing great pain.

2. Iron Shirt is Concerned with the Fasciae of the Whole Body

Iron Shirt is concerned with the fasciae of the entire body; that is to say it primarily involves the subcutaneous layer (beneath the skin) which covers the whole body. Iron Shirt is specifically concerned with the fasciae in the lumbar region, which are thicker and more fatty than ordinarily encountered. These two divisions of fasciae are joined by spindle connections, which are columnar shaped fibers between which the fat is deposited.

The lumbar fasciae are composed of three layers. The most super ficial one extends out from the middle, from the spines of the lumbar verterbrae (situated near the lower rib and hip bone) and

the spine of the sacrum (the bone formed by the union of five vertebrae between the lumbar and caudal, or tail) region, constituting the back part of the pelvis and sacrospinalis ligament (a muscle which extends vertically along the length of the vertebrae in that area) and also out to the sides to the intermediate layer. The intermediate layer extends from the middle of the area of the lumbar and out to the sides, where it joins with the superficial layer. These two layers envelop the muscles which hold a person erect.

The fasciae also extend upward to the lower portion of the twelfth rib and, at its lower extremity are attached to the iliac crest (the large upper part of the pelvis) and the iliolumbar ligament, both in the small intestine area. The deepest layer envelops the quadratus lumbarum (a muscle which extends out from the area of the lumbar to join the other two layers at the sides, as previously described.) The three layers together comprise what is technically known as the “Origin of the Transverse Abdominis Aponeurosis”.

The deep fasciae of the upper back are made up primarily of thoracic fasciae, which are thin coverings of the extensor muscles of the thoracic spine (vertebrae between the neck and abdomen, enclosed by ribs). Its lower border joins with the most superficial part of the tri-layer of the deep lumbar fasciae, while its upper portion combines with the cervical and trapezius fasciae. Attaching along a mid-line composed of the spines of the thoracic vertebrae, the deep fasciae of the upper back extend out to the sides following the rib angles and the fasciae of the muscles between the ribs.

The deep fasciae that enclose the rhomboids (two muscles that attach to each shoulder blade) and muscles of the posterior (or back) are considered to be separate from the thoracic fasciae, though there is no actual separation between the two.

Out to either side the axillary fasciae (covering the armpit) are to be found, serving as a protective layer over the axillae which are practically devoid of muscular tissue. They also partially enclose the back and side muscles, blend in with the thoracic fasciae, and are connected to the fasciae beneath the spine. In turn, the deltoid fasciae (covering the triangular muscle of the shoulder and upper arm), at about the level of the fourth thoracic vertebra and the mid-scapular (mid-shoulder blade) line, connects with the fasciae beneath the spine and is anchored to the spine and acromion process (the shoulder blades’ projections which form the points of each shoulder).

All of the various layers just mentioned combine to form the continous fascial network of the back.

The deltoid fasciae extend out from the spine at the scapulae to the clavicle (or collar bone). There they merge with the pectoral fasciae (covering the breast). The deltoid fasciae also extend laterally from the shoulder into the arm where they become known as the brachial fasciae. These brachial fasciae join with the pectoral and axillary fasciae and are attached to the epicondyles of the humeri (covering the large rounded prominences associated with the shoulder joints) on the upper end of each humerus (bone of the upper arm) as well as the olecranon of each ulna (or the curved part of the ulna bone at the point of the elbow). (The ulna bone is one of two bones in the forearm and is on the same side as the pinky finger. The other forearm bone is called the radius.) The brachial fasciae are thin where they cover the biceps and thicker over the triceps.

The interbrachial fasciae join as one with the brachial fasciae and extend from the epicondyles of the humeri to the remotest ends of the radius and ulna bones.

The pectoral fasciae are thin sheaths connected to the clavicle and sternum (or breastbone) and extend to the deltoid, brachial and axillary fasciae and also the outer surrounding layer of the abdominal fascia. They also attach to the diaphragm. Beneath the pectoral fasciae lie the pectoralis major muscles. Beneath those are fascial sheaths called the clavipectoral fasciae that enclose the pectoralis minor muscles. This is found between the pectoralis minor and the thoracic body wall.

These fasciae, attached to the clavicle and enveloping the artery running beneath the clavicle, extend to the first rib, the coracoid process of the scapula (the bone that unites with the scapula to form the cavity through which the arteries of the scapula and temporal bones run) and the axillary fasciae.

The ribs comprise the foundation of the thoracic body wall and are covered exteriorally by the external intercostal fasciae (or fasciae between the ribs). This sheath, extending in the direction of the head, joins the scalene fasciae (the fasciae covering the deep muscles attached to the cervical vertebrae and first and second ribs, acting to flex or bend the neck). Extending downwards towards the lower abdomen, this sheath joins with the fasciae that separate the external and internal oblique muscles of the abdomen.

The interior surfaces of the ribs are covered by the endothoracic fasciae (surrounding the muscles within the thorax). These extend toward the head, blending with the prevertebral fasciae (covering the vetebrae which are at the beginning or top of the spinal column), while in their extension to the lower abdomen they connect to the internal surrounding layer of the abdominal wall. The subcutaneous fasciae of the abdomen are soft and pliable, increasing in tensile strength as they extend out to the sides. The highly elastic deeper portion of the subcutaneous fasciae are attached to the linea alba and the inguinal (or groin) ligament. (Alba is a white substance carried by the central nervous system.) The outer investing layers of the deep abdominal fasciae unite with the fasciae of the back and the breast. In their extension downward they connect with the fasciae lata (the external fasciae of the thighs), symphysis pubis (the junction of the two bones which join with a third to form the arch on either side of the pelvis), and the aponeurosis (the white fibrous tissue which forms the attachment of the external abdominal oblique muscles).

The surrounding internal layer unites with the deepest portion of the thoraco-lumbar fasciae, the pelvic fasciae and the fasciae of the diaphragm and are commonly referred to as the transversalis fasciae. These cover the external surface of the abdominal cavity wall, the lumbar vertebra bodies and the psoas major muscle.

The various fascial layers which have been described are integral to the cultivation of Iron Shirt as the fasciae into which we pack Chi. As previously described, this Chi will then form a protective cushion in the body which is also a storage place from which Chi can be retrieved when required.

B. Cleansing the Marrow/Changing the Tendons

1. "Cleansing the Bone Marrow"

The process of transforming sexual energy for storage in the brain and bone marrow, cleansing the internal organs, and restoring the organs to proper function is known as "Cleansing the Bone Marrow"

By circulating Chi in the Microcosmic Orbit and cleansing the "inner marrow" (which, as described in Chapter 1, increases the quantity of blood cells, a vital source of life-force), your system is cleansed of pollution. With the routes cleared, Chi flows freely to

where it is needed and then it is said that the whole body is filled with Chi. When a person ages, the bone marrow begins to dry out and produces fewer blood cells. At that time, the body fills the empty space within the bones with fat. In order to fill the empty bones with renewed energy to revitalize the marrow to a youthful condition, we need to transfer sexual energy which can be stored in the bones while simultaneously burning out fat.

Cleansing the bone marrow, maintaining healthy organs and changing the tendons lead to a strengthening of the muscles, tendons and ligaments, a condition described as one in which the inside of the body is clean and the outside is strong. All three levels of Iron Shirt practice are involved with strengthening and rebuilding the fasciae, tendons and bone marrow.

2. "Changing the Tendons"

Using various methods, Chi can be gathered from internal organs and led out to the fasciae surrounding them whenever necessary. When sufficient Chi has been accumulated, it is guided out along the fasciae between muscle groups and finally to the tendons which themselves are included in fascial sheaths until the entire body is filled with energy.

Tendons connect muscles to bones, are stronger than muscles and last longer. Fewer cells and smaller blood supplies are required to maintain and develop the tendons. Iron Shirt is designed to strengthen and develop the tendons so that movement no longer depends strongly upon the muscles.

In Taoism your health is said to be impaired if your tendons are crooked, loose or weak. Diseased and crooked tendons will cause you to be thin and if the tendons are no longer resilient, this causes you to be easily fatigued as well. The fasciae can become restricted due to injury, resulting in scar tissue which is tougher and tends to contract and pull upon the surrounding tissues and tendons, impeding blood flow and interfering with the passage of Chi. Emotions can also be traumatic and can chronically alter your way of seeing the world and, thereby, the way in which you present yourself to the world. This is evident in many ways, most obviously by the way in which you hold yourself physically.

Fasciae and bone tendons take a longer time to grow and, when injured, take a much longer time to heal. When, however, the

tendons are strong, relaxed, and long and full of strength, they are also full of large quantities of Chi and have ready access to more of it when needed. Once developed, they will be much stronger, last longer and work harder. They will use very little nutrients and will require very little maintenance.

Some therapists have worked on loosening what has become overly restricting fascial tissue, thus often liberating emotions and memories that had created a constant drain on a person's energy reserves. Sometimes the person experiences a new lease on life by being able to function with a range of freedom of motion that he might otherwise never have known.

As previously mentioned, "Changing the Tendons" and "Cleansing the Bone Marrow" will be dealt with further in Iron Shirt II and Iron Shirt III, respectively.

C. Harmony of Fasciae, Tendons and Chi

A Taoist would describe the body as internally consisting of the vital internal organs and the Chi energy which services them. Externally the body is comprised of bones, tendons, muscles and the fasciae which contain them. If you recall, bones are moved by the action of muscle contractions which pull on the tendons that are attached to the bones. Blood is said to move muscles and Chi to move blood. Thus, the Taoist Master strives to create and protect the Chi and the blood. This Chi, as an electromagnetic energy is unseen, while the muscles, tendons, bones and fasciae are quite visible. Practice consists of working both the visible and the invisible as an expression of the harmony of Yin and Yang.

To stress only internal or external development will result in disharmony and dysfunction. The organs and muscles must be vitalized by Chi, but the circulation of the Chi is augmented by having a healthy body. Strengthening muscles without cultivating Chi creates a similar imbalance which will not lead to true health or strength.

"Changing the Tendons" works with the muscles, tendons, bones and fasciae, developing both the visible (muscles, tendons, bones and fasciae) and the invisible (the flow of Chi).

The practice of loosening the tendons is comparatively easy, whereas that of utilizing the fasciae is considered to be more difficult. Iron Shirt Chi Kung is said to be the most difficult discipline

of all and yet its practice, in which you learn to increase and store more Chi, truly begins with the Microcosmic Orbit. Once you have collected
Chi,you you can direct it as it is needed to the fasciae of any point in the body.

By a process in which you collect, conserve and reserve the energy of the vital organs (kidneys, brain, heart, liver, lungs, spleen and genitals), the polluted energy descends and exits as the clean, vital energy rises up to replace it. As you relax and collect more and more Chi, it is directed towards the tendons and fasciae until the entire body is filled with Chi energy.

The Chi flows into the fasciae, expanding and strengthening the tendons.

Again, balance or harmony is necessary. If you practice so that your fasciae are vitalized with Chi and your tendons are neglected, the fasciae will have nothing to depend on, since it is by way of the tendons that the muscles attach to the bones. On the other hand, if you work on the tendons and not the fasciae, the fasciae will not fill out and serve well as a coordinator of the muscle groups which they cover. If you exercise the tendons and the fasciae without Chi Kung to activate an energy flow, the tendons and fasciae will not ‘’raise up’’ separately and will not be able to work freely. If you practice Chi Kung and not the tendon or fascia exercises, the Chi will not be able to travel freely throughout the body and will be impeded in gaining access to all of the meridians. At the same time, the tendons will be weak through disuse and the fasciae will be tight and restricting.

In this chapter, an overall picture is presented describing how the muscles, fasciae and bones function together. Muscles cover other muscles and bones and contain the various cavities which hold your vital organs. The tendons and fasciae are joined together and the tendons connect muscles to bones. The fasciae cover muscle groups, affording them the ability to do more work than they would were they not so bound together, and add to the resilience and general tone of the muscles as well. Since these bundles of muscles wrapped in fasciae lie outside of bones, they protect them; and since they make up the walls of the thoracic and abdominal cavities, they protect everything within them. The most important uses of the Iron Shirt Chi Kung are to fill the cavities of the body with Chi and to build up more Chi pressure in the vital organs, protecting and enabling them to deliver instant energy. (Fig. 5.3)

Fig. 5.3 *One of the most important reasons for practicing Iron Shirt is to fill the cavities of the body with Chi.*

D. Muscle-Tendon Meridians

There are 12 muscle-tendon meridians in the body. These exist along the surfaces of the muscles and tendons, running from joint to joint. Unlike the other meridians, these do not connect with any internal organs. They seem to be primarily involved in the gross utilization of energy with which the musculature is associated. Here, however, there is far greater efficiency (that is, minimized effort with increased energy output) than is ordinarily presumed to be normal.

Muscle-tendon meridians originate in the extremities, meet at major joints and end at points ranging throughout the torso and head. Knowing the tendon routes well and energizing them will greatly increase the muscle-tendon-fascia tone and improve the range of movement, or radius.

1. Lung Muscle-Tendon Meridian (Fig.5.4)

This meridian has its origin at the end of the thumb. Looking at a person standing and facing you with his arms at the sides of his body and the palms facing forward, the meridian would be seen as a line that extends up along the outer side of the bones of the thumb to the outer side of the wrist. It then ascends up the outerside of the forearm to the crook of the arm and, rising up the biceps, crosses over to and enters the chest, coming out again at the sterno-clavicular joint, From there it extends across the collar bone to the front deltoid, while another branch extends downward into the chest sending still other branches down to the diaphragm.

Fig. 5.4 *Lung Muscle-Tendon Meridian*

2. Large Intestine Muscle-Tendon Meridian (Fig.5.5)

Again, picture a person who is standing and facing you. Now his arms are at his sides with the palms facing inward to the torso. Beginning at the end of the index finger this meridian travels up along what is then the outerside of the forearm to the outer portion of the crook in the arm. There it continues to ascend along the outer side of the upper arm to the side deltoid and then splits into two branches. One goes back over the trapezius muscle, descending down between the spinal column and scapula and extending up along the backbone to about midway of the length of the neck. The other travels across the lower surface of the trapezius and then to the sternocleidomastoid muscle on its way to the face, where it splits again at the jaw line. One short branch runs to the corner of the nose, the other travels up along the side of the face, passing through the side of the forehead on its way over the top of the head and down a similar route to the opposite jaw where it finally anchors.

Fig. 5.5 *Large Intestine Muscle-Tendon Meridian*

3. Stomach Muscle-Tendon Meridian (Fig.5.6)

This meridian is somewhat more elaborate, starting at the third toe and sometimes the second and fourth, too. The meridian runs up the lower surface of the foot to about the level of the ankle. From there it splits into two branches. One goes up the middle of the lower leg to the outerside of the knee. The other, running laterally to the first, continues to the hip joint and then up over the ilial crest (upper part of the pelvis) to continue on around to the back where it crosses the lower ribs and joins with an extension of the meridian that runs along the backbone from the sacrum to about the level of the collar bone. Returning to the more medially located branch, we see that it continues up to the top of the thigh and veers in towards the pubic bone. There it enters the abdomen and emerges again above the cavity of the collar bone. Next, it travels up the side of the neck and jaw, where it splits in two. One branch veers forward towards the corner of the mouth, ascending up along the side of the nose to the corner of the eye. The other goes up along the jaw line to a point in front of the ear at the temple.

Fig. 5.6 *Stomach Muscle-Tendon Meridian*

4. Spleen Muscle-Tendon Meridian (Fig.5.7)

With the figure standing and facing you, this meridian is seen as originating at the middle and end of the big toe. It then runs along the middle of the foot and ascends to the internal malleolus (hammershaped bone on each side of the ankle). From there it continues upward along the middle of the shin, passing the middle of the knee. Then it travels upward, beginning at the middle of the thigh and sweeping across it to end at a point on the groin. It then turns in toward the pubic bone and rises straight up to the navel. Veering off laterally, it crosses the abdomen, ending at a point just below the nipple, where it then enters into the chest. Another branch runs through a point located at the pubic bone to the coccygeal region where it ascends the mid-line of the backbone to about the level of the tops of the scapulae.

Fig. 5.7 *Spleen Muscle-Tendon Meridian*

5. Heart Muscle-Tendon Meridian (Fig.5.8)

With the person standing with his arms at the sides of his body and the palms facing forward, this meridian begins at the lateral tip of the pinky finger. From there, it ascends to the middle of the wrist, continuing upward along the middle of the forearm to the crook of the arm. Traveling upward and medially, it runs to the armpit and then crosses the pectoral muscle at about the level of the nipple, joins at the mediastinum (the partition between the two pleural sacs of the chest, extending from the sternum to the thoracic vertebrae and downward to the diaphragm) and runs straight down to the navel.

Fig. 5.8 *Heart Muscle-Tendon Meridian*

6. Small Intestine Muscle-Tendon Meridian (Fig.5.9)

With the person standing and facing away from you with his arms at the sides of his body and the palms facing forward, this meridian begins at the tip of the little finger. Ascending up along the back of that finger to a point on the wrist just above it, it continues up along the middle of the forearm, joining its upper arm extension in the middle of the elbow. Proceeding up the middle of the upper arm, it unites with its neck and ear extension behind the armpit. Ascending and descending, tracing out a pattern like a Z on its side, it continues up and over the trapezius, crossing the neck and connecting at the mastoid process with a small branch entering the ear. Another branch loops up and over the ear and then dips down to end at a point on the jaw below that is slightly behind the level of the outer corner of the eye. It then ascends, passing very close to the outer corner of the eye as it travels to the forehead, uniting with the muscle-tendon meridian extension of the mastoid process at the temple.

Still another branch issues out of the point at the mastoid process, ascending the previously described branch that crosses the forehead on its way to the temple.

Fig. 5.9 *Small Intestine Muscle-Tendon Meridian*

7. Bladder Muscle-Tendon Meridian (Fig.5.10)

Looking at a standing figure faced away from you, the bladder meridian begins in the small toe. Running along the outer side of the foot, it rises and joins with the external malleolus.

It then ascends to and joins the lateral corner of the popliteal fossa (or cavity behind the knee), while a branch extends downward from the external malleolus to join at the heel. Then it runs up along the calf and joins at the back of the knee. From there, it ascends to the middle of the buttocks, while at the same time extending downward along the middle of the calf to the heel. From the buttocks it ascends along the mid-line of the backbone to the nape of the neck, continuing upward to join with the occiput (the lower back part of the skull). It then continues upward across the crown of the head to unite with a point at the side of the nose near the inner corner of the eye. A branch arches along the line of the eyebrow and swoops down to the cheekbone. Then, continuing downward it extends to the lower jaw, the throat and onto the chest, passing under the armpit to angle up to and join with the line that ascends the backbone. A small branch extends up out of this extension to the backbone, rising at an angle out of the region of the scapula to unite in the shoulder. There is also a branch that extends out of the nape of the neck to unite with the root of the tongue. Finally, a short branch extends from the line coming up and out from under the armpit to join at the mastoid process.

8. Kidney Muscle-Tendon Meridian (Fig.5.11)

Looking at the back of a standing figure with the left heel lifted, the meridian is seen to start under his little toe. From there it travels along the spleen meridian and curves up at the arch of the foot, passing the underside of the ankle and uniting with the calf extension of the muscle-tendon meridian at the Achilles tendon. Continuing to ascend the middle of the calf, it unites again at the middle of the popliteal fossa (cavity behind the knee) joining with the bladder meridian.

Viewing the same standing figure from the front, the kidney meridian is seen to continue up along the inner side of the thigh along with the spleen muscle meridian. It unites at the pubic bone, continuing a short way up to the navel. From the pubic bone it goes through to the coccyx, where it ascends the backbone to connect with the occiput and join with the bladder meridian.

Fig. 5.10 *Bladder Muscle-Tendon Meridian*

Fig. 5.11 *Kidney Muscle-Tendon Meridian*

9. Pericardium Muscle-Tendon Meridian (Fig.5.12)

Facing a standing figure with his arms at his sides and the palms of the hands facing forward, the meridian begins at the middle fingers. It then rises up the mid-line of the forearm and upper arm, passing through the middle of the palm, the crook of the arm, the point of attachment of the front deltoid and then into the armpit. From there it spreads out into the chest both ventrally and dorsally.

Fig. 5.12 *Pericardium Muscle-Tendon Meridian*

10. Triple Warmer Muscle-Tendon Meridian (Fig.5.13)

Observing a standing figure from the rear with his arms at his sides and the palms of the hands facing forward, the meridian is seen to begin at the end of the fourth finger. It rises to a point directly above it at the wrist and goes up the forearm to the elbow. Then, it travels up the middle of the upper arm, over the trapezius to the neck, where it joins the small intestine meridian. One branch goes to the jaw and connects with the root of the tongue, while the extension of the main meridian rises past the teeth to the ear. There it shifts forward to the outer corner of the eye and continues up past the temple to the upper part of the hairline.

Fig. 5.13 *Triple Warmer Muscle-Tendon Meridian*

11. Gall Bladder Muscle-Tendon Meridian (Fig.5.14)

Here, when we view the figure from the side, we find that the meridian begins at the outer side of the end of the fourth toe. From there it angles up along the lower leg, sending out a branch to the outer side of the knee. Continuing up the thigh, it disperses another branch at S-32 and, continuing upward, sends out yet another branch that runs to the anus. It then ascends along the side of the body and rises in front of the shoulder, uniting with the muscle-tendon meridian extension that leads to the breast at the supraclavicular fossa. A slightly divergent point just below this bulges forward, where it links with the breast. The main meridian continues upward, rising up behind the ear to the crown of the head. It also descends in front of the ear to the side of the jaw from where it ascends again to the corner of the nose, while another branch travels up to the outside corner of the eye.

Fig. 5.14 *Gall Bladder Muscle-Tendon Meridian*

12. Liver Muscle-Tendon Meridian (Fig.5.15)

Here we view the standing figure facing us. The meridian starts at the big toe and connects in front of the internal malleolus. It then rises up the lower leg along the tibia (the inner and larger of the two bones of the lower leg) and joins on the inner side of the knee. Finally it sweeps up the thigh and unites at the pubic bone, thereby connecting with all the other muscle meridians.

Fig. 5.15 *Liver Muscle-Tendon Meridian*

If you want to strengthen a particular muscle-tendon meridian, you can practice by using a Chi timetable. For example, if you want to strengthen the liver muscle-tendon meridian, it is best to practice at 1:30-3:30 a.m.

Fig. 5.16 *Timetable of Chi Flow to the Organs*

Chapter 6
Developing a Daily Routine

If you practice the Six Healing Sounds (as described in *Taoist Ways to Transform Stress into Vitality*) just before going to bed, you will sleep more soundly and awaken earlier and more refreshed. Upon awakening, do not suddenly jump out of bed. Allow your engine (your body) to warm up a little first. Switching into high gear as soon as you get up can be disruptive and damaging to your entire system. If you are in the habit of bouncing out of bed in the morning as soon as you awaken, even though you may experience vitality lie in bed awhile instead and practice the Inner Smile, allowing the energy to flow into your Microcosmic Orbit, and you will be amazed at how much your health and overall progress will improve. Continue with Chi Self Massage (as described in *Chi Self-Massage: The Taoist Way of Rejuvenation*). If you are pressed for time, practice Chi Self-Massage while sitting on the toilet seat. It is not necessary to set aside time to do these practices since you can combine them with other activities. After diligently spending time in the Universal Tao System, you will easily be able to realize differences in your general well-being.

You should drink some water when you get up, but not to excess. Drink as much as you feel is comfortable. Imbibing too much water can make you feel nauseated and even damage your kidneys. For drinking purposes it is wise to use a water filter or distill your water. Water and air are your two most important ingredients to good health and steady progress in this system. If you are worried about losing trace minerals through distillation, use tap water to cook with. Then you will have your minerals, too. Make sure that the tap water is filtered, at least through a simple mesh. Make sure that the air that you breathe is filtered as well whenever possible. The “Bionaire” air filter is a good choice because, in addition to filtering the air, it has an ion emitter.

Practice the Iron Shirt exercises you have learned in this book, and in a short time you will find that it all fits together quite easily and becomes as ordinary and yet as necessary, as brushing your

teeth. You will, in other words, begin another good habit. To develop the daily practice of Iron Shirt, it will serve you well to realize that you do not need to do all of the exercises or breath alignment every day. On those days that you practice, it is best to do so early in the morning when you arise. Design a schedule that works for you. You might be able to devote no more than five or ten minutes to an activity, but do it. Rising twenty minutes or a half hour earlier in the morning will improve your whole life. In fact, in a short time you will discover that you need less sleep and have more strength and energy. At the same time, you will find that your activities, both before and after practice, will become more efficient and, therefore, you will derive more benefit, even though you spend what might seem like only a little time in actual practice.

You can create a schedule to fit your time allowance. A recommended schedule to follow might be:

Monday: Embracing the Tree for approximately six to seven minutes, followed by Holding the Golden Urn and the Horse Stance Using a Wall.

Tuesday: Embracing the Tree, the Turtle and Buffalo and the Horse Stance Using a Wall.

Wednesday: Embracing the Tree, the Turtle and Buffalo, plus the Phoenix and Door Hanging.

Thursday: Embracing the Tree, the Phoenix, the Iron Bridge, and the Backbend.

Friday: Embracing the Tree, the Iron Bridge, the Iron Bar and the Warrior Poses.

Saturday and Sunday: Embracing the Tree, or rest for both days before beginning the cycle again. You may also decide to start the schedule over on Saturday. It is important to remember to start gradually, practicing only fifteen or twenty minutes to a half hour per day.

Iron Shirt can be practiced at any time. Once you master using the mind to bring Chi to the various parts of the organs, you will find it very useful and you will be able to use the Chi energy anytime that you want or need it.

If, for example, you are riding in a car, on a train, or in a plane and you feel back pain, you can bring the energy to the back by pulling up the anus and bringing the energy to the kidneys, or simply by contracting the back muscles. Squeeze and release, squeeze and release and you will find that the pain or stiffness will go away.

You will feel energized immediately. In this way you can help the organs that need to be exercised.

Squeeze in some practice whenever you find some time during the day. It does not have to be any particular time and/or place. When you are standing on line, for example, with time on your hands, you can practice the elongation of the spine by pressing the legs down with the sensation of screwing them into the ground. Pull your head up at the same time and push the spine down. Once you master the practice, you can use it in any way that you want.

Do not practice too close to bedtime or you will not be able to sleep. If you feel any discomfort during your practice, consult any Universal Tao Certified Instructor. If the problem still exists, consult a qualified physician. Remember that exercise is a tool. To misuse such a tool can be harmful. Iron Shirt Chi Kung is not meant to be harmful and will not be if used in the proper way. The exercises have been clearly outlined, as well as the side effects and how to prevent them. If the instructions are followed properly there will be no problems. People have been practicing this system for many thousands of years successfully.

Chapter 7
Iron Shirt Chi Kung Experience

A. Testimonials from Advanced Iron Shirt Students

Gunther Weil, Doctor of Psychology

I have been a student of spiritual practice for many years. I was involved for a very long time with the Gurdjieff work as a practitioner. In 1978 my teacher died and I decided to step out of that teaching which, by then, I'd been involved in for some fourteen years. I began studying Taoist work, particularly Tai Chi and then Chi Kung, studying the latter with Don Ahn. In September of 1980, I met Master Chia and learned to practice the Microcosmic Orbit, Seminal Kung Fu, Tai Chi Chi Kung and now Iron Shirt. The approach taken in teaching Iron Shirt is extremely precise and has provided what was lacking in my previous experience of Chi Kung. Although my health had improved enormously in my earlier experiences, and I had a great deal of energy I had reached the point of feeling stuck and blocked. I hadn't made any progress in a year. I feel that the Iron Shirt teaching has been very helpful in getting me going again.

Roberta Prada, Opera Singer

As a classically trained singer, I find the Iron Shirt practices, in combination with the Microcosmic Orbit meditation and the Six Healing Sounds, to be of great benefit to my technique. Specifically, my goals for my singing include a free and easy vocal mechanism and an ability to feel grounded and centered while performing. Since beginning the Taoist practices, I have achieved the relaxation of my jaw, the lowering of my breathing, and the ability to search out areas of tension in my body, so that I can release them and allow the free flow of energy throughout my body. The more tissues resonate freely along the paths of vocal production, the more beautiful and

powerful the sound becomes, and the production of that sound becomes more precise and effortless. This is true for me. It would be difficult to attribute these results to Iron Shirt alone, since I continually study with a voice teacher as well, and perform regularly. However I am certain that the degree of body alignment, delicate coordination, physical and mental power and the ability to still myself, have enhanced my ability to achieve the goals I have set for myself in my art with greater naturalness, precision, clarity and beauty of sound. Ideally I would like to see courses in these arts form part of the studies offered in conservatories and professional schools as part of the body movement/breathing curriculum. Tai Chi is already taught in these settings in England. Once the exercises are learned, they can be used in free moments anywhere: on tour, in a dressing room, in small spaces, without equipment, and without a teacher. They are practical and of lasting value.

I would heartily recommend the Microcosmic Orbit Meditation, Iron Shirt and Tai Chi to singers, actors, conductors, instrumentalists and dancers as a valuable adjunct to their studies.

B. Interview of Iron Shirt Practitioner Michael Winn, conducted by John Zielinsky, Instructor

John: Can you tell me when you first started Iron Shirt?

Michael: I first studied Iron Shirt a little over two years ago. Before that, I was doing Kundalini Yoga which involves a lot of breathing and intense energy. I found Iron Shirt to be even more intense because the air was packed inside, held and circulated internally whereas with the other practices, I breathed in and out and slowly moved the energy around using various sounds. In the beginning I found that I had too much energy in my head for doing Iron Shirt, partly as a result of my other practices. When I started to do Iron Shirt, my face would get very red. As I got better at it, doing it every day, I started to get the energy more rooted, or grounded. I discovered that when a practice is done properly, you are mixing energy from the air with what is in the body, holding it inside where it is somewhat warm, and mixing this with the energy from the ground which is cool. It took me a while to really get the energy down out of my head, and relax before I could begin to practice and

feel like I was drawing in some full energy, mixing it and circulating it around.

John: How long after practicing Iron Shirt I did you begin practicing Iron Shirt II and Iron Shirt III? Also, how long do you practice? How frequently every day during all that time, and how much do you now practice?

Michael: I practice every day, almost without fail. I studied the Iron Shirt II a few months later and Iron Shirt III a year or so after that. I continued doing the Iron Shirt I, even when I did the Iron Shirt II or III. I did not continue with the Iron Shirt II practice because I found that the Iron Shirt I and the Iron Shirt III were sufficient. Iron Shirt III, of course, added another level to my practice. A lot of people do not practice Iron Shirt I long enough to get to the other levels. In fact, what I found out in going through the stages of Iron Shirt I is that it is related to all of the other meditation practices, but as your energy gets more refined and you start to pack the energy in your body more, you feel a different quality to the energy as it circulates around. When I really had it right, I could feel a kind of cool radiant heat emanating out of my body. It was not an electric energy. It was mixed with the Yin energy and properly refined. It left my body feeling that it was together really flowing, giving me a nice energy throughout the day.

The other sensation started happening after a year and a half as I was beginning to take longer before doing Iron Shirt I, before packing, to stand and relax more down to the earth. This allowed me to take more cool energy in. I would begin spontaneously to do the full Microcosmic Orbit, down to the leg roots into the ground, bringing the energy back up the front of my legs to the perineum, back to the spine, around the top of my head and rooting to the ground again. As I looked back into the ground, I would then do the Microcosmic Orbit a full body length into the ground below me. In other words, I was pretending that I was buried underground and my head was right at the surface of the earth. I would circulate the energy through myself standing under the ground. I found a very rooted, cool energy and could visualize myself and my energy in the ground below. I pulled the energy back into my body before I even began to pack. I found myself already getting rooted, just with my mind.

Also, at one point, spontaneously, I started seeing a variety of crystals at various points within my body, and in the body in the ground that I was circulating the energy through. This would add

another quality to Iron Shirt: refining energy. My practice then continued at a much higher level of energy.

What I finally realized is that when you do the Iron Shirt and you are circulating the energy around in the Microcosmic Orbit, you are also pulling in the earth energy and circulating it around in your body before sending it back down. This is what rooting is about.

John: The variation underground, was that yours or from Master Chia?

Michael: Actually, I asked him about it and he said you could do that when you work from a very high level, and even visualize yourself five body lengths down. I started off visualizing myself all the way down to the center of the earth and pulling earth energy out from there. Then I asked him about it. He said try something closer in the beginning. I found that this position at the center of the earth also worked, but Master Chia warned me that the center of the earth is very molten and I might pull out some very hot energy. It has the same effect though.

I have really begun to notice in whatever I do that there is Chi in my bones. When I am doing Tai Chi, I begin to feel my skeleton with a dense, glowing energy in it. This is what lets me know that the energy is not just in my body anymore, or just in my head. When you swing your arm, the feeling is that the flesh and the blood are really light and not quite there, but in the center you can feel steel, an energy that is packed in. I think you get the same sensation from Tai Chi or anything else, but doing the Iron Shirt III speeds the process up a hundred times faster. I think the main things to caution against are not to get too much hot energy into your head or into your heart. When you hold the energy in for a long time and circulate it around, it can strain your heart. The important thing, then, is to start gradually and bring your body up so that it can handle the energy until you can move it around comfortably.

John: Do you relax after you exercise and walk?

Michael: Yes. This is very important. Some days Iron Shirt I is so intense that I do not do anything else. The energy that I have pulled in and circulated through my body is enough for me to digest and work with. I do not do any other practice, not Tai Chi, not anything, because my body has been fed, even stuffed. In fact, I have to sit down and digest the meal.

John: Have you noticed any specific health benefits related to the Iron Shirt practice?

Michael: Yes. In my other practice with Kundalini Yoga, the energy would be very high, but it would leak out of my body. I noticed in the winter that I would be cold. I was becoming very Yin. It was a very Yang practice, but it used up the energy in my body. I notice now with Iron Shirt that my body is much warmer in the winter. I can withstand the weather, the elements. I was already becoming very healthy as far as not getting very much illness or sickness from Kundalini Yoga, but I feel that this has further increased my abilities to fight off flus or colds, or any similar illness. At one time, four or five family members were visiting me and they all came down with the flu and were out for a week. I felt it try to come into my body for a day or so, and I felt very weak. I was able to push it out. I think that packing the Chi inside your body leaves no room for the bacteria, viruses, etc., once the Chi has been built up to a certain level.

John: One other question about your practices: When you practiced Iron Shirt, did you have someone do the pushing to develop the rooting?

Michael: I was living alone and often did not have anyone with me, which is unfortunate. Periodically I would go over to the center and get pushed again and found that I was breaking at the waist, for example, because I did not have my posture quite right. There are small corrections you really need to make. They probably slowed down my progress in getting it right. I was still studying the energy and still packing it in, but there is no benefit to doing so if you do not do it perfectly. So I would say that it is good to get pushed.

John: Michael, I know you lead a busy life and you have a lot of mental activity; do you find that Iron Shirt III helps you to cope with stress from day to day life? Does it help you on a mental level as well as a physical?

Michael: Yes. Sometimes when I am writing, I will work for fifteen or sixteen hours a day. When I feel that I have used up my Chi, my energy, and my brain is not functioning enough, I will do some Iron Shirt to get the energy going again. At times, I do not want to sleep, I want to keep going and keep pushing myself, but I do not think this is the right way to live. It is smarter to live simply. However sometimes you find yourself in the situation of a deadline and, yes, it definitely helps to relieve the stress.

John: Do you have any general comments about your Iron Shirt?

Michael: I have seen other kinds of Chi Kung, and they involve

movement and inhaling and exhaling with those movements, and I think those other Chi Kung are valid and powerful. However, I think that ultimately, this is a higher Chi Kung because it is more internal. In other words, it does not rely on continual breathing, or continued movement of any sort. You do breathe in in the beginning, but as you move along to higher levels of the Iron Shirt Chi Kung, you do not even have to bring in your breath, but can just draw in the energy with your mind, pack it and circulate it around. Movement with your mind emphasizes the internal aspects of the energy; it is also more integrating. That can be a problem in the beginning for a novice whose mind is not integrating with his Chi, and he cannot move his Chi around with his mind. He needs to use more breathing and more movement. I think that if a person sticks with it, it will come in time.

C. Personal Experiences of Students

- No matter what sort of physical activity I indulge in since I've begun studying here, I feel heat in my arms, legs and back. I'm sure that something has opened up for me.
- I cook for a living and I get cut and nicked a lot at work. I've noticed since coming here that I heal a lot quicker. There's something else. I feel I can store a lot of energy in my back now.
- Iron Shirt makes me feel as though I've discovered myself. I've meditated and used energy in other systems, but they've been nothing like what I've experienced here.
- What I enjoyed the most was the harmony that I found among Iron Shirt Chi Kung that "builds the fire", the meditations to open the channels to enable the "fire" to be transported more fully through the body, and Tai Chi as the means to send the Chi through the channels. It all came together very clearly for me here. My concern has been to preserve the "life-force" in the face of the many influences that attack it in daily life, and how to develop a means of harmonizing and choosing the most life-giving elements that are available. This information has laid out a method that I can easily follow to attain this goal.
- I found Iron Shirt II to be most gratifying. After finishing an Iron Shirt II class, I'd experience a "click" in my hips. This

had never happened before. As the week progressed the "clicks" came on sooner and stayed longer. Then, suddenly, three days ago, I discovered that I had new hips and there was an incredible feeling of space throughout my lower abdomen. When I practiced Tai Chi I felt a definite connection between my feet and hips and scapulae. This was something I had heard about and could not enjoy first hand. Now I feel connected all over.

- I first learned about Chi Kung when I was a small boy, reading Kung Fu stories, and I continued to think that it was just story stuff until I came here and found that it is true. Along about April, after practicing Chi Kung for just a couple of months, I had to go to the hospital with a terrible pain at the back near the kidney. At the hospital I was given a morphine shot and I found that my experience with that shot was very similar to the experience I had forcing Chi into my head. So I tried using Iron Shirt to suppress the pain. I didn't have any luck at first, but after a couple of days I was actually able to create the pain-suppressing effects of morphine.
- I have practiced Yoga, Judo and Tai Chi extensively. When I came across Master Chia's book, I sensed that it was just what I'd wanted. I'd had terrible migraines for years. I'm all right now. Before that alt the energy had been stuck in my head. I could feel it there, and I could feel it come down when I completed the Orbit. In fact all I had to do to complete the Orbit was bring it down, because I'd actually spent years in my other practices bringing energy up to my head. Now, after three months of practicing Master Chia's Taoist system, I have enormous energy.
- At first Iron Shirt seemed to be too different from the gentleness of the Tai Chi I'd learned. But I learned to recognize the need for the balance that it produces. I feel that I've been learning to use my body and I see how it is now very different. Soon I will be able to do these exercises on my own, anywhere I need to.
- I feel that I have much more energy now. I can hold my breath twice as long as when I first began to practice. I definitely feel more rooted. I feel energy racing through me.
- I could really feel energy coming up out of the ground doing the Iron Shirt exercises, and I know what it is to be rooted

now. Sometimes my legs shake when the energy comes up through them. There's something else, too. My back seems more like one unit. I can inhale more air and I feel stronger all over.

- I've been practicing meditation for about ten years, primarily a type of Kundalini Yoga meditation practice. It did stress circulation of the energy, but it was only up and down the spine rather than using the front channel. I came across Master Chia's book about six weeks ago and started to practice according to what I read there. I happened to go on a meditation retreat for a month where I was able to practice quite a bit and experience an opening of the Microcosmic Orbit, a deepening of my meditation and a release of blockages that I had been aware of for a number of years. My experience with the Chi Kung thus far has been of an increase in energy flow and a further unblocking of the leg channels.
- I've been studying meditation and martial arts for about nine years and I've always had a complete separation between the two: one being physical and one being spiritual. When I came here, the two were linked together. I'd read about it but had never experienced it, that is, until now. When I lived in San Francisco I thought I had Chi Kung down pat by doing tension exercises, but now as I practice Iron Shirt, I realize that I was going down the wrong road. I was trying to use the mind and to strengthen the muscles, instead of working from the inside structure out.
- For the past 25 years or so I've been involved in martial arts: Karate, Kung Fu and Tai Chi. Through these practices I had experienced various energy centers. I had not been aware of a circuit that had to be completed until I saw it depicted on the cover of Master Chia's book, *Awaken Healing Energy Through the Tao*. I was especially drawn to it because I saw that along that route were some of the centers I had already experienced. When I read the book, I discovered that it answered questions for me that I'd not yet been able to put into words. I began to realize that I must learn to turn my senses inward and to reflect. I recognized that introspection is something we are not ordinarily taught. As I read, I came to believe that this might

be what I had been looking for: a method to follow that would allow me to know more about myself.

- I approached the Microcosmic Orbit and Iron Shirt because I was searching for something to cure a serious problem that was unsuccessfully treated previously. I had a four-by-six centimeter duodenal penetrating ulcer. (It's been documented.) And for those who don't know about such things, that's a big ulcer. I also had two crushed discs commonly called kissing vertebrae, from two separate accidents. In addition, I had a genetic curvature of the upper portion of my spine for which I'd had chiropractic adjustments over a period of two years. When I came to inquire about your courses, my digestive system had wound down to a standstill, I had lost about thirty pounds, and my gastroenterologist had told me that I must undergo surgery. In less than four months of practicing Iron Shirt, I actually have scar tissue where the ulcer had existed. I no longer have to take medication, and now I have no back pain, after having experienced it constantly for three years prior to starting this practice. During this period I did nothing but what I've learned here: Iron Shirt each morning, and the Microcosmic Orbit during the day. I have gained twenty-five pounds, and I really do feel that Iron Shirt supplied the real healing power.
- I was introduced to Master Chia through a friend who said that he knew that Master Chia could help me get rid of bad headaches. I had seen Chinese, French and American doctors and none of them could do anything to help me with a problem that had made me miserable for almost fifteen years. After three days with Master Chia, I completed the Orbit and gradually I found my headaches were subsiding.
- I studied some Tai Kwan Do and I'm presently studying Praying Mantis Kung Fu. I became interested in the internal Kung Fu through a friend of mine. As soon as he told me about it, I was interested. I went to learn Tai Chi at the time and learned very fierce breathing exercises. It did seem to get energy going but after practicing it I didn't feel as energetic as I do here. The surprising thing about Master Chia's system is that it's so simple to do, and yet, it's so

effective in doing what it's supposed to do. I feel it inside my navel as opposed to feeling it in my stomach or my elbow or different parts of my body. I also find that it helps my martial art practice.

- I have been practicing some martial arts from time to time, especially Hsing Yi, and have sought out internal practices. Your system is by far the best that I have found and I want lo thank you for it. In fact, it intergrates Kundalini Yoga and some Western practices, integrating the uses of the centers and the meridians. It is excellent and I want to continue with it.
- I've practiced martial arts, meditation and a number of spiritual disciplines for around eight or nine years and, last spring, I took Master Chia's Microcosmic Orbit workshop. I had the personal experience of feeling the Chi travel through the basic meridians and a number of acupuncture points. I was surprised because before, they were just points in books to me. I thought maybe you could influence that energy with needles, but I never believed you could feel it. I look forward to practicing more and more Iron Shirt and deepening the sensation of the energy and the experience.
- Before coming here I had experienced energy in my body but I didn't know what to do with it; it seemed very scattered. Through the structure that Master Chia offers, I now have a means of control that I never had before. My background is in martial arts and in meditation for about the past five years. Iron Shirt is something I've never seen offered anywhere else, and I feel it's invaluable to anyone who is doing any martial arts, especially a dynamic type, which can easily throw your body out of alignment or else lead to damaged organs. It's become apparent that if I know how to use this type of energy that I get in Iron Shirt, I feel my risks of sustaining damages are greatly lessened.
- I still have a long way to go to develop any rooting power, but I do feel stronger especially in my back.
- You brought up something a little while ago about people having more difficulty in dealing with pleasure than with pain. Well, I'd been meditating twice a day during my vacation and got so high that I just couldn't stand it. My whole body was like golden light. I had to back away from the practice.

I just wasn't ready for it. This stuff is really authentic. I am very convinced. There's another thing I'd like to say about this practice. I am an acupuncturist and have no trouble getting patients these days. I never even have to think about soliciting clients. They just show up. My work is more effective, efficient and clear.

- I find myself growing, now that I have discovered this teaching, and I've discovered my body, I've already helped my body immensely. I want to learn everything that I can that relates to these methods, now. The effects are too convincing. It's like coming across the answers to everything.
- I came from another system that I felt was very good, in fact, perfect. So I really wasn't looking for anything else, except that I was curious to know about this other system.I found theUniversal Tao exciting and very different. As I went into it and felt so much energy running around in my channels, I began to miss some of those simpler powerful ethics of my earlier meditations. It took me a while of practicing the Taoist meditations on a daily basis to understand that in the Taoist approach, I was making use of sources of energy that I had, in my earlier system, not tapped. While previously I had been achieving one sort of intensity of energy I find that through Tai Chi and Iron Shirt, I can hold that energy in my body rather that just having a temporary experience that might come on from a lot of chanting or breathing exercises.

$15.95

Iron Shirt Chi Kung I

Once a Martial Art, now the Practice that strengthens the Internal Organs, Roots Oneself Solidly, and unifies Physical, Mental and Spiritual Health.

Mantak Chia

Profusely Illustrated by Juan Li

In the days before gunpowder, Iron Shirt Chi Kung was one of the principal martial arts, which built powerful bodies able to withstand hand-to-hand combat. Even then, however, martial use was only one aspect of Iron Shirt and today its other aspects remain vitally significant for anyone seeking better health, a sane mind and spiritual growth. "Iron Shirt" refers to the fact that its unique system of breathing exercises, which permanently pack concentrated air into the fasciae (connective tissues) surrounding the vital organs, make them well nigh impervious to injuries from accidents or blows. We also learn how to root ourselves in the earth's power and thus to direct the earth's gravitational and healing power through our bone structure. Iron Shirt's strengthening of the organs is of special interest to athletes and performers, for it teaches them how to increase the performance of the organs during sports, speech, singing, dancing and playing music. For the Taoist masters, all this in turn lays the groundwork for higher, spiritual work. Every step of the way is made clear in the numerous line illustrations of Juan Li.

Master Mantak Chia, born in Thailand, comes from the ancient lineage of Taoist Masters, extirpated in communist China and now existing in dwindling numbers among the Overseas Chinese. He also has a Western education in anatomy and physiology. Now in Thailand, he has developed a clear and practical way of teaching this ancient wisdom, much of it hitherto kept secret. He is also the author of *Awakening Healing Energy*, *Taoist Secrets of Love*, *Taoist Ways to Transform Stress into Vitality*, and *Chi Self-Massage*.

If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training. This booklet does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Bone Marrow Nei Kung

Bone Marrow Nei Kung teaches how to cleanse and grow the bone marrow, regenerate sexual hormones and store sexual energy in the fascia, tendon, and bone marrow.

The bone marrow is responsible for the production of red and white blood cells, so any work which helps in the production, circulation and overall health of the blood also assures one of having more Chi. The red blood cells are a truly vital source of energy because the medium in which the body is able to make use of oxygen and to get rid of the carbon dioxide.

In Taoist yoga it is believed that the sexual organs are joined with all the other organs of the body. In addition, the tendons, muscles, and glands all join together at the sex glands. So any exercise which revitalizes and strengthens the sex organs will also have a positive effect on all the Internal organs, tendons, muscles, and glands.

In Bone Marrow Nei Kung one works at revitalizing and strengthening the organs through vaginal and testicle weight lifting. For example, if a five pound weight pulls down the testicles, then there is an equal five pounds force pulling up within the body; otherwise, the testicle would drop to the floor with the weight. What pulls up with equal force to the weight is a combination of connective tissue (fascia), urogenital and pelvic diaphragm force, as well as muscle, tendon, and internal organ force.

As the sexual organs develop the ability to lift comfortably five pounds of weight or more, all the genital areas are strengthened resulting in greater control of sexual energy. Moreover, the techniques of the "Big Draw" (males) and the "Orgasmic Upward Draw" (females) learned in the *Taoists Secrets of Love* Practice are greatly enhanced by *Bone Marrow Nei Kung* practice. Genital weight lifting also stimulates the sex hormones and endocrine glands. The sort of hormone stimulation brought about by Bone Marrow Nei Kung is extremely invigorating, leading the development of the "Steel Body"; a body able to withstand injuries without internal damage.

The process through which sperm or ovarian energy is made to lodge in the bones and marrow is through the practice of " beating" the body with a rod made of metal wires. Beating produces a vibration which penetrates deeply into the core of the organs shaking loose deposits of toxins, stimulating circulation and setting off a process of restructuring and repair which, after prolonged practice, results in the development of muscles and organs which are thoroughly cleansed of impurities.

The work with Bone Marrow Nei Kung is not simply limited to restoring mental health and preventing injury—it prepares the stage for the higher techniques of the intermediate level of the Universal Tao Practice when the practitioner, using the physical body a solid foundation, begins to work on developing the Spirit Body for the experience of ultimate transcendence.

Bone Breathing

Bone Breathing or Bone Compression is the method for "Cleaning the Marrow", or cleansing out fat in the bone marrow so that more sexual energy (Jing) can be absorbed into the bones to help regrow the marrow.

During Bone Breathing we take advantage of the Chi generated in Iron Shirt I by absorbing Chi into the bones, thereby greatly extending the circulation of Chi for the meridians and the organs. As the Chi permeates and penetrates the bones, nutrients and oxygen come to enrich the bone marrow. Tension in the muscles surrounding the bones is lessened allowing continuous flow and movement of the whole body—an important factor for people who depend on physical activity as a way of living. As a result of increased Chi circulation in the marrow, the bones become strong and healthy because the marrow, as the main producer of red and white blood cells, now has more room to grow.

Strong bones play a significant role in preventing many of the problems relating with aging: decalcification resulting in fragile bones; poor posture which generates feelings of depression and loneliness; frequent infections due to a weakened immune system; and restricted physical activity due to arthritis and calcified joints.

The key ingredient in practicing Bone Breathing is relaxation. It is most important that one not be tense in the practice. Bone Breathing is a two stage process:

Fig. 1 *Bone Marrow*

First Stage

Inhale and Exhale through the Fingers

- At first one can use the mind and the eyes to visualize the respiration process through the fingers.
- Gradually feel the breath moving up the hands, arms to the skull, and then down the spinal column and legs.
- Notice the sensation as the breath moves through these areas.
- During inhalation, the breath feels cool and in exhalation it feels warm.
- Feel the inside of the bones and allow the breath to penetrate the bones by relaxing the muscles and tendons.

Fig. 2 *Bone Breathing*

Fig. 3 *Skeleton*

Second Stage

Inhale and Exhale through the Toes

- By degrees inhale up through the legs into the thigh bones.
- After inhaling, hold the breath, but not so long as to experience discomfort.
- Then exhale down and out through the toes.
- In the next breath inhale all the way up to the hips and then exhale through the toes.
- Next breathe up to the Sacrum. At this point energy may rise up through the back and reach the head, overflowing into the entire nervous system.
- Finally, breathe up the legs and back, combining it with the fingers breath coming up the arms and shoulders, through C-7 into the head.
- Keep in mind that energy is inhaled and exhaled most effectively through the toes, fingertips, elbows, knees, sacrum, C-7, Door of Life, Shoulders, and the tip of the nose.

Applications for Chi Weight Lifting

Strengthening the Fasciae Network

An upward counterforce is created by the internal organs and glands to resist the weight placed upon the genitals. This force is strengthened by the Chi released from the sexual center as the internal system engages the fasciae to pull up against the weight. The fasciae, therefore, contribute greatly to the distribution of energy. They also serve as the connection between the genitalia and the pelvic and urogenital diaphragms. When this connection is loose, the Chi

Muscle and the diaphragms allow the organs to drop their weight onto the perineum, thereby reducing the Chi pressure. When the connection is kept strong, the organs and glands are held in place and the Chi pressure is maintained.

Chi Weight Lifting for Powerful Urogenital and Pelvic Diaphragms

The human body has many diaphragms holding the internal organs and glands in place, such as the thoracic, pelvic, and urogenital diaphragms. During Chi Weight Lifting these contribute greatly to the upward counterforce deployed against the downward pull of the weights anchored to the genitals. (Fig. 4) The pelvic and urogenital diaphragms, considered the floor of the organs, and the Chi Muscle, are all strengthened by this practice which helps to prevent any loss of energy through them. Their increased strength also helps to alleviate the protruding abdomen caused by organs stacking up on the pelvic area.

Chi Weight Lifting is credited with many other benefits related to the improved functioning of the diaphragms, such as the lifting of dropped kidneys. Furthermore, the practice helps to seal the openings of the anus and sex organ to prevent the leakage of Chi. Taoists believe that this helps to redirect the spirit away from these openings as one prepares to finally leave the body. The upward flow of energy that is developed through Taoist practices will point toward the crown as the proper exit for the spirit to use at the end of life.

Fig. 4 *Pelvic and urogenital diaphragms provide counterforce to the weights.*

Sexual Hormones Delay the Aging Process

The release of sexual hormones stimulates the pituitary gland to prevent the production of an aging hormone. It has been proposed that one function of this gland may be to measure the growth of mutated reproductive cells. Scientific studies have found some evidence that the aging hormone is released when these mutations are allowed to increase beyond a certain level. Theoretically their growth should be impeded by a healthy reserve of sexual hormones. Otherwise, upon sensing the reduced presence of Ching Chi within the body, the pituitary gland can cause a premature death by producing the aging hormone. It is therefore wise to maintain sexual energy and hormones through the Taoist practices.

Sexual Hormone Stimulation of the Brain

The right side of the brain is also influenced by the sexual hormones to promote the healing and rejuvenation of the body. Since Ching Chi revitalizes the internal system and regrows the bone marrow, hormonal stimulation of the brain greatly enhances these processes. This effect also serves Taoist spiritual work because practitioners find it to be an invigorating experience on all levels. The health of the body and the mind directly affects the spirit.

Equipment and External Preparations

Cloth for the Massage and Lifting the Weight

Men and women use a silk cloth for the Sexual Energy Massage techniques to increase the flow of Chi and blood in their sexual centers. Silk works well because it develops considerable static energy when rubbed. This is important for the stimulation of Chi in the sexual organs, perineum and sacrum. Women also use the cloth to massage their breasts. Men use the cloth after the massage techniques to lift the weight from a special holding apparatus.

Men: Two sizes of cloth can be used to lift the weight, depending on the method chosen for practice. The smaller cloth, which is used for lifting the weight from a table or chair, should measure approximately three and one-half by eight inches. If you choose to lift the weight from the floor, the length of the cloth can very according to the length of your legs. When the cloth has been cut to size, you can sew the edges to prevent unraveling and to avoid abrasions of the skin.

Equipment for Men

Men require a special device by which the weight can be held to the cloth. (Fig. 5) Cut a ten inch length of galvanized pipe for an apparatus to be used from the floor. Cut an eight inch length for an apparatus to be used from a chair. (Either size is adaptable to either method if necessary.) Drill a one-quarter inch hole through the pipe one-half inch from either end.

Secure a piece of chain two links long to the pipe with a one quarter inch bolt inserted through the hole and fastened by a nut and washer at its end. At the end of the chain, a heavy ring one and a half inches in diameter is attached. Several types of clamps may be used on the opposite end of the pipe to hold the weights. After the silk cloth has been tied gently, but firmly, around the groin, it can then be attached to the ring in order to lift the entire weight-holding apparatus.

Some men can begin Chi Weight Lifting with a two and one-half pound weight; however it is safer to start with the apparatus alone, or with one or two weight clamps attached to it. (These are used in standard barbell sets.) If you use two weight clamps, their weight should equal one pound, plus the weight of the apparatus itself. Some stores that carry sporting equipment sell one and a half pound weights. Add on more weight gradually, but only as much as you feel comfortable with. Do not advance to higher weights unless you can lift the current weight easily for one minute.

Fig. 5 *Chi Weight Lifting Equipment*

Genital Massage and Preparatory Exercises for Men

Massage Techniques

Cloth Massage and Sexual Energy Massage Practices: These stimulate internal energies and prepare the genitals for the role at hand. (Fig. 6) First, the silk cloth is applied to the sexual center, perineum, and sacrum to activate the Chi. Men should feel the testicles fill with energy as they become firm. Women should feel the breasts enlarge slightly as the vagina becomes moist with secretions. The Sexual Energy Massage techniques should then be used to condition the genitals for Chi Weight Lifting. After the weights are removed, the massage techniques must be repeated to restore the circulation of blood and Chi to the sexual center.

***Men**:* Although not all six techniques are required, the Sexual Energy Massage must be emphasized by men after the weights have been removed to ensure that the genital area will be clear of any blood coagulation which can lead to blood clots.

Fig. 6 *Cloth Massage*

Fig. 7 *Folding the Cloth*

Outline of Pre-Chi Weight Lifting Exercises

Both men and women should specifically review the Power Lock which is used before the Sexual Energy Massage and again immediately after the weights have been removed. The Kidney and Chi Pressure exercises are included herein.

Men:

(a) Increasing Chi Pressure Exercise
(b) Increasing Kidney Pressure
(c) Power Lock-two or three times up to the Crown
(d) Cloth Massage
(e) Finger Massage of the Testicles
(f) Palm Massage of the Testicles
(g) Ducts Elongation Rubbing
(h) Stretching the Ducts Gently with Massage
(i) Stretching the Scrotum and Penis Tendons
(j) Tapping the Testicles

Chi Weight Lifting

Warning: Do not attempt Chi Weight Lifting without studying the precautions in Section F.

Students are expected to receive instruction before attempting Chi Weight Lifting; however, the following detailed synopsis will clarify this practice for novices. Students are not expected to remember every detail. In advanced practice, the steps which follow are combined into a very brief exercise. Although the summary is concise enough to be used as a practice guide for trained practitioners, all practitioners are advised to first read the details.

Attaching the Weight—Men

a. Position of the Weights

Chi Weight Lifting can be initiated from either a kneeling or standing position. (Fig. 10) If you cannot kneel, set the weight on a chair in front of you. It may be necessary to relieve the pressure of the weights quickly at times, particularly if they are too heavy and the knot beneath the testicles is tight. For this reason, keep the weight close to a place where it can be quickly removed. Consider tying one end of the cloth to the ring while leaving the other end in a loop--folded beneath the knot--so that the knot will undo itself if that end is pulled.

b. Standard Method of Tying the Cloth

Warning: Do not tie the cloth around the testicles alone.

(1) Fold the cloth lengthwise several times to a width of about one inch. (Fig. 7) This creates a thick padding.

(2) Hold the cloth beneath the perineum, and bring it up behind the testicles. Be sure that the edge of the cloth is folded away from the skin so that if does not cut into the groin.

(3) Wrap both ends of the cloth upward around the penis and testicles, and secure the cloth at the surface of the penis base by tying a knot.

Note: If you prefer, you can place the cloth on top of the penis and tie the knot beneath the testicles. In either case, the knot must eventually be positioned at the perineum. (Fig. 10a)

(4) Move the knot behind the testicles and beneath the perineum. The ends of cloth should hang to the floor. Before tightening the knot, you can use one end to create a loop between the knot and the groin so that the cloth and apparatus can be quickly removed.

(5) Contract the muscles of the undertrunk and tighten the knot. The penis and testicles should bulge slightly from the pressure to insure against slippage. Do not cut off the circulation to the testicles.

Fig. 8 *Tying the Silk Cloth around the Genitals.*

(6) Tie one end of the cloth to the weight that you have placed on the floor, or on a chair. (Fig. 10 and 11) If the weight is on the floor, tie the cloth to it from a kneeling position.

(7) To remove the weight at the end of practice, kneel in front of the chair--or near the floor--and untie the cloth attached to the holding apparatus, then remove the cloth from the groin.

Fig. 9 *Tying the Silk Cloth.*

Fig. 12 *In the beginning stages of Chi Weight Lifting it is the kidneys that provide the internal counterforce.*

Vaginal Weight Lifting

The only difference between the Egg Exercise and Vaginal Weight Lifting procedure is the addition of a weight to the specially drilled egg after its insertion. In weight lifting we use wooden eggs. Usually an egg is chosen of approximately one inch diameter with holes drilled through which a string can be threaded for attachment to a weight. Use a sturdy string that can sustain at least ten to twenty pound weight. You can buy a half-pound plate that has a hole through which the string can be tied, or use a small cotton or plastic bag into which a weight can be placed and the bag easily attached to the egg's string and hung. The heavier the weights, the more counter pressure must be exerted by the vagina, the cervix, the ovaries, the diaphragm, the organs and glands. This extended effort will result in increased Chi pressure and hormone production. Make sure you can handle the weight well before adding more to it.

Fig. 13 *Vaginal Weight Lifting*

The exact sequence of steps is then followed as described in the Egg Exercise. This time, however, do not move the egg up and down. Hold it by tightening and squeezing the external and middle sections of the vaginal canal around the egg and pulling the egg up. Do not release it.

Practical Exercise Step-by-Step

(a) Insert the Egg While Holding the String and Weight

Place a chair in front of you and then place the weight on the chair. If you are not already prepared, start with the breast massage, followed by massaging the mons, the perineum, and the coccyx. When you feel the Chi is ready, insert the jade egg with the string attached into the vagina, always attempting to increase the force of section used to draw it in. Use the other hand to hold the string with the weight.

(b) Assume the Horse Stance

Align your body in the basic Horse Stance.

(c) Grip the Egg Using the Muscles of the Vaginal Canal and Release the String and Weight.

Inhale, closing the external and internal vagina tightly. At the same time contract the uterus near the cervix so that the vaginal canal has been closed on both ends. Inhale, squeeze the egg tightly, and pull it up until you feel you have gripped the egg firmly, then slowly release the string with the weight attached. Do not remove your hand in case you did not grip the egg firmly enough. If the egg with the weight attached falls out, it might hurt you.

(d) Use the Cervix to Pull the Weight up

Hold your breath and contract harder. Inhale and start to pull from the cervix and feel the force of the cervix helping to pull up the weight. When your feel you are holding the egg with the weight securely, start to rock the pelvis, thus rocking the weight, 30 to 60 times. This will generate a tremendous energy. When you feel the energy build up, inhale slowly and deeply down to the ovaries, gathering your sexual energy, and carry it through the uterus and down to the clitoris. Hold it there.

(e) Employ all the Muscles of the Vaginal Canal

Contract and hold the lower, then the middle and upper vaginal muscles, so that the egg pushes deeply up into the vaginal canal and the weight will not pull the egg out.

(f) Bring the Energy into the Head

Now draw all the energy you have just gathered up the spine and into the head, as you continue to hold the egg deeply inside of you.

(g) Continue Pulling the Energy into the Brain

Still holding the same breath, continue gathering and pulling the sexual energy up into the head, where the brain can now be bathed in this wondrous nourishment.

(h) Hold the Energy in the Brain

Hold this energy in your brain, initially for 30 to 45 seconds, and gradually increase this time period.

(i) Bring the Energy to the Navel

Finally, stick the tongue up to the palate, exhale, bring the energy down, and collect it in the navel point.

(j) Rest the Weight on the Chair and Expel the Egg

Grip the string on the weight and place the weight on the chair. Remove the egg, utilizing the contractile strength of the vaginal muscles to expel it.

(k) The Ovaries Pull and Lift the Egg and Weight Upwards

When you feel you can pull from the cervix well, begin to use the force of the ovaries. You will try only the left side first, then the right ovary, and finally both sides together. When you feel you can once again secure the egg in the vaginal canal, use your mind and start to contract the left ovary, wrap the Chi around that ovary, and then pull from the left ovary toward the cervix and the vaginal canal, pulling the egg and attached weight upwards. Do the same on the right side, and then both sides together.

Fig. 14 *Swinging the Weight Back and Forth.*

(I) Using Organs and Glands to Pull Up the Weight

Continue to use first the left. The right and then both sides of the organs and glands to pull the weight upwards, returning after each one to the ovaries to begin the exercise again. Practice in the following order: kidneys and adrenal glands, spleen and liver, lungs, heart (with caution), thymus gland, and then pulling all the way to the brain with the pituitary and pineal glands.

(m) Secure the Egg in the Vaginal Canal

Press your tongue firmly to the palate with the tip of the tongue touching the lower jaw behind the teeth and the flat part of the tongue touching the middle of the palate. Turn your eyes up toward the middle of the brain, and squeeze the head muscles toward the brain's middle area. Contract the lungs, heart, and thymus gland, and press upwards to the middle section of the brain. The pituitary gland, together with all of the other glands and organs pull up the spleen, liver, kidneys, bladder, ovaries, cervix, vaginal canal, egg and weight. Repeat the practice, now focusing on the pineal gland.

When finished with all of these steps, make sure that you circulate the energy for a few rounds in the Microcosmic Orbit, finally collecting it in the navel. Since all the steps of this exercise are very important and extremely powerful, you must use caution. Gradually you will feel all the organs and glands contributing to the internal force that will pull the weight.

Cleanse the Egg Thoroughly

Since the mucous secretions on the egg are an ideal medium for bacterial growth, be sure to cleanse the egg thoroughly after each use.

Massage Yourself

Massage the Hui Yin point in the perineum. Massage the mons and the coccyx. This massaging after each exercise is very important. It will help you clear the remaining energy so that the body can absorb it easily.

Channel the Energy in the Microcosmic Orbit

Gently tap the lower abdomen with your palm to remove the excess energy from the ovaries, vagina and clitoris. Sit down quietly and channel the excess energy in the Microcosmic Orbit, so that all your organs will benefit.

Hitting

General Instructions

- Can be done every day to stimulate the organs and channels.
- Be careful not to hit too hard.

Fig. 15 *Construction of Rattan and Wire Hitters.*

Awakening and Detoxifying the Lower Abdomen and Joints

- Begin with the following warm up exercise to unlock energy in the major joints and lower abdomen.

A. Lower Abdomen

- Inhale; pack energy in the lower abdomen about 3 inches below the navel just above the pubic bone.
- Hit 3 times on this point; feel the energy awakening.
- Exhale and rest; inhale and repeat procedure.

Fig. 16 *Hitting the Door of Life and Lower Abdomen.*

B. Door of Life

- Inhale; pack energy at the Door of Life (Point opposite the navel) and hit 3 times.
- Exhale and repeat.

C. Knees

- Inhale; pack energy in the left leg and hit 3 times on the joint at the back of the knee.
- Exhale and repeat.

D. Inside of Elbows

- Inhale; pack energy in the arms and hit 3 times on the inside of the joint of the left arm.
- Exhale and repeat.
- Do right arm joint.

Detoxifying and Strengthening the Organs

A. Stomach/Prostate/Ovaries

- Inhale, pull up genitals and urogenital diaphragm.
- Begin hitting on the navel and hit down to just above the pubic bone and then up again to just below the sternum.
- Rest and feel the energy flow.

B. Abdominal Organs

- Inhale, pull up genitals and urogenital diaphragm.
- Hit about 1 ½ inches to the left side of the navel.
- Hit down to the pubic bone in a parallel line to step A, and up again to the left side of the rib cage.
- Exhale and move about 3 inches from the navel.
- Inhale, pull up and hit down in a parallel line to the hip and up to below the rib cage.
-Repeat the procedure on the right side of the navel.

Endocrine Glands

Fig. 17 *Detoxifying and Strengthening the Organs.*

Fig. 18 *Hitting Abdominal Organs.*

12 Channels in the Hand

A. Inside Elbow/Middle Finger

- Begin at the inside of the left elbow, hit 3 times and hit down the inner side of the forearm to the wrist toward the middle finger and then up the shoulder.

B. Inside Elbow/Thumb

- Begin just to the left of center of left elbow, hit 3 times and hit down forearm to wrist toward the thumb. Then hit up to the shoulder.

C. Inside Elbow/Small Finger

- Begin just to the right of center of left elbow, hit 3 times and hit down toward the small finger and up again to the shoulder.

Fig. 19 *Hitting to Stimulate the 12 Channels in the Hands.*

D. Outside Elbow/Middle Finger
- As above, but starting just below the left elbow.

E. Outside Elbow/Thumb
- As above, but start just below the left elbow.

F. Outside Elbow/Small Finger
- As above, but start just to the right of the left elbow.

G. Repeat as above on the Right Arm beginning with the Middle Line of the Right Elbow.

12 Channels in the Legs

A. Back Side of Left Leg
- Hit 3 times on the middle of the back left leg joint. Hit down to the ankle and up to the buttocks.

B. Back Side of Leg/Great Toe
- Hit 3 times on the back of the left leg joint to the right of center.
- Hit down to the ankle and up to the buttocks.

C. Back Side of Leg/Small Toe
- As above, but begin just to the right of center of the back of the joint.

D. Front Side of Leg/Middle Toe
- As above, but begin hitting just below the center of the knee cap, Hit down to the ankle and up to the groin.

E. Front Side of Leg/Great Toe
- As above; begin hitting to the right of front center.

F. Front Side of Leg/Small Toe
- As above; begin hitting to the left of front center.

G. Move to the Right Leg and Cover the Channels as above.

Fig. 20 *Heel Line-Hitting the Big Toe Line of the Leg.*

Fig. 21 *The 12 Channels in the Leg.*

Fig. 22 *Distribution of Fourteen Channels (Anterior View)*

Fig. 23 *Gall Bladder, Lung, Kidney and Large Intestine Meridian*

Fig. 24 *Small Intestine,Stomach, Heart and Spleen Meridian*

Back

A. Left of Spine 1 ½ Inches

- Hit at the left of the Door of Life, and hit up parallel to the spine up to the neck and down again to the buttocks and sacrum.
- Be very careful over the kidney and be sure to round the scapula.

B. Left of Spine 3 Inches

- Begin at the Door of Life and hit up to the rib cage and down to the buttocks.

C. Right of Spine 1 ½ Inches

- As above.

D. Right of Spine 3 Inches

- As above.

Fig. 25 *Hitting Left and Right of Spine*

Fig. 26 *Hitting the Ribs*

Ribs and Chest

- The chest is hit in horizontal lines, extending out from the sternum and beginning at the bottom rib.
- Each of the hitting lines is about 1 ½ inches apart.
- There are 6 such lines on the left and right rib cage.
- Do not hit on the center of the chest over the sternum.
- Be extremely gentle over the heart and lungs.
- Begin at the bottom of the left rib cage and hit just to the left of center and hit around to the side parallel to the belt route.
- Move 1 ½ inches up and hit parallel to the above line.
- Finish the last 4 lines on the left rib cage and then hit the 6 lines on the right rib cage.

Fig. 27 *Hitting the Chest*

Fig. 28 *Hitting the ribs from the sternum outward horizontally*

Bone Marrow Nei Kung

In this booklet you will find all the information needed to begin the Bone Marrow Nei Kung Practices. Bone Marrow Nei Kung is a system of health developed by the ancient Taoist Masters for the cultivation of internal power. They discovered that, through the process of absorbing energy into the bones, bone marrow can be revitalized to replenish the blood and nourish the life-force within. Many healers have sought these methods, which are known to make the body impervious to illness and disease. In ancient times, the "Steel Body" attained through this practice was a coveted asset in the fields of Chinese medicine and martial arts.

Today the copious health benefits of this art are sought after by health enthusiasts from all walks of life. The Taoist methods of "regrowing" the bone marrow are crucial to the rejuvenation of the body, which in turn rejuvenates the mind and the spirit. These secrets have never before been revealed, but now their disclosure is necessary to instill the sensibilities of the masters into an energy-deficient society. In this booklet, Master Mantak Chia divulges the step-by-step practices of his predecessors in a useful and informative work, written for the health and spiritual well-being of today's world.

The meditations, practices and techniques described herein are ***not*** intended to be used as an alternative or substitute for professional medical treatment and care. If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training. This booklet does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Simple Chi Kung

Whether one is student or an expert, practice is essential. A practice session can be fruitless, however, if the body is not properly prepared to handle the energy it is about to absorb. This is the main reason for these additional Iron Shirt training exercises. The term "warm-up" means to begin the Chi and blood flow and invigorate their circulation throughout the body. Warm-up exercises are particularly important for areas of the body that are rarely stretched, such as the spine and the sacrum. Even a person who does weight training and aerobics is still not properly prepared for the conduction of large amounts of energy. Without an adequate warm-up before exercise, the muscles may also be stiff and tight and lack sufficient blood supply to meet the sudden demands placed on them by strenuous activity. This is one major cause of athletic injury.

They are also easy to perform. Listen to the messages from your body as you do the various exercises. Pain is the body's warning signal that you may be overdoing it. The goal is not to overstretch or to develop large muscles, but to loosen the joints and relax the muscles so that the Chi and blood can flow without obstruction. Don't force yourself beyond your limits: less is better, especially at the beginning. If you feel any joint pain or discomfort while doing any of the exercises, back off until you feel comfortable. If you still feel strain or pain, discontinue the exercise all together.

Be especially respectful of any injuries, chronic problems, or physical limitations you may have. If you are kind and gentle to your body, it will start to trust you and relax by itself. You will find yourself starting to loosen on a deeper level without having to force the issue. In this way, you will develop naturally, gradually, and safely. In Iron Shirt Chi Kung, you learn to reorganize the structure of your body in the way you are standing, sitting or moving. In particular, you discover how to use the power of the Lower Tan Tien, the perineum and the spine to stand in a strong, stable, integrated way.You will see that many warm-up movements focus on training the waist for this reason.

Bouncing

Bouncing the body can be compared to a brief ride on the subway. For those of you who commute, this can be practiced on the way to work as well.

1. Just relax the body while concentrating on opening the joints, and bounce on the floor without any tension.

2. Let the vibration in the heels work its way up through the entire skeletal system: from the legs to the spine to the neck to the skull. Shoulders and arms should vibrate as they hang loosely by the sides of the body. To enhance this, you can hum a vowel to hear the vibration make the voice tremble as well.

3. Rest and feel the Chi entering the joints.

Fig. 1 *Shake all the joints loose and feel them open.*

Foot and Hand Kicking

Draw out your leg and opposite arm and kick out letting go of any tension, pain and stress (30 to 60 times); then do the opposite leg and arm.

Fig. 2 *Foot and Hand Kicking*

Knee Rotations

Standing with feet together, hands on your knees, knees flexed, rotate both knees together, exercising your ankles and knees with clockwise/counterclockwise rotations.

1. Place the feet together. Bend the knees and place the palms lightly on the kneecaps.
2. Slowly and gently rotate the knees to the left.
3. Rotate the knees to the back.
4. Rotate the knees to the right.
5. Repeat steps 2 and 4 eight more times.
6. Now reverse direction and repeat nine times.

Fig. 3 *Knee Rotations*

Hip Rotations

1. Stand with the feet parallel and slightly wider than shoulder width apart. Place the hands on the sides of the waist. As you perform the hip rotations, keep the head above the feet. Move slowly and easily, breathing deeply and continuously.
2. Bring the hip and forward.
3. Move the hips in a large clockwise circle..
4. Now move the hips in a circle to the back.
5. Move the hips counterclockwise.
6. Repeat steps 2-5 eight more times.
7. Reverse the direction and repeal steps 2-5 nine times.

Fig. 4 *Hip Rotations*

Sacrum Rotates Back and Forth

Rotating the sacrum is an excellent exercise to open the lower back and activate the spinal cord. Place one hand over the sacrum and the other over the pubic bone. Rotate the sacrum in a circle, 36 times in each direction. This movement activates the sacral pump.

Fig. 5 *Sacrum Rotates Back and Forth*

Standing Crane and Turtle

Stand with feet apart and draw your head out in front of you with your chin extended out and your palms on your knees.

Draw your chin into your body moving your spine. Do Crane Exercise nine to eighteen times and reverse curving your lower back nine to eighteen times with the Turtle Exercise.

Fig. 6 *Standing Crane and Turtle*

Standing Crane

Fig. 7 *Standing Crane*

Spinal Cord Breathing

Inhale and expand the chest, arms bent at the elbows and extended to the sides of the body. Exhale, tuck the tailbone under and round the back forward, bringing the elbows toward one another in front of the chest. Inhale, expand the chest, tuck the chin in toward the throat, push the chin back, raise the crown and bring the arms out to the sides. Repeat this back and forth movement 36 times. This movement activates the cranial and sacral pumps, and loosens all the joints in the spine.

Fig. 8 *Spinal Cord Breathing*

Fig. 9 *Spinal Cord Breathing*

Empty Force in Lower, Middle, Upper Parts of the Body

Breathe in the three abdominal areas (Lower, Middle and Upper) and exhale deeply out with mouth open. Breathe in deeply and exhale, sticking the tongue out and curling it under with the movement of the lower abdominal area emptying any further air out of the body. (Optional: Men: Pull your genitals down at the same time as you breathe and Women: Use a string and jade egg).

Do the same procedure for the Middle and Upper abdominal areas, then move the tongue and abdomen in a circular motion and reverse continually emptying the body out of any air.

Fig. 10 *Empty Force in Lower, Middle, Upper Parts of the Body*

Empty Force Practice

Fig. 11 *Empty Force Practice pulling the Genitals down*

Upper Stretching and Twisting to Four Sides

Raise hands above head and stretch as far as you can reach, moving up on your toes. Grab your elbows, moving down on your feet and lean to each side several times. Then turn your spine to the right and then to the left.

Fig. 12 *Upper Stretching and Twisting to Four Sides*

Windmill Exercise: Opening the Spinal Joints

Do each phase of this practice very slowly and mindfully.

A. Outer Front Extension

1-3. Begin in the same stance as for Waist Loosening. Bring both hands together and hook the two thumbs together. Keeping the hands close to the torso, inhale and raise the arms until they are extended straight above the head, with the fingers pointing upward. Gently stretch up in this position, extending the spine slightly backwards. You can even say ***"Ahhhhhh"*** as you would when you stretch first thing in the morning.

4-5. Begin to exhale slowly and bend forward, reaching as far out in front as you can, keeping the head between the arms. Try to feel each joint of the spine releasing one by one in a wavelike motion. Bend first from the lumbar vertebrae, then from the thoracic vertebrae, and finally from the cervical vertebrae. At this point you should be completely bent over.

6-9. Slowly straighten your back, once again feel each joint of the spine become open, from the sacrum, lumbar, thoracic and cervical vertebrae. Allow arms and head to hang heavily until you are back in the starting position. Repeat three to five times. Finish with the arms over the head as at the end of Step one.

B. *Inner Front Extension*

1-3. Now do the same movements, but in reverse. Point the fingertips downward and slowly lower the arms, keeping the hands close to the torso. When the arms are completely lowered, begin to bend forward. Release the head, cervical vertebrae, thoracic vertebrae, and lumbar vertebrae, until you are bent all the way forward as at the end of Step two of the Outer Front Extension. Feel each joint become open.

4-5. Keeping the head between the arms, start to straighten back up. The arms should extend in front as you slowly move back to an erect position. When you finish straightening up, the arms should be straight up above the head. Repeat three to five times.

C. *Left Outer Extension (Left Side Bending)*

1. Keep your head between your arms in the overhead position, and lean to the left. You should feel a gentle stretch on the left side of the waist. Continue stretching down and to the side until you are bend all the way down to the side.
2. Then circle back up on the right side until you are once again standing straight with the arms overhead. Repeat three to five times.

D. Right Outer Extension (Right Side Bending)

Repeat the side-bending movements as in the left Outer Extension, but to the right. Do three to five times.

E. Conclusion

To finish, unhook the thumbs and let the arms slowly float back down to the sides.

Fig. 13 *Windmill Exercise*

Fig. 14 *Windmill Exercise*

Look from Side to Side from the Neck

1. Neck tilt: Let the head drop gently on one side, then the other back and forth. Let gravity do the work. Try to feel how much it weighs. Keep both shoulders dropped, relaxed and motionless.

2. Side to side rotation: Look over the shoulders one after the other, looking further and further back as you warm up.

Let your eyes direct the movement and let your neck follow so it is always in extension, never in contraction.

3. Up and down: Look up right over the head, then down in between your feet alternately.

4. Rotations: Follow a circle around your face clockwise several time, then counterclockwise. Again keep your eyes open and directing the movement. The neck is only following.

For all the exercises make sure you keep the rest of the body joints loose and breathe calmly from your abdomen.

Fig. 15 *Look from Side to Side from the Neck*

Shoulder Rotation with Eyes

1. Lateral movement: Spot an object in each extreme angle of your peripheral vision and move from one to the other alternately without turning your neck.

2. Up and down: Spot an object over your head, another one by your feet and go from one to the other without tilting your head.

3. Upper right corner of the right eye to the left corner of the left eye.

4. Upper left corner of the left eye to the right corner of the right eye.

5. Rotations: Follow a circle around the eyes very slowly and catch yourself when your eye balls want to skip an angle and go back and forth there until you have a smooth movement.

N.B.: Make sure you are breathing steadily from your abdomen and your neck is unlocked.

Fig. 16 *Shoulder Rotation with Eyes*

Shoulders

1. Shoulder Rotations: Stand with feet a shoulder or hip width apart in a relaxed manner.
   a. Bring the shoulders all the way up to the ears
   b. Then as far back as possible (Trying to touch the shoulder blades together)
   c. Then let them drop.

Repeat several times.

2. Shoulder rotations + Front Arms Stretch
   Stand with feet a shoulder or hip width apart in a relaxed manner, arms extended forward.
   a. Bring the shoulders all the way up to the ears
   b. Then as far back as possible (Trying to touch the shoulder blades together)
   c. Then let them drop
   d. Stretch all the way from the tip of the fingers to the spine as if you were pulled forward by the fingers.

Repeat several times.

3. Shoulder Rotations + Arms Stretch over the Head: Stand with feet a shoulder or hip width apart in a relaxed manner, arms extended over the head.
   a. Bring the shoulders all the way up to the ears
   b. Then as far back as possible (Trying to touch the shoulder blades together)
   c. Then let them drop
   d. Stretch all the way from the tip of the fingers to the spine as if you were pulled by the fingers from the ceiling.

Repeat several times.

4. Shoulder Rotations + Lateral Aarms Stretch
   Stand with the feet a shoulder or hip width apart in a relaxed manner, arms stretched out laterally.
   a. Bring the shoulders all the way up to the ears
   b. Then as far back as possible (Trying to touch the shoulder blades together)
   c. Then let them drop
   d. Stretch all the way from the tip of the fingers to the spine as if you wanted to touch the walls in both directions at the same time.

Repeat several times.

The stretch happens from the tip of the fingers and involves all tendons, ligaments and faciae from the tip of the fingers to the spine. This is excellent for prevention and correction of carpal tunnel syndrome and tennis elbow.

Fig. 17 *Shoulders*

Forearm and Palms Slapping the Organs

Twist the spine left to right, letting go of the arms with palms slapping the organs (Lungs, Heart, Kidneys, Spleen, Pancreas, Lower Bladder) as you turn the spine several times.

Fig. 18 *Forearm and Palms Slapping the Organs*

Hand and Wrist

Wrists:

One arm and hand active, the other arm and hand passive. The passive side receives the treatment/exercise, the other side (active side) gives the stretch. Stretch is given upon exhalation.

1. Simple flexion:
   a. The active hand lifts up the passive wrist at sternum level and flexes the wrist by pushing the hand toward the inside of the arm.
   b. Repeat several times.
   c. Switch sides.
2. Internal rotation with flexion and abduction of the wrist:
   a. Passive hand facing your face; the active hand wraps around the back of the passive hand, thumb between the little finger and the ring finger, with middle finger and ring finger wrapping around the wrist of the passive hand.
   b. Rotation of the passive wrist is given by pushing the thumb of the active hand between the little finger and the ring finger of the passive hand while the middle and ring fingers of the active hand pull the passive wrist in the opposite direction.
   c. Repeat several times.
   d. Switch sides.
3. External rotation with flexion and adduction of the wrist:
   a. Arms outstretched palms facing each other.
   b. Passive hands turns outwardly, active hands spoons the passive hand, slightly clenches the fingers together holding the weight of the passive hand and arm.
   c. Passive side decontracts and lets drop the whole weight of the elbow and shoulder.
   d. Active hand flexes and stretches the passive wrist by bring ing it closer to the sternum.
   e. Repeat several times.
   f. Switch sides.

4. External rotation with abduction and extension of the wrist:
   a. Passive hand extended, with arm outstretched, palm facing forward, thumb down.
   b. Active hand takes all the fingers of the passive hand in a palm to palm position giving an upward rotation, hyper extending the wrist while you let drop the whole weight of your arm and shoulder.
   c. Then lift up all the weight of your wrist, elbow and shoulder in a stretching movement toward the ceiling. Stretch should be felt all the way from the fingers to the neck.
   d. Repeat several times.
   e. Switch sides.
5. Hyper extension of the wrist:
   a. Passive hand palm up.
   b. Active hand takes the fingers of the passive hand and hyper extends the fingers, hand, wrist and arm in one motion down toward the leg.
   c. Repeat several times.
   d. Switch sides.

Fig. 19 *Hand and Wrist*

Fig. 20 *Elbow Twist*

Opening the Door of Life

1. Begin in the same stance as the Waist Loosening. Twist to the left as in the Waist loosening exercise, initiating the movement from the hips. Let the right arm swing across the front of the torso, raising it up to head height with the palm facing away from you. At the same time, let the left arm swing around the back and place the back of the left hand over the Door of Life point (the point on the spine opposite the navel).

2. When you reach your full extension, relax, and then extend again by loosening the lower back. Feel the gentle stretch and increased extension coming all the way from the Door of Life area, not from the shoulders. Extend in this way two or three times.

3. Twist to the right and repeat the steps as above on the right side. Repeat nine times to each side.

Fig. 21 *Door of Life*

Fig. 22 *Opening the Door of Life*

Elephant Swings his Trunk

Let go of your arms and move your hips back and forth throwing your arms out and loosening your shoulders and neck.

Fig. 23 *Elephant Swings his Trunk*

Squatting to Open Sacrum

A good exercise for developing the squatting position is to stand with your feet shoulder width (when you improve your squatting ability, place both feet together) close to a wall, facing the wall and then to squat straight down from the kua (like you are sitting down, not bending the knees too much). The wall will prevent you from leaning forward when you squat. Some people tend to bend the head forward first, and also to bend the back and lean forward. Using a wall will make you see whether you are bending too much. Breathe in the Lower Tan Tien. Keep the chest relaxed and feel a force pulling you down and a force pulling you up, when you squat down to the Earth.

To squat down you can also use the help of a partner or the edge of a table. Be sure that you go straight down and bend from the kua. When you work with a partner, stand shoulder width facing each other, arms stretched, and firmly grasp each other's wrists. From this position, squat straight down together from the kua while supporting one another. Sink as deep as you both can without leaning forward.

Start by standing in front of the wall 18 cm or more away. Eventually you can move closer to the wall. Place both hands on the sides, the tips of the fingers touch the thigh bones.

Slowly drop down from the groin, like you are sitting down; drop till you can't go any further, and lightly bend the knees. If you bend too much your knees will hit the wall.

Fig. 24 *Squatting to Open Sacrum*

Clench and Tap Teeth

Clench and tap your teeth several times from the front, right and left sides.

Fig. 25 *Clench and Tap Teeth*

Bone Breathing

1. Bone Breathing Process

The Bone Breathing Process uses the mind and the eyes to absorb the Cosmic Force into the bones. The mind and the eyes are also used immediately after each exercise (in any posture) to bring the energy down to the navel.

Bone Breathing is the method of drawing external energy through the skin into the bones to clean out fat in the bone marrow(“Cleansing the Marrow”). This process helps to regenerate the bone marrow, thereby rejuvenating the production of blood and Chi. It is vital to the practice of Iron Shirt Chi Kung III, but is also used in Iron Shirt I to increase blood and energy circulation. Chi can then flow freely into the bones and blood, carrying nutrients and oxygen to areas in need. Tension in the muscles surrounding the bones is lessened and the bones become strong.

Bone Breathing is a three-stage process of inhaling and exhaling as through the fingers and toes:

a. Use the powers of the mind and eyes to breathe in outside energy through the fingertips, gradually up to the hands and arms to the skull, and then down the spinal column. A sensation is felt as you breathe into each area.

b. Inhale and exhale the same way through the toes and then, by degrees, inhale up to and into the thigh bones, legs, and hips (also in a step-by-step progression). Then inhale up your legs to the sacrum where the energy will enter your spinal column, surging up throughout the nervous system.

c. Finally, breathe into both the arms and legs simultaneously, through C-7, and up into the head. Remember that you absorb and eject energy more effectively at specific points, many of which protrude from the body; toes, fingertips, elbows, knees, sacrum. Door of Life. C-7, shoulders, and nose.

Fig. 25 *Bone Breathing*

2. *Bone Compression*

This exercise is another mean of increasing the flow of Chi to the muscles and the bones, squeezing out toxins, sediment, waste material, and negative emotions that have become stored in the muscles. Once these negative qualities are cleaned out, positive ones have room to grow. Positive emotions relax the muscles and the entire body.

We also know the Bone Compression as the “Power Exercise” or the “Dynamic Tension” which serves to greatly tone up the muscles and strengthening the bone and bone marrow. It is accomplished by tightening and squeezing the muscles to the bones as you inhale, then releasing and totally relaxing chose muscles as you exhale strongly.

Practice in the following progression: (a) hands, forearms, upper arms; (b) legs, lower legs, thighs; (c) neck and head, (d) back (spinal cord) and chest (rib cage). Peel the muscles and bones separate from each other as you relax.

Complete the exercise by standing up straight with the palms on the navel. (Men, left palm over right; women, right palm over left). Stand for a while, and feel the Chi flow in your Microcosmic Orbit. Then concentrate on collecting the energy in the navel. Men should spiral the energy outwards in a clockwise direction 36 times, being careful not to go above the diaphragm or below the pubic bone, then inwards 24 times, and collect the energy at the navel. Women should spiral in a counterclockwise direction 36 times, reversing when spiraling inwards for 24 times. When you are finished, relax, and use the palms to gently brush any remaining energy down from the chest.

Tips of the fingers have a lot of Chi.

Fig. 26 *Touching Navel and Sexual Center.*

Fig. 27 *Stage One: Respiration through the Fingers*

Precautions

The following is a warning to all practitioners, especially those with high blood pressure, emotional instability, heart or chest pain, or any acute illness.

1. If you have high blood pressure, check with a doctor before attempting to practice Iron Shirt. Do not do the exercises and breathing techniques strenuously.

2. Women should not do Iron Shirt breathing during menstruation, but may practice the structure, standing meditations, and Bone Breathing. If pregnant, do not practice Iron Shirt Packing Breathing; use only Energizer Breathing and standing meditation.

3. Be sure that the diaphragm is lowered while practicing these exercises to avoid accumulating energy in the heart and to facilitate the flow of the Microcosmic Orbit. Do not pack the chest as this can cause energy to congest there, which can affect the heart. Again, you should always relax the chest.

4. Always breathe into the lower abdomen and perineum to avoid trapping negative energies in other parts of the body. especially in the brain, the heart, or the liver.

5. After practicing the postures, be sure to place the tongue on the roof of the mouth to connect the Microcosmic channels so that all energy from the head can be drawn down through the Functional Channel to the navel for storage. Do not leave energy in the head or upper body.

Simple Chi Kung

Warm Up Exercises

Mantak Chia

Simple Chi Kung

In this booklet you will learn a series of simple exercises which can be used as warm ups for higher Chi Kung practices. When the practitioner does these exercises, the body is prepared to handle the energy it is about to absorb and the circulation of Chi and blood throughout the body is facilitated.

The exercises are easy to perform and are designed to loosen the joints and relax the muscles to improve the flow of Chi and blood. Every part of the body is given attention, and the exercises start with generalized "bouncing" to shake the joints loose and open them.

The joints of the knees, hips and spine are worked, and these exercises are followed by breathing routines, then stretching, twisting and rotation exercises working on the tendons and ligaments in different parts of the body.

Specific techniques for opening the Door of Life point and the Sacrum are illustrated in a clear step-by-step manner, and the booklet ends with an explanation of Bone Breathing and Bone compression.

Practice of these warm up exercises will result in a deeper level of loosening in the body and an increased awareness of the body's structure. The practitioner can then progress to practice of Iron Shirt Chi Kung with confidence.

If any readers are suffering from illnesses based on mental or emotional disorders, an appropriate professional health care practitioner or therapist should be consulted. Such problems should be corrected before you start training. This booklet does not attempt to give any medical diagnosis, treatment, prescription, or remedial recommendation in relation to any human disease, ailment, suffering or physical condition whatsoever.

Introduction

Tan Tien Chi Kung is one of the Taoist Chi Kung practices used to develop Tan Tien and Perineum power.

We need Chi and Chi pressure in the Tan Tien as a foundation for most of our Universal Tao practices, especially for Iron Shirt and Tai Chi Chi Kung, and meditation.

The Lower Tan Tien is the main energy reservoir in the body. It is the place where we store the energy we generate, gather and absorb in Chi Kung and meditation. If the energy is stored in the Tan Tien it can be accessed later, if not the Chi dissipates and cannot be used. The Tan Tien is therefore also called the Ocean of Chi. According to the Chinese medical theory, once the ocean is full it overflows into the eight extraordinary meridians. Once these are full the Chi flows into the twelve ordinary meridians, each of which is associated with a particular organ. The Tan Tien is therefore the foundation of the entire energetic system of the body.

Fig. 1 *Expanding the Chi Ball.*

We usually refer to the lower abdominal area as the Tan Tien, but we actually have three Tan Tiens: the Lower Tan Tien, the Middle Tan Tien (heart) and Upper Tan Tien (behind the mideyebrow point; the brain). You can read more about the Tan Tien in the booklet, “Opening the three Tan Tiens to the Six Directions”. All three Tan Tiens are used in Taoist inner alchemy. Because of their capacity to deal with a large amount of Chi, the Tan Tiens are used as a “laboratory” for Inner Alchemical work. Translated from the Chinese, the word Tan means elixir (literally cinnabar, a mineral used in the Outer Alchemy as a basis for the elixir of immortality, since it was considered to have the perfect balance of Yin and Yang). Tien means field or place. It is the place where all the energies of our body, the earth, the Universe and nature come together to form the pearl, the elixir of immortality, the nourishment for our soul and spirit.

The Lower Tan Tien (hereafter referred to as “the Tan Tien”) is located in the abdomen approximately three finger-widths below the navel near the center of the body. The precise location varies from person to person and depends on the body type. In the Tan Tien we store our Original Chi. Original Chi is the Chi derived from the egg and sperm of our parents, from which our entire organism arises.

In Iron Shirt Chi Kung practice we learn to stand effortlessly and relaxed in the “Embrace the Tree” position through our internal body structure and alignment, our rooting, a powerful pelvic floor and the centering in the Tan Tien. In Tai Chi Chi Kung we learn to move this “tree”, circulate the energy and strengthen our internal power. All movements in Tai Chi originate from the Tan Tien. This important region is responsible for control and balance, two key ingredients in proper Tai Chi execution. Additionally, the Chi generated through the Iron Shirt and Tai Chi practice is stored in the Tan Tien.

For the development of the internal and rooting power and the centering of the body and the mind, it is necessary that enough energy is stored in the Tan Tien (so that the Tan Tien is filled with Chi pressure) and that our mind is strong and focused in the Tan Tien. This will also makes us more focused, stable and balanced in daily life. It enhances our personal power.

Fig. 2 *A healthy body has an internal pressure of fourteen and seven tenths pounds of pressure per square inch (PSI) Any reduction of this pressure increases the chances of illness and overall weakness.*

While the Tan Tien is both the source and container of Chi power, the mind acts like a general that issues orders to the Tan Tien for directing power. Through this we can draw energy quickly and effectively from this area and direct it to another area. This is especially important in Tai Chi and Healing Love practices.

We have a constant air pressure in our body. We call this Chi pressure. In Tan Tien Chi Kung we learn to develop this Chi pressure in the Tan Tien and to strengthen our organs and fasciae. Our system relies entirely upon Chi pressure to move the body fluid. We can actually increase our vital energy, strengthen our organs, and promote self-healing by increasing the Chi pressure in our organs and body cavity. The circulatory system, the lymphatic system, the nervous system, and the endocrine glands will all be activated, and blood, spinal fluid and hormones will flow more easily so that the heart will not have to work as hard. Increasing pressure in the abdominal cavity will help increase the Chi pressure used to move the Chi, blood and lymph fluid.

One of our goals is to increase Chi pressure in order to increase organ and abdominal pressures so that the Chi presses outward on the fasciae layers from the inside. We pack the Chi in the Tan Tien and, after it is released, the fasciae expand as do the organs.

When people are sick, the Chi pressure inside decreases and falls below the Chi pressure from outside, which is about 14.7 PSI. So these people cannot tolerate the exterior pressure so well. They will become irritated very quickly, tired from people around them, etc. Life becomes a burden. A lack of Chi pressure also slows down all circulation (Chi, blood, lymph and spinal fluid). It is a downward spiraling movement of the whole life force.

Developing Chi pressure is one of the best practices we can use to reverse the downward spiraling movement into an upward spiraling movement in the quantity and quality of our life force. In other words, the increase of the Chi pressure in our Tan Tien through the Tan Tien Chi Kung will enhance our healing, martial arts (Iron Shirt and Tai Chi), meditation abilities, and the art of daily living and will also nourish our Original Force. It is the Chi pressure in the Tan Tien that roots our body and mind.

It is our electric wire in the earth, our ground wire. When the Chi pressure is low, we will have no rooting. The energy and the mind will be fuzzy, drifting and will quickly rise upward and dissipate, and cause overheating, headache, pain in the heart and a distracted mind.

If you want to become a big strong tree, you need deep roots, which also means a high Chi pressure in the Tan Tien. This is one of the reasons why the Tan Tien Chi Kung is the foundation for Iron Shirt and Tai Chi Chi Kung and it is also important for our meditation practice.

In the long run we will regain our inner peace and stillness through this inner power in the Tan Tien. This will restore our connection with our Origin, the mind of the Tao.

Fig. 3 *All forms of energy work require that we remain solidly connected to the ground.*

Practice

The practice is divided into two parts. In part one, we will learn to increase the Chi pressure in the Tan Tien, in the organs, especially the kidneys, in the fasciae, in the lumbar area and the Door of Life. This is accomplished through a combination of breathing, contraction (pulling upward) of certain parts of the perineum (anus) toward specific areas of the abdomen and pressing down the abdominal diaphragm. The exercises also nourish our Original Force.

The warm-ups open the kua/sacrum and the hip joints and strengthen the anus (perineum)

In part two, we will learn eleven animal postures. In fact, they have the same results as the exercises from part one. They are, however more powerful and will significantly enhance the Chi pressure/inner power in the Tan Tien, the strength of the perineum and the rooting power. They are actually a very good preparation for Tai Chi.

Warm-up Exercises

We start the practice of Tan Tien Chi Kung with some warm-up exercises: the opening of the sacrum/kua and the strengthening of the anus (in fact the whole perineum, including the sexual organs).

An open sacrum and a strong anus are the necessary conditions for the development of Chi pressure in the Tan Tien (Tan Tien power). These are the requirements for the correct execution of the exercises of Tan Tien Chi Kung.

1. Opening the Sacrum

The sacrum, the groin area, the hip joints and the iliopsoas all form the kua. When the kua is closed, the flow of Chi, blood, lymph fluid down and up the legs is blocked as are the nerves to the legs. In order to enable the sacrum to move freely, the sacrum should be separate from the hip bones. When the sacrum and the pelvis are open, there is space for the energy and we can push this energy far down in the Lower Tan Tien.

Fig. 4 *Sacrum*

1. Rub the sacrum warm. Stand shoulder width, feet parallel, ankles and knees slightly spiraled outward and locked together like one piece. The arms are round and the palms are facing the earth. Picture your Lower Tan Tien as an ocean. The waves are moving you back and forth. Sink down in the groin/kua. Inhale, turn the palms and raise them upward, pull the perineum slightly up, the sacrum is closed. Exhale, turn the palms, with the thumbs inward, down and push them firmly toward the earth. This will create a tension in the tendons. At the same time contract the anus and push the heels which are firmly rooted, outward and turn the upper thigh inward. This will help to open the sacrum. Keep the knees and ankles aligned and connected with the earth. When you open the sacrum this way, it feels like you are pushing the hips to the side. Actually, you are also pushing the sacrum to the back, tucking the coccyx in and opening the pelvis.

Activating the hips and the sacrum pump activates the cranial pump, stimulating the flow of cerebrospinal fluid through the spine to the brain. This will nourish the brain and enhance the clarity of our thinking and the activities of the central nervous system.

Fig. 5 *Sink down in the kua, round the arms and push down into the earth.*

2. Squatting will also help to open the kua, especially the sacrum and the hip joints. Squatting is a powerful and effective way to open the kua and the sacrum. For many people in the world it is still common to sit, talk, eat, empty the bowels, meditate and relax and restore the energy flow in the squatting position.

The squatting position also provides a deep massage and enhances the Chi and blood flow to all organs in the Lower Tan Tien, including the small and large intestines and the fasciae. It releases gases and is very helpful in relieving constipation.

A good exercise for developing the squatting position is to stand with your feet shoulder width (when you improve your squatting ability, place both feet together) close to and facing the wall and then to squat straight down from the kua. The wall will prevent you from leaning forward when you squat. Breathe in the Lower Tan Tien, keep the chest relaxed and feel a force pulling you down and a force pulling you up, as you squat down to the Earth.

To squat you can also use the help of a partner or the edge of a table. Be sure that you go straight down and bend from the kua.

When you work with a partner, stand shoulder width facing each other, arms outstretched, and place the hands on each other's shoulders. From this position, squat straight down together from the kua while supporting one another. Sink as deep as you both can without leaning forward.

3. Other exercises for loosening the sacrum:

- Put your hands on your sacrum and pubic bone and rotate the sacrum in both directions.

- Hold your hands again on the sacrum and move the sacrum back and forth, back and forth.

Fig. 6 *Squat*

2. Anus/Perineum

The Taoists divide the anus into five parts: the front which is connected to the Hui Yin (the perineum point and the sexual organs); the back of the anus, which is connected to the coccyx and the sacrum; the middle; the left, which is connected to the left side of the body, especially the left kidney; and the right side, which is connected with the right side of the body, especially the right kidney. In Tan Tien Chi Kung we strengthen all these parts (perineum power) by contracting them (pulling up). When your pelvic area is strong, no energy will leak out of these gates, and you can enhance the Chi pressure in your Tan Tien. With a weak perineum and anus, this is not possible.

Fig. 7 *Anus is divided into five regions.*

There are good Taoist exercises to strengthen the anus and the different parts of the anus (perineum/pelvic floor) and to learn to contract them (by pulling up) without tightening the muscles too much. To make them really strong, which means giving the muscles a strong tone, you must do these exercises many times a day. The pleasant thing about them is that you can do these exercises everywhere: good times and places to practice are while waiting at the post office, the bus station, the shop, or when you watch a movie or TV, or work on the computer. When you are creative, you will find many occasions during the day to practice these exercises.

The best way to do these exercises is in the standing position. However, you also can practice them sitting or laying on the ground, in bed or even in the bathtub.

We give you the exercises in the standing position;

1. Stand shoulder width with the feet parallel and all the nine points firmly rooted in the earth. Just be aware of the front part of the anus and the sexual organs, especially the testicles, the vagina and the uterus. Inhale half the breath, flatten down the stomach, hold the breath, inhale without inhaling, inhale more and contract the **front** part of the anus and the sexual organs. Keep your tongue against the palate. Exhale very slowly and pull up even stronger. This will be easier and more effective when you exhale with the kidney sound. When you do this well the coccyx will turn in and the sacrum will push out, rounding the lower back, because the sacrum and the sexual organs are connected.

2. Stand in the same position, be aware of the middle part of the anus, and for men also the prostate gland. Inhale half the breath, flatten down the stomach, hold the breath, inhale without inhaling, inhale more and contract the **middle** part of the anus. Hold the breath and exhale very slowly, pulling up the middle part of the anus even more. You can also exhale with the kidney sound now, if you wish.

3. Stand in the same position; be aware of the **left and right** sides of the anus. Inhale, flatten down the stomach, hold the breath, inhale without inhaling, inhale more and contract the left and the

right sides of the anus toward the kidneys. Hold the breath and exhale slowly, if you wish, with the kidney sound, pulling up the left and right side of the anus even more. Feel the kidneys and the whole part of the back expand, including the Door of Life.

4. Stand in the same position; be aware of the **back** of the anus. Inhale half the breath, flatten down the stomach, hold the breath, inhale without inhaling, inhale more and contract the back part of the anus. Hold the breath and exhale very slowly, with the kidney sound if you wish, contracting the back part of the anus even more. You will feel that the lower back is pushed further outward and has more power.

When you inhale and contract the different parts of the anus, at the same time you can always contract your eyes, suck in your mouth, widen your nostrils like a rabbit and push the tongue against the palate. All the round muscles around the orifices of the body and the diaphragm are working together.

3. Releasing Tension in the Diaphragm

Many people have a stiff diaphragm which sticks to the rib cage. In order to be able to develop the Chi pressure, we should have a diaphragm that is loose and that can easily move up and down. To release the tension in the diaphragm, you can massage the diaphragm:

a. You can massage under, and along the rib cage from top to bottom and, or

b. You put the left hand's middle fingers with the palm facing upward, under the rib cage. Place your right hand on the lower part of the right rib cage and push the rib cage downward with your right hand. Repeat for the left side.

This massage will loosen and stretch the diaphragm and will facilitate and deepen the breath. You will be able to keep and push the diaphragm down on the exhalation, which is necessary for the development of the Chi pressure in the Tan Tien.

Fig. 8 *Release Tension in the Diaphragm*

Development of Chi Pressure in the Tan Tien Through Tan Tien Breathing

To feel Chi within you is not easy. When people laugh in the Lower Tan Tien, the Tan Tien Chi starts to develop. You can picture the Tan Tien as a balloon that you can fill with air, creating air pressure in the balloon. The main thing you have to do to fill this balloon is to blow air in it little by little. Blow and hold, blow and hold. With the Tan Tien it is the same. You inhale, blow in the air, hold the breath (air) and exhale very slowly. In this way you can maintain the pressure.

You can verify this with a partner exercise. Take a partner and gently put your fist on his or her Tan Tien (belly) just below the navel.

a. Let him inhale in the abdomen and feel the pressure of the breath (Chi) pushing his abdomen against your fist. Let him then exhale quickly and you will feel that the air (Chi) pressure is gone and that you are pushing into an empty Tan Tien.

b. Let him inhale in the same way and exhale this time very slowly through the mouth. You will feel that the pressure is still there. Just as with the balloon, when you pull up the perineum and push down the diaphragm, the air (Chi) pressure in the Tan Tan will be more condensed and stronger.

As you continue to push, you will feel that the energy remains there and is moving. Let your partner now laugh in the Tan Tien while you are still pushing, and you will feel the Chi pressure becoming stronger and the Chi moving and vibrating. You can change places and let your partner work on you.

1. Breathing exercises to develop Chi Pressure in all Seven Areas and in the Whole Tan Tien

We distinguish seven important areas in the Lower Tan Tien where we would like to develop the Chi pressure:

1. Area below the navel (Chi Hai)
2. Both sides of the front part of the Tan Tien
3. Bladder Area
4. Area near the Solar Plexus
5. Both Sides of the body
6. Both Kidneys
7. Door of Life.

Areas 1 - 4 belong to the front part of the Tan Tien, and 6 and 7 to the back part of the Tan Tien.

Just as with the balloon, you can press some areas of the balloon/Tan Tien to increase the pressure in other parts of the balloon/Tan Tien. The two main areas you always press are the perineum and the diaphragm. This will reduce the space in the Tan Tien and condense the Chi (ball) in the Tan Tien. When you pull to the right, the left, the back or the front, the Chi ball (pressure) will move from one side to the other.

A. Lower Tan Tien: Ocean of Chi or Chi Hai

Put your hands on the Chi Hai in the lower abdomen very gently and very softly. Smile and do a few abdominal breaths. Inhale half the breath, hold the breath, inhale more and pull up the front part of the anus (and the sexual organs) and push at the same time into your lower abdomen; the breath pushes your hands out. Feel a suction. Slowly exhale (hold the Chi pressure in the Chi Hai) and push the Chi down to the lower abdomen part of the Tan Tien. Regulate the breath and maintain equal force between the downward pressure of the Chi and the upward force from the anus (perineum). Always keep the diaphragm down and the chest relaxed. You can make a high pitched sound when you inhale (dragon sound), suck up with the sound and a low pitched (tiger sound) sound when you exhale and push the energy down. Laugh softly inside and feel the vibration in the Chi Hai.

Fig. 9 *Put your hands on the Chi Hai in the lower abdomen.*

Repeat several times. Feel the pressure becoming stronger with every breath. Especially when you exhale consciously, you hold the Chi. When you inhale and exhale with an absent mind, you lose the Chi. Then it will be true what the Taoists say, that with every breath taken, life is one breath shorter.

B. Both Sides of the Front Part of the Tan Tien

Put your hands gently on both sides of the front part of the Tan Tien. Smile and inhale half the breath. Hold the breath, inhale more and pull up the anus and the left and right sides of the anus and push these points of the Tan Tien outward against your hands. Exhale slowly and press the Chi down to the right and left parts of the front Tan Tien maintaining equal force. Do this several times until you feel a strong Chi pressure. Laugh softly inside and feel a vibration in both sides of the Tan Tien.

Fig. 10 *Smile and inhale half the breath.*

C. Bladder

Put your hands gently on your bladder. Smile and inhale half the breath. Hold the breath, inhale more and pull up the anus and the front part of the anus and push the bladder outward against both hands. Exhale slowly and consciously and push the Chi down in the bladder. Maintain equal force. Repeat several times until you feel a strong pressure in the bladder region. Laugh softly inside and feel a vibration in the bladder. You can do this exercise when you are urinating to greatly reduce the loss of energy during urination.

Fig. 11 *Put your hands gently on your bladder.*

D. Upper Abdomen near the Solar Plexus

Put your hands gently on the upper part of your abdomen. Smile and inhale half the breath. Hold the breath, inhale more and pull up the anus and the front part of the anus. Press the upper part of your abdomen out against your hand (with the high pitched dragon sound). Exhale slowly and consciously (with the low pitched tiger sound) and push the Chi in your upper abdomen. Maintain equal force. Repeat several times until you feel a strong Chi pressure in this area. Laugh inside and feel a vibration in the Upper Tan Tien.

Fig. 12 *Laugh and Smile in Solar Plexus.*

E. Both Sides of the Body

Place your hands gently on both sides of your body. Smile and inhale half the breath. Hold the breath, inhale more and pull up the anus and left and right sides of the anus and push both sides out against your hands. Feel both sides expanding. Exhale slowly and consciously and push the Chi down to the left and right sides. Maintain equal force. Feel both sides of the Tan Tien expanding. Repeat several times until you feel a strong Chi pressure in both sides. Laugh inside and feel both sides of the Tan Tien vibrating.

Fig. 13 *Feel both sides of the Tan Tien expanding.*

F. Kidneys

Place your hands gently on your kidneys. Smile in the kidneys and inhale half the breath. Hold the breath, inhale more and pull up the anus and the left and right sides of the anus and push the kidneys out against your hands. Feel the kidneys expanding, and the whole lumbar area opening. Inhale more, expand, hold the breath once more and exhale slowly down in the kidneys. Feel the whole kidney area expanding when you exhale and push the energy down. Repeat several times until you feel a strong Chi pressure in both kidneys and a Chi belt around your waist. This exercise will also strengthen the kidneys and increase your Original Force. Smile in the kidneys and feel them vibrating.

Fig. 14 *Feel the kidneys expanding, and the whole lumbar area opening.*

G. Door of Life

Place both hands gently, one over the other, on the Door of Life (about L2/L3 level). Cover the Door of Life. Smile and inhale half the breath. Hold the breath and pull up the anus and the back part of the anus and push the Door of Life out against your hands. Feel the Door of Life expanding and becoming more open. Inhale more, hold the breath, pull up more and expand, inhale more, hold and expand. Exhale slowly and consciously and press the Chi down to the Door of Life. Maintain equal force. Repeat several times until you feel a strong pressure in the Door of Life and you feel it open and breathing. Be aware of the soles of your feet, the coccyx and the sacrum. Inhale and pull up the anus and the back part of the anus, feel the pulsation in the Door of Life sucking up the energy of the Earth and moving it upward through the spine to the brain. Exhale, put both feet together, scoop up the energy and bring it down. Touch the navel and focus on the Door of Life. Repeat several times.

Rest, cover the navel, smile and feel your whole abdomen full of Chi, open and breathing/pulsating.

Fig. 15 *Focus on the Door of Life.*

H. Tan Tien Breathing

Breathe slowly and smoothly in the Tan Tien until you feel nice and calm. Then combine all the seven breathing exercises together. Smile and gently place both hands on the Lower Tan Tien. Inhale part of the breath. Hold the breath, inhale more and pull up the anus and the front part of the anus and push against the fingers. Exhale slowly and push the energy down, expanding the lower abdomen. Hold the pressure.

Place your hands on both sides of the front Tan Tien. Inhale again part of the breath. Hold the breath, inhale more and pull up the anus and the left and right side of the anus. Push against the fingers. Exhale slowly and push the energy to the left and right side of the front Tan Tien. Feel these parts expanding and hold this pressure. Place your hands on the bladder. Inhale part of the breath. Hold the breath. Inhale more and pull up the anus and the front part of the anus, pushing out the bladder. Exhale slowly and push the energy down in the bladder.

Feel the bladder expanding and hold the pressure. Place your hands on both sides of the body. Inhale part of the breath. Hold the breath and pull up the anus and the left and right sides of the anus. Push both sides of the body out against the hands. Exhale slowly and push the energy down to both sides of the Tan Tien. Feel the sides expanding and hold this pressure.

Place your hands on the kidneys. Inhale part of the breath. Hold the breath, inhale more and pull up the anus and the left and right sides of the anus toward the kidneys. Push the kidneys outward. Exhale slowly and push the Chi down into the kidneys. Feel the kidneys expanding. Hold the pressure.

Place both hands on the Door of Life. Inhale part of the breath. Hold the breath, inhale more and pull up the anus and the back part of the anus. Exhale slowly and push the energy down into the Door of Life. Feel the Door of Life expanding, pushing the lumbar area slightly to the back. Feel the energy rising up the spine to the brain. Your whole Tan Tien is now like a balloon with a very high Chi pressure inside, expanding to all sides.

Hold both hands on the Tan Tien and laugh gently inside it. Feel the vibration and pulsation of the Chi. Turn your senses inward to the Tan Tien. Empty the mind in the Tan Tien. Just rest for a while. Feel nice, calm, relaxed and energetic.

Fig. 16 *Laugh gently in the Tan Tien.*

2. Exercises to Bring More Chi Pressure and Energy Vibration in the Tan Tien

1. You can just repeat the exercises. The only difference is that this time you use your fingers to give counter pressure against the pressure of the Chi from inside.

For example: Put your fingers on the Chi Hai in the lower abdomen. Smile and do a few abdominal breaths. Inhale half of the breath, hold the breath, inhale more and pull up the front part of the anus and push at the same time against the lower part of the Tan Tien, against the pressure from your fingers. Feel a suction. Slowly exhale (hold the Chi pressure in), increase the pressure of your fingers and push the Chi down in the lower abdomen against your fingers. You will notice that with the counteracting force of the fingers the Chi pressure becomes stronger. Do this a few times. The last time you hold the breath after the exhalation and tap both fists on the Chi Hai until you feel a vibration in this area.

Do this for all the other six areas of the Tan Tien (tapping on the bladder is especially good for women). You then combine them, enhancing in this way the Chi pressure and vibration in the whole Tan Tien. Repeal this until you feel a very deep vibration of the Chi inside the Tan Tien and in your original force.

Have a partner gently push you with his fist in your Tan Tien, so that you have to hold and apply counter pressure. This will help you to develop a stronger Chi pressure and vibration in the Tan Tien.

2. Repeat each exercise again and continue to use the fingers as a counteracting force. At the end of each exercise, inhale and expand for instance the lower abdomen and exhale quickly with the deep tiger sound “haaa”, pushing the energy down and out against your fingers. The sound is made through a quick expansion, for instance from the lower abdomen. The exhalation, the expansion and the sound should be completely synchronized.

Repeat with the whole Tan Tien.

Rest with the palms facing downward. Feel the Tan Tien Chi breathing and pulsating. Inhale and pull up the front, back, left and right parts of the anus together with a light contraction of the eyes and mouth and feel the suction in the Tan Tien, the palms, the soles of the feet, the perineum, the sacrum, the mideyebrow point, the crown. Exhale and condense the energy in the Tan Tien.

Repeat several times.

Fig. 17 *Use counter pressures of hands and breath to increase Chi pressure.*

Animal Exercises

After each animal exercise: Inhale, put the feet together, scoop up the energy from the universe, palms facing up. Turn the palms downward and pour the energy down over the body, back into the navel, back into the Tan Tien. Focus on the Door of Life. Gently, move the hands from the navel (Lower Tan Tien) to the thighs. Feel the fingers and Chi penetrate the thighbones as Chi is absorbed into the bone marrow. Move the hands down the thighbones. Feel the fingers penetrate the bones, glide past the knees, and across the shinbones. As you glide the hands down, sink the hips and bring the tailbone down to the heels in a squatting position.

Fig. 18 *Scoop up energy and pour it onto and into the crown.*

Feel yourself sinking down through the Earth and into the infinite space beyond the Earth. Picture the galaxy and feel the spiraling of the force.

Fig. 19 *Lift the Tailbone first.*

With your hands resting on your feet, lift the tailbone until the legs are straight. Feel the Chi drawn from outer space and the earth spiraling into your body.

Squat down again and gather more Earth energy and more Universal energy. Do this 3 to 9 times.

With your hands resting on your feet, lift the tailbone until the legs are straight. Feel the Chi drawn from outer space and the earth. spiraling into your body.

Stand up slowly, gliding the hands over the back of the legs. Feel the fingers touch the bones and the bone marrow and glide up to the coccyx; hold them there for a while. Feel the Chi rising to the spine and the brain. Move the fingers to the sacrum. Feel the Chi pour into the sacrum and the sexual center.

Bring the hands up to the Door of Life and concentrate on the navel.

Feel the Chi energize the kidneys and the Door of Life. Slowly bring the hands to the navel. Smile and collect the energy in the Tan Tien.

Notes: In all the animal exercises the diaphragm is down, the chest relaxed and the anus pulled up. Repeat all the animal exercises several times.

Start the exercises with some Tan Tien breathing, expanding the front, back and sides of the Tan Tien with every breath. Stay relaxed and keep your mind focused.

When doing the animals breathe in with the high pitched, wheezing dragon sound and breathe out with the low pitched, growling tiger sound.

1. Rabbit (Front Tan Tien)

This exercise develops the Chi pressure in the front part of the Tan Tien, navel and pelvic area.

Stand shoulder width, with the feet parallel. Inhale, pull up the anus and the front part of the anus, expand the lower abdomen (with the high pitched dragon sound) and feel the suction in the abdomen, while raising the arms slightly above the head. The wrists should be bent down and the fingers facing the earth.

Exhale quickly and pull up the anus and the front part of the anus even more and, like a rabbit, widen your nostrils. At the same time, sink down a little in the kua, press the palms down and push the energy in the front part of the Tan Tien and the pelvic area. It is very important that you synchronize these three movements. When you do this you will feel the Chi pressure increasing in this part of the Tan Tien and in the palms of your hands. Because there will be a lot of Chi generated in the lower abdomen, the kua and the hip joints will open more.

Fig. 20 *Rabbit sinks into the kua.*

2. Crane (Both Sides of the Tan Tien)

This exercise develops the Chi pressure in both sides of the Tan Tien.

Stand shoulder width, with the feet parallel. Inhale, pull up the anus and the left and right sides of the anus, expand the left and right sides of the Tan Tien and feel the suction in this part of the Tan Tien. Raise the arms. The fingers should form beaks. Move the arms to the sides of the body at shoulder level. Exhale quickly and pull up the anus (the left and right sides of the anus even more). At the same time, press your palms down to hip level and press the Chi to the left and right sides of the Tan Tien. Feel them expanding and feel the Chi pressure growing in this part and in the palms of your hands. Repeat several times.

Fig. 21 *Crane makes beaks.*

Fig. 22 *Crane expands left and right sides of Tan Tien.*

3. Bear (Back Part of the Tan Tien and the Whole Back/Spine)

This animal position corresponds to the back part of the Tan Tien, especially to the sacrum and the whole back: a bear back! We already did part of these exercises in the beginning to open the sacrum and the kua.

Stand shoulder width, feet parallel with the palms facing up. Inhale. Pull up the anus and the back part of the anus, expand the sacrum and the lower back and feel a suction. Feel this suction raises the palms. Now, on exhaling, you must quickly do several things at once. Just as in all the animal exercises, you have to exhale quickly and pull up the anus and the back part of the anus even more. At the same time, you must turn the palms downward and push them down together with the energy and open the sacrum as described in the warm-up exercises, while rounding the shoulders and sinking the chest. You will feel the whole back expanding.

Fig. 23 *Bear expands the sacrum.*

4. Swallow (Left and Right Tan Tien)

Stand in the Embrace the Tree position. Inhale, pull up the anus and the left and right sides of the anus and let the Lower Tan Tien Chi move you to the left. Your left foot turns 90° and your right foot 45° to the left. Exhale, pull up the anus and the left side of the anus more and press the Chi down in the left Tan Tien, in the left leg, pushing you down into the earth. Feel a force coming up from the earth and a force pushing you down. Inhale again; pull up the anus and the right side of the anus and let the Lower Tan Tien Chi move you to the right. The right foot turns to the front and then 90° to the right, the left foot also turns to the front and then 45° to the right. Exhale quickly, pull up the anus and the right side of the anus more and press the Chi down in the right Tan Tien, in the right leg, pushing you into the earth. Feel again a force coming up from the earth and a force pushing you down.

This exercise is very important for your Tai Chi, especially for the Tan Tien form.

Fig. 24 *Swallow moves the tree.*

5. Dragon (Left, Right and Middle Tan Tien)

Stand shoulder width, with the feet parallel and the fists at hip level. Inhale, pull up the anus and the left side of the anus and expand the left side of the Tan Tien. Feel a suction. Exhale quickly, pull up the left side of the anus more and, at the same time, press the energy in the left Tan Tien and the right fist to the left leg. Feel the left side of the Tan Tien expanding. Repeat this for the right and the Middle Tan Tien. For the Middle Tan Tien, you push both fists down and pull up the middle part of the anus. This exercise is also very good for your Tai Chi.

Fig. 25 *Dragon makes suction.*

6. Eagle (Lower Tan Tien)

Stand shoulder width, feet parallel and hold the arms with the elbows bent. Pull up the anus and feel the force in the Tan Tien activated by the force of the fingers and a slight contraction of the eyes. At the same you will feel that the force in the fingers is activated through the force in the Tan Tien. Just stand for a while and feel the forces moving you, enhancing the power in the Tan Tien and in your fingers.

Fig. 26 *Eagle activates Lower Tan Tien Chi.*

7. Monkey (Lower and Upper Tan Tien)

Stand shoulder width, with your feet parallel and your fists in front of the kua. Inhale, pull up the anus and the middle part of the anus and expand the lower Tan Tien, fists pushing down. Then with a swing coming from the force in the Tan Tien and a contraction of the anus, move your arms up quickly, palms facing downward and let the Chi rise to the Upper Tan Tien. Exhale, pull up the anus more and push the energy down in the Lower Tan Tien. At the same time press the hands down to the earth in a squatting position and then scoop up the earth energy.

Fig. 27 *Monkey pushes down to Earth.*

Come back to the starting position. Inhale again, pull up the anus and the middle part of the anus, and swing the arms high up in front of you.

When you exhale quickly, pull up the anus more and push down the Chi ball in your Lower Tan Tien with some force and then let your whole weight freely come down with the kua until you are in the squatting position. Let your hands swing backward like open cups beneath the perineum. Inhale, gradually raise up from the knees to the hips and, with your palms, scoop up the earth energy. Gather the energy at the navel. In this exercise, the upper part of your body is loose while the lower part is heavy.

Fig. 28 *Monkey scoops up Earth energy.*

8. Elephant (Left and Right Kua and Lower Tan Tien)

Stand with your feet parallel and shoulder width. Inhale, pull up the anus and the left side of the anus and swing your arms, like the trunk of an elephant, upward to the front and to the left as you turn your waist to the left. Hold the breath, expand the left Tan Tien and swing the trunk and the waist to the middle again. Exhale, pull up the middle side of the anus and at the same time press the energy and swing the trunk down until you are in a squatting position. End the swing of the trunk between your legs. Inhale, pull up the anus and the right side of the anus, swing the trunk upward to the front and to the right as you swing your waist to the right. Hold the breath, expand the right part of the Tan Tien and swing the trunk and the waist to the front again. Exhale, pull up the middle side of the anus and at the same time press the energy and the trunk down until you are in a squatting position. End the swing of the trunk between the legs. The swing of the trunk should be light and smooth.

Fig. 29 *Elephant swings his Trunk.*

Fig. 30 *Elephant gathers Chi.*

9. Rhinoceros (Left and Right Tan Tien)

Stand shoulder width, with your left foot in front and your right foot at a 45° angle behind you. Stretch your left arm straight in front of you, the palm facing downward. Hold the back of your right hand in front of your forehead. Inhale, pull up the anus and the left side of the anus, sink a little bit in the kua and move the waist with the Tan Tien to the left. Your hips and navel should stay pointed straight in front of you. The arms and the upper body move with the Tan Tien to the left. Exhale, pull up the left side of the anus more and, at the same time, press the Chi down in the left Tan Tien, pressing the left leg into the ground.

Repeat to the right side, the right leg in front and the left foot at 45° turned outward behind you. Stretch the right arm straight in front of you and hold the back of the left hand in front of your forehead. Inhale, pull up the anus and the right side of the anus. Sink a little bit in the kua and turn the waist with the Tan Tien to the right. The navel and hips should not move. Exhale, pull up the right side of the anus more and, at the same time, press the Chi down in the right Tan Tien, pressing your right leg in the ground.

Fig. 31 *Rhinoceros presses and condenses Chi into Left and Right Tan Tiens.*

10. Horse (Upper Tan Tien and Solar Plexus)

Use an expanding sound from the upper Tan Tien/solar plexus. Stand shoulder width, with the feet parallel and the fingertips on the Tan Tien. Inhale, pull up the anus and the front side the anus and expand the upper Tan Tien against your fingertips. The fingertips will provide some counter pressure. Exhale quickly, pull up the front side of the anus more, swing the arms and press them down with the Chi. Sink a little in the kua and at the same time feel the upper part of the Tan Tien expand with the horse sound ("ho"), it is an echoing sound coming from the solar plexus.

Fig. 32 *Horse makes "Ho" Chi in Solar Plexus.*

11. Bull (Back Tan Tien)

Stand shoulder width, with the feet parallel. Put your left leg to the front and turn your right foot 45° outward. Your arms are in front of you, palms facing outward. Inhale, pull up the anus and the back side of the anus; sink to the back and at the same time turn the palms and scoop up the Chi on the left and right side when you sink to the back. The Tan Tien Chi is pushing you to the back and down into the right leg. Spiral the hands with the spiral of the tendon under the armpits until the palms are facing you. Then exhale, pull up the front side of the anus, spiral the hands more until the palms are facing outward and, at the same time, let the Tan Tien Chi push you to the front and down into the left leg. Feel the energy rising from the earth. Pull up the front and back side of the anus, round the sacrum/ lower back (with your chest in, scapulae round and chin pushed back and up). Feel the energy rising in the spine and push the energy out to the fingertips. Repeat with the right leg in front and the left leg back.

Fig. 33 *Bull strengthens the Back Tan Tien.*

This is a very important exercise for Tai Chi. From this exercise you will learn to sink back in the kua, move from the Tan Tien with the Tan Tien force and direct the force through the spine to the fingertips and from the fingertips back into the earth.

Finishing Tan Tien Chi Kung

After you have finished Tan Tien Chi Kung, sit and relax. Put both palms on your Tan Tien. Smile and feel the Chi vibrating in the Tan Tien and in all the organs, glands and fasciae. Then inhale, move your arms above your head, exhale with the Heart or Triple Warmer Sound and with the palms move all the excess heat (and sick energy) down out of the body, into the earth. Repeat a few times. Let go and empty yourself. Inhale again, raise your arms slowly upwards and scoop up the Universal energy, the violet and ultra red light, into a huge Chi ball. Turn your palms toward your crown and pour the energy over you. Be aware of the soles of your feet and slowly move the energy with the palms down into your body, energizing the body, including your brain, organs, glands, spine. Repeat a few times. Rest. Turn your mind and senses inwards. Empty your mind in the Tan Tien. Feel nice, calm and energetic.

Tan Tien Chi Kung

Empty Force, Perineum Power and the Second Brain

Mantak Chia

Illustrations by Udon Jandee

Tan Tien Chi Kung

Tan Tien Chi Kung is one of the best Taoist Chi Kung practices used to develop the Tan Tien and Perineum power. We need Chi and Chi pressure in the Tan Tien as a foundation for most of the Universal Tao practices, especially for Iron Shirt Chi Kung, Tai Chi Chi Kung and meditation. The Tan Tien is the energy reservoir in the body; it is the place where we store the energy we generate, gather and absorb in Chi Kung, Tai Chi and meditation.

The Tan Tien is also called the ocean of Chi. According to Chinese medical theory, once the ocean is full it overflows into the eight extraordinary meridians. Once these are full the Chi flows into the twelve ordinary meridians, each of which is associated with a particular organ. The Tan Tien is therefore the foundation of the entire energetic system of the body.

Tan Tien Chi Kung will help you develop Chi pressure which is one of the best practices to reverse the downward spiraling movements into the upward spiraling movement of the quantity and quality of our life force. In other words, the increase of the Chi pressure in our Tan Tien through the Tan Tien Chi Kung will enhance our healing, martial arts (Iron Shirt and Tai Chi), meditation abilities, and the art of daily living and will also nourish our original force. It is the Chi pressure in the Tan Tien that roots our body and mind.

TAOIST SECRETS OF LOVE

CULTIVATING MALE SEXUAL ENERGY

MANTAK CHIA

MICHAEL WINN

ISBN: 0-943358-19-1

$17.95

TAOIST SECRETS OF LOVE

CULTIVATING MALE SEXUAL ENERGY

MANTAK CHIA
MICHAEL WINN

Master Mantak Chia reveals for the first time to the general public, the ancient sexual secrets of the Taoist sages. These secrets enable men to conserve and transform sexual energy through its circulation in the Microcosmic Orbit, invigorating and rejuvenating the body's vital functions. Hidden for centuries, these esoteric techniques and principles, make the process of linking sexual energy and transcendent states of consciousness accessible to the reader.

This revolutionary and definitive book teaches:

- Higher Taoist practices for alchemical transmutation of body, mind and spirit
- The secret of achieving and maintaining full sexual potency
- The Taoist "valley orgasm"—Pathway to higher bliss
- How to conserve and store sperm in the body
- The exchange and balancing of male and female energies, within the body and with one's partner
- How this practice can fuel higher achievement in career and sports.

Master Mantak Chia, author of **"Awaken Healing Energy Through the Tao,"** has studied with Taoist and Buddhist masters and created a synthesis of their spiritual techniques. Through his numerous centers all over the United States, Canada and Europe, Master Chia has succeeded in bringing this knowledge of Taoist esoteric practice, healing and methods of accumulating and directing "life force energy," to the public at large.

Written in clear easy to understand language and illustrated with many detailed diagrams that aid the development of a powerful energetic flow, for physical, psychological and spiritual health and balance.

Awaken Healing Energy Through the Tao
The Taoist Secret of Circulating Internal Power

Printed in the United States of America

XCII

ACKNOWLEDGEMENTS

This book has been over a decade in the making. I thank foremost those Taoist Masters who were kind enough to share their knowledge with me, but never imagined it would be taught to westerners. Such is the Tao.

I acknowledge a special debt to H. Reid Shaw for his encouragement after I had just arrived in America and for his hard work on an initial manuscript.

I thank the many contributors essential to its final form: the artist, Susan MacKay, Gunther Weil, Rylin Malone, and all my students for their feedback, Master T.K. Shih, Kim Wang, and Juan Li for their fine artwork; Jeffrey Antin, and Marcia Kerwit for their additions; my assistant Jo Ann Cutreria for typing the manuscript into the computer and endless help; Daniel Bobek for his long hours at the computer, and Barbara Somerfield for her patience as my publisher.

A special heartfelt thanks to Michael Winn for his selfless labors, and for saying so eloquently and insightfully in English what my Chinese does not permit.

Without my wife Maneewan the book would have been academic. For her gifts, my gratitude and love.

A WORD OF CAUTION

Any man suffering from venereal disease or any local illness of his sexual organs or prostate gland should consult a medical doctor and a qualified instructor of Taoist Esoteric Yoga before practicing the methods taught here.

TABLE OF CONTENTS

About the Author
Introduction: Taoist "Dual Cultivation" and the Quest for Sexual Love by Michael Winn
Commentary: Chinese "Sexual Kung Fu": Will It Work In the West? by Gunther Weil, Ph.D.
Summary of the Principles of Taoist Cultivation

PART I:
The Fundamental Premise: Sex Energy Can Be Transformed Into Spirit

Chapter 1: MALE SEX ENERGY IS STORED IN ITS SEED 1
The Extraordinary Power of the Sexual Elixir 2
Why Has the Spiritual Power of Sex Been Kept Secret?. 5
Why Reveal the Secret Now? 7
Chapter 2: WHAT IS "CHI" ENERGY? 11
Chi: Electricity of the Human Body 13
How does "Ching", or Sexual "Essence" Function in Humans? 14
Major Phases of Chi Energy 15
Difference Between Hunger and Sexual Desire 17
Chapter 3: THE BIOLOGY OF ESOTERIC SEX 21
The Volume of Sperm Fluid Lost in a Lifetime 21
Your Body Has Atomic Energy In It! 22
Biological Importance of Sex Hormones To Health 25
Death and Sex in the Natural World 32
Chapter 4: THE SEXUAL ECONOMY 35
The Youthful Fury of Sexual Frustration 38
Sex and the Super Athlete 39
Sex, Commitment, and Marriage 41
Moral Effect of Semen Loss 46
The Controversy: Is Sex Good For Your Health? 47
Chapter 5: SEX IN THE ESOTERIC TRADITIONS OF THE WORLD 51
The Difference Between Taoism and Tantra 57
Karezza and Coitus Reservatus 60

PART II:
Taoist Practices for Mastering Sexual Love

Chapter 6: THE DANCE OF THE TESTES: Exercises for Pelvic Strength 65
The Pelvic and Urogenital Diaphragms 66
The Scrotum Pumps Cold Sperm Energy Upward 68
Sacral Pump and Cranial Pump 71
Three Postures of Testicle Breathing: Sitting, Standing, Lying 72
Testicle Breathing: Step-by-Step 74
The Golden Nectar 79

Compressing Air into the Scrotum Increases Sexual Power . . . 79
Scrotal Compression Exercise: Step-by-Step . . . 80
Venting Exercise for High Blood Pressure . . . 82
The Power Lock For Sealing The Seminal Fluid . . . 83
Power Lock Exercise: Step-by-Step . . . 86
Safety Points For Testicle Breathing, Scrotal Compression, and Power Lock . . . 91
Cleansing Side Effects . . . 93
Summary of Testicle Breathing . . . 94
Summary of Scrotal Compression . . . 94
Power Lock is the Basis for Alchemical Sex . . . 95

Chapter 7: POLARITY IS THE KEY TO TRANSFORMING SEX ENERGY . . . 97
Yin and Yang: Battle of the Sexes . . . 99
Higher Orgasm is a Delicate Balance of Polar Energies . . . 101
Prepare the Yin Energy with Gentleness . . . 104
The Art of Passion: Timing and Frequency . . . 105
Sex Position Affects the Flow of Energy . . . 106
Cold Water Skinny Dip For Premature Ejaculation . . . 107
Century Count: Build Your Staying Power . . . 107
The Four Attainments of the Jade Stalk . . . 109
The Nine Shallow/One Deep Thrusting Method . . . 110

Chapter 8: THE SECRETS OF SEMEN RETENTION . . . 113
Learn to Circulate Your "Chi" in the Microcosmic Orbit . . . 114
The Importance of the Microcosmic Orbit . . . 117
External Locking: The Three Fingers Method . . . 120
Timing and Safety Points . . . 122
Massage the Perineum Afterwards . . . 123
Be Aware of the Magnitude of Power Generated . . . 124
Rotate Sex Energy to the Head Afterwards . . . 126
Summary of the External Locking Method . . . 127
Internal Locking: Draw Nectar Up to the Golden Flower . . . 128
Big Draw for Women . . . 134
Big Draw and Masturbation . . . 135
Morning Erection has Potent Chi . . . 136
Automatic Mind Control of Ejaculation . . . 137

PART III:
Transforming Sexual Energy into Spiritual Love

Chapter 9: THE YIN AND YANG EXCHANGE: Cultivating the Valley Orgasm . . . 143
Valley Orgasm Summary . . . 156
Big Draw as a Contraceptive Method . . . 157
A Woman's View of Dual Cultivation . . . 159

Chapter 10: THE SEVEN SPIRITUAL STAGES OF CULTIVATING SEXUAL ENERGY 163
Left-Hand Path 167
Cultivating The Right Hand Path 168
No Hand Path of The Tao 169
The Seven Spiritual Stages of Taoist Energy Cultivation 172
Chapter 11: ORGASM AND WU WEI BY MICHAEL WINN ____ 181
Preserving Polarity: What Does It Mean To Be Yang? by Michael Winn 186
Chapter 12: COMMONLY ASKED QUESTIONS ON SEMEN RETENTION 193
1. Will a vasectomy affect the Big Draw? 193
2. If Yin energy is cool, why is a woman so warm when you have sex with her? 194
3. How long does it take to make love with your method? 194
4. Why can't women absorb Yang energy directly from a man's sperm during normal ejaculatory sex? 195
5. During the Yin/Yang exchange, I feel a mini-orgasm in my genitals. Am I losing fluid? 195
6. Will occasional ejaculation harm my efforts to learn the Big Draw? 195
7. What is the relationship between the strength of the buttock and pelvic muscles and sex? 196
8. I feel less sexual desire after doing the Big Draw every day for several weeks. What's happening to my sexual energy? 196
9. Aren't you being a bit fanatic in trying to save every drop of sperm? 197
10. What do Taoists say about sexual fantasies and vibrators? 198
11. Will the Sexual Kung Fu practice kill my appetite for the physical passion of sex? 198
12. What's the difference between the physical pleasure of sex and the pleasure of feeling love? 199
13. If the goal is to build one's sexual energy up, what's the harm of sleeping with a lot of different women (or men) to share their ching chi? 199
14. Isn't the Big Draw a form of sexual vampirism? . . . 200
15. What is the best hour of the night to make love? .. 201
16. How are the eyes used in Sexual Kung Fu practice? 202
17. How will health, tension, stress and different psychological states affect Taoist sex? 202
18. What is the difference between mechanically blocking ejaculation through celibacy and the Taoist Cultivation method? 203

19. Summarize the advantages of the total body orgasm compared to normal sex orgasm and ejaculation? .. 204
20. Could you explain what happens when you reach the point of no return during an orgasm? 204
21. How do you feel about homosexuality and group sex? 206
22. What causes the penis to go flaccid if you haven't ejaculated? 207

Chapter 13: STUDENT EXPERIENCES OF TAOIST SEXUAL CULTIVATION 209
Interview with a 46 year old psychologist 209
Experience of a lawyer, age 29 214
Experience of a businessman, age 45 216
Experience of a Teacher, age 37 217
Experience of an Electrician, age 27 218
Experience of a Dry Cleaner, age 67 219
Experience of a Cook, age 30 221
Experience of a Garment Factory Owner, age 38 221
Experience of an Executive, age 38 222

Chapter 14: PRACTICAL GUIDELINES TO KEEPING SEX RADIANT AND HEALTHY 225
1. Get Tuned with Your Partner's Energy 48 Hours in Advance 226
2. Foreplay Begins with a Relaxed Atmosphere 226
3. Don't Make Love After a Big Meal 226
4. Avoid Intercourse in Any Extreme State 227
5. Don't Make Love When Drunk on Alcohol 227
6. Urinate 20 Minutes Before You Have Intercourse . 228
7. Sex During Extreme Weather Conditions Can Be Unhealthy 228
8. Avoid Hard Physical Work Before and After Sex.. 228
9. Don't Rely on Artificial Sexual Aids 229
10. Don't Bathe/Shower Immediately After Sex 229
11. Don't Thrust Too Powerfully into the Woman 229
12. Your Sexual Power is Greatest in The Springtime . 229
13. If You Are 111, Make Love Passively 230
14. Stop Making Love if it Has Become a Routine Chore 230
15. Don't Rely on Sexual Fantasy to Get Aroused 231
16. Keep several pillows handy 232

Chapter 15: EXERCISES TO INCREASE MALE POTENCY 233
How to Cure Impotency 233
How to Avoid Wet Dreams 234
Warming the Stove 236
Massage the Field of Pills 237
Harmonizing the Tendons, Marrow and Bones 237
Secret Taoist Method of Urinating 238
Six Exercises For the Kidneys/Back 239
How to Enlarge and Elongate Your Penis 240

How to Decrease Penis Sensitivity 241
Strengthen Your Erection 242
Reflexology Massage of the Penis 242
Indian Rope Burn Massage 244
Four Ways to Increase Sperm Count 244
Massaging the Prostate Gland 245
Anal Pump Squeeze Exercise 245
Tongue Kung Fu 246
Hot and Cold Baths for Sexual Health 250
Harmonious Energy for the Homosexual 251
How to Absorb Sexual Energy from the Sun 253

Chapter 16: ACUPUNCTURE, MOXIBUSTION AND HERBS CAN HEAL WEAKENED SEXUAL ENERGY 257

Chapter 17: BIOLOGICAL FACTS EVERY MAN SHOULD KNOW ABOUT FEMALE SEXUALITY 267
The Uterus 268
Ovulation 268
Fertile Mucus 269
Nonfertile Mucus 269
Menstruation 269
Periods 270
Emotional Changes 271
Women's Sexual Anatomy 271
Inner Lips 271
The Shaft of the Clitoris 272
The Glans 272
The Position of the G-Spot 272
The Walls of the Vagina 273
The Cervix 274
Love Muscle 274
Sexual Response Cycle 274

Chapter 18: SUMMARY OF THE SEVEN STAGES OF TAOIST ESOTERIC YOGA 277
The Small Heavenly Cycle (Microcosmic) 277
The Tongue is a Switch of the Circuit 279
The Seven Esoteric Formulas of the Seven Books of the Tao 279
First Formula: Fusion of the Five Elements 279
Second Formula: Lesser Enlightenment of Kan and Li 280
Third Formula: Greater Enlightenment of Kan and Li 282
Fourth Formula: Greatest Enlightenment of Kan and Li 283
Fifth Formula: Sealing of the Five Sense Organs . . 283
Sixth Formula: Congress of Heaven and Earth Immortality 284
Seventh Formula: Reunion of Heaven and Man. True Immortal Man 285

ABOUT THE AUTHOR — Mantak Chia

The author of this book, Mantak Chia, was born in Thailand on April 4,1944. When he was six or seven years of age he learned to "sit and still the mind" from Buddhist monks while on a summer vacation. This is not to say that he was passive and quiet as a child. In fact, he excelled in track and field events during his grammar school days in Hong Kong. It was during that time that he learned the traditional Thai Boxing and met Master Lu, who taught him Tai Chi Chuan. Shortly thereafter, Master Lu introduced him to Aikido, Yoga and more Tai Chi. His knowledge of esoteric practice did not begin, however, until he was eighteen and he had returned to Thailand. It was at that time that a senior classmate, Cheng Sue Sue, a student of Yi-Eng, taught him the level of Tao Esoteric practice up to the Reunion of Man and Heaven.

When he was in his twenties, Master Chia studied with Master Meugi in Singapore, who taught him Kundalini Yoga and the Buddhist Palm. With the Buddhist Palm, he was soon able to eliminate blockages of flow of life-force in his internal organs and to drive cold, wet or sick energy out of patients who came to see his Master, thereby restoring them to health. The young Mantak Chia felt, however, that Kundalini Yoga produced too much heat and could be dangerous and so he later combined it with elements of Taoist practice, which had cooling effects.

Later, in his twenties, he met and studied with Master Pan Yu, who had created a synthesis out of Taoist, Buddhist and Ch'an teaching, and Master Cheng Yao-Lung, who had also created a new system by combining Thai Boxing and Kung Fu. From Master Cheng Yao-Lung, he learned the Shao-Lin secret method of internal power as well as the Iron Shirt method called "Cleansing the Marrow and Renewal of the Tendon". From Master Pan Yu, he learned a variation of Kundalini and the "steel body", a technique that is said to keep the body from decay. Master Pan Yu still lives and practices in Hong Kong, where he treats patients by transmitting his life-force to them. To better understand the mechanism behind the healing energy, Chia also studied Western medical science and anatomy for two years.

Yet, with all of these achievements, Master Chia was the manager of the Gestetner Company in Thailand, was in charge of sales of offset machines and was well acquainted with the working of the company's copying and printing machines. He may well be the

only Taoist master in the world with a computer in his living room. He is also married and has a son. His wife Maneewan works as a medical technician. He is, in short, living proof that his practice is very much down-to-earth, striving to enhance everyday life and not requiring retreat from society to a hermit's life.

The main thrust of Chia's intention is to strip away the mysticism, the mumbo-jumbo, the powers vested in the Guru, the reliance on things-other-worldly or magical. He seeks to present, instead, a fully predictable working model that might be considered as a scientific means of dealing with energy systems. In time, he hopes this will lead to technological developments that might serve to simplify or speed the means whereby such progress might be made. It is with such hopes that he beckons members of the medical community to investigate what he has to offer. There are already physicians and lawyers and computer programmers, who have experienced, first hand, the benefits that Master Chia's methods provide. It is up to them and others in the scientific community to join Master Chia in his lifetime task of bridging the gap between reason and spirit, mind and body, science and religion.

Teaching Healing Tao to perpetrators of violence, many of whom are drug and alchohol abusers, addresses the seed causes of crime and brutality. This invokes a deeper understanding of life resulting in personal transformation to a lifestyle of non- harming. It is an ideal self help method to empower prisoners to help themselves within the confines of prison. Books and letters sent have an exponential effect with prisoners sharing the books and the benefits or their practice with each other.TAO-Inc. provides: an interactive newsletter for prisoners and instructors, a website, pen-pal list, volunteer instructors and free books for inmates. For a free copy of the newsletter please include a $.34 stamp with your name and address.

YOU CAN HELP SHARE THE BENEFITS OF HEALING TAO
This program is sustained through individual donations of cash, office supplies and stamps. $1. $.34 & $.55 stamps are consistently needed. TAO-Inc. is non-profit and tax exempt under section 501 (C) (3) of the IRS code.

INTRODUCTION

Taoist "Dual Cultivation" and the Quest for Sexual Love

by Michael Winn

"What a pity! A mountain peak as tiny as one square inch has been the source of great inspiration and misery for centuries."

—*Anonymous Chinese Poet on man's obsession with woman's sex.*

Thousands of books have been written attempting to help men and women resolve the problems arising from the endless search for sexually fulfilling love. What could possibly be written that is new?

Taoist Secrets of Love is not just another flowery philosophical treatise on the ecstasies of oriental love. Rather it is a pragmatic handbook that distills the secret teachings on sex of four different living Taoist masters sought out by Mantak Chia during fifteen years of travel and study in the Far East. As he put it, "I read a ton of books telling me how great esoteric love-making was, but none of them explained precisely how it was done. So I decided to write it myself."

Most books on Taoist sex fail to instruct on how to transform sperm energy once it is held in, where to store sex energy in the body, how to best exchange it with a woman, and give cursory treatment to the retention of semen. Chia synthesized the ancient Taoist practices into simple but powerful methods that can be easily learned by western men. This first volume is directed primarily at men, simply because most men are sexually weaker than women and lose more energy through sex than women. A later volume will describe the esoteric Taoist sexual practices for women, which includes voluntary arrest of the menstrual flow.

The sexual imbalance between men and women is obvious. A woman can sexually receive her man for as long as she pleases, and thus the Taoists say her yin essence is nearly inexhaustible. A man's love making is limited to the amount of energy he has to keep his erection. His yang essence is more easily tired. A woman is sexually stronger than a man because biologically she needs to

be. Her reproductive organs must bear the strain of physically producing children and nurturing them. The effects on men of this primal biological inequality are profound, setting off a chain reaction that can permeate male thinking and feeling on all levels, from marriage to work to cultural roles we choose to play and to the spiritual models we choose for our inner growth.

At heart most men are as terrified of women's infinite sexual capacity as they are fascinated by it. The general effect on men is to make them feel sexually insecure and causes them to attempt to compensate with some other strength. Sexual insecurity may be the primary reason men have sought physical, political, financial, intellectual, and religious advantage over woman. Correcting this sexual imbalance could have significant side benefits in establishing a more harmonious society, although the primary goal of the Taoist teaching on cultivation of sexual energy was personal health and spiritual fulfillment.

The quest for sexually fulfilled love has taken on the dimensions of a religion amongst those who are too liberal or too scientific to believe in any traditional version of God. The power behind this belief in romantic love, in an ultimate commitment to one person, is the power of sexual experience. If offers something tangible to be shared, a sacrament that is personal and present.

The decline of religion in the west may have begun when the experience of sex became more powerful than the spiritual experience offered by religion in prayer or in fellowship. The current revival of religion in the west ironically may be due in part, to a sexual exhaustion following on the heels of the sexual revolution. Sex became a drug, an opiate for the discontent. Total sexual freedom did not supply the stability people needed most. Today, people are turning back to either marriage or religion to seek their sense of an absolute.

The Taoists offer neither religion nor marriage as the solution to stability, unless it be the marriage of subtle energies they identify as yin and yang. They simply encourage each individual to cultivate his natural inner life-force, or chi. It is in this context the ancient Chinese developed highly refined methods of increasing sexual vitality for the single and the married man. There are two main ways that these energy cultivation methods can be used and this book will accordingly attract two distinct kinds of students.

The first student seeks worldly happiness in the form of physical, emotional, and mental satisfaction. This includes any layman interested in strengthening his personal love relationship, in al-

leviating sexual frustration, in relieving boredom with sex, in curing impotency, wet dreams and premature ejaculation and in general increasing his longevity and good health. If he is disciplined and does the practices taught in this book, he can attain all of these benefits.

The other student considers himself on a spiritual path and wants to somehow integrate his sexual desires with his meditative practice or spiritual beliefs. The students already drawn to study the Taoists secrets of cultivating sexual energy with Master Chia have come from an amazingly broad range of spiritual disciplines, including every type of yoga: Kundalini, Hatha, Kriya, Tantric, Siddha and martial artists as well as T.M., Zen, Buddhist, Sufi, Hindu, and Christian adherents. The suggestion is that many Americans, however satisfied they are with their basic spiritual beliefs, feel the need to better integrate their sexuality with their spiritual growth.

The Taoist practice of chi cultivation focuses on integrating the divine or subtle energies into the human body, with the goal of achieving a dynamic balance of opposing energies called yin and yang. The Tao is the indescribable sum and absolute source of these energies, which manifest in ever changing form. The Taoists, being practical, proposed that a man can begin with the most accessible energy at hand, namely the sexual attraction between men and women, and use that as a springboard to more subtle realms.

Taoist Esoteric Yoga is neither a religion, nor a path to salvation. Its vision reaches very far, teaching that enlightenment and physical immortality are only stages in a process of coming to wholeness as a human. It also remains very near and practical. The raw materials required for this evolution can be found at any given moment within the life of an ordinary human being.

The Taoist teaching of physical immortality doesn't suggest men no longer die. It means that before they die they have the opportunity to cultivate a "solid" or substantial spiritual body, also known as the Immortal Body, the Solar Body, the Crystal Body, and other names. In the west the closest parallel to a Taoist Immortal is probably an angel. This is different from schools that teach how to become a holy man by dissolving the individual ego into the bliss of cosmic oneness. The Taoists insist each adept preserve his individual nature within a body (physical or spiritual) so he can oversee the growth of his soul until final union with "wu chi," the nothingness from which the oneness of the Tao emerges. This "staying in your own body" precludes the adept from totally

surrendering to any guru or divine being or religious authority. No one else can do your spiritual work for you.

Chia sees his role as simply that of a teacher who helps his students empower themselves through cultivation of their chi energy. He passes chi (or "shakti") to his students only so they will have a better sense of what to cultivate and refuses any dependent emotional relationships. He describes himself as the lead driver in a caravan of cars. "I can give each student a road map, a set of tools and instructions on how to fix his car. We start out together, and help and love each other as much as possible along the way. But ultimately everyone has to make it on his own. Some will break down, get lost, or choose a different route. Some may find a better road than the one I plotted. As a teacher, there's no kindness I can offer beyond the map and tools and precise instructions for driving safely."

The Taoist premise is that few men ever penetrate the secret of fully tapping the sexual power that is sleeping deep within their own body. It is revolutionary for the average man to think he can enjoy a deep and radiant pleasure in sex that penetrates permanently to the core of his being, an experience far superior to ordinary genital orgasm. The kind of prolonged "total body and soul orgasm" cultivated by Taoists is normally thought to be the exceptional gift of passionate and sensitive women. It has even become the greatest myth of western culture—the woman as passionate object of romantic love, the one who brings love to its real tenderness. The Taoists taught that men can participate equally in love through a truly exquisite balancing of sexual energies that is as tangible as any physical sensation of genital orgasms.

How is it possible for a man to so radically transform his sexual experience and through it his whole experience of life? Paradoxically, this "higher orgasm" can be discovered only when the "normal" or genital orgasm which so preoccupies America's sexologists is de-emphasized. The beginning three basic stages of Taoist "dual cultivation" of sexual energy for couples are:

1) The male learns to hold the penis erect for as long as desired and does not ejaculate any sperm.

2) Man and woman re-direct sexual energy through specific bodily channels into higher regions of the heart, brain and glands.

3) Man exchanges his super charged energy with the complementary energy of woman.

For the man, it is opening his feelings and subtle energy channels to the woman's essence and absorbing it during sex that is the key.

If you are without a lover, the Taoists offer a modification of this practice known as "single cultivation." This teaches a single man how to put his sex energy to work creatively in daily life or simply to enjoy life in good health without the plague of sexual frustration. The goal of the Taoist masters was not to create a new myth of a super macho orgasm which everyone would struggle to achieve and thus create competition. Rather it was to teach men and women practical ways of using natural energies to go more deeply into life's greatest gift, the freedom to love.

So what does all this cultivation of sexual energy have to do with love, of either the personal romantic type or the compassionate religious variety? The Taoists teach it is the responsibility of man and woman to balance the powers of Heaven and Earth harmoniously within themselves and that harmony in other spheres of life will follow thereafter. On the esoteric level, all acts of human love are the spontaneous transformation of our seed essence. Our seed essence, the seed of our very soul, is physically stored in the body as sperm or ovarian energy. When we love someone, we not only help them, but we also transform some of our own essence to a higher level of energy. Thus the Taoists see sexuality as a primary source of power behind love on the human level. Anyone following "the path of the heart"—the spontaneous and continuous loving of all that one meets—will find their way much strengthened by the Taoist insights into using the power of sexuality to that end.

At the same time it is the larger unseen cosmic harmony of the Tao that is always present that allows the experience of personal love to occur. Thus the Taoist term "harmony" is probably the closest equivalent for the western concept of "love" or compassion, on both the personal and universal levels. The Taoist goal is not to fulfill the human ego with its insatiable desires. It is to quiet the ego and calm the mind so that the subtle energies in the body can be first observed and then cultivated to a high level of awareness. Then the mind can see its true role in the larger order of things and work harmoniously to keep the forces in balance. Personal love relationships can be one valuable stage in this process, a microcosm of the larger subtle energy fields of the universe.

Western sexologists will undoubtedly dismiss these methods as having no statistical or verifiable scientific basis and accuse them of using vague terms such as "energy." It may be shunned by Western religions who are against sexual pleasure as well as by Eastern ascetic schools who believe spiritual enlightenment can be

found only by austerities that include sexual abstinence. The fact is that the early Taoists were scientists who based their practices on precise observation of human biology and psychology. They were neither hedonists nor ascetics, but sought a middle path to create the highest spiritual harmony possible between man and woman in accordance with natural laws of the universe. The deeply philosophical poetry of the Taoists, from the I Ching to Lao-Tse's "Tao Te Ching" to the "Secret of the Golden Flower," all testify to the sublime heights of their vision.

The fact these Taoist practices have survived by secret oral transmission for several thousand years is the strongest testimony that they work. The interviews I have conducted with dozens of modern western couples using these Taoist sexual practices, confirmed they still work for an ordinary cross section of urban men, young, old, white, black, Chinese, married and unmarried. Students of yoga, martial arts, and meditation have found it especially easy to learn the technique of seminal retention. Many people were already aware of the importance of sexual energy in their spiritual path, but simply lacked the method of expressing it directly in love making.

The Taoist methods may appear to be similar to the tantric sexual techniques becoming popularized in the west. The principle of balancing male and female and using the body as the crucible for transformation are essentially the same. As Nik Doulgas and Penny Slinger suggest in their authoritative "Sexual Secrets" (Inner Traditions N.Y. 1980) Indian tantra may have originated with ancient Taoists in China and then re-entered China hundreds of years later with the effect of re-vitalizing Taoist sexual practices.

For westerners today the foremost practical difference is that esoteric Taoism never assumed the cloak of secret rituals and invocation of religious deities that can make tantra seem strange and ill-fitting when transplanted to this culture. Sex was used more openly in China as a medicinal form of healing and natural path to spiritual balance without the same religious overtones. I strongly recommend that you obtain Sexual Secrets as a companion volume to this book, as it contains fresh translations of the classical Taoist treatises on sex and has dozens of superb illustrations of Taoist love-making positions not offered in this book.

It must be stressed that Master Chia does not teach his Taoist methods of transforming sexual energy as separate from his practice of meditation, Tai Chi Chuan, Iron Shirt Chi Kung and other Taoist arts. Sexual balance is a very important foundation for

building a healthy physical and emotional life, but the Taoist goal is ultimately to gather the primal energies driving all our desires, emotions, and thoughts and cultivate them back into their original state of pure spirit.

The Taoist Masters of ancient China were no fools. They knew love between man and woman is a mystery which cannot be taught. Sex may be only the hand maiden of higher love, but our sexual limitations often confront us with the feeling that our relationships with our lovers or that our life in general is incomplete. The techniques taught in this book are not mechanical substitutes for love. The Taoist secrets of love are meant to be mastered and then discarded when the transformation of sexual energy is experienced as a natural creative power of man, as easy as walking, talking or thinking. Then the pleasure of sex can be ecstatic beyond orgasm and love tender beyond belief.

Michael Winn
June 1984

Michael Winn is general editor of the Taoist Esoteric Yoga Encyclopedia and an instructor at the Healing Tao Center in New York. Born in San Francisco in 1951 and educated at Dartmouth College, he has travelled to over sixty countries as a journalist, photographer, expedition guide and observer of global culture. He has practiced various kinds of meditation, Kundalini yoga, Chi Kung and Tai Chi forms over the last fifteen years. He tested the methods taught in this book during an extended period of celibacy and later with a lover. Only after finding the methods effective, in both situations did Winn agree to this collaboration. The principle ideas belong solely to Mantak Chia as transmitted to him by his Taoist teachers.

CHINESE SEXUAL KUNG-FU: Will It Work in the West?

by Gunther Weil, Ph.D.

America's fascination with sex in the 1980's is matched only by its massive confusion of attitudes towards it. We need the pleasure of sex but can't decide how to deal with the emotional pain and complexity that often accompanies it. We have all felt guilty, conflicted or alienated by our sexual involvements and commitments at one time or another. From where does sex draw such enormous power to influence our lives?

No doubt, there is a biological imperative at work—the species' need to reproduce and continue itself. Less clear but equally powerful is the way sexual feelings become ensnared in the complex web of our culture. Eventually the culture-wide sex habits become a powerful set of unconscious influences. Most of us have been carrying the excess baggage of the sexual mores of our age for so long that we've forgotten how heavy the load is.

The cultural legacies of the Judeo-Christian ethic were the axis around which the sexual experiments of the 1960's revolved. The neurotic and barren life-styles of this ethic in previous generations were among the major causes of the sexual revolution of the 1960's. Alienated by sexual hypocrisy and the obvious destructive effects of sexual repression, people began searching for new and more honest ways of expressing their desires. Over the last twenty years we have seen the sexual revolution come full circle. What was previously illicit and forbidden became commonplace and banal. Some seek a solution to this current dilemma by returning to the old morality. Some seek refuge in celibacy. And some of us are still searching___

The far reaching implications of the sexual revolution of the 1960's, including the various liberation movements that have accompanied it, are now being re-examined in the wake of widespread conflict and unhappiness between men and women. The recent quest for a "new frontier" for the sexuality of the 1980's, a trend that is beginning to appear in the popular media, is essentially a reaction to the unhappy results of the new morality experiments of the last two decades. We thought we knew what we wanted, but when we got it we realized something else was missing. Individu-

ally and culturally we are again examining the meaning of our sexuality and the deeper purposes served by our loving relationships.

Many new ideas are now emerging from the New Age consciousness movement which address this need. Witness, for example, the concept of "High Monogamy" which emphasizes the challenge and excitement of conscious, through-time, relationships that transcend romantic egotism. The much publicized revival of popular interest in Indian and Tibetan sexual tantra is another example. Others are re-examining the merits of celibacy. The sexual paradigm is shifting again, part of the polar shift of the American morality play. As this play continues we are further mystified by the Moral Majority seeking to revive the old repressions and neurotic patterns which drove us to seek relief in the first place.

Many of us are struggling to understand the meaning of the conflict between the old and new sexual morality. Can we avoid the pitfalls of both repressive and "liberated" sexual morality which are by now all too familiar? Where do we turn for guidance in seeking our own truly individual answers?

Unfortunately, our views about human sexuality are constantly shaped by the fads and fashions of science and popular culture. We are influenced as much by these trends—from Dr. Spock to the Herpes scare—as we are by the actual biochemical processes of our bodies and minds. We often "know" more about who and what we are from what we read or see on television than from a deeply lived experience of ourselves. It is obvious that we lack a clear and impartial vision of our own social conditioning. Our self-knowledge is usually derived from the world of well known experts, books, films, TV, magazines, rather than from a patient understanding of our deepest gut feelings or intuitions.

The power of these cultural influences can be understood by carefully noting the cyclical and often contradictory scientific and psychological theories about sexuality found in the popular media. We can easily conclude that consistent valid and practical guidelines for the physical, psychological, and spiritual health of men women are few and far between. This conclusion applies to most of our difficult social and interpersonal problems, but is especially true in the sexual arena. The fact is that we really don't know much from our scientific or popular media sources about the function of sex beyond the obvious reproductive and "pleasure principle" arguments that have influenced all of our thinkers from Freud up to the more recent sociobiologists.

Unfortunately, our lives are powerfully affected by this loss of personal sexual self-knowledge. As a society we have chosen to ignore what the great spiritual traditions once understood about sexual energy and its role in personal transformation and spiritual evolution. What knowledge we once had has been fragmented or distorted by the institutionalized Judeo-Christian religions and remade to serve the lesser gods of social, political and personal control. Our Western institutional religious tradition has essentially repressed and distorted the sexual instinct and thereby created a variety of personal and social pathologies. In so doing, it has also effectively removed sexuality from its spiritual foundations.

In this respect, Western psychoanalysis correctly perceived the role of repressed sexuality in individual neurosis. Whatever limitations the psychoanalytic view may have as a full representation of human potential, this much can be granted to Freud's insights. Wilhelm Reich and Carl Jung understood quite well the enormous power of liberated sex energy and its connection to a larger universe of spiritual meaning. Jung rightly protested Freud's emphasis on disease as a model for health as well as the narrowness of his understanding of the range and purpose of the unconscious. He correctly emphasized instead the creative and transcendental function of sexual energy within a spiritually attuned and evolving individual.

But all of these psychologists and their legacies have missed the point in one way or another. It is true that the sexual instinct can both liberate and enslave, but in order to be truly liberating, the sexual instinct must be channeled in the direction of another purpose. Only in conjunction with the drive for spiritual transformation can sex become truly liberating.

Because of his lack of knowledge of the great spiritual traditions, Freud was completely unable to see this point. Wilhelm Reich, whose work has influenced so much of the Human Potential Movement's body centered therapies, was bold enough to bring Freud's insights to their logical conclusion. Reich clearly recognized that the ultimate result of repression was individual dis-ease and political fascism.

But in his zeal to emphasize the destructive effects of sexual repression, he also ignored the spiritually transforming functions of sex energy. Carl Jung had just the opposite problem. He clearly emphasized a spiritual and transcendental perspective on the sexual instinct, but he left out the central role of the physical body in this development. This omission made it next to impossible to

apply Jung's elaborate intellectual models to daily problems of sexuality.

So we search in vain within Western psychology to find the practical disciplines and principles we need in order to reconcile the conflicts which face us in the sexual realm. This is a simple and ordinary dilemma. But when we want to harmonize our sexual and love relationships with our spiritual goals, our situation seems especially poignant. Time and time again the sexual function proves to be a disruptive influence, generating conflict and division in our lives. It should not be too surprising therefore that celibacy has become an appealing alternative to so many who wish to follow a spiritual path while remaining worldly men and women.

These facts become even more obvious when we observe the behavior of the gurus, swamis and other teachers in "New Age" spiritual circles. The numerous examples of apparently celibate spiritual teachers born and raised in the puritanical context of traditional oriental cultures and suddenly set loose in the American "new morality" is simultaneously sad and funny. We frequently hear of this guru or that master who has fallen into the temptation of sexual relations which their disciples. Scandals have now become almost commonplace in the ashram and dojo. One does not need to become cynical about this in order to recognize that the sexual instinct is bound to find its expression in rather prosaic and predictable ways no matter what the official spiritual dogma may condone or prohibit. This has been true one way or another throughout the history of the institutionalized Judeo-Christian churches, as well as in the New Age spiritual scene, embracing as it does so much of the Buddhist and Hindu life-styles. In regard to sex, institutional religion, old or new, has little to offer us.

Turning to examples of the teachers of sexual tantra, the gap between theory and practical knowledge becomes rather obvious. We hear of the marvelous and ecstatic rewards of tantric inspired relationships. Our New Age spiritual bookshelves and periodicals lend themselves increasingly to the interest and fascination with esoteric sexual practices.

But what is the real purpose of esoteric sexuality and where can one find real knowledge and practical instruction in these publications? How is it possible for someone to actually apply these rituals in a form that is applicable to ordinary life and relationships? And how much do we really understand of the actual esoteric teachings when they are removed from the larger religious and ritualistic context of the Hindu and Buddhist traditions?

In order to answer these questions we need to accurately understand esoteric sexuality as the study and control of sex energy within ourselves having little or no connection with outer rituals of culture. Beyond this, we need practical methods that can be understood by the Western mind and applied in contemporary life.

One way to discover these methods is to identify the essential, fife-affirming aspects of sexuality found in mankind's cultural and spiritual traditions and determine which work today. We must carefully separate what we need to guide ourselves in the sexual realm without getting bogged down in outmoded ways of thinking and living.

The tradition of Taoism, the core of Chinese culture, presents an interesting and practical perspective on this question. The ancient Chinese masters observed that the sexual function is closely related to physical and mental health and is also the basis for the cultivation of higher spiritual faculties. The position that effective conservation of the life force energy and its gradual transformation into a kind of spiritual/material substance is both the birthright and responsibility of mankind. When practiced within the monastic tradition of religious Taoism, the conservation and cultivation of sex energy was largely a matter of celibacy.

But in its wisdom the Taoist tradition also provided another or practical way: The path of Sexual Kung Fu (sometimes called "Seminal and Ovarian Kung Fu"). This practice indicated a way by which a married monk or ordinary man and women could cultivate the Tao ("The Way") while remaining in worldly life. Because of its eminently practical orientation in matters of health and living, the Taoist tradition addressed sexual relationships in a straightforward and realistic manner.

The Taoist Sexual Kung Fu was and is today a method of increasing longevity and health, harmonizing the relationship between the sexes, and a means of spiritual transformation.

Aside from some historical distortions in which the basic egalitarian nature of the practice were subverted by emperors and aristocrats in the direction of a kind of male exploitation of the female, the basic premise of the method of Sexual Kung Fu is that of spiritual development and the harmony of the male and female energies.

Accustomed as we are in our Western traditions to consider the field of sexology from within the limits of our religious, scientific and cultural conditioning, it is difficult for us to grasp the

essential meaning of the metaphor of Sexual Kung Fu. We have a vague understanding of some kind of relationship to the martial arts, but beyond this, the concept of a sexual kung-fu seems comical if not downright ridiculous.

In fact, the literal meaning of "Kung-Fu" is method, practice or discipline. The concept of sexual Kung-Fu implies a specific method or practical discipline of having sex without ejaculation. At the same time the Taoist tradition recognizes a certain form of conflict between the sexes: a form that is universally represented by the lawful opposition and dynamic interplay of the forces of Yin and Yang. This lawful opposition plays itself out on the "battlefield" of sexual relations and is expressed as the playful conflict between sexual adversaries. A conflict, by the way, in which man is weaker than his "strong enemy," and where the Kung-Fu of ejaculation control is developed as a way of remedying this imbalance of sexual force.

In the western world we also have a related notion of a battle between the sexes. But we easily make a major error by assuming that this expression connotes the same meaning as the Taoist metaphor in anything other than the most superficial sense of conflict. Our Western concept of the battle between the sexes conveys the morbidity and frustration of the ponderously serious sexual dramas which dominate so much of our current thinking about relationships. It has little to do with the playful and transformative aspects of sex as they are understood in the Taoist tradition.

Only when we move our thinking to the level of "sexual energy" is it possible for us to begin to see how the sexual function can be properly understood and correctly employed in the service of sexual harmony and health. According to the Taoist view, man is constitutionally inferior to woman with respect to his sexual capacities.

His energies are easily spent and with the advancement of years his energetic capacity becomes severely diminished. It is this factor that is a major cause of conflict between men and women and it is this factor that is the basic underlying issue of so much of the current sexual counseling and sex therapy.

From our contemporary perspective the idea of a sexual Kung-Fu seems odd and maybe even a little revolutionary. But with the growing interactions of oriental and Western culture and medicine, and the resultant impact on Western sexology, the principles and methods of Seminal and Ovarian Kung-Fu could gradually become accepted.

Considering the fact that Western sexological research is quite young, we might anticipate the kind of confusion that one finds in a teenager exploring his/her sexuality. By contrast, the Taoist tradition is over eight thousand years old and has reached a full maturity in both theory and method. In fact, both traditions are dealing with the control of the same powerful impulse. Whether or not the Taoist Sexual King-Fu can work in Western society will be determined in part by its translation of it into Western forms of scientific understanding and psychology. Its acceptance may hinge equally on the willingness of Westerners to adapt themselves to the wisdom of the Taoist masters.

The ancient Taoist masters would enjoy this play of opposing forces as the inevitable working of the Tao. A young Taoist master has taken the bold step of revealing the secret methodology to the west; it is up to the reader to test its truth.

The Six Healing Sounds
as taught by
Master Mantak Chia

Healing Tao Center

SUMMARY OF THE PRINCIPLES OF TAOIST CULTIVATION OF SEXUAL ENERGY

1. The universe is filled with different kinds of dynamic energy, or "chi." The Tao, or "way," for each man is to creatively transform his energy over a course of a lifetime back to its original state of harmonious balance. Sexual essence, or "ching," is a powerful, vital energy that is generated continuously within the human body. Sexual drive propels the course of man's evolution biologically by transmitting the genetic lineage. Emotionally it harmonizes the love between man and woman, and spiritually provides a tangible link between the "ordinary" creative powers of man and the eternal creative process of the cosmos. Refining one's awareness of sexual energy—with or without a partner—is one of the simplist ways of humans to return to pure consciousness and experience the deepest rhythms of life. (Chapters 1 and 2.)

2. Sperm is the storehouse of male sexual energy. A single ejaculation has 200 to 500 million sperm cells, each a potential human being. There are enough spermotozoa lost in a single orgasm to populate the entire United States if each cell was to fertilize an egg. The manufacture of a sperm fluid capable of such psychic super potency consumes up to a third of a man's daily energy output and is especially taxing on the male glandular/immunological system. (Chapters 3 and 4).

3. Conservation of sexual energy is the first principle of cultivation. Ejaculation of the male seed for purposes other than having children is a wasteful loss of an extremely precious treasure. The energy loss over long periods of time weakens the physical health of the male, can lead to unconscious emotional anger towards women and gradually robs the male higher mind/spirit of it's power to rejuvenate itself. For this reason many traditional spiritual orders in the world require male celibacy. Taoists accept sexual love as natural and healthy, but know the momentary pleasure of genital orgasm with ejaculation is superficial compared to the profound ecstasy possible when love is enjoyed without the loss of the powerful male seed. It's every man's birthright to have full control over his bodily functions and prevent this loss. The secret Taoist methods of sealing the penis in order to conserve "ching" are given in Chapters 5 thru 8.

4. Transformation of sex energy is the second principle of cultivation. During sexual arousal, the "ching" or sexual essence stored in the testicles expands rapidly and causes some energy to

naturally rise to higher centers in the heart, brain, glands, and nervous system. This upward movement is cut short by ejaculation outward, so most men never become aware of the full power of their sexuality. The Taoist method perfects this upward transformation of sex energy by opening subtle channels from the genitals up the spine to the head and back down the spine to the navel. The expanding sexual energy is chanelled into this "microcosmic orbit" so it flows past all the major vital organs and harmonizes the etheric energy complexes in the body, called "Tan Tiens" by the Taoists (or "chakras" by the Hindus). (Chapters 7 and 8)

5. Balancing the polarity of female-male (yin-yang) forces is the third principle of Taoist cultivation. Once the sex energy has been conserved and transformed up, a single man can use meditation to balance the male and female poles which exist inside every male body. In the practice of "dual" cultivation, a couple balances this field of energy between them by sharing and circulating their subtle energies. The relationship becomes a springboard to transform the sexual attraction into personal love and then into spiritual awareness and service. The power struggle between the sexes gradually diminishes and balancing their differences over work, family, love, and the purpose of existence leads them into deeper harmony. Balancing this core sexual polarity in a couple is true depth psychology, as it nourishes man and woman at their innermost root. Chapter 9 details the "valley orgasm" method of exchanging the yin and yang energy during intercourse. A higher level of this practice involves exchanging energy without sex, or having orgasm within oneself, and must be learned from a master. (Chapter 18)

6. Don't over-emphasize physical sex in your daily practice, as it is easy to get stuck on pleasure without experiencing higher subtle energies. Proper sexual refinement is only one small part of the vast and all-encompassing Tao. If the mixture of your chi (general vital energy), ching (sex essence) and shien (spirit) is imbalanced, it will be difficult to unite yourself and feel whole and peaceful. Cultivating sex energy is important in nourishing your spirit, but without proper diet, exercise, meditation, virtuous moral behavior and love, true cultivation is impossible. Likewise, don't ignore sex and focus excessively on the higher spiritual centers; the roof will easily fall without a strong foundation below. Tao is the wholeness of Heaven and Earth, true harmony for man is the middle way between them, found in the balanced integration of their subtle energies.

7. Avoid sex without love. It creates imbalances in your physical, mental and spiritual bodies and will slow your real growth. The Taoist techniques are meant to be practical, not mechanical. A woman seeks tenderness of feeling in her lovers and will resent a man who is overly compulsive or preoccupied with his mechanical mastery of esoteric love methods. Dual cultivation is impossible without the full participation of the woman, who must transform up her yin essence stored in her ovaries. Regard the woman you love as more than a powerful generator of yin energy; she is foremost a human being worthy of your full love and respect.

8. You do not need a wife or girlfriend to cultivate your sexual energy. In the beginning it is easier to practice controlling your ejaculation alone, without the distracting excitement and heat of a woman. At any stage it is essential to tell your lover exactly what you're doing and ask her cooperation. The same principles of Taoist cultivation apply to women, with sexual essence drawn from the ovaries and this "ching" transformed upward into higher mind and heart. Many women already have an intuitive feel for the process. The receptive nature of women allows them to quickly learn the Tao of love, especially if the man has mastered the process in his own body.

9. Any male in reasonably good health can master the Taoist methods of cultivating sexual energy taught in this book. If you feel impotent or ejaculate prematurely, the rejuvenation exercises in Chapter 15 should be studied before attempting the Big Draw method taught in Chapter 7. The principles of cultivation are simple, but require steady attention. Its like cultivating a garden—hoe a little everyday, and nature will do the rest. One day you will have luscious blossoms and fruits. An impatient mind kills progress. Do not feel guilty or angry when you spill your seed; it may take years to fully master the Tao of love. The key is to relax, enjoy yourself and keep practicing.

PART I

THE FUNDAMENTAL PREMISE:
Sex Energy Can Be Transformed into Spirit

CHAPTER I

MALE SEX ENERGY IS STORED IN ITS SEED

"There is no medicine, or food, and no spiritual salvation that can prolong a man's life if he fails to understand or practice the harmony of sexual energy."
—*P'eng Tsu, physician to the Emperor*

For more than 8,000 years of Chinese history, the "Sexual Kung Fu Method" of retaining the seminal fluid during the act of love remained a deep secret. At first it was practiced exclusively by the Emperor and his innermost circle, who learned it from the Taoist sages that advised the court. These wise men claimed in earlier times it was a natural gift of all mankind. The Emperor needed the method to prevent impotence and illness; improperly educated monarchs were exhausted at an early age by the sexual demands of their wives and concubines. In aristocratic families it passed from father to chosen son alone, excluding wives, daughters and other family members.

Sexual Kung Fu is an internal practice that permits men to retain certain bodily secretions which are a source of incomparable energy when stored and recirculated to higher vital centers. One prevents loss of this biochemical energy by not ejaculating. Stopping ejaculation is not to be confused with stopping orgasm. The

Sexual Kung Fu Method provides an altogether unique and superior type of orgasm repeated over lengthy periods of love making. Its secret is simply, there is no loss of seminal fluid during orgasm.

By practicing control of certain muscles, tendons, and fascia of the lower trunk and by allowing the genital pressure to spread over the entire body, the seminal fluid is withheld. At the same time one thrills to pleasures of infinite variety. Indeed, the joys of this kind of love must be considered quite different from ordinary physical pleasure; the intensity is so great that it often leads to a spiritual awakening.

A man who masters this method will find his sexuality so enhanced that he will feel a revolution has occurred in his life. The pair of lovers becomes a dynamo, generating great quantities of electromagnetic energy. With this method one can make love more often than before, with tremendous benefits to one's health. Sexual Kung Fu stimulates production of precious hormonal secretions instead of depleting them, as is ordinarily the case with ejaculation.

Every vital function is invigorated because one no longer discharges life energy through the genitals. Real sexual fulfillment lies not in feeling the life going out of you, but in increasing awareness of the vital current that flows through the loins. The body is further replenished by a method of "steaming" the vital energy up from the sexual centers to the brain and higher organs such as the heart and crown of head. The life-enhancing energy process is completed by exchanging energy with one's lover during a relaxed meditation following the creation of this supercharged sexual energy.

This powerful release and sharing of life's vital force is the fundamental bond in human love. To awaken this dynamic energy is also to experience the force behind man's biological and spiritual evolution, also known as the Rising Kundalini.

EXTRAORDINARY POWER OF THE SEXUAL ELIXIR

Wise men of the Orient have from time immemorial sought means of preventing discharge of the seminal fluid. Without exception they have realized the tremendous implications of the sexual act: when performed with love and discipline, it may awaken dormant powers in the mind and body. The nervous and endocrine systems are particularly open to improvement. The act of love has long

been recognized as healing, but the Taoist masters sought to go beyond this and find the principles of physical immortality within it. Many schools arose proposing various ways of tapping the secret elixir of sexuality.

Those who fully understand conventional ejaculatory sex, know it grossly exploits every gland and organ. With ejaculation, the internal pressure of life is expelled from the body, leaving behind in some sex-obsessed men only enough life force to fold the newspaper, squeeze food through the bowels and make for the psychiatrists's couch.

The sages considered one drop of semen equal in vital power to one hundred drops of blood. The Hindu holy men refer repeatedly to Amrita, the elixir of life, a rejuvenation substance that may be produced during prolonged sexual activity without ejaculation. The production of this elixir, which westerners might call a higher hormonal secretion, requires a sexual technique that prevents ejaculation and thereby allows the body to enter higher and higher states of energy.

Extraordinary powers, including healing and clairvoyant perception, may evolve when one retains the semen and drives its power back up into the body. Many gifted minds have held that if one could retain these fluids for one's entire life, the body would not decay after death. The Saints—Christian, Buddhist, Moslem, or Taoist—all used the power dwelling in the vital seed to perform "miracles."

DIAGRAM 1

THE SECRET OF SECRETS

Many esoteric sects have urged the eating of the seminal fluid to increase sexual ability and bodily fitness. This practice is at least as rational as buying vitamins. Scientific analysis has found it to

contain a treasure house of vitamins, minerals, trace elements, hormones, proteins, ions, enzymes, and other vital nutritional substances.

But there is an additional property in the sperm seed which present-day science cannot analyze and is far more important than any vitamin. This may be called the Life-Force. Though it registers on no scientific instruments, it is far from imaginary since it separates the living from the dead. Ginseng root is an example of another natural substance which shows no special properties under chemical analysis, yet its life restoring powers are now widely acknowledged. Love making is a powerful healing tonic because it involves sharing the human life force, which is far more potent than any herb or medicine.

Chinese aristocrats and adepts seeking the deepest level of fulfillment have long had the capacity to return the energy of the seminal fluid to the brain and vital bodily centers. But ordinary people in our society have, until now, had no technique for recycling this great life power to the body. Most men have found the sexual lure irresistibly attractive and have happily lost their seed when succumbing to it, unaware of the consequences to their health or that there was even an alternative available to them.

With frequent ejaculation of sperm vitality ultimately plummets. The big spender loses stamina, his vision begins to weaken, hair tumbles from his skull: he grows old before his time. At first he will not feel drained, but after years of abuse his capacities will begin to drop alarmingly. When the hormonal secretions of the sexual glands are regularly leached out, the body is sapped at its root. Within a period of time that will range from months to decades depending on the endowment of the individual, creative and sexual abilities are halved, and the ability to withstand disease and the frailties of old age is diminished.

To regain failing powers, the desperate big spender of vital seed sometimes tries to borrow well-being from hormone injections, "uppers," "downers," intoxicants, megavitamins, hallucinogens, and aphrodisiacs. These substances frantically stuffed into the body may appear to help temporarily. He may seek to regain his dwindling sexual powers with personal power purchased with money or political influence. If he is on a spiritual path, or is surrounded by a loving community of family and friends, this feeling of a failing life power will be slowed. But so long as the pro-

digious energy waste continues, decline is inevitable. The organs of digestion will be unable to assimilate sufficient nutritional energies to replace those irrecoverable life energies lost by ejaculation.

The Taoist method of cultivating sexual energy recirculates to the body the hormones, proteins, vitamins, enzymes, minerals and electrical energies of the semen. When they are conserved and transformed, one enjoys a marvelous sexual life, improved health, deep inner balance, and rising spiritual consciousness.

The Taoist method of love actually stimulates the production of hormonal substances of unusually high quality. One can learn to focus energy on the endocrine glands during the act of love. When the glands are bathed in energy, the quantity of their secretions increases; more importantly, their quality improves. At higher stages in the practice the hormones develop extraordinary properties.

The Sexual Kung Fu method allows one to generate and conserve more nervous and hormonal energy than are necessary for ordinary functioning. This excess vitality may be channeled to strengthen the body and to raise mental and spiritual abilities. When lovers are in close embrace subtle Yin and Yang energies are concentrated into vortexes from the sexual region to the head and eventually remain in the head at all times.

WHY HAS THE SPIRITUAL POWER OF SEX BEEN KEPT A SECRET?

Our race has finally grown aware of the need to conserve natural resources, lest we consume ourselves to total ruin. Fresh water, soil, forests, and fuels must be spared, food produced more efficiently, building and transportation accomplished with less waste. We have already exhausted a major portion of the readily recoverable riches of the planet. The cost of basic commodities skyrockets because, with the few resources left, we continue to over produce inefficient machines such as cars and unproductive military armaments—tanks, missiles, etc.

Everyone is eager to conserve natural resources, but few even dream of conserving the most critical resource of all: one's own vital energies. The careful harboring of the energy stored within man's seed is a truly rational energy program. Yet this aspect of conservation is entirely overlooked by politicians and health experts.

One reason for this neglect is simply general ignorance of the ancient and highly secret methods used in the past. Taoist Masters gained knowledge of these methods through unknown millenia of relentless searching for the secret principles animating matter. These methods are the fruit of many generations of inspired meditation by sages coupled with my close observations on modern life. This book fashions into a unified whole my personal experience of the teachings.

The Taoist masters felt bound to reveal their potent secrets to only the most select disciples, those who had proven their devotion to the Master's ideals by years of arduous self-sacrifice and service. Why did the Masters feel so strongly compelled to hide their tremendous knowledge from the public?

The reason for this secrecy is not easily comprehended by the western public today. The mass media have fostered a state of mind in which anyone's life is everyone's business: the most intimate details of private sex life are the most greedily lapped up. Advertisers assure their clients today "Nothing sells unless it is sexy." This mentality has made sex, in America, into a disposable commodity, making it harder in our private lives to experience sex as an intimate pleasure that can be cultivated over time to ever deepening levels. Today sex is often consumed and thrown away as soon as the lover becomes old or an inconvenience. Even the women in the harem of Chinese Emperors and aristocrats fared better, being assured of material comfort for life in exchange for their sexual favors. The court society favored the position of men, but at least the female sexual energy was respected for its healing benefits and honored as being necessary for the spiritual development of the male.

A classic Taoist story tells of a woman who learned the process of sexual transformation and exchanged her yin energy with her lover's yang energy and thereby achieved Immortality. She thus became the guide to ancient emperors on the subject of love. There is a recorded historical instance of a palace maid in 690 A.D. becoming the Empress on the death of the Emperor. Empress Wu, respected for her mastery of the art of love, ruled wisely for several decades until her death.

The ancient Taoist masters were not superstitious. They were natural scientists who laid the foundation for amazing technological advances in medicine, chemistry, biology, navigation, and

many other fields that would not be discovered by western scientists until 2000 years later. Nor did they crave exclusive possession of their potent knowledge. They had their reasons for secrecy, and their reasons were well-founded at the time. They were custodians of the doctrine taught to them by their masters, and feared the misuse of the great force unlocked by the secret principles. Perhaps, they felt an obligation to protect the public from its tendency to distort the purest teaching to suit its own base instincts. In rural China, which was much less populous then, someone with such esoteric knowledge could easily become a chieftain or a king. A warrior could use his power to defeat his opponents.

The Taoist Masters thus thought it dangerous to spread their teachings too widely, and passed them on to only a few chosen disciples before departing their earthly life. To guarantee that the formulae not be used for selfish purposes, these Masters often transmitted to each disciple only a part of the doctrine. Thus, only if the disciples banded together and shared their learning could the supreme potencies be unleashed. If anyone selfishly withheld his learning, they would never receive the whole doctrine. In the course of many generations, fragments of the innermost secrets came to be regarded as the whole. My attempt is to reunite many disparate parts into an organic whole which I believe similar to the most ancient and complete teachings.

WHY REVEAL THE SECRET NOW?

Why violate the traditional Chinese teaching method and expose to the general public these powerful principles? The simple reason is that the historic moment is already late. The human condition is too desperate to deprive our species of a potentially great infusion of vital energy. If the human race is not quickly infused with a new life energy to render it more harmonious than it has been for most of the last 2,000 years, we are all, earthly Masters and mortals, threatened with an untenably harsh existence, if not extinction.

There are so many wizards of the computer, stock market, test tube, and spectator sport, but so few of the art of life. Our race spends its brief span fiddling with statistics, black boxes, noxious chemicals, and above all, with meaningless words. A majority of Americans daily pass more than six hours in a mesmerized trance induced by a colored shadow dancing in a box of glass. These

machines have inadvertently become instruments of our own destruction; a tv programmed mind is not a free mind. Too few devote even one second to entering deeply the great current of life hidden within ourselves. Yet all the technological energy is eagerly sought is an apish imitation of the electrifying ecstasies found hidden within the body and mind.

There are positive signs; in Taoist thinking, any excess eventually leads to its opposite. Despite the current mediocrity of most popular culture, there are tremendous forces driving the race into expanded consciousness. It is clear that the reason for the chaotic state of planetary affairs is the revolutionary advance in human consciousness. In simplest terms, hydrogen bombs hover above us only because we are clever enough to conjure them up. Hatred contains the seeds of love. We have created a crisis in order to force a solution demanding that we restore our balance with one another and nature.

Among the most important implications of this soaring up of consciousness is that the ordinary man will be admitted to secrets of life and mind that were formerly reserved for the chosen few. The French scientist Schwaller de Lubicz elucidated this idea: "It is certain that such a revolution in thought . . . is not the result of whim. It is in fact a question of cosmic influence to which the earth, along with everything in it, is subjected. A phase in the gestation of the planetary particle of our solar system is completed . . . A new period must begin, and this is heralded by seismic movement, climatic changes, and finally, above all, by the spirit that animates man." Not only do troubles press consciousness to evolve, but changing consciousness bursts the constraints of existing order.

I hope that the Taoist practices of cultivating male energy presented here will attain higher perfection when subject to the shock of opposing ideas, scientific study and personal experiment, and the whole race's inventive genius. Today in China, it is formally prohibited to keep secret beneficial practices: one must reveal all knowledge that may improve the general welfare. Henceforth, closely-guarded preparations of medicinal herbs, roots, mineral waters, barks, muds, flowers, gems, venoms, as well as yogic and meditation practices will reach perfection more quickly by serving all.

So the revelation of the Taoist secrets of sex is a contribution

to human culture that may take time to manifest its real influence. Where a few great minds once acted, the full race of human genius must now struggle to save our world from the dangers of its own excess.

CHAPTER 2

WHAT IS "CHI" ENERGY?

"Essence, chi, and spirit are the three jewels of life!'
—*Book of Changes and The Unchanging Truth,*
Master Ni Hua Ching

Taoist cultivation of sexual energy cannot be understood until the Chinese concept of "chi" is clear. Chi, also known as prana, the warm current, Kundalini power, or the electro-magnetic life force, is very difficult to describe because this life energy is invisible and cannot be seen. However, we can feel it. "Chi" is simply the Chinese word for "breath." On the physical level it is the raw air we breathe in and out, revitalizing us and keeping us alive. Our life hangs by this thin thread of breath every second of our lives, and that thread is seemingly empty air.

We transform that raw air by mixing it with other nutrients and refining it into a different kind of energy, one that takes a solid form. It becomes our blood, flesh and bones, but never loses an inner rhythm of pulsation that flows through each cell. Our vital organs—heart, liver, kidney, and glands—in turn refine this energy and send chi power to the higher functions of our brain, thus creating our thoughts, dreams, and emotions. From this emerges the human will to live and die, the power to love and ponder this breathing planet suspended in the vacuum of space. As this "chi"

follows a self-perpetuating cycle, its rhythm becomes so natural we hardly ever notice it. When was the last time you marvelled at the simple fact you are breathing and your heart is beating?

The ancient Taoist masters spent a lot of time observing the flow of this "chi", which they recognized as the breath of the universe that moves through everything. Chi is the glue between our body, mind, and spirit, the link between our perception of the inner and outer worlds. Living close to nature with few of the distractions of modern civilization, the Taoists were able to map in fine detail the workings of the chi energy both within the human body and in the world at large. Later Taoists made numerous distinctions between the different kinds of "chi" that operate, so that today in China the working heirs to their knowledge—the acupuncturists and herbologists—refer to as many as 32 different functions of chi in the human body.

The Chinese never bother trying to analyze exactly what this "chi" is. Whether it is matter or energy or a process of changing between the two is irrelevant. All that matters is how the chi functions, in short, what it does. When you want light in your room you turn on the lamp, the electricity flows and radiates light. You don't analyze it, you simply flip the switch. When an acupuncturist inserts a needle into a point on a liver meridian, he switches on the liver "chi" so it flows more powerfully.

DIAGRAM 2

CHI: ELECTRICITY OF THE HUMAN BODY

Modern scientists are beginning to describe the world in much the same fashion that the ancient Taoists described it—as an interplay of positively (yang) and negatively (yin) charged "chi" energies. Here is a recent description of electricity in Time-Life's science magazine:

> "Electricity is almost certainly the most elusive of everyday things: It lives in the walls of our houses, and regulates the lives of our cells. It bolts from the sky as lightning, and sparks from your finger if you touch a metal doorknob after shuffling across the rug. It shapes the structure of matter—making plastic pliable, oil slick, and glue sticky. It runs electric trains and human brains . . . Light is electromagnetic radiation—and that includes everything from visible light to x-rays, microwaves, and radio waves. The magnetism in iron magnets is caused by the spinning of countless electrons twirling in unison, just as the magnetic field of the earth is most probably created by the swirling of electric currents in its molten metal core.
>
> "Your entire body is a giant electric machine: body chemistry (like all chemistry) is based on electrical bonds. It even runs on electricity. The energy you need to see these words comes from the egg you ate for breakfast; the egg got its energy from the corn consumed by the hen; the corn extracted that energy directly from the electromagnetic light of the sun through photosynthesis.
>
> "When you think about it, the universe is positively (and negatively) electrifying. But because of the usually perfect balance between positive and negative forces, most of the electrical power around you is neutralized—and therefore unnervingly invisible, at least in the normal sense . . . Essentially, everything around us is electrically charged empty space."
> K. C. COLE,
> *Discover Magazine,* Feb. 1984

What is curious is that even in China today, ordinary people take for granted that the universe is made up of these charged energies. If asked, they would say a garlic has a very hot (chi) energy. It warms the body: therefore the essence of garlic "chi" is hot, or yang. In the early centuries of China, chi was expressed in written Chinese as a blank in the top portion of the Chinese pictogram and as fire in the lower part. This was done so that no "fire"—no single creative energy might be conceived of as defining chi.

Chi pre-existed before everything in the physical world as original chi, or pure energy. This neatly avoided disagreements about the metaphysical nature of original chi (eg. is God good or evil?) and focused attention on its functional manifestation in the ordinary world, as hot yang chi in fresh garlic or weak yin chi in a diseased liver. As a result, Taoist philosophy tends to be very pragmatic and grounded in observation of the natural organic world. Taoist cultivation of chi energy may extend into what may at first glance appear to be impossibly subtle spiritual realms, but it always begins with down-to-earth and in-the-body practices.

DIAGRAM 3

THE ANCIENT CHINESE CHARACTER FOR CHI ENERGY

derived from the root of fire above
and emptiness below to denote its original purity.

HOW DOES "CHING", OR "SEXUAL ESSENCE" FUNCTION IN HUMANS?

For the Taoists, sexual energy is called "ching," or "essence." It can also be understood as a kind of "human electricity" because like "chi" it is an invisible energy that flows through the body. However in its raw physical form, it is stored in men in their sperm and women in their ovaries. Thus it is a kind of chi energy that has

been transformed by bodily process into a more potent form. It is raw matter distilled into a powerful essence that has the ability to recreate the entire human organism. For men, their sperm power is the essence of their "yang" or male energy.

When you feel sexually aroused, this is your "ching" essence expanding at a phenomenally powerful rate. Your whole being is suddenly charged with new energy, your body fired with passion and your heart transfixed with desire. It's like turning on the light switch. Your entire world of touch and feeling is dramatically changed from night to day within seconds. This happens in men when they feel attracted to a woman because their hundreds of millions of sperm cells begin vibrating and generating a larger field of sexual electro-magnetic energy. It also occurs spontaneously in the springtime. When trees are bursting with sap, man's ching is attuned to the cycles of nature and expands as well. What is the relationship of this sexual "ching" essence and the other types of chi energies that form your life force?

MAJOR PHASES OF CHI ENERGY

The following lists in simplified form some of the major phases of "chi" in humans and their relationship to "ching" essence as well as "shien," or spirit, the highest stage of refinement. These three: chi, ching and shien, are known as the "three treasures" because their proper cultivation leads one to enlightenment.

1. Prenatal Energy: Combines "chi" and "ching" inherited from mother and father, expressed in the gene code and visible as the innate vitality that people have.

2. Breath Energy: Body absorbs cosmic energy from the inhalation and exhalation of air. Those who breathe properly—relaxed, deep breaths to the abdomen—will receive more energy.

3. Food Energy: The purity of chi received from food will depend on quality of diet and ability of body to digest and assimilate nutrients.

4. Meridian Energy: Comes from different types of body cells that produce the energy. It courses through the acupuncture channels linking all the vital organs and glands.

5. Pulsation Energy: The deep rhythm of your body, felt especially in veins and arteries, also seen in biorhythm energy flue-

tuations that harmonize our emotional, mental and physical bodies.

6. Sperm (Ovarian) Energy: "Ching" is the sexual essence that exists from birth but grows more powerful when fed by other types of chi (food, breath, etc.) Sex essence is the source of all energy available for creative and thinking processes (shien).

7. Spirit Energy: "Shien" is the light behind our personality, the ability to discriminate, human self-awareness. At its purest level, it is our very being.

8. Wu **Chi:** The emptiness, or void from which all chi energies originate and must return. (Original Chi)

DIAGRAM 4

THE CYCLE OF SUBTLE ENERGY

The goal of Taoists is to cultivate the life energy to the highest level possible, bringing good health and deep fulfillment of the human aspiration for wholeness. The early sages observed the natural process of the raw chi of the universal elements—sun and earth, food and air—being transformed into ching, or sex energy, and in the male stored as sperm. The next step is far more subtle and difficult to observe. The sperm energy is mixed with the chi of the human vital organs and refined into shien, or spirit. In short, sex energy offers a link between our biological and metaphysical identities, between the animal and the divine. Sexual ability gives man the divine power to re-create himself, but it also binds him to his animal body and that of his lover.*

The Taoists believe that you can use any substance or force that exists in the universe to feed the process of cultivating your spirit, and thereby free yourself of the limitations of your animal body. Everything has energy in it, and human consciousness can absorb that energy if it so desires. But some substances are easier for the human body to change into a useable form than others. For example, you can absorb the energy from eating a good hot meal more easily then you can from sitting on the beach under the sun. The solar energy is too raw and too powerful to be easily "digested" by the body. Sunlight will burn you severely if you try to absorb too much. But your body can easily assimilate a plate of food and function for a long time on the calories and nutrients digested.

DIFFERENCE BETWEEN HUNGER AND SEXUAL DESIRE

What is the difference between food and sex as energies that our bodies crave to be fed? Many people confuse the hunger for food and sex as being similar biological desires that are both necessary for survival. Clearly they are connected, as many people feeling sexual frustration turn to food for gratification. An imbalance in

*If you are interested in a fuller elucidation of the working of chi energy in the spiritual realms, read two books by Taoist Master Ni, Hua Ching: "Tao: The Subtle Universal Law" and "The Taoist Inner View of the Universe and the Immortal Realm" (College of Tao, 117 Stonehaven Way, Los Angeles, CA 90049). There are many volumes in Chinese on this subject, but I feel these are the best translations and commentary on the Taoist canon available in English. Ni's translation of the I Ching is preferred over those of western scholars, who don't understand fully the esoteric aspects of these classic texts. His translation is titled "The Book of Changes and The Unchanging Truth."

ching (sex) energy ranks as a major cause of obesity—when you are sexually frustrated, food is the easiest substitute.

The major difference between food (chi energy) and sex (ching essence) is that sex energy, because it has already been refined and produced inside the body, is much easier to "digest" or "absorb" than a raw substance like food. Food must be broken down and connected before it supplies any useful energy. Sexual essence is already in a state of readiness that is linked within milliseconds to our hormonal and nervous system. The image of sex or the mere thought of it can instantly enter our brain and alter our entire psychological state as well as our bodily feeling.

Thus sexual energy potentially has a far higher value than food as a kind of "nourishment" needed for human emotional maturation and spiritual growth. That is why sex was also considered a department of Chinese medicine and treated so matter-of-factly. A Taoist doctor might prescribe a two week round of love making in certain positions to heal your illness. Human love, expressed through the function of sexuality, was seen as the most potent medicine you could take. It was a kind of "human herb" that could cure most ailments as it restored the flow of chi which governs our organ vitality and general immunological system.

People become obsessed by their relationships as the exchange of sexual energy that occurs is the most important source of sustenance in their lives after food. Relationships invariably get complicated because although your friends and lovers are visible and tangible beings, the sexual energy you are constantly exchanging and transforming into emotion and spirit with them is invisible. It can be known only through your feelings and intuition.

A relationship fails when the spirit of it is not properly cultivated, and you force yourself to "eat" negative, or poisonous, sexual energies without transforming them into positive or neutral energies. When the imbalance in energy becomes strong enough, divorce occurs unless the couple finds another way to correct it. Reading pornographic magazines or masturbation are other examples of negative cultivation of your ching, because they stimulate the "yang" essence in your sperm without balancing it with a real woman's "yin" sexual energy.

The major difference between ching, or sex essence, and food and sunlight energy is that your ching chi is physically manufactured and stored inside your body. This precious substance—

sperm, with its extraordinary power to mate with a female egg and create another life—is manufactured and stored in your testicles for safekeeping. The point is that you are free to tap into your supply of sex energy at anytime by drawing the sperm power from the testicles.

DIAGRAM 5

The modern character for fire can be interpreted as: the primordial element of fire, physical fire, or psychic heat burning beneath the Taoist cauldron.

If you run out of sperm your body automatically makes more. This allows you to be physically ready for your lover at all times. Even if you are alone, without a lover, and never intend to procreate, your body produces the sperm and transforms it into creative sexual energy. So you can always transform this stored sex energy into spirit, your pure awareness, and express it through creative personality at will. So in fact "ching" is internal energy that nourishes us night and day without ceasing. The process of refinement is partly automatic, and partly voluntary. We can either help or hinder the process of transforming our sex energy into creativity depending on how aware we are of our internal process. Yet, like breathing, we draw on this source of energy constantly without being aware of it.

Freud stumbled partially upon this truth many millennia after the Taoist masters had clearly mapped out the role of sex in shaping our destiny. Freud didn't realize that the mental neuroses he discovered could be healed by cultivating the sexual and other Chi energies within the body. When these energies are re-balanced through proper love-making and meditation, the mind is re-patterned and freed of old traumas and habits. Taoist cultivation of one's sexual energy is an extremely powerful tool for self therapy. So powerful, in fact, that it should be used only by those who have achieved a certain degree of integration in the body, mind, and

spirit. Severly imbalanced individuals may release more energy than they can safely deal with, and should see a psychiatrist before attempting to learn the Taoist methods.

DIAGRAM 6

This unique human freedom of utilizing our sexual energy so flexibly does not come without it's price. The price is that we spend an estimated 25% to 40% of our chi energy taken in through food, air, and sunlight just to manufacture this sperm energy and maintain sexual readiness. Why does the body spend so much of its valuable resources to produce billions of sperm cells and regulate them with an accompanying hormonal system? Simply to produce a few children over the course of a lifetime? Nature is not that extravagant. The enormous investment of our bodies in producing this sperm energy is to speed our overall evolution. The more successful man is in transforming his stored energy into higher creative and spiritual energy, the more rapid his evolution. This path of Taoist cultivation of chi energy is simply an attempt to most efficiently utilize the natural gifts every man is born with to evolve the maximum possible in a single lifetime.

CHAPTER 3

THE BIOLOGY OF ESOTERIC SEX

Ordinarily discharge of the seminal fluid completes the act of love. As soon as the fluid is spent, the body strains to replace it. The faster sperm is used, the more the body is forced to produce. Quite obviously, production of this nutritionally rich and psychically superpotent substance requires an enormous amount of raw materials. The reproductive glands receive these raw materials from the blood stream. In its turn, the blood withdraws the precious elements from every part of the body, liver, kidney, spleen, etc., including the brain.

Every organ pays heavy tribute to the glands that produce the sexual seed. Because a single drop of semen houses such prodigious life energies, frequent loss of fluid depletes the body systems of their most precious nutrients and speeds the inevitable physical decline into old age. Retaining the seed within the body is the first step to reversing this cycle in which the male pays an unnecessarily stiff price for sexual satisfaction.

THE VOLUME OF SPERM FLUID LOST IN A LIFETIME

One may conservatively estimate the average American male ejaculates 5,000 times in his lifetime, equal roughly to 4 gallons of fluid. The Kinsey Report provided the following details on the American male's normal frequency of ejaculation:

AGE	AVERAGE EJACULATION PER WEEK
Puberty-15	3.17
16-20	3.3
21-25	4.14
26-30	3.51
31-35	2.9
36-40	2.42
41-45	1.95
46-50	1.8
51-55	1.54
56-60	1.09

More recent studies suggest that it is likely that the vital seed is more frequently lost now than in the time of Kinsey's study because the overall level of sexual stimulation and activity is presently higher. The effects of the sexual revolution, availability of contraceptives, attitudes toward sex in television, film and magazines has been particularly strong in encouraging premarital sex among youth.

But to avoid any statistical inflation, let us use the estimate of 5,000 ejaculations per lifetime made by Kinsey in the 50's. To calculate the flood of fluid normally lost: 5,000 (ejaculations) x 3 cc (fluid) = 15,000 cc.

This is 15 liters or roughly 4 gallons of fluid. The semen spent in an average ejaculation has a volume of 2 to 5 cubic centimeters. These drops contain 200,000,000 to 500,000,000 individual sperm cells.

YOUR BODY HAS ATOMIC ENERGY IN IT!

This is an astonishing statistic: a single male ejaculation scatters two to five hundred million sperm cells. Cast upon two hundred and fifty million female eggs, a single ejaculation could conceivably generate the present population of the United States. Multiplying this figure by 5,000 ejaculations per lifetime yields a numerical indication of the seminal power.

The normal male ejaculates enough semen to generate one

trillion human lives. Within a single man's loins sits the capacity to sire more than two hundred times the present population of four billion on the planet! In a very real sense every man can create a stockpile of sex energy literally more potent than the atomic bomb. If this immense reservoir of psychic energy were to be redirected towards love and spiritual harmony, the possibilities for a peaceful existence seem unlimited.

Some Western scientists may scoff at the idea that semen is an immensely powerful substance. Yet no one can deny the prodigious life-potential in the seed of a single man. By gathering this life-generating force within oneself, one collects tremendous energy.

The effects of conserving this energy would differ with every individual. No man or race produces the same type of energy. Each creates according to its own genius. One group develops enormous physical force, another massive resistance to disease, another clairvoyant powers, still another great longevity. But all men have the inherent ability to substantially increase their active lifespan by creatively adapting to their environment.

Scientists have tried to improve upon Darwin's thesis by focusing on specific genetic impulses behind behavior that lead to increased survival of an individual's gene pool. This correctly gives a lot of evolutionary power to our sexual impulses, but ignores the process whereby this sex energy is transformed into higher creative impulses of the mind and spirit. The evolved man directs his animal body and instincts with his mind and spirit. The scientists maintain the reverse is true. They are right, but only to the extent that man's evolution back to his original self is incomplete.

Man is still bullied about by his biological urges. When man is complete, and has truly integrated his still clumsy body with his mind and spirit, his total freedom of spiritual being is beyond the control of biological instinct. This does not violate the physical laws of the universe; it simply postulates that we are beings with the inherent power to cultivate our energy to a level of power where it allows us to direct our bodies freely. It is not mind over matter, as that implies a battle. It is more mind inside matter. The revelations of mind have allowed us to create nuclear bombs and send man to the moon, so why not use mind to direct its own body which is immediately at hand?

Scientifically minded readers may refuse to accept this. No

proof is possible except in the experience given by daily cultivation of one's chi. Many scientists may have thought it impossible to have an orgasm without ejaculation, yet I and hundreds of my students know it is only a matter of education, of training the mind to control the chi in the domain of its body.

While science may analyze the chemical constituents of seminal fluid, it cannot account for the human seed's life-genius. This is beyond instrumental measure. How can one measure a human life? Only a scientific philistine would try to reduce man to a mechanical theory.

These and other scientific explanations pale before the power of the seed's ability to make 4 billion unique human beings with creative intelligence. Theoretical physics now acknowledges it is impossible to scientifically analyze the ecstatic fact of creation. Quantum physicists have accepted the likelihood that there is no smallest particle, no physical building block upon which the cosmos is built. There are only the multi-universes of space and time linked together by infinite fields of energy. These are currently described as gravitational, weak and strong forces, and electromagnetism. Taoists view any attempt to describe the totality of nature, the Tao, as futile. They found it far more useful to find ways of experiencing deeper harmony with it.

Sexual energy is a field generated within the body and linked to the larger cosmic fields in ways that no scientist can presently understand. But there is no reason to wait 500 years for science to come up with explanations of sexuality, as every man can experiment with his own sexual energy field and draw his own conclusions today. The Taoist masters were ancient scientists with a genius for self-observation and were dedicated to furthering human evolution. Each generation tested the practices taught to them by their masters and tried to improve on it. The methods of chi cultivation may have evolved over the millennia, but the principle has remained the same: The ching or sperm power is a super potent force readily available to men, awaiting only their harvest. Sexual essence is a building block for expanding our personal universe, the foundation for human love and evolution.

BIOLOGICAL IMPORTANCE OF SEX HORMONES TO HEALTH

Modern science has given us the opportunity to study the function of sperm in the body in amazing detail. Each of the sperm cells contains 23 chromosomes, prostaglandins, ions, enzymes, trace elements and other essential parts of human life. Only the elements of the egg and the nurturing environment of the mother are needed to form a living human being of infinite potential.

The seminal vesicles, two little sacks collecting sperm at the base of the bladder, are tied to the vas deferens. They produce a yellow fluid that mixes with the sperm and thickens the seminal fluid. This secretion contains the sugar, fructose, which nourishes sperm cells.

The prostate gland also contributes to the reproductive secretion. It surrounds the urethra (the main duct or tube running the length of the penis) beneath the bladder. In ejaculation the prostate jets forth a thin clear fluid which helps to propel the sperm. Cowper's glands along the urethra supply a few drops of alkaline secretion, which serves to neutralize acid remaining from urination.

DIAGRAM 7

Dr. Beyoihn, a noted endocrinologist, stressed the importance of the hormonal function of semen production: "Sexual hormones are important to our harmonious development. When men abuse the reproductive function, the secretions of the sexual glands are lost. . . resulting in mental and physical weakness, inability to concentrate, and a less tenacious memory."*

Love-making is an internal exercise which helps restore imbalances in bodily chemistry. A moderate amount of sex tends to repair hormonal disturbances, to reduce cholesterol and blood pressure levels. Sexual activity alters the body chemically. The reason this happens is because each gland in the body affects all the others. Thus when sex hormones are stimulated, it stimulates the hormones secreted by the other major glands—adrenal, thymus, thyroid, pituitary, and pineal. The illusion when you are young is that you can stimulate your glands indefinitely, without paying a price for it. Sex seems like a bottomless well of bliss. It is, if you take the trouble to recirculate the sexual hormones within the body instead of repeatedly ejaculating them.

These sex hormones do more than just make you feel good. They literally invade every sphere of your activity and form your personal identity. Recent scientific studies have shown that sex hormones influence the brain's cellular organization. If you are male, then your brain has male stamped on each cell. This is what produces different proclivities in men and women.

Dr. Gunter Dorner, director of the Institute for Experimental Endocronology at Humboldt University in East Germany points out: "The sex hormones . . . don't just suddenly appear out of nowhere at puberty. Nor do they just meander about the body. THEY KNOW WHERE TO GO. The cells that are their targets have already been primed in the womb to respond to the hormones that are now being produced. This is true of the body, of the reproductive organs, heart, lungs, liver, and kidneys. But it is also true of the brain. The tissues, neural circuitry and chemistry of the brain have already been stamped during fetal life by the sex hormones. And the foundations have already been laid for the range of behaviors that will characterize the organism as male or female in adult life."*

*E. Flatto, *Warning: Sex May Be Hazardous To Your Health* (Arco Publishers 1973).
**Science Digest*, September 1983, p. 87.

These hormonal differences obviously determine many of the qualities in men and women the Chinese have called yin and yang. The Taoist goal of total integration of sexual impulse with the mind begins to make sense even to a western intellectual when the connection between sexual activity, hormonal balance, physical health, and personality are examined together. The evidence for health being powerfully affected by hormonal balance has been well substantiated, and is even now a major topic for cancer researchers in their efforts to understand how the mind and emotions control our immune system. The Taoists would say it is unnecessarily complicated to track each individual microscopic hormone receptor and enzyme in the gene code to fight the hundreds of different types of cancers and diseases that result when our immune system fails.

The Taoists contend the critical factor is simply balance—that when male and female chi energies are balanced in the body, each cell will have the energy to function perfectly, and hormones do their job in making the body machinery run smoothly. This balance of male and female hormones produces a happy personality who lives harmoniously with the world. The specific Taoist practice of sexual energy conservation and transformation is one of many designed to insure that the internal equilibrium of the human energy system is so powerful that no outside force can destroy its inner balance. The Taoists thus see everything, hormones, sex, personality, health, and beyond that, your spiritual destiny, linked inextricably together. That is the working of the Tao, which links the finite ordinary world of a Saturday night date to the explosion of a super nova light years away. The principle of the fusion of energy in both is the same.

In olden times the Taoist secret of secrets was the method of being reborn through a process of giving birth to your new self. When I first learned it I didn't understand it, but later, in studying the endocrine system, I was able to see analogies. I realized that both men and women have the makings of male and female hormones and that, in effect, they are each capable of having intercourse within themselves, and giving birth to a new self.

The most important connection in the male hormone system is between the testicles and the pituitary gland located between the eyebrows, behind the forehead. These glands work together in the transformation of sexual energy, a fact that you will experience

DIAGRAM 8

SEXUAL ENERGY, GLANDS, HORMONES, PERSONALITY & DESTINY ARE ALL LINKED TOGETHER IN THE BRAIN.

when you begin cultivating your sexual energy up. Your testicles and your pituitary gland will begin to pulsate together when the ching is cultivated properly, and is a sign that your glandular system is working harmoniously all the time, not just during sex. The pituitary gland in turn regulates the activity of the other glands. When they are in perfect harmony they secrete an exceptionally fine nectar—a superfine hormonal substance undiscovered by scientists—which floods the nerve centers of the brain and helps create the feeling of bliss described by so many mystics. This is only one phase of spiritual development, but one that is powerfully affected by the balance of sexual energy in the body.

Sexual activity is equally powerful in the more ordinary spheres of health. Sex offers all of the health benefits of physical exercise. Sex reduces the tendency to compulsive eating while burning calories, and thus helps remedy obesity. Sex strains the heart less than driving a car in city traffic, or watching a good football game. Moreover, the heart rate quickly diminishes after sexual action. (For someone on the verge of a heart attack, passionate sex may be sufficient to trigger it. Passive sex is recommended in this case.)

Loving is thus a great natural antidote to stress. Emotional stress especially causes untold harm, as it is a continuous injury to

every cell. Life in our urban society subjects us to increasing doses of this potent poison.

Stress directly causes cardiovascular degeneration, such as arteriosclerosis and hypertension. Love restores impaired body chemistry by activating the hormonal centers to defend the physical body and by harmonizing our mental and spiritual faculties.

With frequent ejaculation, the benefits of sex begin to decline, and vitality ultimately plummets. The sexual big spender loses stamina. His vision begins to weaken, hair tumbles from his skull. He grows old before his time. The physical damage caused by expelling the sexual essence from the body is greatly alleviated only in couples or individuals who create and sustain a powerful emotional and spiritual love.

Over years of marriage, couples who consistently find a deeper harmony naturally conserve some of their sexual essence. Insurance studies bear this out: married couples live longer than single people. Two can often share the stress of life better than one alone. A better balance of yin and yang is achieved. The very act of love spontaneously transmutes lower vital chi and ching into higher mind. The Taoist methods of cultivating sexual energy are powerful aids to those following this "path of the heart", but take the path a step further by maximizing the benefits of sex for health and personal growth.

In Chicago a group of elderly people urge couples to practice sex in a ritualistic fashion to preserve vitality. The group, called "Sexy Senior Citizens," is the unconscious heir of many comparable societies flourishing in the Orient for millennia which taught Taoist methods of chi cultivation.

With aging all bodily systems become less efficient. Among these is the hormonal system, which regulates important electromagnetic reactions. If hormonal secretion declines from optimal levels, the body must necessarily weaken.

The relations between the hormones, sexuality and aging have not been fully elucidated. However, many researchers in the vanguard of medical science feel that the hormones regulating growth and sexual development play a critical role in aging. These are produced in the pituitary, thyroid and gonads.

The testes have a double function: besides being the factory for the sperm, they produce male hormones, among which is testosterone. The Sertoli cells in the testes produce another hormone,

inhibin. When not ejaculated, these hormones go into the blood stream and are carried to every part of the body.

DIAGRAM 9

Sexual Kung Fu fills the cranial cavity with Chi. This overflows & begins filling other body cavities with life-force, retarding the aging process & strengthening the body's immunity to disease.

Much evidence points to the link between harmonious sexual activity and the retardation of aging. Loving sex stimulates high-quality hormonal secretion. The presence of these hormones in the blood appears to slow the aging process. With Taoist cultivation one produces unusually potent hormones because one focuses energy directly on the endocrine glands, stimulating them to much greater levels of activity. Because the hormonal energy is constantly circulated within the body instead of being ejaculated, a successful student of Taoist loving finds himself with ever-increasing amounts of energy as he grows older.

This increased circulation of sexual energy also redistributes the chi within the body's storage system. As we grow older and our life force is depleted, our body cavities increase in size and are gradually filled with fat or various kinds of pollution that speed the aging process and lower the quality of our final years. The Taoist method draws sexual energy up from the testicles and fills the spinal and cranial cavities with ching. When full, this overflows and begins to fill the chest and abdominal cavities with rejuvenating life force.

These reservoirs of chi within the body supply the raw material used to make the body virtually impervious to disease in the method known as "inner alchemy" to the ancient Taoists. This process of refining the "Elixir of Immortality" or the "Pill of Immortality" may be described in biological terms as storing the body's life-force and then returning it to its source. The chi is moved from these reservoirs within the body cavities into the deepest centers of the brain and bones. The secret of packing chi into the bone marrow is well known to highly achieved masters of Tai Chi Chuan and other internal martial artists. They know that muscle power cannot survive the aging process, but that bones survive for thousands of years. This practice which I will describe in an upcoming book on Iron Shirt Chi Kung, is dependent on retention of sperm power.

Recent scientific studies show the importance of bone marrow to the production of disease fighting white blood cells. These scientists will eventually catch up with the ancient Taoist masters and figure out the full connection between healthy sex, hormones and bone marrow and the prevention of aging and disease.

DEATH AND SEX IN THE NATURAL WORLD

"... When the living organism, whether vegetable or animal, achieves its aim, which is a new seed, its organism deteriorates."
—*Schwaller de Lubicz, The Temple in Man*

Nature perpetuates its species through sex. In the male seed she concentrates the parent's essential elements. The theme of parental sacrifice for the offspring is repeated in all life forms, from amoeba to walrus, praying mantis to orchid.

One may readily glimpse the death in generation by considering the Emperor Moth's brief span. This large moth travels many leagues across the countryside in quest of his female: "The famous principle of the struggle for life is here the struggle to give life, the struggle to die. Although they can live three days in quest of the female, they perish as soon as the fertilization is complete."*

Plants, too, are subject to these laws. After a plant goes to seed or bears fruit, it dies or enters a period of dormancy. Gardeners know that a plant prevented from going to seed outlives its more precocious brothers. Most fruit-bearing trees do not produce fruit until they are five or ten years old. During this period they devote their entire biological force to the growth and strengthening of tissue.

Later in their life, plants split their vital force between reproduction and tissue maintenance. When they grow old they need all of their remaining energies for survival: they withdraw power from the sexual sphere and bear no more.

Some male insects may increase their lifespan several fold simply by not spending their seed. One may object that an insect's sex life has no relevance to ours. Yet the insects excel brilliantly in sexual invention and effectiveness. They comprise more than half of the total animal weight on earth. They far surpass human erotic variety. The insects make D.A.F. de Sade, Saint Anthony, and David Bowie look like a troop of boyscouts discovering sex for the first time.

Insects work the web of material life with particular intensity. Their power to impose their definition of life is manifest in their

*Carlos Suares, *The Cipher of Genesis* (Shambhala 1978).

numbers, gigantic age and breadth of habitat, garb and custom. Marxist-Socialist deification of the State but weakly mimicks their pitiless genius for collective organization. Rather than staggering them, nuclear war will offer a rare occasion to spin new organs to create an abundancy of new life forms.

In all forms of life the reproductive act exhausts essential energies. The offspring consume bodily stores of nutrition to get a grip on their new life. Vital organs suffer the most depletion because they contain the densest concentration of nutrients. Among humans, the female sacrifice of her bodily energy is unavoidable in the passage to birth. The male, likewise, must surrender the potency of his seed at least once to fertilize the female ovum.

Nature warrants the sacrifice worthwhile, for it fulfills her goal of multiplying life. She intends the old to make way for the new. But amongst all material creatures, only man has the force of will to oppose Mother Nature. "Not distance, not the difficulty of the journey, not the danger of approach foils instinct (in the animal kingdom). In man, who sometimes has the force to escape the sexual commandments, disobedience may have fortunate results.

Chastity in a human being can function like a transformer, changing unused sexual energy into intellectual or social energy. Among animals, this transformation of physiological values is impossible."*

It is the very possibility of transforming our instinctual and essentially animal sexual energies into something higher that makes us human, and potentially divine. The failure to direct our sexual energy upward is a failure to fulfill our deepest human potential. That is why unconscious sex with ejaculation of the male seed is a kind of mini-death seen so often in the plant and animal kingdoms. Two hundred to five hundred million sperm die upon a single ejaculation. The expenditure of subtle energy is even much greater than these huge numbers suggest.

If this spent seed leads to any kind of rebirth in the man, or in the woman, receiving new life, this loss or death is in harmony with nature. But without transforming these mini-deaths into a sharing, a love, a child, or a higher awareness of some sort, this act of sex becomes a mere killing of the potential life energy stored in the seed. Perhaps that's the connection between sex and violence.

*Suares, *op. cit.*

Those radically opposed to abortion and contraception might as well begin their campaign against men who kill their potential life-force by ejaculating needlessly.

Although the Taoists have no concept of sin, they might say that man has fallen to his current weakened psychic state in large part because he has squandered his sexual energies over the last several millennia. The Chinese legends speak of a golden age when all men lived in harmony with nature and transmuted their seed up as naturally as you or I breathe. Whether or not this is literally true is irrelevant—the kernel of truth in the story is that man is capable of a much higher existence than what he now accepts. The story bears a striking resemblance to the Biblical story of Adam and Eve's fall from grace after tasting the forbidden fruits of sexual love. In this sense, the end of the Taoist cultivation is to regain the lost paradise which still exists within every man and woman, their original nature.

The major function of sex in nature is to create new life and to perpetuate the species. Yet in our time humanity has been fruitful and multiplied itself to the brink of overpopulation and its attendant ecological horrors. The abuse of sexual power through indiscriminate procreation has brought humanity to a global crisis. It has accelerated the danger of a war which might result in the extinction of the species.

Apart from certain insects and higher apes, animals engage in sexual intercourse for reproductive purposes only. The female receives the male only at definite mating periods, that overall compromise a small part of the animal's lifespan. It is clear that sexuality plays a different role for humans than it does for animals, and it is critical that men and women become educated as to the possibility sex can play in their own evolution and thus affect the balance of nature as well.

CHAPTER 4

THE SEXUAL ECONOMY

"Man cannot be without woman and woman cannot be without man. If you think intercourse is an isolated or separate act, longevity is threatened and every illness arises."
—from the Recipe for Making Priceless Gold
Sun S'su-Mo, physician who lived 101 years

Every man is born with a certain amount of priceless vital chi energy. Some begin with more than others, but for the sake of simplicity let us assume an average man is born with a sum of vitality likened at $1,000,000. Over one's life span this million dollar's worth of life force is spent. Some spend wisely and live heartily into the 80's and 90's. When you are young you spend it faster because it seems like such a huge amount it could never run out.

Most people in our consumer society spend more money than they earn. They borrow themselves deep in the hole, assuming they will earn enough to pay it back later. If they fail, they face bankruptcy or a corrective period of lean living. Through poor habits the same thing happens with life energy, only the penalty is loss of appetite for life, sickness, and death.

Let us say that someone earns an additional 100 units of life force daily through breathing, eating and resting. Yet he may spend 125 units of life through poor diet, smoking, gluttony, overwork, anxiety, constitutional weakness, drug abuse and frequent loss of the vital sex fluid. To spend the extra 25 units he must continuously borrow vitality from the brain and organs. This theft of vital energy from one's own million dollar reserves gradually induces mental and physical sickness and premature aging.

Conserving sexual energy is a practical way to earn 125 units and spend 100 units or less. It's an investment in one's physical, mental, and spiritual growth. The imbalance of one's personal economy can be corrected by reducing the disastrously wasteful expenditure of ejaculation. A "profit" of 25 units of vitality is then made by transforming the conserved sexual fluid into higher mental or spiritual energy. Eliminating other bad habits will reduce the loss and increase the profit, but no other single factor in life is so potent as sexual energy.

If you work hard all day, you've already used up much energy. If you then have a few drinks, eat a heavy dinner and later have sex in which you ejaculate the vital sperm fluid, you are overspending your life's provision prematurely. Some people would call it a day well spent, as they cannot envision anything better in life to spend their energy on. If you continue to overtax your resources, you may wake one morning fatigued with life, sick with arthritis or cancer, or maybe you won't wake up at all. You will have prematurely exhausted your vital capital and may have to die at an age that you feel is somehow "unfair" or possibly worse,

suffer through your final years in life with your creative powers and physical faculties greatly diminished.

I am a Taoist living in the twentieth century near New York City and lead an extremely busy life. I have a wife and an overly energetic young child. I own a computer, drive a car in city traffic, deal with teaching hundreds of students, and maintain a heavy travel schedule flying around the U.S.I know it is possible to lead a rich and rewarding life without exhausting oneself, and have seen my students do the same. The more you cultivate your chi energy with daily practice, the easier it becomes to replace energy spent and still end up ahead.

Of course, if you choose a simpler lifestyle you can progress much more quickly. That's why many Taoists choose to live up in the peaceful mountains. But you can live by the same Taoist principles anywhere. The universe is bountiful if you know how to live with it. Sexual energy is one of the most abundant gifts given to us by nature, yet most people casually toss it away without realizing the full value of its treasure.

As Americans become more aware of the importance of personal health they are seeking to change their lifestyles. Many people are now realizing that they have been living destructively. Fortunately, they have grown conscious before it is too late. Whether they are jogging or taking a dance class, they wish to begin a life-energy conservation program. First they must pay the interest on the vital sums they have overspent from their mind and body. After a while they may repay both interest and principal as they begin to produce and conserve more energy. At that point they can take the path of cultivating their chi energy into its original spirit.

Have realistic expectations. You may have spent more vitality than you had to spare. Concentration and patience are necessary to recover it. You can spend $100,000 in an hour, but you may need one year to earn it back. Serious physical and mental trauma, heavy use of drugs, and frequent ejaculation all involve grossly excessive spending. Many young people seem to have unlimited energy. But these youths are toying with the sources of life as if on a wild spending spree.

Many older people apparently in good health are, in fact, tottering on the brink of serious breakdown. Only the strength of habitual self-will allows them to continue to function. When they have a check-up—often prompted by unconscious awareness of

their condition—the doctor may order an immediate halt to strenuous exertion. Often these people collapse in the first days of their enforced rest because the flimsy strand of willpower which kept them going has been cut. Friends will say, "I can't believe it. Yesterday he seemed strong as an ox." If you learn to balance your account in the sexual economy, you will be taking the most prudent steps possible to avoid such a scenario in your own life.

THE YOUTHFUL FURY OF SEXUAL FRUSTRATION

One of my main concerns is the frustration of youth in our society. Upon the quality of their thoughts and acts civilization will endure or crumble. Most male youths are more interested in sex than almost any other subject. This is natural, as their bodies are working overtime to produce billions of sperm cells. Women cannot imagine what an intense experience this is, as their energy cycle is more evenly distributed over the fluctuation of a monthly menstrual cycle.

This build-up of male energy is a natural manifestation of universal Yang energy. The development of traditional romantic love at this stage is natural. If this expanding Yang energy finds a receptive female to nourish it the love between them can mature and spiritual evolution gradually awaken. The problem of obsessive sex arises from a material society that stresses the value of physical sex so highly that people remain immature all their lives seeking to sustain a lusty image of sex that exhausts them and ultimately blocks their evolution by stimulating them to rapid loss of their seed.

The harder youths try to grab pleasure, the more surely it eludes them. In their frustration, many seek pleasure with increasing fury, a quest for identity that leads to frequent masturbation and promiscuity. The more often they spill out their vital seed, the more empty they gradually become despite the temporary feeling of gratification as the life force passes out their loins. Unrestrained sexual frenzy can destroy a young man's fragile identity and melt him into the mob mind cultivated by sex-for-profit industry and sexually exploitive media shows. Higher vital energy which should nourish the young person's true center serves instead to grease the empty fantasy of his bed of lust. Afterward he is left with nothing. This spells spiritual disaster if the excesses are not corrected in

time. This type of young man may have difficulty in his relationship with women and ultimately this leaves a vacuum in his understanding of himself and the female pole of his own male energy.

For this same reason adolescents tend to fanaticism, political, religious, or otherwise. Mao's Red Guard is but one youth group that has propagated its reigning tyrant's brand of fascism. The proliferation of various cults in the U.S. is strong evidence that the young are not able to fill the void in their lives with the physical pleasures that have become standard. If the fragile link with his newly forming adult identity is frayed or broken by lack of love or social nurturance, a youth has only the group psyche to animate his life. The group mind provides the fullness their hollowness craves. As Nature abhors a vacuum, their own emptiness despises itself.

These remarks apply to adults in our sex obsessed society as well; many are desperately questioning for an identity that is their own by natural right, if only they knew how to claim it. The proper understanding of the function of sexual love in their personal evolution would go far to correct these excesses. Education about methods of chi cultivation of all types, but especially of the sexual energy is the most direct solution. Teenagers will never give up their sexual desire, but it is not far-fetched that many of them would be interested in improving it if they knew how.

SEX AND THE SUPER ATHLETE

There is a widespread belief among many professional sports coaches that an athlete who makes love the night before a big game loses his competitive edge. This is a controversial topic and a survey of existing opinion on the subject is inconclusive. Clive Davis, editor of the Journal Of Sex Research, looked into the effects of having sex before competition and concluded "You can always find anecdotal reports to support any position you want to take, but certainly you couldn't support either side medically."

Top-ranked prize-fighters are the most vociferous in contending that they cannot violate natural laws without paying a stiff price. Ken Norton publicly stated that he gave up sex for eight weeks before his first fight with Ali and abstained for a similar length of time in subsequent Ali fights. "A couple of times in my first 10 or 11 fights, when I didn't abstain from sex, I think it hurt me." Norton said that he believed that "9 out of 10" fighters give

up sex while training for a bout. Joe Frazier, who also fought Ali, felt very strongly about the damaging effects of ejaculatory sex: "If you mess around before a fight you don't have any reserve energy left."

It is rumored that the great Muhammed Ali observed strictest sexual continence for as long as one year before his bouts. He didn't publicize this because he keeps his training methods secret.

The Taoist approach to sexuality resolves the dilemma facing a male athlete who is forced to choose between losing his competitive edge or his woman. An athlete can have the best of both worlds by learning the secrets of conserving and transforming sexual energy. There is a substantial increase in available energy reserve after Taoist lovemaking, as the male has not only conserved his own super potent seed power but also absorbed a high dose of equally potent yin/earth power from his lover. Any athlete who can master the urge to ejaculate his life-force will have taken a step in the life-long process of mastering himself and his chosen sport. He can awaken from a night of ecstatic lovemaking feeling light hearted and energetic, with his batteries fully charged. This is quite different from the pleasant exhaustion that often follows ejaculatory sex.

Some male athletes claim that ejaculatory sex the night before is beneficial to their sport. The reason for this is usually simple—the athlete has too much nervous energy and lovemaking relaxes him. His excess energy impedes his performing ability, and ejaculation relieves that tension. This improves his coordination and attention in the field the next day and thus helps him to win. This is entirely in line with the Taoist idea of the function of lovemaking to harmonize the mind, body, and spirit. Huge quantities of raw chi energy in the physical body are useless until they are harmoniously integrated with the mind and spirit.

University of New Mexico Professor Mark Anshel did extensive research on sex and the athlete. He found that many coaches were intentionally creating sexual frustration with the hope that their athletes would redirect their drives against an opponent. "All people don't react to frustration the same way," Anehel points out. "By preventing sexual activity, these coaches (or the athlete himself; Guillermo Vilas, the Argentine tennis pro, once admitted staying celibate for a year to improve his game) may actually bring about negative personality manifestations such as anger or feelings of isolation."

The Taoists have used sex since ancient times to heal physical, emotional, and mental imbalances, a practice very much in line with helping athletes maintain maximum fitness. The Taoists were martial artists as well, and knew the secret of defeating an opponent was a combination of physical discipline and maintaining a superior degree of self-awareness. For this reason they cultivated their chi energy and guarded against the loss of their seed to women. This Taoist practice of "Sexual Kung Fu" is kept a closely guarded secret amongst martial artists lest their opponents learn it and grow stronger. The modern athlete can enjoy the same benefits today as the Taoist fighters, swordsmen, and Tai chi chuan players have for hundreds of years—the full freedom to love without losing the competitive edge.

SEX, COMMITMENT, AND MARRIAGE

This subject of marriage is too vast to be generalized by any fixed rules. Marriage may suit some men and not others. One man may marry and be happy for a lifetime and his brother find it torture. In the Tao, nothing is ever forced; alignment with the natural is sought, and from this comes lasting balance of yin and yang.

The Taoist sages would never say that a celibate man is higher or more pure than a married man. Both men have equal opportunity to adapt their daily practice of cultivating their chi energy to their life situation, and thus, to achieve union with the Tao. If all spiritually inclined men were to remain celibate, society might suffer from the lower quality of parental guidance offered to children, and result in disharmony in the world.

Practically speaking, a marriage, especially with children, consumes an enormous amount of time and energy and should not be entered into lightly or for the wrong reasons. The wrong reasons include marrying because of outside cultural pressure or to satisfy someone else's desire, such as parents.

The decision should come freely from within you or else later you will have trouble accepting the responsibilities which arise from your choice. Many men marry because they are emotionally insecure and hope a woman will offer that security. This emotional insecurity can often be traced to insecurity in the male sexual role. So, if you have not yet married, I suggest you master the sexual energy cultivation methods in this book before making that deci-

sion, and if possible learn the Fusion of Five Elements meditation for balancing emotional energy (see Chapter 18 for a description).

Even this is no miraculuous overnight cure for emotional insecurity. If you spent decades feeling and acting insecure, it will take a while to change. Cultivate and balance your internal energy constantly, and you will be surprised at how your emotions will lose their power over you, and be replaced by a continuous feeling of inner connectedness. You won't need to seek your emotional understanding from a woman, which is a dependancy trap many men fall into. When you understand the source of your emotions in the movement of the chi energy in your body, you will be in a position to maintain inner balance and help your lover to achieve the same.

Once you are free of sexual and emotional compulsiveness you will find yourself a very changed man in your relations with women. Ideally, you would get to know a woman for several years before having children with her. This allows you both to learn the subtle energy rhythms of the relationship before your attention is focused on child-raising. If, by then, you have practiced dual cultivation to a high level, the deep bond will go far in getting you through the inevitable difficulties that lie ahead.

For many American men, sexuality actually remains on an infantile level. It is often no more than an extension of feeding. It is an attempt to take in love from outside themselves and childishly demand the certainty of continual gratification. This leads necessarily to the jealous dependency that plays havoc with so many relationships. People spend years watching to see if they are loved: in this way they annihilate even the possibility of what they seek. This type of destructive sexuality is a constant looking outside oneself for assurances. This insecurity can generate negative emotions we are often unconscious of, such as jealousy and guilt, as well as acts that consciously violate our own integrity, such as adultery. One ceases to live in the present moment, creation stops, and life becomes slavish rehearsals of lust broken by long periods of boredom.

It's easy to observe that after a time the life of many couples seems weary, stale, flat and unprofitable. One reason for this is because when they embrace intending to make love, the man ejaculates and thus excretes his deep vitality and depletes his yang charge. Nature is abundant and forgiving, but after years of ejaculation the difference shows up as weakened sexual desire.

Unless the couple has spontaneously found the will to transform their life energy into a higher love—a process of spiritual attunement that balances the daily losses of vital energy—the relationship is in danger of becoming a ghost of its former passionate self.

Energy that could become genuinely joyous is spasmodically thrown out of the body by ejaculation. This loss occurs every time you ejaculate. Eventually a man can develop feelings of indifference or hate for his sexual partner because he subconsciously realizes that when he touches her, he loses those higher energies that could make him a truly happy man. This produces a deep crisis, because during the years of love-making and sharing their lives, a powerful emotional bond has developed. A lot of his sexual energy has gone into making that bond and he can't understand how the bond could exist and yet he feels bored, resentful, and fatigued.

This flattening of sexual desire between regular partners is due largely to depletion of polarity or sexual-electrical tension. You can increase the attraction by charging the positive and negative poles of the male-female battery. Some couples achieve this temporarily by taking seperate vacations or sleeping in separate beds, or they find other ways to naturally keep the balance of energy through outside friendships and activities. With polarity restored the current of life flows between the lovers ever more swiftly and powerfully. Dual cultivation allows a couple to remain together and keep this polarity of their relationship fully charged.

Dual cultivation is designed to promote the happiness of couples, to teach the partners to discover inexhaustable pleasures in each other. There is no inherent reason for love to grow old. The practice of conserving and exchanging sexual energy without loss of the seed will help remove a major cause of promiscuity: incomplete satisfaction with one's lover.

It can also alleviate a common problem in marriage: not enough energy to work things out. With the stress of both parents working and modern fathers trying to share in the child-raising tasks, many couples simply burn out. They never have enough time to make love; if one is aroused the other is exhausted or asleep. Using the Taoist Secrets of Love, both husband and wife will find sex rejuvenating and an endlessly fascinating journey into the subtle realms of chi exchange. They can return to the routine of daily drudgery with renewed vigor and light heart; when your chi is

full and running in all your meridians, the most ordinary things become interesting again. Your chi is the glue between your body, mind, and spirit; until it is completely integrated you will feel incomplete.

The Tao teaches there is infinite pleasure and limitless potential within every human being. The addiction to sex as emotional food can gradually be changed from within the male body through chi cultivation. One grows to appreciate this fact with the retention of the seminal fluid and its transformation into the higher center of the heart. One experiences the fullness of life long after the lovemaking has ceased, and a delicacy that more easily moves beyond temporary sensory stimulation, to a continuous connection of feelings with the lover.

The man who diligently studies the Tao learns that the source of all emotions as well as the source of a woman's allure is also within himself. However, when difficulties arise, the first question to arise is always, "What does my commitment to her mean?" This self-questioning can raise its head at any stage of spiritual accomplishment or emotional maturity in your marriage.

The highest commitment a Taoist can make is to the marriage of yin and yang in the universe. In fact yin and yang are always married, as they are just two poles of the same subtle energy field. Thus, the real commitment a Taoist makes is to consciously realize their union in his life and thus empower himself (single cultivation) and his lover (dual cultivation) with his awareness. When the level of chi and ching chi cultivation reaches a very high level and is integrated with shien, or spirit, the awareness extends to an even wider field and might be likened to the Christian universal love or Buddhist sense of compassion for all sentient beings.

The difference is that a Taoist cultivates this universal sense within his body, so it remains as a tangible experience of his subtle chi energy field. This insures it does not become a conceptual or theological idea of love into which a man is trying to fit his behavior. This is an impossibility, as no whole human being with an integrated body, mind, and spirit can fit into the shoes of an abstract idea, even a noble one like love.

The Taoists in China traditionally cultivated themselves in pairs or small groups, whether it be two friends, a master and student, a man and woman, or a small community of adepts. There were many different approaches used by these different groups;

some were strictly celibate, others quite openly favored dual cultivation between man and woman. Because of the strong emphasis on sexuality in America, and the freedom from social restraints, I'm certain that the method of dual cultivation will become a major path for growth among couples. Americans are raised with the idea that they can do anything they want to do, and don't like being told by priests or gurus that their love of sex is dirty, sinful, or blocking their path to enlightenment. So, let them enjoy sex and take the best from it. It's all part of the Tao, and their marriages will be all the better for it as long as the sexual energy is properly used.

Some men and women will choose to love outside of marriage, and if they cultivate a harmonious balance of yin and yang their union is as holy as one with an official state seal stamped on it. A word about the virtue of a lengthy committment. It normally takes decades to fully cultivate one's chi energy to the highest level of shien. It will likely take years to appreciate the subtle energies your woman is capable of creating and making available for your own cultivation. It is said it takes seven years to know the rhythms of a woman's body, seven years to learn her mind, and seven years to understand her spirit. Don't be a promiscuous fool who is never patient enough to learn the true depth of the Tao.

THE MORAL EFFECT OF SEMEN LOSS

There is a distinct tendency for strengths and weaknesses to propagate themselves. The weak grow weaker, the strong strive to increase in strength still more. Taoist Cultivation helps curb self-destructive tendencies which are worsened by weakness itself. The Taoist treasures the energy stored in his vital fluid. The vital power within him slowly begins to resist abuse of any sort to both his body and character.

The loss caused by ejaculation is not limited to the physical sphere. Mental and emotional functions are profoundly influenced. Hormonal fitness directly effects personality and capacity for creative thought. The mind suffers from the loss of testosterone, the hormone secreted in the testes and spent in ejaculation.

Chinese medicine long ago observed that vicious crimes are often committed soon after seminal loss. Courage is usually at low ebb after ejaculation. One scares easily and reacts violently. This is

one reason murder and mutilation often follow rape.

Thus there is what may properly be called a moral effect of cultivating one's sexual essence or ching chi. The yang fire within the seed burns up internal poisons at the same time it generates an essential life-supporting substance. One who retains his seed increasingly respects every form of life.

Everyone has experienced discomfort when watching someone abuse their child in public, or felt the stare of a starving bum. The anger or despair of others actually spills over to us and influences us whether we like it or not. In like manner, each of our thoughts and acts beams to the far reaches of creation.

The man who cultivates his subtle energy eventually experiences in his body the fact that all living beings are part of one life. He and his lover flow into each other. He knows that across the web of consciousness one living thing constantly nourishes another. In becoming highly aware of the interconnection between all creatures, he strengthens his tendency to be unselfish. He may suddenly find himself asking: why pour negative thoughts into the single stream from which we all must drink? In this sense all loving energy is cosmic, or divine energy. When two people love each other consciously their energies are intentionally consecrated to the good of humanity. This kind of love offering develops a special egolessness in the lovers and will inspire others whom they meet.

While this approach to loving is not limited to the esoteric Taoist cultivation, the use of its methods of transforming sex energy vastly increases the amplitude of loving power which is emanated. In the Taoist view, man cannot direct the heavens, but if he behaves in harmony with the laws of heaven and earth he can guide the larger course of events by becoming harmonious within himself. Thus, Taoist philosophy does not preach any specific moral guidelines. It simply posits that morality is innate within man; if he cultivates his subtle energy and experiences his true self, he will act in a moral fashion among men.

THE CONTROVERSY: IS SEX GOOD FOR YOUR HEALTH?

Man appears to be the only higher creature naturally endowed with the power and inclination to perform sexually regardless of the possibilities of spreading his own kind. There is no falling off of

sexual appetite in the pregnant female or her mate. The human begins sexual activity soon after reaching puberty. Most people spend a lifetime performing and dreaming of sexual intercourse for the sake of pleasure and emotional fulfillment. It seems clear that sexuality serves a higher function in humans, but doctors, scientists, psychologists, priests and artists cannot even begin to agree on what this higher function is and how or if it should be regulated to improve human well-being.

Western scientific texts are curiously contradictory about the healthfulness of sexual intercourse. Many sex manuals today praise the restorative qualities of extensive sexual activity. Others, equally authoritative and based on psychiatric studies, caution against sexual overindulgence. Which school of thought is correct? When does too much sex become unhealthy?

To complicate matters still more, there are similar inconsistencies among Oriental sages. One renowned Indian holy man counsels the male to see every woman as a sack of shit and piss in order to resist the temptation of losing the precious male seed to her.

Yet the Lord Buddha himself is held to have said: "Women are the Gods, women are life . . . Be ever among women in thought."

The Taoist teaching of sexual yoga reconciles these viewpoints because it accepts the middle way, recognizing the truth in both extremes. Their solution is of utmost simplicity: joyous and loving sexual intercourse without the loss of the male seed is healthful in the highest degree.

Much depends, of course, on the path you are taking through life. At a certain time in your life celibacy may be best for restoring your health or for achieving rapid spiritual progress. Celibacy can be an extremely powerful means of conserving all your vital energies freeing you to work with greater intensity in cultivating yourself. But most Westerners are focused on finding the right mate, and working out their sexual and emotional desires with a partner.

The Taoist principles of energy cultivation work equally with both cases, the single or the dual cultivation. For a Taoist, all paths must ultimately move beyond a focus on sex energy and towards attunement to all the subtle energies of the Tao.

But no one can take more than one step at a time. If part of your mind is fixed on sex, you must live out that impulse, study it,

and know its source before you can transcend it. Taoists are always flexible; your energy can be cultivated no matter what your situation in life is. But the basic principles remain the same. Sexual activity without love and with frequent loss of fluid is physically and mentally destructive to any path. Engaging in sexual love with a partner—but without any esoteric practice to cultivate the chi—is an incomplete path to transforming oneself.

Love will spontaneously transform any couple to a higher level of awareness, but at the same time the repeated loss of seed will hasten their physical decline and slow their progress. It's like climbing a mountain slope with loose rock scree—you take three steps up and slide back down one. This pace may lead to emotional and mental happiness found at the top of the first ridge. But it may deprive you—for the lack of time and energy—from seeing the valleys, mountains, rivers and ocean beyond. This is the fullness of the Tao, the attaining of a lasting experience of your higher spiritual self.

CHAPTER 5

SEX IN THE ESOTERIC TRADITIONS OF THE WORLD

". . . It is impossible for us to learn elsewhere what we are incapable of learning within our own bodies."
—*Schwaller de Lubicz, The Temple In Man*

Religions have nearly always tried to control the sexual habits of their followers. Their success seems to swing in cycles of the public submitting and rebelling, but I would guess that ultimately they have failed because for most people the experience of sex is more powerful than their experience of religion. As a biological impulse, sexual drive so completely permeates our actions and desires that it is not easily harnessed by any system of belief, however dogmatic. Hence the adage that prostitution is the world's oldest profession.

In my travels I have noticed that prostitution seems to flourish side by side with the most fanatic religious communities. Sex is like an inflatable ball floating on the surface of a pool—the deeper you push it down into the water, the more strongly it presses back up. If you lose control of the ball for even a split second, it will shoot up into the air out of control.

The attempt by religions to publicly dictate sexual morality is actually a vestige of an earlier, less material era when spiritual experience was more intense than the fleshly pleasures of sex. The

founders of the earliest religions—then known as Mystery Schools or Fertility Cults—understood the role of sexuality in spiritual development, which is why their practices and rites held such powerful experiences for converts. Many modern spiritual leaders, whether Catholic, Jewish or Hindu etc., have forgotten the link in their religious rites connecting sexual power and spirituality. Circumcision rites, Spring fertility festivals *(e.g.* Easter), and communion ceremonies are all remnants of a time when the esoteric and hidden meaning of sexuality was understood and incorporated into religion.

The task for twentieth century man is to peel off the layers of his outer or "exoteric" religious beliefs and free his mind to experience the ecstatic core of his existence in his body. Then the outer ritual and the beliefs of the old religions will either fall way, or take on a new and profound meaning. By accepting sex as sacred, the role of religion will be revitalized in society and made more meaningful in ordinary personal relationships.

Taoism is different from the major religions in that it is a spiritual philosophy and not an organized religion with a body of believers obeying a holy scripture. Faith in God (or the Tao) is not enough for the Taoist; devotion to higher harmony must be accompanied with the self-knowledge that comes from cultivating one's own energy. In a sense, a Taoist must "grow" his soul in order to fully gain knowledge of it. Every human has the same seed within, but unless it is properly nourished, its bearer will never see its fruit. The divine world within man is patterned after the natural world—as a child will never know its full self until adulthood, so must a man cultivate to maturity his subtle spiritual energy if he wishes to enjoy and participate in the fullness of the Tao.

There were some folk cults with Taoist priests that rose up to compete with the arrival of Buddhism in China, but I am concerned here only with the original esoteric teachings of the Taoist masters. These Taoists are famous for permitting the use of sex on their spiritual paths. There were many Taoist sects which sprung up on the five holy mountains of China, and each emphasized different aspects of chi cultivation in their spiritual development. A few sects taught the path of "single cultivation", which utilizes the Taoist principle of mating male and female subtle energies withn one body, but strictly forbids physical sexual intercourse as either unnecessary or too risky.

The practice of "dual cultivation" was widely accepted by most Taoists for both its hygienic and spiritual virtues. Even in these schools the danger of becoming deeply attached to one's lover was acknowledged as a possible stumbling block for those seriously aspiring to become immortals and enjoy full union with the Tao. This sexual attachment was never viewed as sinful, and no sense of guilt was encouraged as in the Christian tradition. Becoming sexually attached to one's partner simply means that the aspiring yogi might experience only the union of a man and woman in this lifetime instead of the greater union of Heaven and Earth. This is no condemnation of the couple, as such a union might be a high accomplishment for them.

The Christian religions have a strong tradition of a sacred marriage, but church politics—mostly male priests afraid or jealous of women's earthy, "dark," yin power—led the Christian world into periods of woman-hating witch hunts that alternated with

woman-worshipping cults of the Virgin Mary. China, whose culture was molded by a blend of Taoism and Confucianism, was spared this vicious cycle. The yin energy of the universe—personified by woman—was always viewed as necessary to its functioning and to the well-being of man.

Even when the original Taoist teachings on the perfect balance between yin and yang fell into periods of decline after the Manchu reign in the Eighth Century A.D., women were not subjected to the same abuse seen in some other cultures. Chinese society became increasingly paternalistic and women were viewed as a kind of male property, but at least the general cultural sentiment favored treating this female "property" with respect. Many of the Taoist sexual manuals which survive today come from this period, and are somewhat lopsided in advising the aristocrats who read them on how to get healing yin energy from the woman.

These manuals totally ignore how men can help to heal women with their powerful yang energy. They do correctly advise men to conserve their seed while suggesting that a man make love to as many as eleven concubines a night. The manuals are really medical textbooks, with a very cut-and-dried clinical approach to sex that treats it solely as a means to harmonizing one's health. Although these manuals fail to stress the higher path or teach meditative practces for exchanging energy with the women they do reflect the basic esoteric Taoist teachings that sex, when properly practiced can be incorporated into daily life with tremendous benefits to health.

The Taoists may have one of the oldest esoteric traditions of cultivating sexual energy in the world, but they certainly were not alone. The idea for transforming sexual energy for spiritual purposes is well known in all the esoteric traditions of the world, both Eastern and Western, although generally it has been guarded as a great secret. Whether in Egypt, India, Tibet or Europe, the information that was revealed to the public was usually kept to a vague or abstract theoretical/theological level. A practical method to hold and transform the sex energy in the body was never taught to the public.

The best place to begin a brief historical survey of this field is with Theophrastus Bombastus Paracelsus, the famous 16th century physician and alchemist extraordinaire. Paracelsus' credentials as a medical scientist are impeccable; more than 400 years ago he

discovered the mercury cure for syphilis. Yet, he came to the same conclusion as the Taoist masters of what was known as sexual alchemy—the seemingly magical but entirely natural transformation of the sexual seed.

Paracelsus experienced the seminal fire with as much reality as an ordinary person feels when his hand is burned in a hot oven. Regarding the constituent elements of the substance, he wrote: "All the organs of the human system, and all their powers and activities, contribute alike to the formation of semen . . . The semen is, so to say, the essence of the human body, containing all the organs of the latter in an ideal form." This position is strikingly similar to the Taoist description of "ching chi," or sexual essence. Taoist cultivation also emphasizes balancing the subtle energies of each organ, which one then fuses into a single higher spirit.

Paracelsus distinguishes between the sperm fluid and the "aura seminalis", which is the light or energy of the sperm. Scientists today might call the "aura" the biophysical energy of the seminal fluid. Paracelsus claimed energy could be distilled from the physical fluid: "This emanation or separation takes place by a kind of digestion, and by means of an interior heat, which during the time of virility may be produced in man by the proximity of woman, by his thoughts of her, or by his contact with her, in the same manner a piece of wood exposed to the concentrated rays of the sun may be made to burn."

This statement rudely translated into modern language means that contact with an attractive woman may stimulate the production of high quality biophysical energy. Taoist alchemists realized a thousand years before Paracelsus practical ways to retain these valuable energies in order to profit from them.

If we turn from the Renaissance alchemist to the great British authority on Indian Tantric practice, Sir John Woodruffe, we find the same principles. In his classic work, *The Serpent Power,* Sir John speaks plainly to those who know how to hear: " . . . the force of the latter (sexual centers), if directed upwards, extraordinarily heightens all mental and physical functioning." He notes that mind, breath and sexual function are interconnected. The spiritual aim of the yogi is to "carry his seed high." This seed releases pranic energies, also known as the Kundalini power, rising up the spine to higher chakras or centers of spiritual function.

Another great modern spiritual authority, attuned to the

power within semen was Gurdjieff. According to this master, certain peoples understood that ". . . by means of the substances 'Exhioehary' or sperm formed in them, it was possible to perfect oneself." He adds that " . . . this self-perfection could probably be actualized by itself, by abstaining from the ejection from oneself in the customary manner of these substances formed in them called sperm."

Gurdjieff maintains that this self-perfection usually cannot be attained simply by retaining the semen, but requires a technique to release the energies of the seed. He is in perfect agreement with Paracelsus and the Taoists on this point.

Without exception authorities on the occult know of the seminal power, and that this substance must be stored and transformed to accomplish higher deveopment. The distinguished magician, Kenneth Grant, writes: "Thus the function of the semen—in the Tantras—is to build up the body of light, the astral body, the inner body of man. As the vital fluid accumulates in the testicles it is consumed by the heat of the Fire Snake, and the subtle fumes or 'perfumes' of this molten semen go to strengthen the inner body."

Most authorities agree on the necessity of collecting seminal fluid and transmuting it by application of inner heat. In the Chinese practice we refer to this as "cooking" the seminal fluid to obtain its "steam." The first step to release this tremendous vitality is conservation of the semen in the act of love.

The modern American spiritual master, Da Free John, also stresses the necessity of conserving the seminal force: "We must find a way of enjoying sexual intimacy whereby Life is not lost, we do not discharge Life in order to achieve pleasure, and we love one another, completely happy and free in our life together."

The "loss of Life" Da Free John refers to is ejaculation. He considers proper use of the sexual force—without ejaculation and with truly loving feeling between partners—as a key to human evolution. He stresses the importance of love in aiding the spontaneous transmutation of the seed to its higher centers of divinity. In this he is in complete accord with other spiritual authorities. Alchemists, yogis, magicians, and mystics agree unanimously on this fundamental point.

Another perspective on the vital seed is found in the works of an eminent Kabbalist and poet, Carlos Suares. The esoteric Kabbalist tradition originated in ancient Egypt. He emphasizes that

development of the will to retain the seed is identical with development of one's true self: "... man, endowed with his self (which, though static by nature, shelters living seed) must struggle against and overcome the centrifugal sexual movement which tends to lead him into the abyss of the female. . . . Instead of being carried away, his mind rules."

Suares here alludes to the degenerative role played by woman in unconsciously luring the seed out of man. She profits very slightly from his great loss, since she usually doesn't have the yogic skills to absorb it. Woman is a bottomless pit for the man who incessantly gives his seed to her, although she can attempt to compensate this loss with her nearly inexhaustable female energy and love.

This chapter could be expanded to include the entirety of initiatory writing. There are many works by Masters who have felt the powers of semen transmuted by vital heat. When Moses is wandering in the desert for forty years, he speaks in the Bible of experiencing "a serpent fire." Since the Bible also declares Moses was "trained by the Egyptians in all their mysteries," it seems likely that this fire refers to the transmutation upward of his psychic energies. Bodily experience of the subtle realm is the final criterion in these matters.

THE DIFFERENCE BETWEEN TAOISM AND TANTRA

The principles of Tantra from India and Tibet have received wide attention in the west in recent years, especially by seekers interested in integrating their sexual impulses into their spiritual growth. The principles behind Tantra are nearly identical to that of Taoism. Both seek to reconcile the opposing dualities of life as symbolized by male and female and both accept any moment or experience in life as a starting point for spiritual growth and as an end point for insight into truth.

Keith Dowman, a western scholar and practitioner of Tibetan Tantric Buddhism put it succinctly: "Strip the (tantrie) yoga of its arcane terminology and there is a simple meditation technique: stimulate the desire and then use it as the object of meditation and it becomes awareness—a field of Emptiness and pure Pleasure." A Taoist would agree, only he might phrase it differently: "Within every moment there is only the Emptiness of yin receiving the

Fullness of yang." This is the eternal marriage of man and woman, of spirit and matter, of Heaven and Earth.

The Taoist path and Tan trie path differ mainly in their language and in the practical yogic methods taught to achieve the same union of mind, body, and spirit. Both fully accept the mastery of one's sexuality as not only a legitimate but necessary means to attain the highest enlightenment possible in the body. Dowman describes the importance of semen in the inner tantric path:

> "Refined semen in the heart center permeates the body as awareness. Loss of semen, by any means, causes life-span to be shortened and causes a pallid complextion. In Anuyoga (fulfillment yoga, or Kundalini yoga) loss of semen is equated with killing of the Buddha. . . . After initiation, intensity of desire is essential to force the bodicitta (seed essence) up the medial nerve (of the spine); not only is desire vitiated by orgasm, but the will to enlightenment itself is temporarily lost."*

This accords perfectly with the Taoists view of retaining semen and transferring it upward, only the Taoists do not personify the subtle energies with a pantheon of divine beings. So I would say that the Tantra is for someone who is fascinated by or is attracted to the religious archetypes of the Tantrics—the gods and goddesses, the Bodisattvas and demons—and their elaborate secret rituals, initiations and invocations using mantra. If you have the patience to follow the rigorous path set out by a lama or guru who understands the true esoteric practice and is not merely a faith worshipper, you should eventually be successful with it.

I myself was raised near a Buddhist temple in Thailand and hung out with monks from an early age. I later decided the external rituals were not so effective as the internal methods of cultivating I learned from my Taoist teachers. These rituals are a blend of the esoteric and local culture. Many westerners may not respond deeply to the archaic imagery of the religious deities or will be confused by the different states of mind to be invoked, as the traditional descriptions of these states of mind do not translate easily from Sanskrit or Tibetan into English.

Certainly the acceptance of Taoism here in the west has been slowed by the difficulty of translating Taoist philosophy from Chi-

*"Sky Dancer: The Secret Life And Songs Of The Lady Yeshe Tsogyel" (Routledge and Kegan, Paul 1984).

nese into English. But the archetypal images of the Taoists—principally images from nature, but including the yin and yang symbol—became globally accepted archetypes long before myself and others began teaching out the esoteric practices. The Chinese form a quarter of the world's population, and our civilization has been around for the last 5000 years, so our basic teaching models are already well known throughout the world.

Perhaps most important is the fact that the esoteric yogic practices of the Taoists were not buried in the rituals or lost on the changing doctrines of religion. They were kept secret and passed on orally for many thousands of years, and when they were finally written down beginning in the second century A.D. they were disguised with arcane poetry to prevent the uninitiated or unvirtuous from learning the meditative practices. But much of this esoteric knowledge was preserved and further developed by Taoist acupuncturists and herbologists, which helped to keep the mystical teachings practical and grounded in using the chi energy to heal bodily functions. Another example of this is the Taoist art of Tai Chi Chuan, a wonderfully multifaceted form that is simultaneously a means of self-defense, a playful dance, a metaphysical meditation on yin and yang, a physically healing exercise, and a ritual invocation of the cardinal energies that can be experienced by anyone watching a master perform.

The actual Taoist practices themselves are as simple to understand as the sun and the moon, because the ancient Taoists used the natural elements of the universe as their teacher. They watched the way plants and animals lived and died, how the weather effected their own metabolism, and how their subtle energies varied with the seasons, the earth's tilt toward the sun and stars, and the phases of the moon. Before language was even invented the sages observed the balance of forces in nature and then found that same harmony within themselves. Life is simple and natural if you keep it that way. No extraneous cultural images or religious concepts are needed to decorate the original and natural vision of the Tao as harmonious nature.

Anybody familiar with the qualities of water, fire, metal, earth, and wood—the primal elements—and has lived through the four seasons of the year—spring, summer, fall, and winter—is a candidate for beginning the Taoist practices. For example, to balance the sexual relationship you basically need to know that

woman is water and has the power to regulate man, who is fire. On a deeper level you would discover that man has both fire and water in his body and can achieve a perfect internal balance by harmonizing his fire (thinking mind) with his own water (sperm fluid, or sexual "waters").

These symbols of fire and water, often expressed as yin and yang are simple to identify with and work with once you are given the specific details of what to do—how to hold your seed in, how to move your energy in psychic channels, and exchange it with the woman, etc. Of course, the experience of more subtle levels of chi energy takes time and cultivation of physical and mental purity. Thats why practice of tai chi, chi kung, meditation, and virtuous living enhance the speed with you gain clarity, and thus compliment the sexual practices.

KAREZZA AND COITUS RESERVATUS
